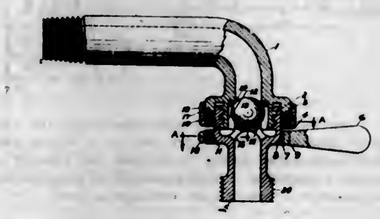
1. The method of making a covered box-body having a base-section and a rim-section, which consists in forming solid blanks for said sections, covering the blanks with a covering material, uniting the covered sections, and then cutting out the central portions of both of said sections.

1,569,643. MOP HOLDER. EDWARD H. TATE, Malden, Mass. Filed May 31, 1924. Serial No. 716,919. 2 Claims. (Cl. 15—229.)

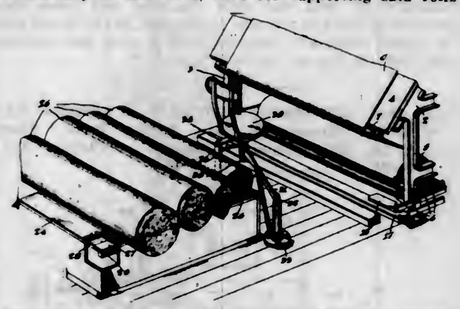
1. A mop-holder comprising a one-piece sheet metal body including a marginal flange, provided in one of its sides, with a pintle-receiving opening, and a bottom, provided with alined outwardly projecting spaced apart socket bosses, a handle-receiving sleeve having a pintle socket registering with the socket bosses; and a hinge pintle inserted in said opening and socket bosses and said pintle socket, one of the socket bosses having an inwardly bent portion bearing on the outer end of the pintle and constituting a stop preventing the withdrawal of the pintle, means being provided for limiting the insertion of the pintle.



1,569,644. VALVE-OPERATING TOOL. LYNN M. TAYLOR, Peoria, Ill., assignor to Standard Oil Company, Whiting, Ind., and Chicago, Ill., a Corporation of Indiana. Filed Sept. 14, 1925. Serial No. 56,230. 5 Claims. (Cl. 137—139.)

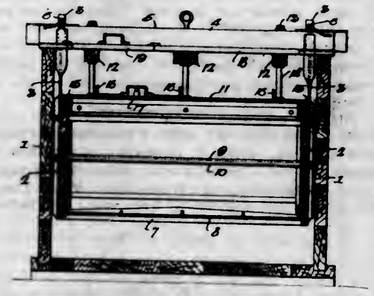
1. A portable valve-operating tool comprising a socket-forming head provided with a handle and having hooks projecting in relatively opposite directions from diagonally-opposite parts of said head.

4. A valve-operating tool having a socket-forming head adapted for connection with the operating member of a valve, and means carried by said head of such form as to permit of the removal of the tool from the valve only when the valve is in closed position.



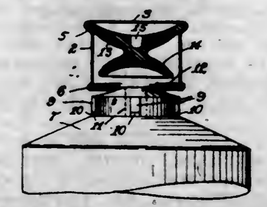
1,569,645. FAUCET. GUSTAV THALER, Oakland, Calif. Filed Aug. 21, 1922. Serial No. 583,220. 1 Claim. (Cl. 251—8.)

A faucet comprising a body provided with a longitudinal hole therethrough and having one end thereof terminating in a cylindrical inverted chamber concentric with the hole, threads formed on the exterior of the chamber wall, a second wall surrounding and spaced from the chamber wall to provide a channeled guideway and said second wall having threads formed on the exterior thereof, a ball valve adapted to be received in the chamber to form a closure for the said hole, a nozzle member having one end enlarged and formed to be received in the channeled guideway and engage the threads on the wall of the chamber, spider arms cast in said nozzle and terminating in a cupped chair for the ball valve, a threaded gland adapted for engagement with said second wall and having a bore to receive the said enlarged end of the nozzle member, the said gland adapted to retain and compress packing against the cylindrical surface of the enlarged end of the nozzle, and a handle carried by the nozzle member to turn the same whereby the enlarged end of the nozzle will travel vertically in the channeled guideway and likewise the ball valve in the chamber to open and close the hole in the body.



1,569,646. CLOTH-INSPECTING MACHINE. NORMAN T. THOMAS, Nashua, N. H., assignor to Nashua Manufacturing Company, Nashua, N. H., a Corporation of New Hampshire. Filed Oct. 15, 1923. Serial No. 668,510. 6 Claims. (Cl. 26—70.)

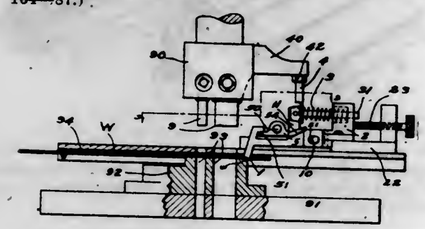
1. In a cloth inspection apparatus, the combination of an inspecting stand, mechanism for feeding a web of cloth over said stand, a cradle for supporting a roll of cloth from which said web is unwound in a position under said stand, a platform in front of said stand for supporting a plurality of said rolls, rails for supporting said rolls



for delivery from said platform to said cradle, a seat normally positioned in front of said stand, and means at one side of the path of delivery of said rolls for supporting said seat.

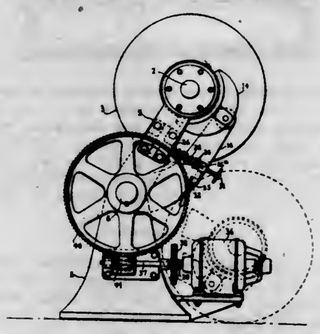
1,569,647. APPARATUS FOR DYEING RAW STOCK. JAMES H. THOMPSON, Trenton, N. J., assignor to Husong Dyeing Machine Company, Groveville, N. J., a Corporation of New Jersey. Filed July 9, 1925. Serial No. 42,484. 4 Claims. (Cl. 8—19.)

2. The combination in a dyeing machine for raw stock, of a vat; a beam structure arranged to rest on the vat; a cage located within the vat and detachably suspended from the beam structure; a perforated, movable bottom for the cage; a perforated top for the cage, which is suspended from the beam structure independently of the cage; and a cover for the vat carried by the beam structure.



1,569,648. CLOSURE FOR CONTAINERS. MANEL G. TORMO, New York, N. Y., assignor to Olive Deimel, New York, N. Y. Filed Dec. 19, 1924. Serial No. 756,888. 4 Claims. (Cl. 221—60.)

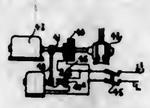
1. In combination, a container having the neck provided with a series of upright ribs on the outer side, each rib having a lateral groove at the base, a cap of resilient metal provided with a bead at the lower edge project-



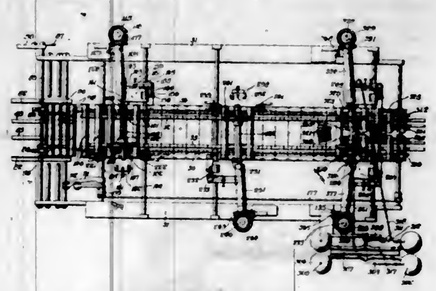
ing inwardly, the bore of the cap having a diameter adapted to snugly fit the said neck at the rib portions, whereby the cap can be applied to said neck and be expanded by said ribs until the bead will reach the grooved portions of the ribs, whereupon return of the cap to normal shape will cause the bead to enter said grooves and lock the cap on the neck.

1,569,649. AUTOMATIC STOP FOR PUNCHING MACHINES. EUGENE W. WAY, Seattle, Wash. Filed Aug. 18, 1924. Serial No. 732,668. 6 Claims. (Cl. 164—87.)

1. An automatic stop for punching machines comprising a dog normally positioned to engage a previously punched hole, supporting means for said dog permitting its movement towards and from the work and bodily in the direction of movement thereof, means operable upon formation of a new hole to move said dog from engagement with the previously punched hole, and means operable upon release of the dog from the previously punched hole to advance it therebeyond, said first means being operable thereafter and prior to withdrawal of the tool from the work to release the dog to permit it to resume its normal position upon advance of the work.



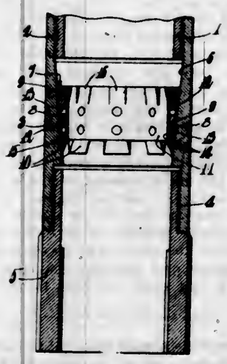
1,569,650. MECHANISM FOR FEEDING MATERIAL FROM ROLLS. JOHN S. COLDWELL, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Dec. 29, 1923. Serial No. 683,306. 17 Claims. (Cl. 242—75.)



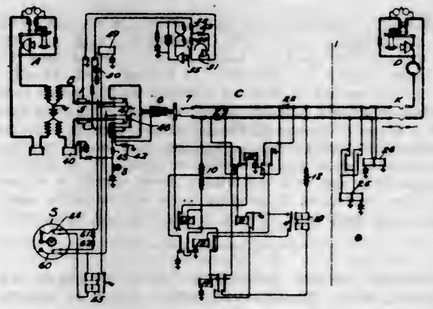
1. A mechanism for tensioning material drawn from a web roll comprising means for imposing a frictional drag on said roll and for rendering such drag proportional to the weight of said roll, said means including means for resolving the weight of said roll into component forces, one of which is effective to control such drag.

1,569,651. GOVERNING DEVICE. WILLIAM H. COSTELLO, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Sept. 1, 1921. Serial No. 497,770. 4 Claims. (Cl. 175—355.)

1. The combination with a machine, of a clutch for transmitting power thereto and a governing device associated with said machine including a member to be driven by said machine, an inertia member which is normally held in a given relation with respect to said former member and is adapted to move relatively thereto upon a given change in the rate of acceleration of said driven machine, and control means for said clutch associated with said members.

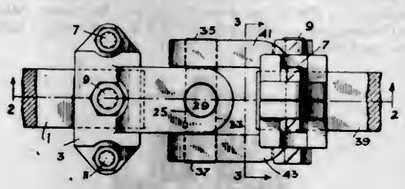


1,569,652. GLASS-BODY-FORMING MACHINE. HANS N. HALVERSEN, Vineland, N. J., assignor to Kimble Glass Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 2, 1922. Serial No. 533,574. 11 Claims. (Cl. 49—7.)



1. In a machine of the character described, the combination of means to heat a part only of a hollow glass body, and mechanical means to subject the interior of said body to a plurality of fluid pressures of progressively greater intensity to round out such heated part.

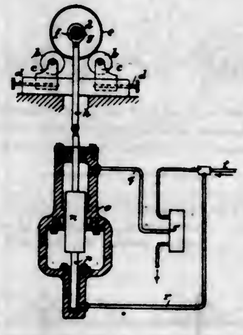
1,569,653. CORE DRILL. HALBERT B. HALVORSEN, Michigan City, Ind., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed May 5, 1924. Serial No. 710,963. 12 Claims. (Cl. 255—72.)



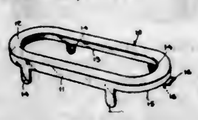
1. A core lifter comprising separate spaced wedge shaped supporting members, core gripping means provided with projecting core engaging members, and means for rigidly securing each of said supporting members to said core gripping means.

1,569,654. TELEPHONE-EXCHANGE SYSTEM. EUGENE C. HELWIG, Hackensack, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 31, 1921. Serial No. 526,226. 21 Claims. (Cl. 179—27.)

1. In a telephone exchange system, a plurality of subscribers' lines, means including a cord circuit and a connected trunk circuit for establishing a connection between two of said lines, an impulse sender for transmitting impulses over the two sides of said trunk circuit in series, an inductive device in the trunk circuit, a key for connecting said impulse sender to the cord circuit, a relay, and means for energizing said relay during the actuation of said key to provide a path around said inductive device.



1,569,655. LOCOMOTIVE-STOKER MANGANESE STEEL UNIVERSAL JOINT. ANDREW M. HUNT, New York, N. Y., assignor to Standard Stoker Company, Incorporated, Wilmington, Del., a Corporation of Delaware. Filed Feb. 1, 1924. Serial No. 689,937. 3 Claims. (Cl. 64—102.)



2. A universal joint adapted for use where lubrication is neglected, said joint having bearings of manganese steel and consisting of a pivot hub provided with four stub shafts, a pair of castings forming a fork secured to a driving shaft at one end of the pivot hub and another similar pair at the opposite end secured to a driven shaft.

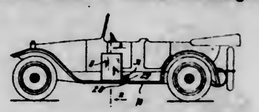
1,569,656. WINDING APPARATUS FOR THE MANUFACTURE OF INSULATING TUBES CONSISTING OF PAPER AND RESIN. WALTER KEHSE, Dresden-Kemnitz, Germany. Filed Sept. 5, 1924. Serial No. 736,025. 5 Claims. (Cl. 93—81.)

1. In an apparatus for winding paper tubes comprising spaced heated cylinders, a winding core, and hydraulically operated devices for moving the winding core toward the heated cylinders and pressing the paper as wound on the core against the said heated cylinders and between the same and the winding core.

1,569,657. NAME PLATE FOR BRIEF CASES AND SIMILAR ARTICLES. ABRAHAM LEVINE, Elizabeth, N. J. Filed May 29, 1924. Serial No. 716,636. 1 Claim. (Cl. 40—17.)

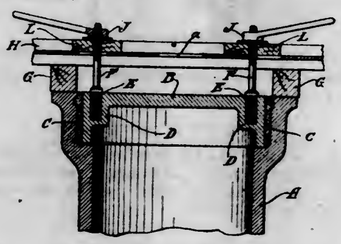
In a brief case an attachment therefor adapted to be attached to the hasp thereof comprising a metallic frame of sheet material bent to form the cross-section which is substantially in the shape of the letter U having unequal legs, the inner shorter leg forming a shoulder or bead portion and the outer leg forming retaining walls and hasp abutting joints and fastening prongs or spurs integral with the outer wall, said outer wall having a cut-out portion for part its length to form a card insert and removing portion, and a flexible tongue portion projecting from the outer edge of the said cut-out portion forming a closure element for said cut-out portion, the whole being adapted for attachment to the brief case by upsetting or bending the prongs or spurs and serving to retain a name plate or card within its enclosing walls.

1,569,658. CAP. DAVID LEVINSON, Chicago, Ill., assignor to Wilson-Western Sporting Goods Co., Chicago, Ill., a Corporation of Delaware. Filed May 10, 1923. Serial No. 638,019. 4 Claims. (Cl. 2—195.)



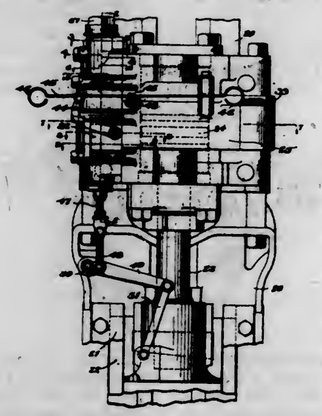
1. A visor formed to provide a pocket for the reception of transparent material, a sight opening provided in the visor, and a slot provided in the material forming the pocket through which the transparent material may be passed to close the sight opening provided in said visor.

1,569,659. TOOL BOX. ADOLPH LOWY, New York, N. Y. Filed Dec. 13, 1924. Serial No. 755,741. 1 Claim. (Cl. 224—29.)



The combination with a support, of a casing fixed thereto having an open front, partitions dividing said

casing into a plurality of compartments, a drawer slidable in each compartment, a bottomless housing adapted to be

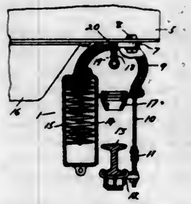


slipped over said casing and entirely enclosing the latter, and coacting means on said support and said housing for locking the latter in position on said casing.

1,569,660. PIPE PLUG AND METHOD OF REMOVING THE SAME. THOMAS G. MASSEY, Montecito, Calif. Filed Mar. 28, 1922. Serial No. 547,493. 12 Claims. (Cl. 137—76.)

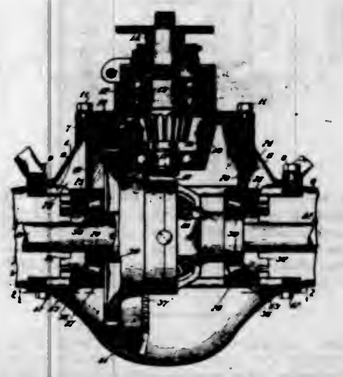
4. The combination with a pipe end, a plug slidably secured therein, interiorly threaded nipples secured at opposite points in the plug, stud bolts for removing the plug adapted to be secured in the nipples, a cross bar through which the stud bolts pass, said cross bar having bearings on the pipe end outside the path of the plug, and nuts on the studs engaging the cross bar.

1,569,661. VALVE MECHANISM FOR CHANNELING MACHINES. HENRY H. MERCER, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed May 27, 1918. Serial No. 236,895. 16 Claims. (Cl. 121—23.)



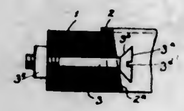
1. The combination with a cylinder, a piston therein, and fluid pressure operated distributing valve mechanism for controlling the movements of said piston in said cylinder, of a valve chamber having a single discharge port, a plurality of exhaust ports communicating with said valve mechanism, and opening into said valve chamber at points between the extreme limits of said discharge port and a plurality of supply ports communicating with said valve mechanism, means for supplying fluid pressure to said valve chamber, and a reversing valve in said chamber and movable into successive positions therein, said valve in each position closing one of said supply ports and one of said exhaust ports, while opening another of said supply ports and placing another of said exhaust ports in communication with said discharge port.

1,569,662. METHOD OF MANUFACTURING RUBBER ARTICLES AND VULCANIZING THE SAME. THOMAS W. MILLER, Ashland, Ohio. Filed May 24, 1923. Serial No. 641,245. 11 Claims. (Cl. 18—53.)



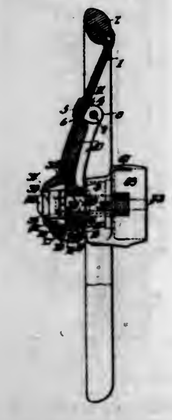
2. The method of forming a rubber article which comprises forming a plurality of stocks each containing each of a group of agents of vulcanization which in a proper proportion would produce vulcanization under working conditions, each containing these agents in a different proportion, and each containing these agents in a proportion ineffective to produce such vulcanization under the same conditions, uniting said stock, and vulcanizing.

1,569,663. SHOCK ABSORBER. EDGAR D. MISNER, Detroit, Mich. Filed Oct. 15, 1923. Serial No. 668,726. 10 Claims. (Cl. 267—10.)



1. In a shock absorber, the combination with a frame comprising a plurality of complementary sections having internal channels registering with each other, of a strap slidably engaging in said channels, and a spring for placing said strap under tension.

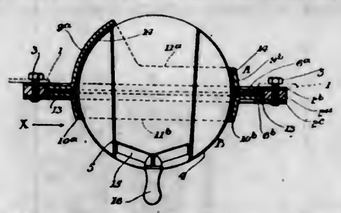
1,569,664. DIFFERENTIAL CARRIER FOR MOTOR VEHICLES. EDMUND C. MOGFORD, Buchanan, Mich., assignor to Clark Equipment Company, Buchanan, Mich., a Corporation of Michigan. Filed Mar. 9, 1922. Serial No. 542,296. 3 Claims. (Cl. 74—56.)



3. A differential housing for motor vehicles comprising an intermediate member, a head secured to the front side thereof, a cover plate secured to the rear side of said intermediate member, a bearing supporting member connected with said head, and a second bearing supporting member adapted to cooperate with said first-mentioned bearing supporting member and to bear laterally against said cover plate adjacent to the margin thereof, said cover plate and the second bearing supporting member being disconnected from each other.

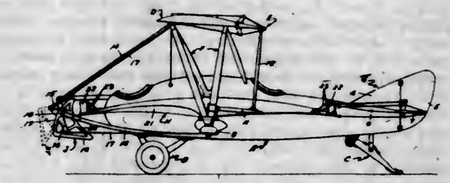
1,569,665. SCORING DEVICE FOR TILE-FORMING DIES. CHARLES E. MULLINS, Roanoke, Ill., assignor to John T. Barrow, Chicago, Ill. Filed Apr. 30, 1921. Serial No. 465,638. 10 Claims. (Cl. 25—20.)

1. In a die for molding tile and the like means for scoring the surface of the tile comprising a frame having an opening which approximates the cross sectional outline of the tile to be formed and is bounded by surfaces converging in the direction of movement of the material therethrough and scoring teeth projecting from said converging surfaces, said teeth being of greater cross section at a distance from said surfaces than at planes thereof in order to form undercut grooves in the material passed through the frame.



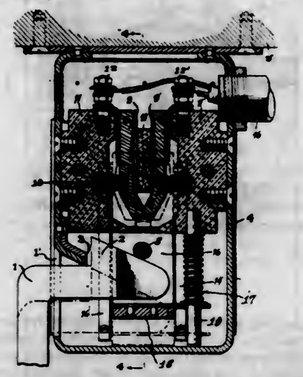
1,569,666. TILTABLE STEERING WHEEL. JAMES A. MURPHEY, Germantown, Pa. Filed Nov. 27, 1922. Serial No. 603,459. 9 Claims. (Cl. 74—33.)

1. An automobile steering wheel having a hub; a swivel connecting said wheel and hub, arranged to permit said wheel to turn upon two axes in transverse relation to each other and both eccentric with respect to the wheel axis; and screw means whereby said swivel connection may be tightened, including a screw thread on said swivel and a screw socket on said wheel engaging the same; and a spring washer between said swivel and said wheel, arranged to prevent rattling.



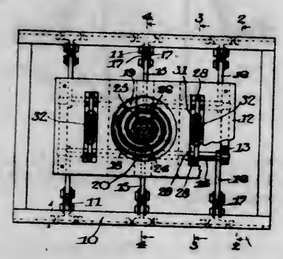
1,569,667. AIR-DIRECTING DEVICE. THOMAS NEILSON, Glasgow, Scotland. Filed Apr. 20, 1925. Serial No. 24,622. 5 Claims. (Cl. 299—73.)

1. An air directing device comprising, in combination, a rotatable bearing ring, means supporting said bearing ring, a part cylindrical socket on said bearing ring, and a nozzle rotatable in said socket and consisting of a



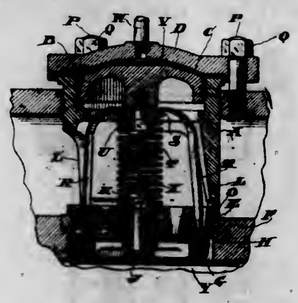
cylinder having a tubular passage therethrough, the bearing ring and cylinder being independently rotatable about mutually perpendicular axes.

1,569,668. VERTICALLY-RISING AEROPLANE. VALENTINE NEWBAUER, Minneapolis, Minn. Filed Sept. 15, 1924, Serial No. 737,748. Renewed Nov. 14, 1925. 10 Claims. (Cl. 244—15.)



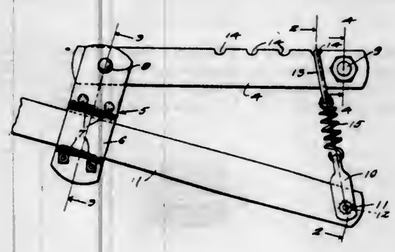
1. An aeroplane comprising a fuselage, supporting wings therefor, a pair of horizontally arranged propeller members at the sides of the fuselage and under said wings, adjustable stabilizing members arranged in the operating planes of said propellers, and an adjustable deflecting member arranged in advance of the propeller members.

1,569,669. BAR-LOCK SWITCH. CLIFFORD NORTON, New York, N. Y., assignor to Graham & Norton Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 11, 1923. Serial No. 631,378. 10 Claims. (Cl. 200—55.)



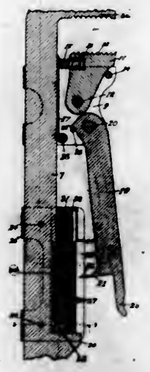
1. The combination of an electric switch, a locking bar or member adapted to interlock with and positively throw said switch both to normal position in the locking and to safety position in the unlocking movement of said bar and means for automatically throwing said switch back from safety position to position normal for the unlocked position of said bar independently of said bar in case of manual or accidental shifting of said switch away from safety position independently of said locking bar or member.

1,569,670. SPRING SUSPENSION. CHARLES H. PALMER, Milwaukee, Wis. Filed Feb. 29, 1924. Serial No. 695,946. 5 Claims. (Cl. 267—20.)



1. In a spring suspension, the combination with a supporting frame, of a load-receiving frame having a pair of spaced parallel shafts rotatably mounted thereon, arms fixed to said shafts and having their outer ends pivotally connected to said supporting frame at opposite sides, a spring mounted on said load-receiving frame and operatively connected to said shafts to yieldingly restrain their rotation under load, and a second spring supported from said shafts and operatively connected thereto to yieldingly restrain the rotation of said shafts in a direction opposite to that produced by an impressed load, whereby said last-named spring becomes effective on the recoil of the first-named spring to decelerate the upward movement of said load-receiving frame.

1,569,671. COMPRESSOR-VALVE LIFTER. FREDERICK W. PARSONS, Elmira, N. Y., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Jan. 22, 1925. Serial No. 4,038. 2 Claims. (Cl. 137—153.)

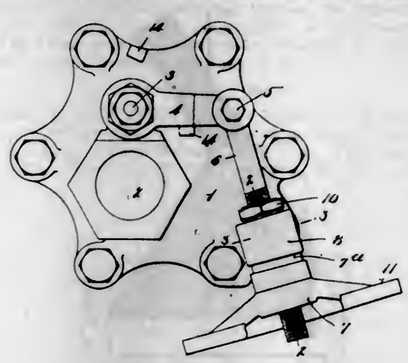


2. Means for actuating a plate valve for compressors of the type in which fingers extending outwardly and downwardly bear upon the valve, comprising a cylindrical cage adapted to fit over and upon the seat of a plate valve, a cover plate adapted to be bolted to the cylinder jacket and to hold the said cage in fixed relation to the said plate valve, a diaphragm held between said cylindrical cage and the cover plate and actuated by pressure fluid entering through the said cover, a piston fitting loosely on the upper part of said cage and responsive to said diaphragm, a valve lifter of the type described operably mounted in the lower part of said cage and means for suitably connecting the said valve lifter to the said piston.

1,569,672. SHOCK ABSORBER FOR HAND CRANKS. ELMER C. PEABODY and WILLIAM ROUSE, Dillon, Colo. Filed June 23, 1925. Serial No. 39,137. 3 Claims. (Cl. 74—33.)

1. A device of the character set forth, comprising a main crank, an auxiliary crank, means pivotally connecting the auxiliary crank to the main crank, a clevis pivoted to the main crank, a link adjustably connected to the auxiliary crank, a spring connected to the clevis and link, and a handle connected to the auxiliary crank.

1,569,673. WRENCH. OSCAR CHAS PIETSCH, Hancock, Mich. Filed Sept. 28, 1923. Serial No. 665,402. 4 Claims. (Cl. 81—134.)



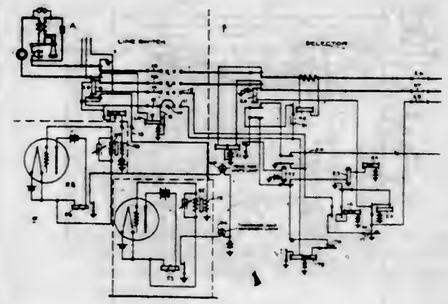
1. A wrench consisting of a shank having a fixed jaw at one end and a movable jaw slidably arranged on the shank, a column of substantially U-shaped blades slidably retained upon an intermediate portion of the wrench and a lever pivotally arranged with respect to the movable jaw, at one end, and having its opposite end engageable with said blades, said shank having laterally arranged longitudinal channels to receive the inner ends of said blades.

1,569,674. VALVE. REGINALD J. S. PIGOTT, Brookline, Mass., assignor to Crosby Steam Gage & Valve Company, Boston, Mass., a Corporation of Massachusetts. Filed June 2, 1922. Serial No. 565,467. 3 Claims. (Cl. 251—18.)

1. In a valve of the character described, means for operating the valve controlling spindle comprising, in combination, a lever operatively attached to the spindle;

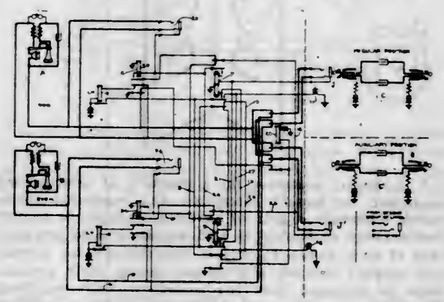
a screw having one end pivoted to the lever; a bushing rotatably disposed on the screw in threaded engagement therewith; a hub swivelled in the case about an axis at

right angles to the longitudinal axis of the screw and interiorly rotatably engaged by the bushing; and means for rotating the bushing and thereby actuating the screw.



1,569,675. COMBINATION UNDERGARMENT. LÉDA H. PLAUCHÉ, New Orleans, La. Filed May 8, 1925. Serial No. 28,880. 1 Claim. (Cl. 2—73.)

A combination garment having a body encircling member including front and back portions, the front portion being longitudinally divided throughout its length, said front and back portions terminating at their lower ends in flaps forming a portion adapted to extend between the legs, defining leg apertures, the latter portion being transversely separable, shoulder straps connecting said front and back portions, and means for detachably fastening the margins of said body encircling portion together, certain of said means functioning also as a detachable fastening means for one of said shoulder straps.

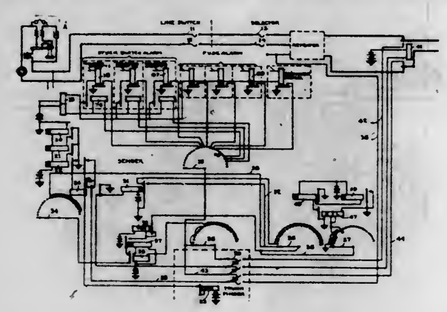


1,569,676. AUTOMATIC TELEPHONE SYSTEM. WINFRED T. POWELL, Rochester, N. Y., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed Nov. 30, 1921. Serial No. 518,874. 7 Claims. (Cl. 179—27.)

1. In a telephone system, a plurality of telephone lines, each having a different arbitrary designation, an operator's position, means for connecting a calling telephone line to said operator's position, a line indicating device a source of alternating current associated with said operator's position, and means responsive to the same

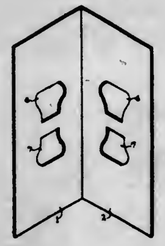
number of applications of said source of alternating current in all cases and effective after the initiation of calls on said lines for actuating said indicating device in accordance with the designations of said telephone lines.

1,569,677. TELEPHONE SYSTEM. WINFRED T. POWELL, Rochester, N. Y., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed Dec. 8, 1922. Serial No. 605,718. 10 Claims. (Cl. 179—54.)



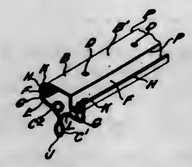
10. The method of handling telephone calls which consists in grouping the lines in pairs, extending a call from either one of a pair of lines to a predetermined outlet, thereupon extending a call contemporaneously originated from the other line of the pair to a second predetermined outlet, and completing the calls from said outlets.

1,569,678. AUTOMATIC TELEPHONE SYSTEM. WINFRED T. POWELL, Rochester, N. Y., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed Sept. 4, 1923. Serial No. 660,761. 6 Claims. (Cl. 179—27.)



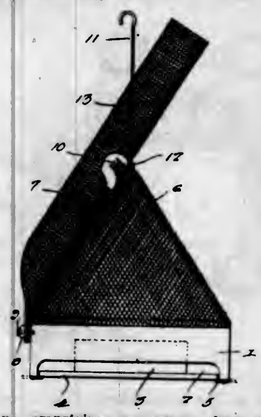
1. In a telephone system, a primary office, a second office, means including several kinds of apparatus at said primary office, one or more trunk circuits extending between said offices, an attendant's position at said second office, means including directively operable switches and link circuits for extending a trunk to said attendant's position, an impulse sender, means responsive to the faulty operation of any of said apparatus for connect-

ing said sender to one of said trunk circuits, means directively controlled from said impulse sender for operating said switches to extend said trunk circuit through



said link circuits to said attendant's position, and means for signaling the kind of faulty apparatus over said established connection.

1,569,679. DISPLAY CONTAINER FOR SEPARABLE DEVICES. JOHN B. SANBORN, Evanston, Ill. Filed Jan. 18, 1923. Serial No. 613,348. 9 Claims. (Cl. 211—34.)

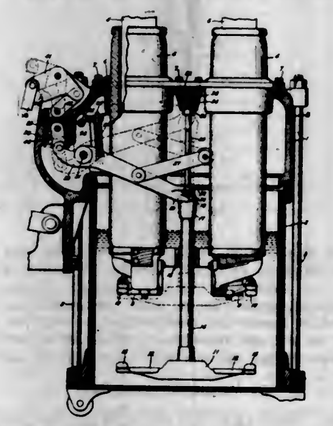


1. A display container for a plurality of devices each consisting of loosely interfitted and separable parts, which comprises a pair of perforated sheets to receive therebetween a number of said devices and to permit a part of each device to project therethrough for display and support thereof, said sheets having their perforations so arranged that the several devices positioned therein cooperate to restrain their respective unsupported parts against displacement from the container.

1,569,680. TRAVERSE ROD FOR DRAPERY. DICKRAN M. SARKISIAN, Forest Hills, N. Y. Filed Sept. 28, 1921. Serial No. 503,870. 3 Claims. (Cl. 156—20.)

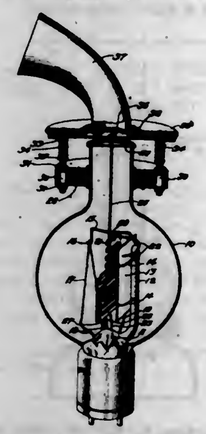
1. A traverse rod having a flat middle portion, depending walls integral therewith, an outwardly extending flange integral with each wall and an upstanding rail carried by each flange, the middle portion and walls forming a central channel between a pair of spaced channels formed by the walls, flanges and rails.

1,569,681. FLYTRAP. HENRY H. SCHENK, Memphis, Mo. Filed Mar. 23, 1925. Serial No. 17,711. 1 Claim. (Cl. 43—118.)



A fly trap comprising an opaque base section provided with a fly entrance, a bait holder removably supported within the base section, a substantially conical shaped wire mesh chamber having its larger end secured to the upper portion of the base section and communicating therewith, a substantially cylindrical shaped fly entrapping compartment formed of wire mesh extending upwardly along the outer face of the conical chamber, the upper portion of said fly entrapping compartment extending above the apex of the conical shaped chamber, said chamber being provided with a fly exit which extends into the intermediate portion of the fly entrapping compartment, the upper end of the compartment being closed, the lower end thereof being open, means for normally closing the open lower end of said compartment, and a suspension hook for said trap, said lower end of said hook being attached to the upper portion of said chamber and said hook being provided with a compartment encircling portion.

1,569,682. METHOD OF AND APPARATUS FOR ASCERTAINING THE PROPORTION OF A CONSTITUENT IN A FLUID. EDWIN X. SCHMIDT and ULRIC O. HUTTON, Milwaukee, Wis., assignors to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Jan. 30, 1924. Serial No. 689,455. 16 Claims. (Cl. 73—51.)

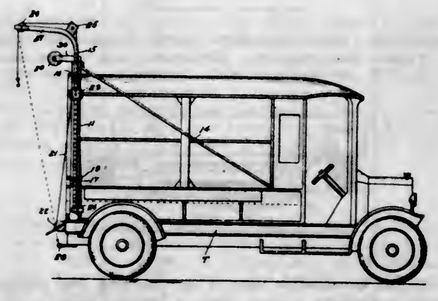


1. The method of ascertaining the proportion of a constituent in a fluid, which comprises simultaneously subjecting dimensionally proportioned portions of a thermally expansible medium to influence respective of the test fluid and of a standard medium, the temperature of said first mentioned medium being maintained different from that of said test fluid, and utilizing the differential of the resultant changes in dimension of such portions of said first mentioned medium in indicating the proportion of such constituent in the test fluid.

1,569,683. ELECTRIC SWITCH. CHARLES F. SCHWENNER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Jan. 5, 1924. Serial No. 684,669. 7 Claims. (Cl. 200—150.)

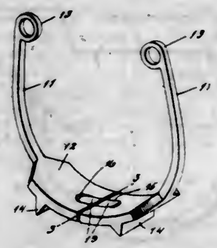
1. In a fluid break switch, a receptacle comprising a cover and having an opening therein and adapted to contain fluid immersed switch contacts, a piston mounted in said opening and contact operating mechanism connected with opposite sides of said piston.

1,569,684. ELECTRON-DISCHARGE DEVICE. PAUL SCHWERIN, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 11, 1922. Serial No. 551,531. 14 Claims. (Cl. 179—121.)



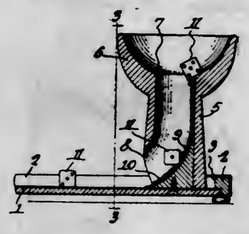
1. A transmitting device comprising a vessel a portion of the wall of which is flexible, a pair of grids within said vessel, one of said grids being movable relative to the other, and means connecting said flexible portion and said movable grid.

1,569,685. UPHOLSTERY PIPING BAT AND METHOD OF MAKING THE SAME. MAURICE JOSEPH STACK, Cohoes, N. Y. Filed Mar. 16, 1925. Serial No. 16,079. 10 Claims. (Cl. 19—145.)



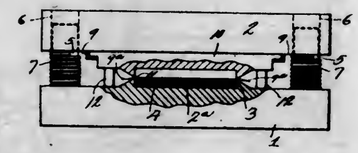
7. A continuous bat with a core composed of the same material as the bat loosely twisted into the form of a rope and having its fibres interlocked with those of the bat proper.

1,569,686. DERRICK. EDWARD LEO TIRRELL, Phillipsburg, N. J. Filed Nov. 16, 1923. Serial No. 675,075. 4 Claims. (Cl. 214—3.)



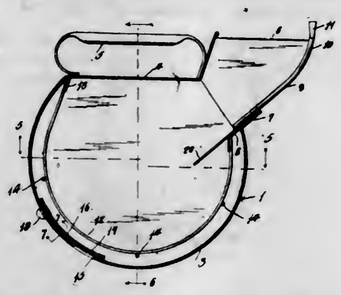
1. In combination with a vehicle, a frame mounted at one end thereof, a movable lifting boom mounted on said frame and provided with means for lifting a pole or the like from a prone to an inclined position and means mounted on said frame and adapted to engage a pole or the like held by said lifting means and to elevate the same on movement of said vehicle.

1,569,687. NONSKID DEVICE. JAMES W. URIE, Carson City, Mich., assignor of one-half to James C. Goolthrite, Carson City, Mich. Filed Sept. 17, 1925. Serial No. 56,880. 3 Claims. (Cl. 152—14.)



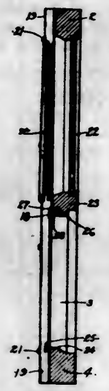
1. A non-skid device for vehicle tires, comprising a plurality of flexibly connected non-skid members disposable upon a tire in embracing relation thereto, each of said members including a pair of sections, and calks arranged transversely of the members and providing the pivotal connecting means for the sections thereof.

1,569,688. GAME BOARD. GILL UTTER, Tacoma, Wash. Filed Oct. 17, 1925. Serial No. 63,101. 1 Claim. (Cl. 273—145.)



A dice throwing apparatus comprising a supporting base, a hollow post rising therefrom and having an opening in one wall near its lower end, a curved plate in the throat of said post opposite said opening, and a bowl-shaped receiving member carried by the upper end of the post and having a central opening communicating with the interior of the post, said bowl having a shoulder at its junction with the post whereby the dice are struck and thorough tumbling thereof insured.

1,569,689. SOLE MOLDING AND TRIMMING DEVICE. GINO VANNONI, Mishawaka, Ind. Filed Aug. 1, 1925. Serial No. 47,541. 7 Claims. (Cl. 18—16.)

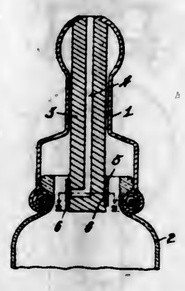


1. The combination with a sole molding and cutting mold comprising a base plate, a presser plate, a cutting edge surrounding a stock receiving cavity carried by the base plate and with which the adjacent side of the presser plate cooperates during a sole forming operation, of cutter receiving members carried by the adjacent side of the presser plate and positioned whereby they will not interfere with the pressing operation.

1,569,690. SELF-CLEANING BERRY PICKER. WEBSTER WAINIO, Watton, Mich. Filed May 7, 1925. Serial No. 28,744. 2 Claims. (Cl. 56—330.)

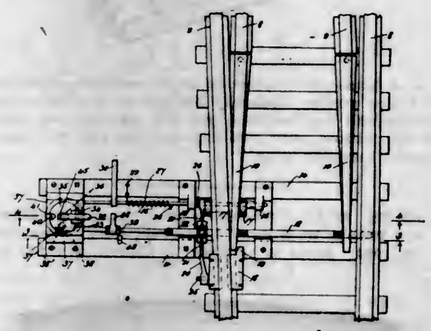
1. A berry picker comprising a container having an opening in its bottom wall, a closure for said opening, a nozzle, parallel bars secured in said nozzle and constituting picking fingers, and a screen spaced from the bottom wall of the container.

1,569,691. DETACHABLE WINDOW. OTTO A. WALSTAD, Minneapolis, Minn. Filed Feb. 11, 1924. Serial No. 692,066. 23 Claims. (Cl. 20—52.2.)



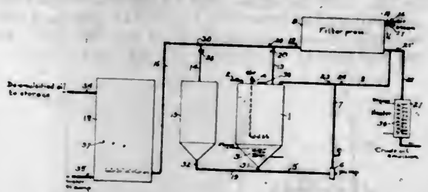
1. The combination, with a window frame and a sash mounted to move vertically therein, of guides arranged to bear on said sash with a yielding pressure, said guides having gaps therein near the middle portion of the window frame and permitting the sash to be disengaged at one end from said guides and removed from said frame during the vertical movement of said sash.

1,569,692. PREPARATION OF ALKALI CELLULOSES. EMILE VAN WEYENBERGH, Clapham, London, England, assignor to Courtaulds Limited, London, England. Filed Mar. 6, 1925. Serial No. 13,652. 4 Claims. (Cl. 260—10.)



1. A process for the production of alkali cellulose containing not less than 30% by weight of caustic alkali, and not more than about 35% by weight of water, which consists in steeping the cellulose in a solution containing more than 55% by weight of caustic alkali at a temperature of at least approximately 40° C. but not high enough to detrimentally affect the cellulose, and then removing the excess caustic alkali solution while maintaining a raised temperature.

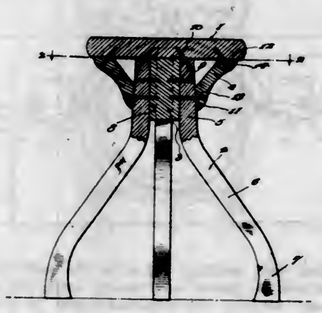
1,569,693. NURSING NIPPLE. LLEWELLYN C. YOUNG, Toledo, Ohio. Filed Nov. 7, 1924. Serial No. 748,301. 2 Claims. (Cl. 128—252.)



2. A nursing nipple having an outer shell of yielding material with a discharge orifice in its outer end, a relatively stiff feed tube projecting through the nipple and adhesively connected thereto, said tube having a passage communicating with said discharge opening and a laterally disposed inlet opening, a sleeve valve having a plurality of different sized orifices selectively to register with said inlet opening, said valve being rotatably mounted on said tube thereby to regulate the liquid flow therethrough by manually adjusting said valve.

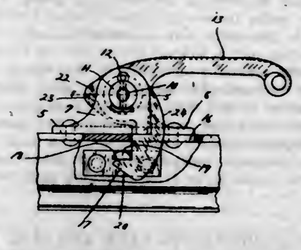
1,569,694. RAILROAD SWITCH. OTIS E. ZIPPERER, Coleman, Fla. Filed July 13, 1925. Serial No. 43,352. 6 Claims. (Cl. 246—402.)

2. The combination, with a stationary rail, and a movable point; of a locking block slidable longitudinally on the lower part of the rail and having a tooth on one side which normally overlaps the tip of the point, a locking shaft journaled crosswise of and projecting under the rail and point, eccentric locking disks secured on the said shaft and normally arranged to lock the point to the rail, and a connecting-rod pivoted to one of the disks and to the said locking block on the other side of the rail from the said tooth.



1,569,695. APPARATUS FOR DEEMULSIFICATION OF OILS, ETC. CHARLES V. ZOUL, Santa Monica, Calif., assignor, by mesne assignments, to The Celite Company, a Corporation of Delaware. Filed Jan. 30, 1923. Serial No. 615,781. 4 Claims. (Cl. 196—4.)

3. An apparatus comprising a receptacle adapted to contain precoating liquid and a supply of precoating deemulsifying agent; means for warming and drying the contents of said receptacle; a filter press; means for forcing precoating liquid from said receptacle to the filter press to warm and dry the filter press and produce a precoat on the filtering media thereof, means for returning liquid from the filter press to the warming and drying receptacle; a second receptacle for pre-dried liquid and means for conducting the liquid from the filter press to said last named receptacle.

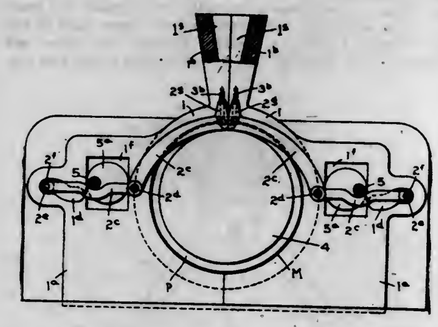


1,569,696. FLOWER STAND. SAMUEL A. ADAMS and JORDAN LEICESTER, Merry Hill, N. C. Filed Sept. 3, 1924. Serial No. 735,608. 2 Claims. (Cl. 45—117.)

1. A stand of the class described comprising a core block having a flat upper end and flat side faces, legs having the inner faces of their upper portions disposed against the respective side faces of the core block, fastening elements secured through the said upper portions of the legs and into the core block, the upper ends of the legs occupying the same plane as the upper end of the core block, a top disposed centrally of its under side upon the upper end of the core block and the upper ends of the legs, fastening elements secured through the upper end portions of the legs and into the under side of the said top,

brace members having lower end faces disposed against the outer faces of respective ones of the said legs at the said upper portions of the legs and upper end faces disposed against the under side of the said top, fastening elements secured through the lower end portions of the brace members, the upper end portions of the respective legs, and into the said core block, and other fastening elements secured to the upper end portions of the said brace members and into the said top.

1,569,697. WINDOW LATCH. GUSTAF IVAR BARCLAY, Detroit, Mich., assignor to Detroit Steel Products Company, Detroit, Mich., a Corporation of Michigan. Filed May 28, 1923. Serial No. 642,077. 6 Claims. (Cl. 292—126.)



1. The combination with a support provided with a pin, of a detent mounted upon said pin, a handle also mounted upon said pin, shoulders upon said detent and handle for swinging said detent from said handle upon swinging of said handle in one direction, said shoulders permitting the swinging of said detent independently of said handle, and a coil spring surrounding a portion of said pin for swinging said detent in a direction opposite to that taken when actuated by said handle.

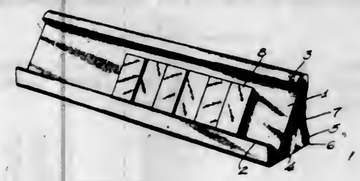
1,569,698. TUBULAR-STEREOTYPE-PLATE-CASTING MACHINE. HENRY F. BECHMAN, Battle Creek, Mich., assignor to Duplex Printing Press Company, Battle Creek, Mich., a Corporation of Michigan. Filed Aug. 14, 1922. Serial No. 581,668. 64 Claims. (Cl. 22—2.)

20. In a stereotype plate casting box, a core, opposite members adapted to surround the core to form a casting box and having projecting portions adjacent their meet-

ing edges; means for separating the members to open or close the box; said box having a mouth extending longitudinally of the core and formed between the project-

ing portions and meeting edges of the said members when the box is closed, said mouth being adapted to direct metal between the adjacent edges of a matrix when the latter is properly positioned in the box.

1,569,699. APPARATUS FOR RETAINING PARCELS OR THE LIKE ON VEHICLES. JOHN FREDRIK OSSIAN BERGSTRÖM, Ange, and BROR JOHAN BRUNZELL, Arbra, Sweden. Filed June 14, 1923. Serial No. 645,326. 2 Claims. (Cl. 242—109.)

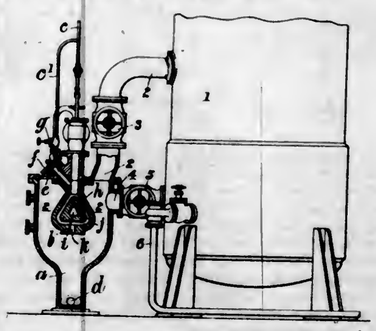


1. In a device for retaining parcels on vehicles, a casing, a roller mounted in the casing, a spring arranged to rotate the roller in one direction, a strap having one end attached to the roller and extending through an aperture in the casing, and a locking device for the strap embodying a shaft rotatably mounted in the casing, a clamping roller eccentrically mounted on said shaft for rotation thereby to and from clamping engagement with the strap, said shaft and roller arranged for limited movement independently of each other, and said shaft rotatable a distance independently of said roller before turning the roller to or from clamping position.

1,569,700. COMBINATION CANE AND GUN. FERNANDO SEVIDAL BERNABÉ, Malaski, Philippine Islands. Filed May 13, 1925. Serial No. 30,016. 2 Claims. (Cl. 42—52.)

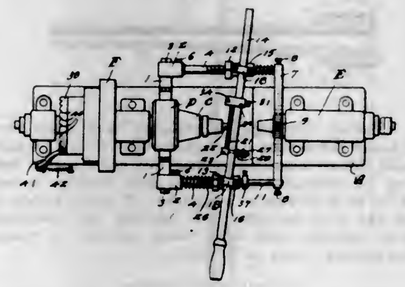
1. A device of the class described including a casing formed in sections, a barrel extended into both sections being slidable in one and fixed to the other, a hammer housing disposed within the barrel, and provided with an enlargement, said barrel provided with a bayonet slot for receiving the enlargement at the housing, means for fixing the enlargement of the housing to the casing, a hammer in the housing, means in the barrel for engaging one end of the hammer, a spring associated with the hammer, and means for releasing the hammer.

1,569,701. GAME TILE HOLDER. RICHARD E. BOSTROM, San Diego, Calif. Filed Apr. 1, 1924. Serial No. 703,517. 4 Claims. (Cl. 273—150.)



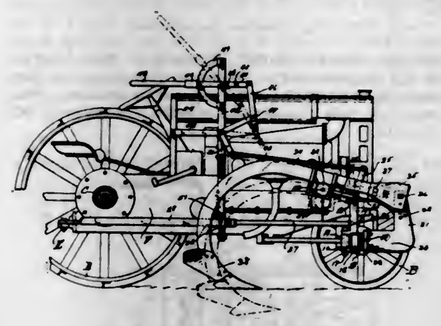
4. A holder for supporting game members, consisting of a long member having an inclined game member supporting side and provided near the opposite long edges of said inclined game member supporting side with game member retaining ledges.

1,569,702. ROAD CONSTRUCTION. THOMAS W. BROWN and WILBUR W. WOLARY, Centerville, Iowa. Filed June 13, 1924. Serial No. 719,860. 2 Claims. (Cl. 94—9.)



1. A road including a road-bed having the side walls thereof extending upwardly therefrom, a bottom layer of course construction material placed upon the road-bed, and between the walls thereof, the side edges of said bottom layer extending only part way to and being spaced from the side walls of the road-bed, a thin layer of extra fine construction material spread over the bottom layer, and a top layer of fine construction material spread over the last-mentioned thin layer, said intermediate and top layers of material extending around the sides of the bottom layer filling the spaces between the walls of said bottom layer and the road-bed.

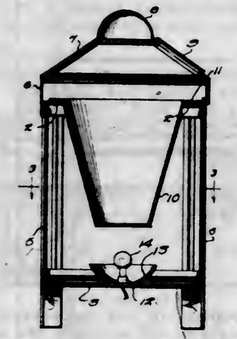
1,569,703. APPARATUS FOR STEAM-GENERATING AND SOLUTION-HEATING PURPOSES. OSCAR ANTON BRUNLER, Glasgow, Scotland. Filed Mar. 30, 1923. Serial No. 628,842. 3 Claims. (Cl. 60—45.)



1. A liquid heater comprising a casing open to a liquid supply and having an outlet, a burner arranged in the casing below the outlet, said burner comprising a jacket having a flame orifice in its lower portion and a direct fuel inlet in its upper portion, and a central part spaced from the jacket by fuel passages surrounding such central part, and an ignition tube arranged at an angle to the jacket and directing the flame therefrom upon the central part of the burner to heat the latter.

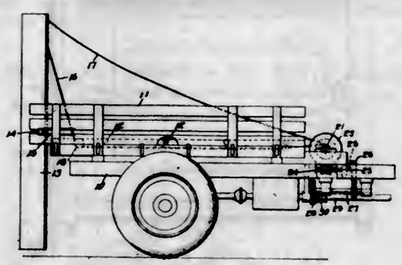
1,569,704. SAW-FILING ATTACHMENT FOR BUTTON-SAWING MACHINES. JAMES D. BUCHANAN, Ioln, Kans. Filed Apr. 11, 1925. Serial No. 22,414. 3 Claims. (Cl. 76—31.)

1. A saw filing device comprising a frame including threaded bars, guide sleeves slidably mounted on said bars, a file holder carried by said sleeves, a file mounted on the file holder, and nuts threaded on said bars to limit the movement of the guide sleeves thereon.



1,569,705. PLOWING ATTACHMENT FOR TRACTORS. OSWALD BUESCHER and RHYNE G. GOEBEL, Smithville, Tex. Filed Aug. 29, 1923. Serial No. 660,018. 6 Claims. (Cl. 97—47.)

1. A plow attachment for tractors including axle extensions having means for engagement with the front axle of a tractor, a bracket mounted on one of said extensions, a member extending upward from the last named extension, a thrust rod operatively engaging said member extending rearward therefrom and operatively engaged with the draw bar of the tractor, a plow beam pivotally mounted upon said bracket, and means detachably mounted upon the tractor whereby the plow beam may be raised or lowered.

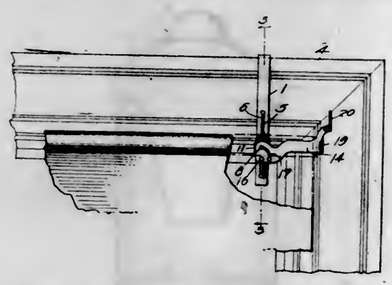


1,569,706. RECEPTACLE. JOHN E. BULWINKLE, Charleston, S. C. Filed Oct. 1, 1924. Serial No. 741,032. 1 Claim. (Cl. 40—132.)

In a device of the character described, an outer casing, said casing being provided with substantially transparent side walls, adapted to contain advertising matter, a substantially frusto-conically shaped inner receptacle arranged in said casing, the bottom of said inner receptacle being spaced from the bottom of said casing, a lamp arranged in the bottom of said outer receptacle, and a reflector arranged beneath said lamp and extending beyond the bottom of said inner receptacle whereby rays

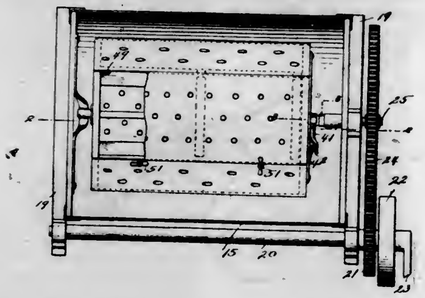
of light will be reflected to the walls of said inner receptacle and then outwardly through said transparent side walls of said outer casing.

1,569,707. DUMPING TRUCK. GUSSIE M. BUNNELL, Miami, Fla. Filed Mar. 29, 1922. Serial No. 547,793. 1 Claim. (Cl. 298—16.)



A truck having a body and an engine shaft, side members comprising spaced horizontally disposed slats carried by said body, a U-shaped member between the bottom pair of slats of each side member adjacent its rear end, the inner faces of the U-shaped member being flush with the respective slats, an inner body adapted to slide longitudinally of said truck body and adapted to tilt at the conclusion of its rearwardly sliding movement of said inner body having a trunnion at each side disposed between the bottom pair of slats and adapted to engage the curved portion of the U-shaped member to limit the rearward movement of the inner body, a transverse shaft at the forward end of the truck, means connecting said shaft in driving relation with the engine shaft, a pair of spools loosely mounted on the transverse shaft, a single clutch member between the spools and splined to the shaft whereby either spool may be driven by the transverse shaft, a pair of cables connected to the forward end of said inner body and adapted to be wound upon said spools for dumping the said inner body and restoring the same to its original position, substantially as set forth.

1,569,708. SHADE ROLLER AND CURTAIN POLE BRACKET. OSCAR BURNS, Troy, and PETER GISCHLAR, Hamilton, Ohio, assignors of one-third to Marshall E. Newhouse, Hamilton, Ohio. Filed Mar. 6, 1925. Serial No. 13,549. 4 Claims. (Cl. 156—24.)



2. A device for the purpose indicated comprising fixed and movable jaw members and a bar connecting the same,

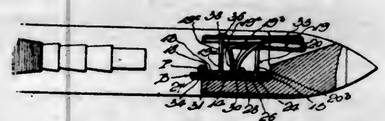
the bar being formed with a longitudinal slot, a shade roller supporting arm having a fulcrum pin movable longitudinally of the slot, and operative connections be-

tween the supporting arm and the movable jaw to advance the same toward the stationary jaw upon angular movement of the supporting arm in one direction.

1,569,709. WASHING MACHINE. ENOCH H. BURRAGE, Winston-Salem, N. C. Filed May 14, 1923. Serial No. 638,943. 5 Claims. (Cl. 68—18.)

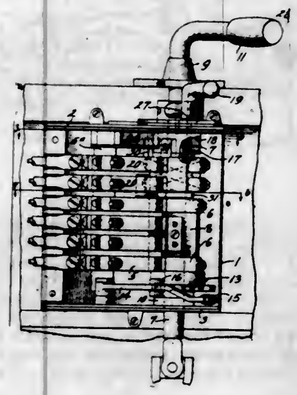
1. In a washing machine comprising a casing and a drum rotatable therein, a journal and bearing for said rotatable drum, comprising a plate secured to one end of said drum, said plate having a slot and a polygonal projection adjacent said slot, a stub shaft mounted for rotation in one end of the casing and having at one end a socket shaped to receive said polygonal projection, said socket having slots in its opposite walls in alinement with one another, and a locking member movable in the slot of said plate, projecting beyond the face of the latter, and movable in the slots of said socket above said projection.

1,569,710. DOG MAT. ARTHUR G. BURT, Baltimore, Md. Filed Aug. 29, 1924. Serial No. 734,918. 3 Claims. (Cl. 119—1.)



1. An article of manufacture comprising a mat upon which an animal is adapted to rest, the upper surface thereof being concaved for its greater area, the edge formed therearound being beveled and providing a head rest for the animal.

1,569,711. ALL-METAL BOBBIN. LOUIS ALEXANDRE CADORET, Pawtucket, R. I. Filed May 25, 1925. Serial No. 32,789. 4 Claims. (Cl. 242—121.)

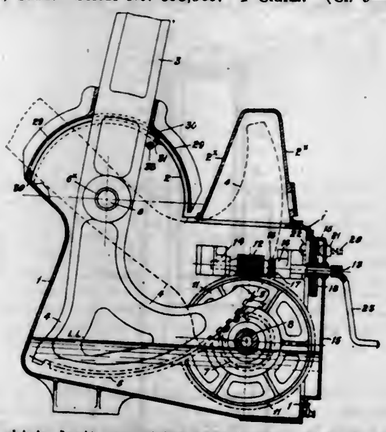


1. A bobbin comprising a one-piece hard metal band continuous throughout its circumference from any point on said circumference, and a cast soft metal bobbin body having an integral head portion cast directly in said band to form therewith a unitary all metal article in which the hard and soft metal portions are tenaciously secured together, said band being adapted to engage bobbin-holding means of a shuttle.

1,569,712. SHUTTLE THREADER. LOUIS ALEXANDRE CADORET, Pawtucket, R. I. Filed Oct. 8, 1925. Serial No. 61,284. 11 Claims. (Cl. 139—223.)

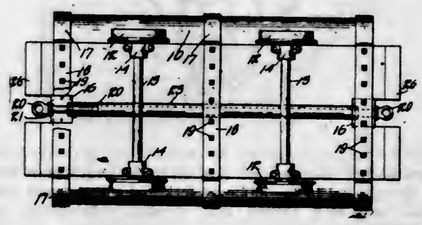
1. In a shuttle threader, thread-guiding means formed of wire and having laterally bent lower ends, and a base having pockets in which said ends are held.

1,569,713. CONTROLLER. WILLIAM C. CARR, Buffalo, N. Y., assignor to The Automatic Transportation Company, Buffalo, N. Y., a Corporation of Arizona. Filed Sept. 10, 1921. Serial No. 499,770. 2 Claims. (Cl. 200—18.)



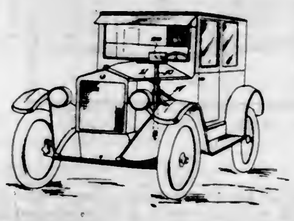
1. In a controller, in combination, a controller shaft, a reversing switch including a tubular operating shaft through which the controller shaft projects, movable contacts carried by the tubular shaft, movable contacts carried by the controller shaft below the tubular shaft, stationary contacts arranged in line with one another for cooperation with the several movable contacts, a common supporting bar for the stationary contacts and a supporting plate having a bearing for the tubular shaft and to which said bar is attached.

1,569,714. PUMP. CHESTER C. CARTER, Perryton, Tex. Filed Jan. 20, 1923. Serial No. 613,974. 1 Claim. (Cl. 103—188.)



A pump of the character described comprising a stationary cylinder including a perforated section depending from the lower end thereof, a valve seat and cage threaded in the cylinder above the perforated section, a ball valve arranged within the cage and normally engaging said seat, a second cylinder arranged to slide within the stationary cylinder, a valve seat and cage threaded in the lower end of the second cylinder, a ball valve normally engaging said seat, a collar arranged in each of said cylinders, a transverse pin carried by each collar and adapted to limit the upward movement of the adjacent ball valve, a discharge pipe rising from the upper end of the second cylinder and including a laterally disposed branch, a shaft mounted for rotation, a reciprocating rod actuated by said shaft and connected with the discharge spout, whereby rectilinear movement is imparted to said pipe, and said valve alternately opened and closed, and means for rotating said shaft.

1,569,715. CONSTRUCTION OF SHIPS' DAVITS. JAMES RICHARD CLAY, Blundellsands, and JOHN SCOTT VALENTINE HARRISON, Waterloo, England. Filed Feb. 16, 1924. Serial No. 693,369. 1 Claim. (Cl. 9—22.)



A ship's davit comprising a casing in which the davit is mounted for movement, mechanism for operating the davit housed within the casing, the casing being formed to provide a neck through which the davit extends and in which it swings, a cover for the neck carried by the davit and operating in all positions of the davit to seal the opening in the neck, said casing being formed with an opening through which a portion of the davit extends in operation, and a housing resting upon the casing to close said opening and receive said extended portion of the davit.

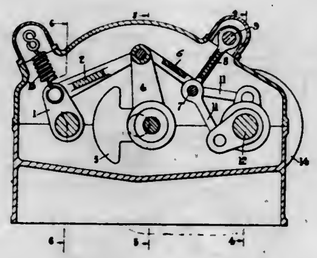
1,569,716. DRAWBAR FOR MINE CARS. CHARLES F. CLAYTON, Balkan, Ky. Filed June 10, 1925. Serial No. 36,201. 7 Claims. (Cl. 213—73.)

1. The combination in a mine car, of a floor, braces extending across said floor on opposite sides thereof in opposed relation, housing elements secured between spaced pairs of braces, and a drawbar extending the length of said body through said housing elements, substantially as set forth.

1,569,717. GLARESHIELD FOR MOTOR VEHICLES. JOHN P. COLGAN, Waycross, Ga. Filed Jan. 25, 1924. Serial No. 688,516. 3 Claims. (Cl. 296—97.)

1. A glare shield for motor vehicles including a supporting post terminating at its lower end in a stud to extend through the frame bar of a vehicle at a point adjacent one of the front fenders of the vehicle, means engaged with said stud for securing the post in upright position, means to extend between the upper portion of the post and an adjacent part of the vehicle bracing the post, and a light screen carried by the post in a position to cast a shadow against the vehicle windshield in front of the driver's seat of the vehicle by the illumination of the headlights of an oncoming car.

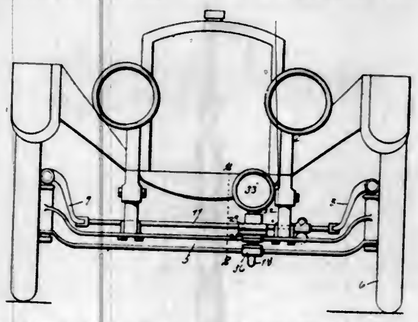
1,569,718. BOLT LOCK. GEORGE F. COLLEY, Memphis, Tenn., assignor to John Q. Roberts, Memphis, Tenn. Filed June 15, 1923. Serial No. 645,671. 2 Claims. (Cl. 287—100.)



2. A joint comprising a forked member having openings in the forks, an intermediate member having an opening adapted to register with said openings, a bolt adapted to be inserted through the openings in the forks and intermediate member to form a pivotal connection, that portion of the bolt disposed within the extremities of the

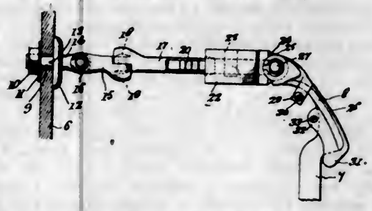
intermediate member having a groove about the same adjacent one end, and a split spring ring in said groove tending to expand into engagement with the bore of the

intermediate member and to a diameter larger than that of the opening in the adjacent fork and consequently bear upon said fork around said opening, substantially as set forth.



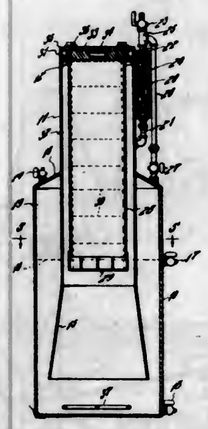
1,569,719. POWER TRANSMISSION. GEORGE CONSTANTINESCO, Weybridge, England. Filed July 25, 1923. Serial No. 653,772. 5 Claims. (Cl. 74—53.)

1. Apparatus for transmitting power from a driving shaft to a driven shaft which is to be rotated against a variable torque, comprising in combination a driving shaft, means for obtaining alternating motion from said shaft, three links meeting at a common point and serving to split such motion into two components of variable amplitude, means for transmitting said alternating motion to the extremity of one of such links, a connection from the second of said links to a lever swinging about a fixed point and carrying a mass, a driving pivot at the free end of the third of said links, stabilizing means connected to said pivot and unidirectional driving devices connected to said driving pivot moving in opposite phase and driving a shaft in one direction.



1,569,720. DIRIGIBLE HEADLIGHT. JAMES M. CREASON, Weed, Calif. Filed Apr. 4, 1925. Serial No. 20,782. 1 Claim. (Cl. 240—62.)

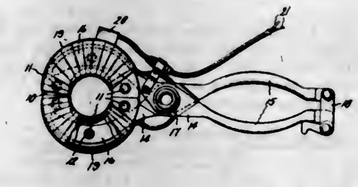
In a device of the character described, a support having an upstanding rim, said rim having depressions formed therein, a tubular stem extending through said support and a key longitudinally positioned in said stem and having its opposite ends normally bearing in said depressions, a spring positioned within said stem and bearing on said key, means for limiting the upward movement of said spring, a second support positions on said stem and secured thereto, said second support being spaced from said first mentioned support, anti-friction means interposed between said supports, and a



lever secured to the lower extremity of said stem for the purpose of rotating said stem so as to cause said key to move out of said depressions, for the purpose specified.

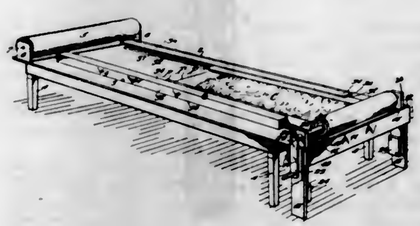
1,569,721. AUTOMOBILE LOCK. ANTHONY WILMOT DALFERES, Lafayette, La. Filed Apr. 11, 1925. Serial No. 22,281. 4 Claims. (Cl. 70—128.)

1. In combination with an automobile having a reverse pedal and a plate attached thereto, a locking bolt attached to said automobile, a locking casing pivotally attached to the top portion of said plate and cooperating with said locking bolt and adapted to lie behind said pedal when in disengaged position.



1,569,722. ACETYLENE-GAS GENERATOR. DAYTON HERSCHEL DANLEY, La Fayette, Ind. Filed Apr. 7, 1924. Serial No. 704,834. 1 Claim. (Cl. 48—22.)

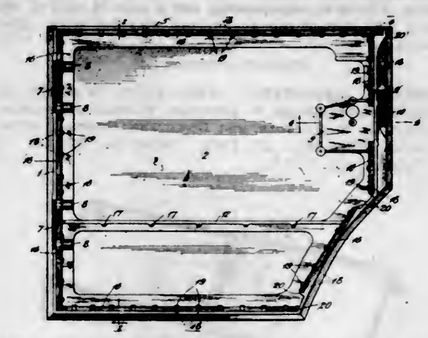
In a device of the character described, an upright tank adapted to contain water formed with a neck portion of reduced diameter extending upwardly beyond the top



to a considerable extent, said neck portion having a depending extension located within the tank, a magazine suspended within said neck and depending extensions in spaced relation to the walls thereof and adapted to contain carbide in caked form, a closure member for said magazine, a cap for closing said neck and acting to retain the magazine closure in position an elongated upstanding cylinder mounted beside the neck at the upper portion thereof and containing fibering material, a pipe leading from the upper portion of said tank and provided with a control valve, an outlet valve connected with the top of said cylinder and with said pipe and an intake for said cylinder connected with the bottom thereof and connected with the lower portion of the neck to communicate with the space between the neck and the magazine.

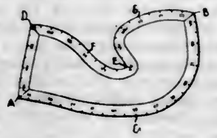
1,569,723. INSTRUMENT TRANSFORMER. WILBUR K. DICKINSON, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Aug. 14, 1925. Serial No. 50,327. 3 Claims. (Cl. 175—358.)

1. An instrument transformer including a separable two part core and two pivotally connected handle supporting said core parts, one of said core parts being pivotally connected to its supporting handle.



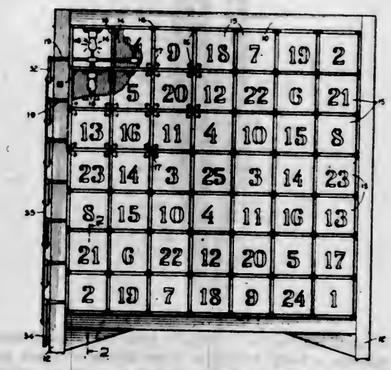
1,569,724. ROLLING DEVICE FOR COTTON SAMPLES. HARRY DIMOND, Brookline, Mass. Filed June 30, 1924. Serial No. 723,227. 7 Claims. (Cl. 19—162.)

1. In a bundle-rolling device for cotton sample tables, the combination of a rotatable mandrel on which the bundle is rolled, rotatable rollers for supporting the bundle as it is rolled on the mandrel, means for mounting the mandrel to allow it to recede from the rollers as the bundle increases in size while resisting its movement to cause the rollers to compact the bundle around the mandrel, and means to guide the paper wrapped around the bundle to fold its marginal portions into the ends thereof.



1,569,725. VEHICLE DOOR. HERMAN H. DOEHLER, New Rochelle, and MARC STERN, Brooklyn, N. Y., assignors to Doehler Die-Casting Co., a Corporation of New York. Filed Jan. 3, 1923. Serial No. 610,422. 11 Claims. (Cl. 296—44.)

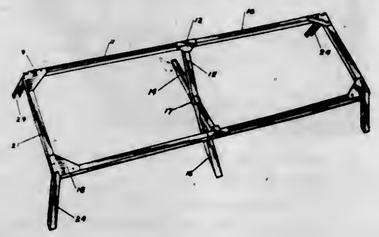
1. A vehicle door comprising a sheet metal cover member having a marginal portion turned up at an angle to the sheet member with its extremity bent substantially parallel to the sheet member, and a metallic



frame cast against the side of the cover member upon the said marginal portion.

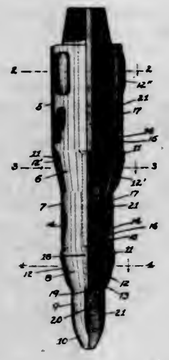
1,569,726. GARMENT-PATTERN-DESIGNING SCROLL AND SQUARE. HELEN DOHERTY and JOSEPHINE LE BLANC, Providence, R. I. Filed Dec. 28, 1923. Serial No. 683,229. 2 Claims. (Cl. 33—12.)

1. A one-piece or unit scroll for laying off dress patterns, the scroll having a margin bounded by different curves, each curve being separated from an adjacent curve by angles, one of said angles being a reentering angle, such reentering angle being located opposite the longest side of the scroll.



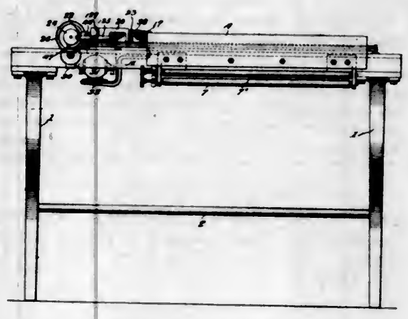
1,569,727. GAME DEVICE. PASQUALE DONATO, New York, N. Y. Filed Oct. 2, 1925. Serial No. 60,010. 2 Claims. (Cl. 273—102.)

1. In a game device of the character described, a plurality of movable targets, indicating means associated with each thereof and operable by the target when struck, said means comprising a common shaft behind said targets and a movable hammer element rotatably mounted thereon behind each target, said hammer element being normally supported by the target in a position slightly beyond the upper vertical position whereby movement of the target will jar the hammer past the



vertical dead-center position to permit it to fall of its own weight, and said hammer element comprising a sleeve, a stem carried thereby, and a head carried by the stem, one end of the head being provided with noise-deadening material.

1,569,728. ALL-STEEL CAMP COT. WILLIAM W. DOUGLAS, WALLACE R. DOUGLAS, MARCELLA DOUGLAS, WILLIAM H. DOUGLAS, and DONALD Q. DOUGLAS, Crete, Nebr. Filed Nov. 17, 1924. Serial No. 750,457. 3 Claims. (Cl. 5—116.)



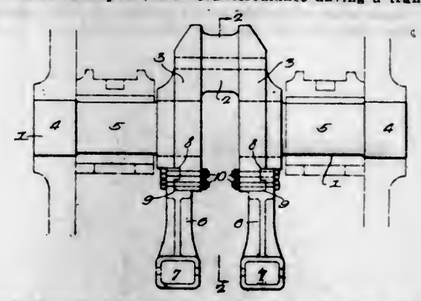
1. A collapsible bed frame having end and side rails forming a rectangular structure, pivotal connections between the end and side rails at the corners of the frame, two of the said connections at diagonally opposite corners of the frame being fixed pivots and the other two of the said connections being pivots which are adapted to slide lengthwise of the respective side rails, the arrangement being such that during the collapsing movement of the frame the side rails maintain their parallel relation.

1,569,729. TOOL FOR STRAIGHTENING WELL CASINGS. OSWALD DUDA, Houston, Tex., assignor to Reed Roller Bit Company, Houston, Tex., a Corporation of Texas. Filed Dec. 27, 1923. Serial No. 682,969. 4 Claims. (Cl. 153—81.)

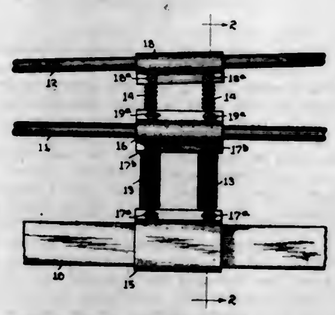
4. In combination in a rotary tool for straightening well casings, a body having a large diameter upper portion and a reduced diameter lower portion, rollers mounted in pockets of said portions, said body having its lower end extending below the lowermost roller and reduced in diameter in respect to the said reduced diameter lower portion, said body having a flushing fluid conduit extending lengthwise thereof from its upper end with ports extending therefrom through the reduced lower end at a point below the lowermost rollers, substantially as described.

1,569,730. TYING-IN MACHINE. HUGH P. EANES, Asheville, N. C., assignor to Paramount Machine Co., Inc., Asheville, N. C., a Corporation of North Carolina. Filed Oct. 24, 1922. Serial No. 596,548. 22 Claims. (Cl. 28—43.)

1. A thread selecting device including means for guiding a plurality of threads, means for holding the threads within said guiding means, and means controlled by the threads within the guiding means for moving the holding means into engagement with the threads.



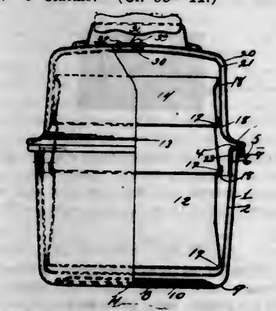
1,569,731. PUMP. CHARLES R. EDWARDS, Houston, Tex. Filed Sept. 18, 1920. Serial No. 411,307. 19 Claims. (Cl. 103—204.)



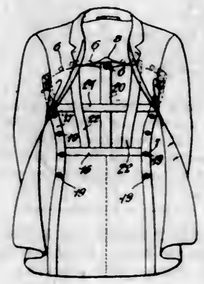
1. A pump including a working barrel, a standing valve therein, a traveling valve reciprocable therein and having a fluid passageway therethrough for ascending fluid and, controlled by an upwardly opening valve, said traveling valve having also a fluid passageway therethrough for descending fluid and controlled by a downwardly opening valve, said last named passageway being provided to conduct a cleansing fluid from within the barrel above the traveling valve and discharge the same into the working barrel beneath said traveling valve and means separating the ascending and descending fluids.

1,569,732. CRANK-AXLE COUNTERBALANCE. EDWARD O. ELLIOTT, Philadelphia, Pa. Filed May 24, 1924. Serial No. 715,763. 2 Claims. (Cl. 74—38.)

1. The combination in a crank axle, of two cheek pieces spaced apart; a crank extending from one cheek piece to the other on one side of the axle, each cheek piece extending on the opposite side of the axle and having a transverse groove therein; a counterbalance for each cheek piece, each counterbalance having a transverse groove adapted to the groove in each cheek piece; and a series of transverse bolts securing the counter balance to the cheek pieces.

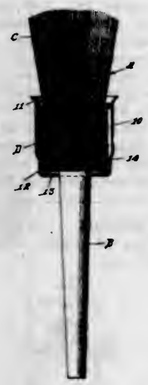


1,569,733. STEERING MECHANISM FOR AUTOMOBILES. FREDERICK E. FANSLER, Acton, Ind. Filed June 26, 1924. Serial No. 722,614. 3 Claims. (Cl. 280—94.)



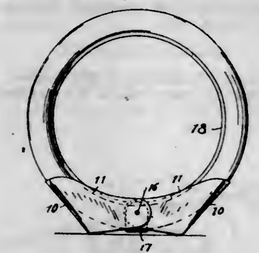
1. A stabilizing and anti-rattling device for the steering mechanism of an automobile comprising clamping elements for attachment to the front axle, tie rod and steering rod of an automobile, a spring member connecting said axle and tie rod clamping element and an additional spring member between said tie rod and steering rod clamping elements, substantially as set forth.

1,569,734. INSULATED VESSEL FOR COOKING, HOLDING, AND SERVING FOOD. GEORGE R. FASSETT, Lakewood, Ohio, assignor to William J. Sanborn, Lakewood, Ohio. Filed Sept. 10, 1923. Serial No. 661,864. 6 Claims. (Cl. 53—11.)



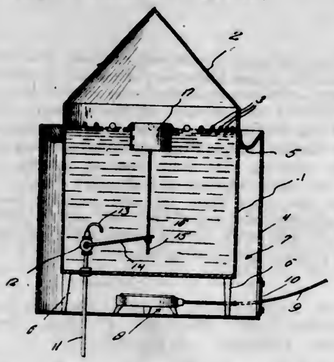
1. A vessel composed of inner and outer walls, said walls being connected above the bottom of the vessel, a metal plate disposed exteriorly to the outer wall at the bottom of the vessel, the outer wall being so formed as to support said metal plate and said outer wall at the bottom of the vessel being spaced from the metal plate whereby to leave an air space between the metal plate and the bottom wall.

1,569,735. COAT. MORDECAI B. FLORSHEIM, Richmond, Va. Filed Apr. 11, 1923. Serial No. 631,348. 1 Claim. (Cl. 2—93.)



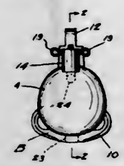
An outer garment of the conventional coat suit type provided with a rear shoulder portion and a back having an opening extending from the lower edge of the shoulder portion to the bottom edge of the garment, fastening means along the marginal edges of said opening, a back member having cooperating fastening means for detachably securing said back member to the garment across the lower edge of the shoulder portion and at adjacent side edges from the said shoulder portion to points adjacent the waist line, and said back member having an open work portion extending from the upper edge to a point adjacent the waist line.

1,569,736. PAINTBRUSH GUARD. UMBERTO FOPPIANO, Valparaiso, Chile. Filed Nov. 17, 1924. Serial No. 750,485. 2 Claims. (Cl. 25—248.)



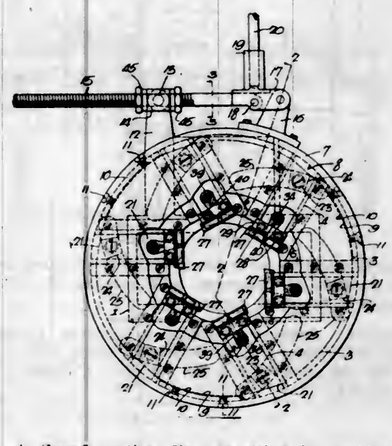
1. In combination with a paint brush, a guard device formed as a shell of greater diameter than the brush ferrule, one end of the shell being formed with a reversely extending flange embedded within the butt end of the brush head.

1,569,737. TIRE STAND. WILLIAM G. FORDING, Lakewood, Ohio. Filed Jan. 17, 1923. Serial No. 613,227. 15 Claims. (Cl. 211—24.)



1. A support for a circular article comprising an elongated receptacle adapted to receive a peripheral portion of said article, said receptacle having flexible side and end walls and means carried by the side walls and adapted to be engaged by said article to cause said side walls to grip the article.

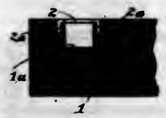
1,569,738. POULTRY DRINKING FOUNTAIN. ERNEST L. FORSHEE, Akron, Mich. Filed Feb. 27, 1925. Serial No. 12,028. 1 Claim. (Cl. 119—73.)



A poultry drinking fountain comprising a cylindrical tank having a conical top, and provided in its side wall with a row of circumferentially spaced water discharge openings adjacent the upper edge thereof, a casing surrounding the tank in spaced relation thereto, the upper end of the casing being bent inwardly, and downwardly, and thence upwardly to provide an annular water trough, the inner wall of said trough engaging the cylindrical tank, the upper edge of the inner wall of the trough being disposed directly below said water discharge openings, and means for automatically maintaining a predetermined water level in the trough.

1,569,739. TOE WEIGHT. CONRAD FREUND, St. Paul, Minn. Filed June 24, 1922. Serial No. 570,573. 4 Claims. (Cl. 168—25.)

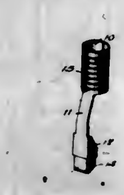
1. A toe weight for balancing a horse's hoof, including a hoof-engaging plate, a spring catch carried by said plate, and a weight adapted to be removably held by said catch to said plate.



1,569,740. PIPE-THREADING DIE. WARREN E. GLASBY and FREDERIC W. COX, Bridgeton, N. J., assignors to The Cox and Sons Company, Bridgeton, N. J., a Corporation of New Jersey. Filed Nov. 2, 1922. Serial No. 598,575. 11 Claims. (Cl. 10—96.)

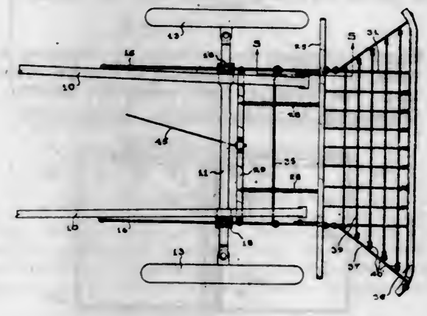
1. A thread cutting die comprising in combination, a body, a chaser holder mounted on the body and provided with a recess having back and lateral walls at an acute angle to each other, a chaser formed with longitudinal cutting teeth on its front face and having longitudinal back and lateral bearing surfaces adapted to engage the walls of the said recess, the said chaser also having a longitudinal lateral clamping surface opposite the said lateral bearing surface and a longitudinal groove with a wall adjacent and at an angle to the clamping surface, and a clamp connected with the chaser holder and engaging the clamping surface of the chaser, the said clamp having a hook portion entering the groove in the chaser and engaging the aforesaid wall thereof.

7. A thread cutting die comprising in combination, a body, a chaser holder mounted on the body and having a chaser receiving recess, a chaser formed with longitudinal cutting teeth on its front face and fitting the recess for longitudinal movement therein, a lever pivoted to the holder and engaging the chaser for moving it longitudinally as aforesaid, and means for locking the lever in different positions.



1,569,741. PAVING BLOCK. ALFRED A. GLIDDEN, Watertown, Mass., assignor to Hood Rubber Company, Watertown, Mass., a Corporation of Massachusetts. Filed Nov. 26, 1924. Serial No. 752,389. 2 Claims. (Cl. 94—11.)

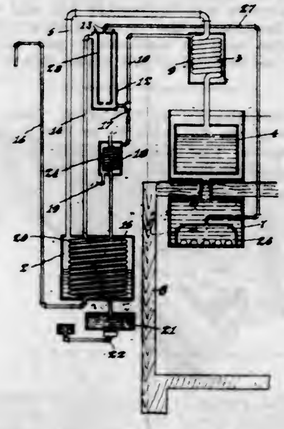
1. A paving block of moderately elastic material having grooves or channels in the under face thereof and bars extending across the channels and spaced from the bottoms thereof, said bars having ends anchored in the block.



1,569,742. PENCIL ATTACHMENT. JOSEPH B. GOEBLING, Wausau, Wis. Filed Apr. 30, 1923. Serial No. 635,694. 1 Claim. (Cl. 120—84.)

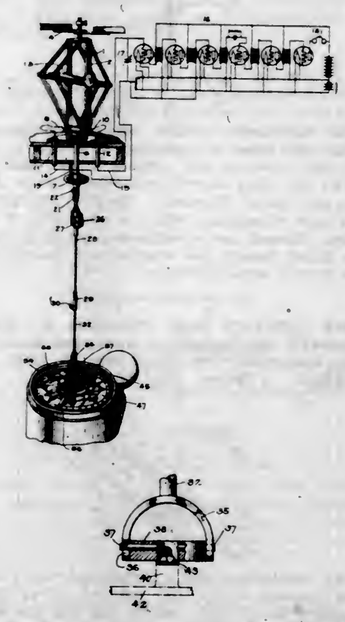
An attachment for writing instruments, comprising an instrument-embracing member mounted for longitudinal movement on the instrument and having an offset resilient arm extending beyond one end thereof, and a rubber carried by the free end of said arm, constituting, respectively, an eraser and a pager disposed in spaced relation to the writing end of the instrument when the arm is projected beyond said end, whereby the writing,

erasing or paging may be accomplished without adjustment of the attachment, the said rubber also constituting a non-slip means for engaging the pocket when the free end of the arm is disposed alongside the writing implement.



1,569,743. AUTOMOBILE FENDER. LEON E. GOODWIN, Portsmouth, N. H. Filed July 18, 1925. Serial No. 44,575. 7 Claims. (Cl. 293—34.)

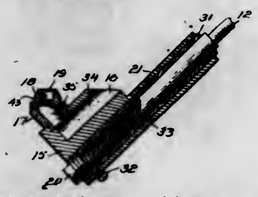
1. A vehicle fender comprising a frame adapted to be secured horizontally beneath the vehicle and projecting forwardly therefrom, a back hinged to the forward end of said frame, a bottom hinged to the lower end of the back and extending rearwardly therefrom beneath the frame, hanger bars pivotally connecting the rear end of the bottom to said frame, spring means between the back and the frame for normally urging the back into raised position and the bottom into a lowered forward position, and releasable means for holding the bottom raised and the back in a forwardly swung position.



1,569,744. REFRIGERATING SYSTEM AND PROCESS. WILLIAM GREEN, Newton, Mass. Filed Dec. 20, 1922. Serial No. 608,079. 13 Claims. (Cl. 62—178.)

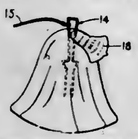
1. In an intermittent absorption refrigerating system, the combination of an absorber, a condenser, connections enabling the refrigerant to flow freely at all times between said absorber and condenser, an expansion chamber into which the condensed refrigerant flows by gravity from said condenser during the condensing period, said condenser and chamber being constantly in free communication with each other, and means for varying the

rate of heat transfer of said expansion chamber at a given differential temperature at different periods in the cycle of operations of the system.



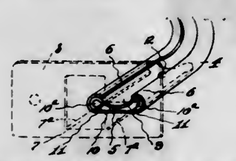
1,569,745. RADIOCOMPASS READING DEVICE FOR SHIPS. EOLINE R. HAND, Toledo, Ohio. Filed Aug. 30, 1923. Serial No. 660,118. 15 Claims. (Cl. 250—11.)

1. A radio compass reading device for shipboard, comprising in combination a loop antenna, means for rotating said loop antenna, a magnetic compass, a reading bar pivoted on said magnetic compass, said reading bar



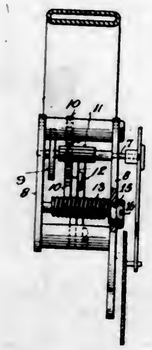
and magnetic compass being so arranged that said bearing bar is substantially parallel to said magnetic compass and remains substantially horizontal with respect to the earth independent of the position of the ship, a connection between said bearing bar and said shaft and means for determining the direction of a radio transmitting station and the angle which said loop antenna makes with the fore-and-aft line of the ship.

1,569,746. SOLDERING APPARATUS. JOHN H. HANKEY, Hagerstown, Md., assignor to The W. H. Reisner Mfg. Company, Hagerstown, Md., a Corporation of Maryland. Filed Sept. 15, 1924. Serial No. 737,852. 6 Claims. (Cl. 113—107.)



1. Soldering apparatus comprising in combination a soldering fountain and a flux fountain, said solder fountain consisting of a pair of balancing columns disposed at right angles one with respect to the other, one of said columns being substantially longer than the other of said columns and means for conductively heating solder contained in said columns.

1,569,747. CANDY CONFECTION. CHARLES F. HAUG, Brooklyn, N. Y. Filed Dec. 21, 1923. Serial No. 681,996. 2 Claims. (Cl. 206—46.)



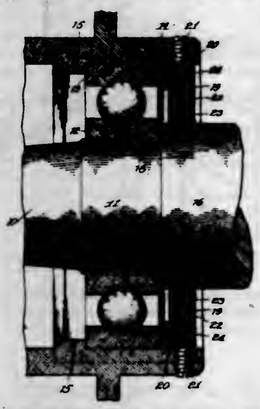
1. The combination with a candy confection having an ornamental form, of a wrapper of brilliantly colored, highly light reflecting foil wrapped around said confection with the edges thereof protruding beneath the confection and folded thereunder, the foil wrapper being pressed into engagement with the confection to assume the shape thereof, and a supporting staple having two prongs forced through the wrapper and into the confection to form a support therefor.

1,569,748. CURTAIN ROD. FREDERICK L. HAWKINS, Mishawaka, Ind., assignor to Mishawaka Novelty Company, Mishawaka, Ind. Filed Feb. 19, 1925. Serial No. 10,370. 5 Claims. (Cl. 156—19.)

1. The combination with a curtain rod end, a supporting lug disposed within said rod end, of an inwardly transversely bowed plate within the rod end and cooperating with the lug for frictionally binding the same against the rod end, and means carried by the bowed plates and forced into frictional engagement with opposite edges of the lug when the lug is forced between the bowed plate and the rod end.

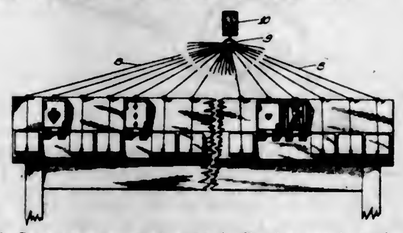
1,569,749. RETARD DEVICE FOR BOURDON GAUGES. OTTO W. HEISE, Bridgeport, Conn., assignor to Manning, Maxwell & Moore, Incorporated, New York, N. Y., a Corporation of New Jersey. Filed Aug. 27, 1921. Serial No. 496,088. 6 Claims. (Cl. 73—100.)

2. A pressure gauge having a Bourdon tube, a movable index, connections comprising a rocking segment for transmitting movement from the tube to the index, an elongate spring extending transversely across the path of movement of the segment, and a normally fixed but rotatable support to which one end of the spring is fixedly secured and by means of which the spring may be bodily shifted, said support being provided with a slot for the reception of a screw driver for turning it.



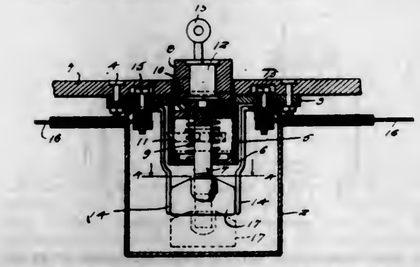
1,569,750. LEDGER RACK. OTTO L. HERMANN, St. Louis, Mo., assignor to Corbon L. Harvey, Detroit, Mich. Filed Feb. 2, 1923. Serial No. 616,527. 6 Claims. (Cl. 45—57.)

1. In an open front rack for a loose leaf ledger, ledger supporting surfaces, a central upright partition for engaging the inside edges of the backs and leaves of the open ledger, a relatively low rear wall at right angles to said partition for engaging the top edges of the ledger leaves on both sides of said partition, said wall being recessed near its bottom to receive the top edges of the ledger back projecting beyond the leaves, and a member extending above the top of said partition and wall at the center only of the latter and aligned with said wall for guiding the ledger leaves as they are turned from the back on one side of the partition to the back on the other side thereof.



1,569,751. DUSTPROOF BEARING. HOWARD R. HIGGINS, Glen Ellyn, Ill., assignor, by mesne assignments, to Marlin-Rockwell Corporation, Jamestown, N. Y., a Corporation of New York. Filed Nov. 20, 1922. Serial No. 602,009. 4 Claims. (Cl. 308—187.)

4. In combination, an axle having a cylindrical surface, a wheel journalled on said axle, a portion of said wheel surrounding said cylindrical surface, a substantially plane surface adjacent said cylindrical surface and perpendicular thereto and affixed to said axle, a member carried by said wheel and felt washers carried by said

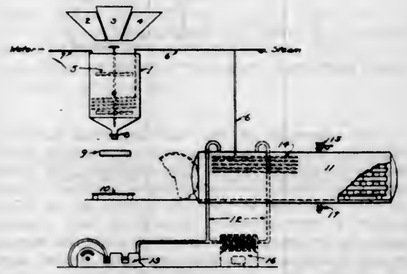


member and having sliding bearing upon said cylindrical surface of the axle and plane surface to prevent dust from entering the bearing.

1,569,752. PRIZE GAME APPARATUS. HARUE HIRAKAWA, San Diego, Calif. Filed July 17, 1923. Serial No. 652,057. 5 Claims. (Cl. 273—139.)

1. In a game apparatus, an inclined support, a plurality of game members, having playing cards on their normally concealed sides, pivotally mounted on said support intermediate its upper and lower edges, and means for independently shifting said game members about their pivotal axes for exposing their normally concealed sides.

1,569,753. ELECTRIC SWITCH LOCK. LOUIE CLARK HUTCHINSON, Montgomery, Ala., assignor of twenty one-hundredths to Benjamin B. Carter and thirty-five one-hundredths to Thomas C. Underwood, both of Gardena, Calif. Filed June 14, 1924. Serial No. 720,133. 3 Claims. (Cl. 200—44.)

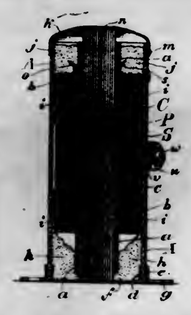


1. A switch lock comprising a supporting member, said supporting member having an extension, a lock device rotatably and slidably mounted in said extension, a contact carried by the lock device beyond one end of the extension, contacts carried by said member outwardly of the extension and coacting with the first mentioned contact.

1,569,754. COMBINATION PASSENGER, DAY, AND SLEEPING COACH. ALBERT E. HUTT, Ardmore, Pa. Filed July 14, 1925. Serial No. 43,491. 7 Claims. (Cl. 105—315.)

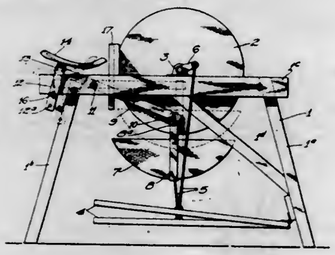
1. In a passenger railroad coach, an outer longitudinally extending aisle, located at one side of said coach and extending parallel thereto, and transverse upper and lower passenger compartments permanently positioned between said aisle and the other side of the coach and in vertical alignment, each permanent compartment consisting of a standing portion in which the height or head room is greater than that of the average standing passenger, and a seating or lying down portion, in which the height or head room is greater than that of a seated or reclining passenger, the resting or lying down portion of the permanent upper compartments being located above the standing portion of the permanent lower compartments, and the standing portion of the permanent lower compartments, and the standing portion of the permanent upper compartments, being located above the seating or lying down portion of said permanent lower compartments.

1,569,755. HEAT-INSULATING MATERIAL AND PROCESS OF MAKING MOLDED BODIES THEREOF. WEBB T. IRVIN, Lompoc, Calif., assignor to The Celite Company, Los Angeles, Calif., a Corporation of Delaware. Filed Dec. 24, 1924. Serial No. 757,844. 15 Claims. (Cl. 18—47.5.)



1. In the process of making molded heat insulating bodies comprising diatomaceous earth and an alkaline earth, a molding operation and a combined hardening and drying operation comprising exposure of the molded bodies to large volumes of air under pressure.

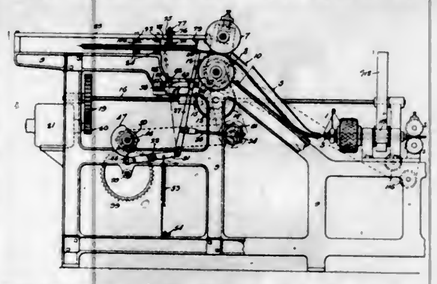
1,569,756. IGNITION COIL. ARTHUR ATWATER KENT, Ardmore, Pa. Filed May 3, 1922. Serial No. 558,239. 4 Claims. (Cl. 175—360.)



1. An ignition induction coil utilized in a closed circuit ignition system comprising a casing of rigid insulating material, metallic end closures secured to said

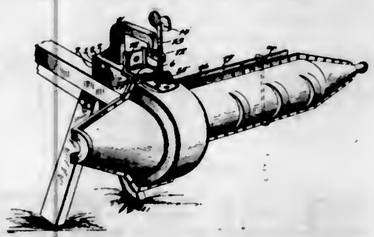
casing on opposite ends thereof, an induction coil unit in said casing held between said end closures and comprising a central straight core of wires abutting against and confined between said metallic end closures, a primary

winding surrounding said core adjacent thereto, and a secondary winding, the contacts between the core wires and said end closures conducting away heat generated in said primary winding at a rate to prevent abnormal temperature rise of said primary winding.



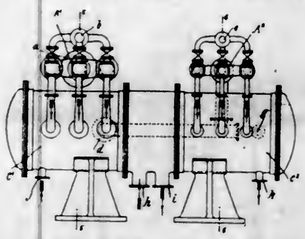
1,569,757. GRINDSTONE. JOSEPH H. KING, San Diego, Calif. Filed Mar. 3, 1923. Serial No. 622,536. 3 Claims. (Cl. 51—267.)

1. An apparatus of the class described including a supporting frame, a grinding member revolubly mounted thereon, a manual means for revolving said grinding member, a trough for said grinding member, vertically shiftably positioned at the lower portion of the grinding member, a lever pivotally mounted on said supporting frame, to the one end of which is pivotally connected the trough and a seat member supported at the opposite end of said lever, upon which the operator sits for manually revolving said grinding member and for vertically shifting said trough when the operator gets off of said seat.



1,569,758. GRASS-TWINE MACHINE. MARTIN KOECK, Jr., Fond du Lac, Wis., assignor to Deltox Rug Company, Oshkosh, Wis., a Corporation of Wisconsin. Filed Mar. 16, 1923. Serial No. 625,499. 16 Claims. (Cl. 117—11.)

1. In a grass twine machine the combination of a conduit, feed rolls adjacent the conduit, levers, nippers pivoted to the levers and adapted to transfer grass lengthwise from the conduit to the rolls, cranks connected with the nippers and adapted to swing them back and forth between the conduit and feed rolls, and cams cooperating

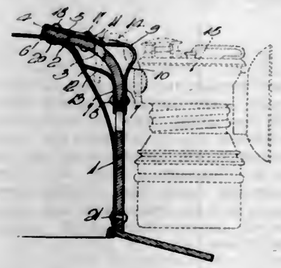


with the levers to shift the nippers into the path of the grass on their forward movement and out of the path of the grass on their backward movement.

1,569,759. RIVETING APPARATUS. WILLIAM G. LEAZAR, Kerrville, Tex. Filed July 29, 1924. Serial No. 728,931. 4 Claims. (Cl. 78—101.)

1. A riveting apparatus for riveting arms on crank cases, the same comprising a riveting block provided with means for holding it on a bench or other support, a supporting member carried by the riveting block and having a laterally projecting arm, a holder suspended from said arm and adapted to support a crank case at a point remote from the riveting block, and a clamp operatively supported on the riveting block for bearing engagement upon a crank case arm and holding it in contact with the crank case and the latter in contact with the riveting block.

1,569,760. AIR EJECTOR. CHARLES LEONARD ARMAND MAURICE LEBLANC, Paris, France, assignor to Société Anonyme pour l'Exploitation des Procédés Maurice Leblanc-Vickers, Paris, France. Filed Sept. 19, 1922. Serial No. 589,177. 3 Claims. (Cl. 230—13.)

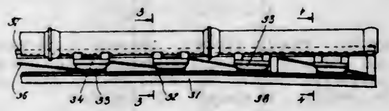


1. The combination with a main condenser of an air extractor including two stages of steam ejectors mounted in series, each of said stages including a plurality of ejectors mounted in parallel, means for supplying steam to either or both of said ejector stages, a first auxiliary condenser associated with one of said ejector stages and comprising concentric bundles of water tubes, a partition separating said bundles of tubes, means for directing water from said main condenser through the outer bundle of water tubes and thence through the inner bundle of water tubes, means for directing steam from said first stage of ejectors into the inner bundle of water tubes and thence to the outer bundle of water tubes, a second auxiliary condenser associated with the other of said ejector stages and comprising two concentric bundles of water tubes, means for directing water from said first condenser to the inner bundle of tubes of said second condenser and thence to the outer bundle of tubes of said second condenser and means for directing steam from the other stage of steam ejectors into the outer bundle of water tubes of said second condenser.

1,569,761. FIGURE WHEELED TOY. JOHN EDMOND LEE, Buffalo, N. Y. Filed Sept. 8, 1924. Serial No. 736,635. 1 Claim. (Cl. 46—45.)

In a figure wheeled toy, the combination with a horse and wagon, of slotted swingable legs on the horse, rotatable spindle mounted in the interior of the horse and adapted to pass through the slots in the legs, cams on the spindles adapted to rotate in the slots to swing the legs, lower foreleg portions jointed on the swingable upper foreleg portions, lower foreleg actuating strips having orifices in their upper ends into which the leg actuating cams are inserted, means for securing the lower ends of the strips to the lower forelegs so that they have a swinging movement as the strips are reciprocated by the rotatable movement of the cams.

1,569,762. MINER'S LAMP HOLDER. FRED LEWIS, Lejunior, Ky. Filed Aug. 10, 1925. Serial No. 49,378. 2 Claims. (Cl. 240—60.)



1. A miner's lamp support comprising a vertical piece of non-metallic heat insulating material having a rearwardly directed upper end formed with a vertical opening, a sheet metal plate bent substantially upon itself between its ends to provide upper and lower plate-like portions which contact with the upper and lower sides of said rearwardly directed end of the heat insulating material, the free ends of said plate-like portions being vertically disposed and secured against the front and rear sides of the insulating member below the bend of the latter, the intermediate part of the upper plate-like portion being forwardly offset from the heat-insulating material and formed with a vertical slot and with an opening alined with the first named opening, the intermediate part of the lower plate-like portion being downwardly offset from the heat insulating material and being formed with an opening alined with the aforesaid openings, the three openings in the slot being adapted to jointly receive the hook of a carbide lamp, said openings being each of annular-walled form to hold the hook against lateral movement.

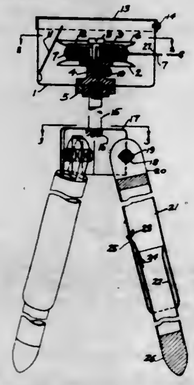
1,569,763. METHOD OF AND APPARATUS FOR DRIVING PILES. FERDINAND J. LITTER, New York, N. Y., assignor to McKiernan-Terry Drill Company, Dover, N. J., a Corporation of New Jersey. Filed July 10, 1923. Serial No. 650,576. 15 Claims. (Cl. 61—76.)

4. Pile driving and guiding apparatus comprising a guide rail, a carriage slidably mounted thereon, a hammer on said carriage and means on the carriage for holding a pile intermediate its ends.

1,569,764. APPARATUS FOR LAYING PIPE. WILLARD D. LOCKWOOD, Philadelphia, Pa., assignor to Frederick Snare Corporation, New York, N. Y., a Corporation of New York. Filed Feb. 14, 1923. Serial No. 618,931. 1 Claim. (Cl. 61—72.

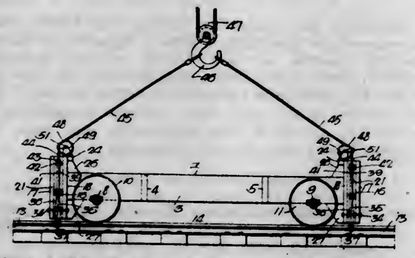
Apparatus for assembling, joining and testing units of pipe sections comprising a scow, a supporting structure mounted thereon, a track carried by said structure, trucks on said track having supports for the pipe sections and guide rails on said supporting structure, one end portion of the track being inclined downwardly to permit the trucks to roll downwardly and cause the pipe sections to rest on said guide rails.

1,569,765. GOLF PUTTER. WILLIAM LOWELL, Maplewood, N. J. Filed Nov. 13, 1925. Serial No. 68,752. 4 Claims. (Cl. 273—80.)



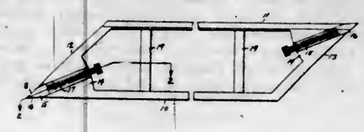
1. A golf putter having means for a limited adjustability of handle or grip over a length of a shaft rigidly

secured to a striking head throughout substantially half the upper end of said shaft, comprising two separated



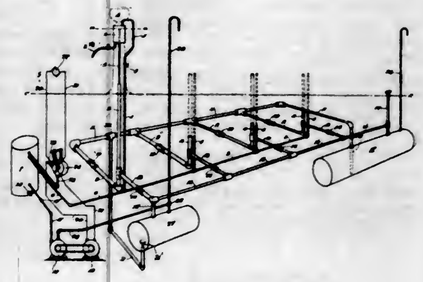
bearings for firm adjustment, one being at the end of the shaft and the other at the inner end of the handle or grip.

1,569,766. GOLF PRACTICE APPARATUS AND HEAD-MOVEMENT DETECTOR. JOHN MCARDLE, Detroit, Mich. Filed Aug. 18, 1924. Serial No. 732,785. 7 Claims. (Cl. 273—35.)



1. In a golf stroke practice apparatus and head movement detector, the combination of means for producing sound, means for supporting sound mechanism, and means for initiating said sound by movement of the head.

1,569,767. TRACK LIFTER. MICHAEL J. MCMENAMIN and CHARLES NIXON, Philadelphia, and REESE D. GREENLAND, Bedford, Pa. Filed Feb. 27, 1924. Serial No. 695,554. 10 Claims. (Cl. 294—67.)

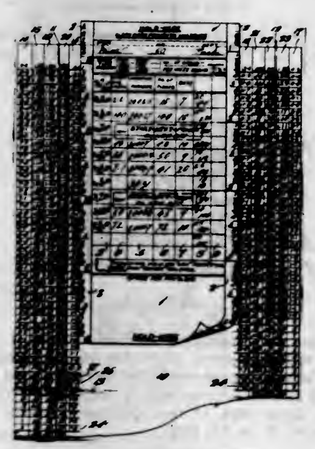


1. Apparatus comprising a supporting structure, a plurality of clamping devices adapted to engage a member to be lifted, hoisting means operatively associated with said supporting structure and anti-friction guiding means for said hoisting means.

1,569,768. PLASTERER'S MITERING PLANE. JAMES MCNAMARA, Jr., Portland, Oreg. Filed Jan. 28, 1924. Serial No. 689,123. 4 Claims. (Cl. 72—138.)

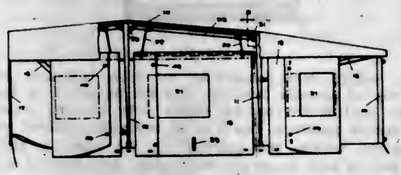
1. A plasterer's plane consisting of a quadrilateral frame having two opposite long sides, one of which is rounded and the other straight, and having two short sides forming acute angles at opposite corners of said frame; and an adjustable bit placed across the edges of said acute angles.

1,569,769. LIQUID STORAGE AND SUPPLY SYSTEM. GEORGE W. MACKENZIE, Beaver, Pa., assignor to Guarantee Liquid Measure Company, Rochester, Pa., a Corporation of Delaware. Filed Dec. 17, 1920. Serial No. 431,512. 2 Claims. (Cl. 221—99.)



1. A liquid storage and dispensing system comprising a storage tank, a plurality of dispensing devices, a common supply line leading from the storage tank to the dispensing devices, a common return line connected with each dispensing device, and auxiliary tank with which the return line connects, a check valve between each dispenser and the supply line, a check valve between each dispenser and the return line, and means whereby liquid from the auxiliary tank may be returned directly to the supply line.

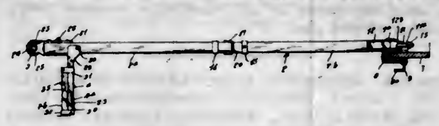
1,569,770. MEANS OF COMPUTATION. GORDON T. MALAN, Philadelphia, Pa. Filed Apr. 2, 1925. Serial No. 20,068. 7 Claims. (Cl. 283—1.)



1. In a device of the character stated, a table comprising a time scale, a time interval column substantially parallel to said time scale having therein numbers representing the time increments corresponding to and in operative alinement with the respective graduations on the time scale, and a factor column also extending

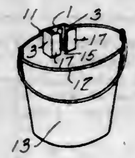
substantially parallel to said time scale and time increment column containing progressive series of numbers representing the precalculated cumulative cost factors

corresponding to and in operative alinement with the respective graduations on said time scale, as well as the respective time increments in said time increment column.



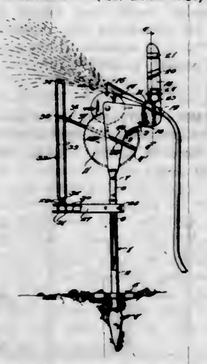
1,569,771. AUTOMOBILE TOP. ERASTUS M. MAXWELL, Cardinal, Va., assignor of one-third to I. K. Hearn and one-third to W. I. Clements, both of Norfolk, Va. Filed Oct. 4, 1922. Serial No. 592,286. 1 Claim. (Cl. 296—140.)

A vehicle top including transverse bows, a covering thereon, longitudinal spring rollers supported from the crown portions of said bows intermediate the side portions of said bows, side curtains, cords connected to the curtains and rollers at longitudinally spaced points so that the cords wind helically on the rollers between the ends thereof, and transversely curved plates secured to the bows within the corner portions thereof between the crown and side portions of the bows, said plates bracing the bows and guiding the cords and curtains over the plates between the side and crown portions of the bows, the side curtains when lowered being shiftable longitudinally to bring the edges of the curtains at the opposite sides together, and the curtains being shiftable and foldable in order that they may move over said plates and between the crown portions of the bows.



1,569,772. AUTOMOBILE BED. RICHARD W. MAYNE, Globe, Ariz. Filed Apr. 24, 1924. Serial No. 708,750. 5 Claims. (Cl. 5—110.)

1. A bed comprising a head bar, angular bolts secured to and extending longitudinally and transversely from the head bar, side rails, straps secured to the side rails and having pivotal and slidable connection with

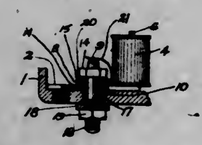


said bolts, a foot bar removably secured to the side rails, a flexible mattress, and supporting elements.

1,569,773. SOAP HOLDER FOR PAILS. ANNA MILLER, Chicago, Ill. Filed June 27, 1923, Serial No. 648,004. Renewed Nov. 30, 1925. 1 Claim. (Cl. 45—28.)

A soap holder for pails made from a single blank of sheet metal and including a back portion having clamp fingers struck out therefrom and integrally attached to the back portion at their upper ends, the said fingers being bent outwardly and downwardly to form shoulders adapted to seat over the rim of the pail; a bottom portion perpendicular to the back portion and formed with a medial opening therein; fastening tabs bent perpendicularly upward from the bifurcated bottom portion; side portions and frontal portions, the edges of the latter falling flush with the outer edges of the medial opening of the bottom portion, and bearing against and being adapted to be fastened to the said upturned fastening tabs, whereby the medial opening of the bottom portion is extended through to the top of the holder.

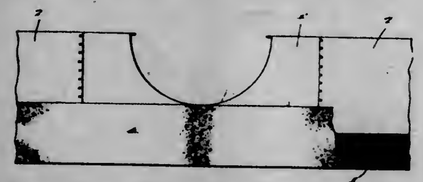
1,569,774. AUTOMATIC HOSE HOLDER. ROBERT J. MITCHELL, Richmond, Mo. Filed Nov. 6, 1924. Serial No. 748,158. 6 Claims. (Cl. 299—68.)



1. In a device of the class described, a relatively stationary member, a member supported thereon for oscillatory movement, means upon the oscillatory member for supporting a hose nozzle, a fluid-impact rotor upon the oscillatory member adapted to be operated through the medium of a stream of water delivered from a hose nozzle carried by said nozzle supporting means, a shaft rotatably carried by said oscillatory member and having a crank portion at one end, means operatively connecting said shaft and rotor to cause said shaft to be rotated

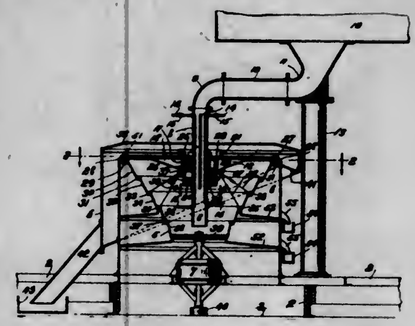
by said rotor, and a stationary guide element carried by said stationary member and engaging said crank portion to cause oscillation of said oscillatory member during rotation of said shaft.

1,569,775. SYNTHETIC MANUFACTURE OF METHANOL. ALWIN MITTASCH, Ludwigshafen-on-the-Rhine, and MATHIAS PIER, Heidelberg, Germany, assignors to Badische-Anilin- & Soda-Fabrik, Ludwigshafen-on-the-Rhine, Germany, a Corporation of Germany. Filed Sept. 4, 1924. Serial No. 735,823. 3 Claims. (Cl. 260—156.)



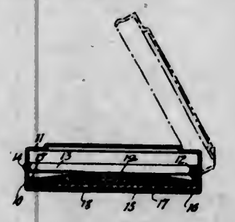
1. In the process of manufacturing methanol by the interaction of carbon monoxid and hydrogen in the presence of a catalyst capable of causing the formation of methanol by the said interaction, the step of completely excluding iron from the reaction.

1,569,776. TERMINAL FOR TELEPHONE RECEIVERS. DAVID H. MOSS, Newark, N. J., assignor, by mesne assignments, to Brandes Laboratories, Inc., Newark, N. J., a Corporation of New Jersey. Filed Feb. 27, 1925. Serial No. 12,148. 3 Claims. (Cl. 179—114.)



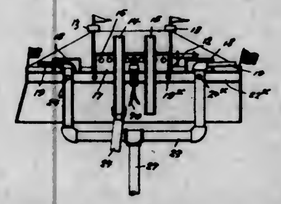
1. An electromagnetic sound reproducer, comprising in combination a casing, an electromagnetic operating mechanism carried within said casing, a pair of terminal posts projecting through the rear wall of said casing for mechanically securing said electromagnetic operating mechanism in position and electrically completing connections between said electromagnetic operating mechanism and the exterior of said casing, said terminal posts comprising screw threaded shanks having enlarged irregularly shaped heads adjacent one end thereof with soldering heads extending from said irregularly shaped heads and extending into said casing, insulating means concentrically disposed upon said screw threaded shanks and substantially separating the surfaces of said casing from said terminal posts, and teeth formed on said enlarged heads for distorting the shape of said insulating means whereby said terminal posts are rigidly secured in position with respect to said casing.

1,569,777. FLUME. GOTTLIEB MUEHLEISEN, Alma, Wis., assignor to National Soil Conservation Company, Alma, Wis. Filed Nov. 3, 1922. Serial No. 598,829. 1 Claim. (Cl. 61—15.)



A flume construction comprising a vertically disposed head plate having a recess in its upper face to receive one end of a conduit, the head plate and wing plates together defining a U, a wing plate secured to each of the vertical edges of the head plate, a vertically arranged U-shaped masonry wall against which the head plate and wing plate contact, a reticulated strip secured to the lower edges of the wing plates and head plate and forming a bond between the masonry wall and said plates.

1,569,778. CONTINUOUS AUTOMATIC SEPARATOR. EDWARD S. MURPHY, Central Miranda, Cuba. Filed Sept. 7, 1921. Serial No. 499,082. 2 Claims. (Cl. 210—76.)

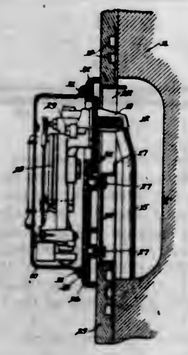


1. A rotor for centrifugal machines provided with a disc, side walls composed of frustra of increasing slope from the bottom up, whereby the ejecting force of the rotor when in use is progressively increased, a top ring about the upper edge of the uppermost frustra and a spider secured to the top ring.

1,569,779. VANITY CASE. CHARLES NACHEMOV, New York, N. Y. Filed June 6, 1925. Serial No. 35,311. 1 Claim. (Cl. 132—83.)

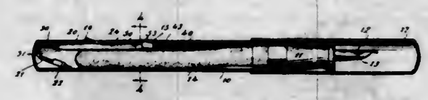
A vanity case comprising an open bottomed body having an annular inwardly directed flange at its lower edge, said flange having radial slits therein, defining at spaced points a plurality of bendable resilient arms disposed within the interior of the case, a mirror framed by said flange and frictionally held by said arms.

1,569,780. AMUSEMENT APPARATUS. THOMAS R. NOCK, Wachapreague, Va. Filed Oct. 10, 1924. Serial No. 742,888. 4 Claims. (Cl. 272—29.)



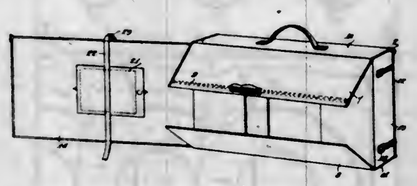
1. In an amusement apparatus, a boat simulation having a tube representing a smoke stack and also having turret representations and tubes representing guns carried by and extending from said turret representations and further having a chamber and broad side tubes representing guns in communication with said chamber, the smoke stack tube being adapted to be connected with smoke supply means, and the turret representing guns being combined with pipes adapted to be connected with a source of smoke supply and having openings in communication with said chamber for the passage of smoke to the tubes representing broad side guns.

1,569,781. PICTURE AND OBJECT TARGET. ROBERT P. ORR, Schenectady, N. Y. Filed Jan. 22, 1925. Serial No. 4,114. 1 Claim. (Cl. 124—15.)



An archer's target comprising a body formed with openings therein, members pivotally secured to said body and mounted to normally cover said openings, said members being adapted to swing through different openings when struck by an arrow and then back to their normal position covering said openings after the arrow has passed, each of said members being provided with a picture of an animal thereon, said pictures being adapted to be marked by an arrow when struck, while the members by their swinging movement permit the arrow to pass through the aperture.

1,569,782. MOUNT FOR THERMOSTATS. ARTHUR J. OTTO and CARL A. OTTO, Milwaukee, Wis., assignors to Johnson Service Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed July 8, 1925. Serial No. 42,333. 7 Claims. (Cl. 236—1.)

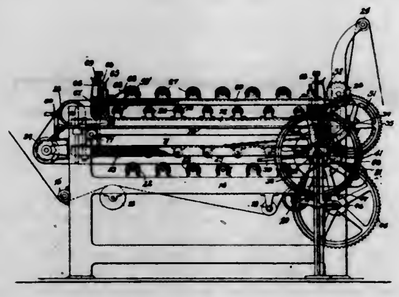


1. In a mounting for control instruments, the combination of a movable pipe head; a mount adapted to be fixed in a wall, and having an aperture through which said pipe head may be moved; a base releasably supported on said mount; means for connecting said pipe head to said mount at the rear thereof when said pipe head is retracted; and means for connecting said pipe head to said base when the latter is drawn forward through said aperture.

1,569,783. FOUNTAIN PEN. ERIC G. PEARSON, New York, N. Y., assignor to Eagle Pencil Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 16, 1922. Serial No. 588,545. 3 Claims. (Cl. 120—46.)

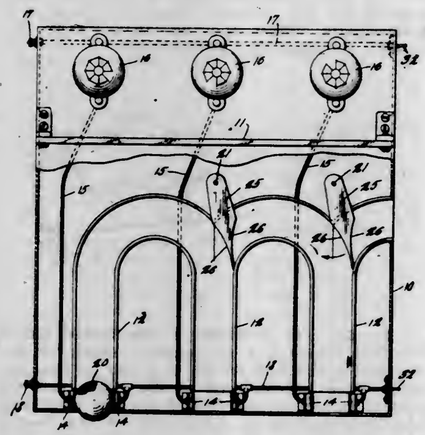
1. In a self-filling fountain pen, the combination with a tubular casing open at one end and having a longitudinal slot in the side thereof, and a collapsible ink reservoir in the casing, of pressing mechanism comprising a supporting strip having a longitudinal slot secured within the casing against the casing wall with its slot in alignment with the slot in the casing and having inwardly extending side flanges of greater length than its slot, a presser strip normally held close to the supporting strip and movable away therefrom, and an operating lever pivotally mounted on a pin extending between said side flanges and movable in said slots to force the presser strip against the collapsible reservoir.

1,569,784. LAUNDRY CASE. HOWARD E. PLIMPTON, Norwood, Mass., assignor to H. E. Plimpton Manufacturing Co., Inc., Norwood, Mass., a Corporation of Massachusetts. Filed May 28, 1924. Serial No. 716,421. 2 Claims. (Cl. 150—52.)



1. A laundry case, comprising a filler formed with a pair of flaps serving as a lid therefor, a casing for said filler having a side wall formed of a pair of flaps one extending from the top wall of the casing and the other from the bottom wall thereof, and said filler being adapted to be fitted in the casing with its lid occurring adjacent the flaps forming a side wall of said casing, and each flap of the casing being folded upon itself along its free and longitudinal edge to form a pocket, said pockets being positioned for receiving the free edges of the flaps of the filler, whereby the flaps of the filler and the flaps of the casing may be opened and closed together, and a cover flap hingedly secured to one end wall of the casing and adapted to fold upon the casing flaps and extend the entire length of the casing, and means for securing the free end of the cover flap to the associated end of the casing.

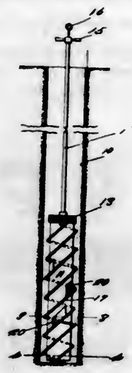
1,569,785. COMBINED FINISHING MACHINE FOR PILE FABRICS. MAX POPITSCH, Ridgewood, N. J. Filed Jan. 18, 1923. Serial No. 613,462. 8 Claims. (Cl. 26—29.)



1. A pile raising machine of the character described, comprising a plurality of pile raising rollers, said rollers being arranged in sets, one set of rollers being movable as a unit toward and from the other, means for

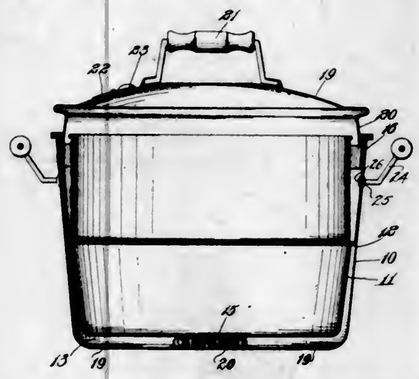
adjusting and locking said set of rollers in different positions in respect to the other set of rollers, means for forcing a strip of cloth through the machine so as to

be acted on by both sets of rollers, and spreading means for spreading cloth immediately before it approaches the respective set of rollers.



1,569,786. TARGET. JACOB E. POPOFF, Cambridge, Mass. Filed Feb. 10, 1925. Serial No. 8,267. 2 Claims. (Cl. 273—101.)

1. A target of the character described comprising a casing, a plurality of channeled horseshoe shaped members arranged within the casin and tilted forwardly therein, switch members included between the horseshoe members, means included upon the upper portion or the switch means for moving the same laterally therein, spaced contact members arranged adjacent the forward end portions of the horseshoe members and electric signalling means connected in circuit with the contact members for registering a shot.

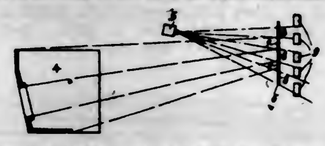


1,569,787. SAND-REMOVING DEVICE. GEORGE A. ROBERTSON, Youngstown, Ohio. Filed Mar. 28, 1925. Serial No. 19,070. 2 Claims. (Cl. 255—68.)

1. A sand removing device of the character described comprising a tubular casing including a bottom and removable closure cap, a plurality of spiraled cutting blades arranged upon the outer side walls of the tubing, a plurality of auxiliary cutting blades struck outwardly from the outer side walls of the tubing and adjacent the spiraled cutting blade, and a pair of oppositely disposed

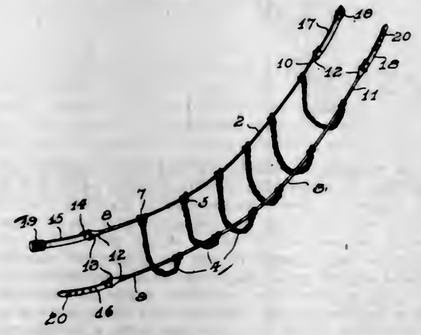
cutter blades arranged upon the bottom of the tubing and including flap valves arranged therewith substantially as set forth.

1,569,788. CULINARY UTENSIL. WILLIAM J. SANBORN, Cleveland, Ohio. Filed Aug. 30, 1924. Serial No. 735,160. 9 Claims. (Cl. 53—1.)



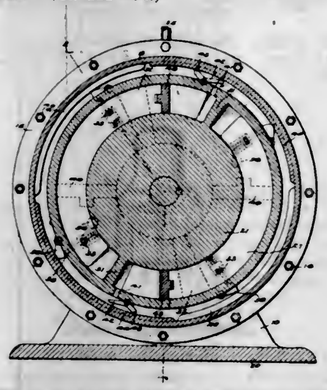
1. A vessel of the character described comprising an inner shell and an outer shell extending in approximately parallel spaced relation across the bottom of the vessel and approximately half way up the inner shell to provide an air chamber between the inner and outer shells, the outer shell at the top of the air chamber extending inward into approximate contact with the inner shell, then extending up to the top of the inner shell, and being engaged therewith at the rim of the vessel.

1,569,789. MAKING MOVING PICTURES. EUGEN SCHÜFFTAN, Berlin-Wilmersdorf, Germany. Filed Sept. 15, 1923. Serial No. 663,011. 15 Claims. (Cl. 88—16.)



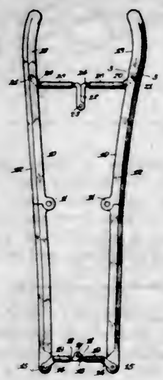
1. The art of making composite motion pictures of a set or scene and a second set which is complementary to the first set or scene which comprises arranging a light transmitting member between the first set or scene and a camera, forming an image of a portion of one of the sets or scenes on a frame of the camera, simultaneously

forming an image on the same frame of the complementary set or scene with a reflecting surface on the light transmitting member, said light transmitting mem-



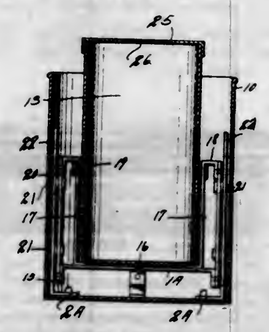
ber extending beyond the reflecting surface for blending the adjacent edges of the two images into each other by the coordination of the reflecting surface and the transparent member.

1,569,790. ANTISKID DEVICE FOR AUTOS. JOHN WALTER SEEGER, Washington, D. C., assignor to Seeger Chain Company, Incorporated, Washington, D. C., a Corporation of Delaware. Filed Feb. 18, 1925. Serial No. 10,012. 2 Claims. (Cl. 152—14.)



1. An anti-skid device for pneumatic tires consisting of a pair of flexible cables each having at spaced intervals a series of projections, cross-chains connecting these cables, the end-links of these cross-chains being pivotally connected to the cables in straddling relation to the projections, and means at the ends of the cables for fastening the appliance to a wheel.

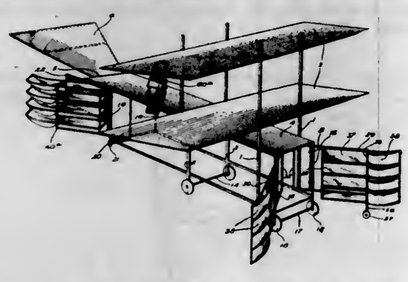
1,569,791. ROTARY ENGINE. JOHN W. SHEPARD, Tucson, Ariz. Filed Sept. 7, 1922. Serial No. 586,676. 5 Claims. (Cl. 121—74.)



1. A rotary engine comprising a stator having an annular steam chest, a rotor in the stator and forming the inner wall of the steam chest, one side of said rotor being formed inwardly of the periphery of the rotor with an annular groove defining a high pressure chamber, the other side of the rotor being formed inwardly of the periphery of the rotory with an annular groove of a greater volume than said first named groove, and forming a low pressure chamber, there being transverse openings in the rotor for establishing communication between the high and low pressure chambers, spring actuated valves for normally closing said transverse openings, cam carried by the stator for periodically unseating said valves and thereby periodically establishing communication between the oppositely located high and low pressure chambers.

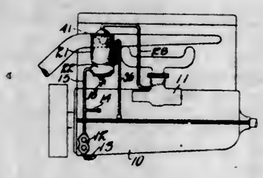
1,569,792. TROUSERS CREASER. ALVIN TIPTON SMITH, Los Angeles, Calif. Filed May 22, 1924. Serial No. 715,148. 1 Claim. (Cl. 223—19.)

A trousers stretcher and creaser including side bars, a stretching assemblage forming a connection between said side bars near the lower ends thereof, and a second stretching assemblage forming connection between the bars near the other ends thereof, each of said assemblages being offset at their outer ends and pivoted at their said outer ends to the said side bars and having a joint at the center formed with lateral members pivotally connected by pivots offset from a line passing through the pivots of said outer ends so that the central joint in folding or unfolding crosses the line between the offset end pivots.



1,569,793. CREAM COOLER. LOUIS TOMHAVE, Fergus Falls, Minn. Filed Aug. 25, 1925. Serial No. 52,415. 5 Claims. (Cl. 31—55.)

2. A structure for supporting cream cans within water cans comprising a base having vertically extending members adapted to fit around the cream can, the base

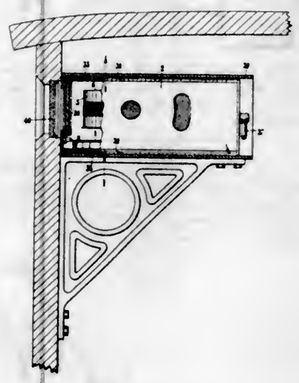


and the vertically extending members being outwardly extended, vertical strips connecting the outwardly extending ends of the base and of the vertically extending members, and legs operatively connected to said vertical strips.

1,569,794. FLYING MACHINE. LEHMAN WEIL, New York, N. Y. Filed Apr. 15, 1925. Serial No. 23,307. 15 Claims. (Cl. 244—20.)

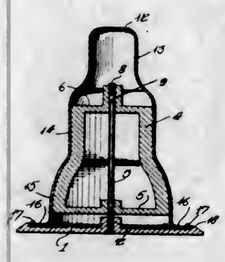
1. In a flying machine, a body, pairs of propellers hingedly mounted at the forward and rear ends of said body, and means for oscillating a pair of the propellers at each end towards or away from each other, each of the propellers comprising a plurality of pivotally mounted blades and means for positively oscillating the blades.

1,569,795. OIL RECTIFIER. WILLIAM G. WALL, Indianapolis, Ind., assignor to Rectifier Manufacturing Company, Indianapolis, Ind., a Corporation of Indiana. Filed Feb. 14, 1925. Serial No. 9,142. 7 Claims. (Cl. 123—196.)



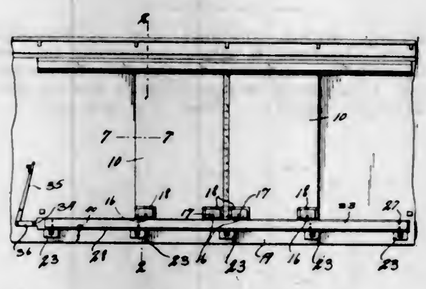
1. An oil rectifier for engines comprising a refining chamber, and a pipe having one end connected to said chamber and having its other end connected to the fuel inlet passage at the side of the throttle valve remote from the engine, substantially as set forth.

1,569,796. ELECTRIC SOLDERING TOOL. EDWARD L. WATSON, Bode, Iowa. Filed July 25, 1924. Serial No. 728,151. 3 Claims. (Cl. 219—26.)



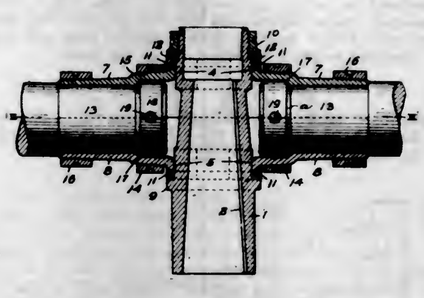
1. A tool of the character described comprising a tubular body, a tubular neck of different material screw-threaded into one end portion of the body and having a collar abutting said end portion of the body, a sleeve screw-threaded on said collar and end portion of the body, a head having a sleeve fitted removably on said neck, an electrode adjacent to said head within the last named sleeve, and an electrode mounted adjustably within the body and projecting into said neck to form an arc with the first named electrode.

1,569,797. TEMPERATURE-CONTROLLING SYSTEM FOR RAILWAY CARS. SILVESTER WÖHRLE, Steglitz, near Berlin, Germany, assignor to the Firm of Optische Anstalt C. P. Goerz Aktiengesellschaft, Friedenau, near Berlin, Germany. Filed Nov. 1, 1921. Serial No. 512,130. 5 Claims. (Cl. 234—11.)



1. A temperature controlling system for railway cars comprising a temperature indicating device adapted to be read behind an observation-window in an outer wall of the car, two casings the one connected with the car open towards the observation-window in the wall of the car, said casing having inside the car an opening for inserting the said second casing, the second casing forming a container for a temperature recording device and provided with a window for the observation of the indication of the recording device and provided with a handle the recording device mounted on a base plate in firm connection with a wall portion of said second casing perpendicular to the wall portion of the casing provided with a handle and adapted to be removably inserted into the said second casing, the wall portion connected with the carrying base plate of the recording device forming a closure for the instrument casing, the insertion of said second casing into said first named casing connected with the car being effected in such a manner that its observation-window comes into line with the observation-window in the wall of the car.

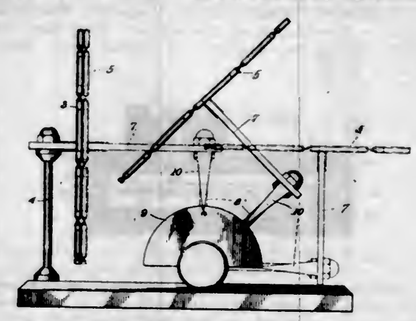
1,569,798. REEL. OSCAR M. WOLFF, Chicago, Ill. Filed Oct. 31, 1924. Serial No. 747,112. 7 Claims. (Cl. 242—77.)



1. A reel comprising a base having a hollowed out upper surface, an upstanding spindle and a reel proper revoluble about the spindle, said reel being flared at its base and said flared portion fitting into the hollowed out portion of the base.

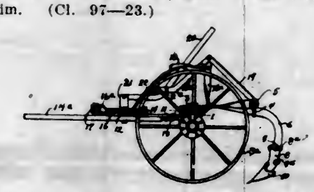
1,569,799. CAR DOOR. DAVID E. CONRAD, Eldon, Iowa, assignor of one-half to Van V. Baldwin, Eldon, Iowa. Filed June 11, 1925. Serial No. 36,469. 19 Claims. (Cl. 20—22.)

1. In a door structure, a wall having an opening, a door therefor, rollers on the door, a track extending parallel thereto and mounted thereon for vertical movement into or out of engagement with the rollers, manually operable means for shifting said track, and a supporting member disposed directly below the lower edge of the door and on which the door rests and is supported when the track is lowered.



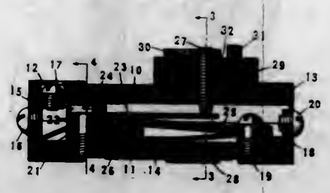
1,569,800. PROPELLER FOR AEROPLANES. THOMAS A. DICKS, Pittsburgh, Pa., assignor to Standard Steel Propeller Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Dec. 21, 1922. Serial No. 608,192. 7 Claims. (Cl. 170—173.)

1. A propeller hub having in combination a tubular body portion and a blade carrying arm consisting of two semicircular sections, said sections having openings therethrough intermediate their ends for the reception of the body portion and provided at their ends with means for positively engaging the shanks of blades.



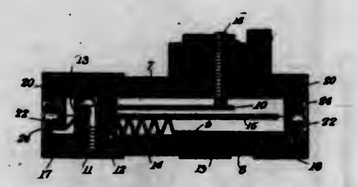
1,569,801. INDUCTIVE COUPLER. HAROLD POTTER DONLE, Meriden, Conn., assignor to The Connecticut Telephone & Electric Company, Incorporated, Meriden, Conn., a Corporation of Connecticut. Filed Oct. 22, 1923. Serial No. 669,887. 6 Claims. (Cl. 171—119.)

3. In an inductive coupler, a movable coil, a pivotal support for said coil the axis of said pivotal support being located at right angles to the axis of said coil and at a distance from said axis substantially equal to the



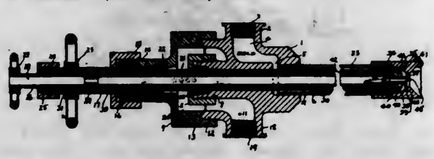
distance from the plane of said coil to the axis of said pivot, said distance being at least as great as a radius of said coil.

1,569,802. COTTON THINNER. JAMES FEAGINS, Frisco, Tex. Filed June 19, 1924. Serial No. 720,932. 1 Claim. (Cl. 97—23.)



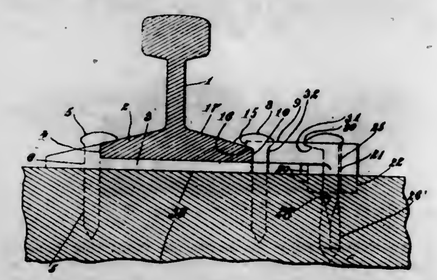
A cotton thinner comprising an angle bar, blocks secured within the opposite ends of said bar, a stub shaft carried by each block, supporting wheels carried by said shafts, plow beams, means for adjustably connecting the upper ends of said beams to said angle bar, a cross bar having its opposite ends connected to said angle bar and extending rearwardly thereof, U-bolts for connecting said cross bar to said beams, a U-shaped member hingedly connected to and extending forwardly of said angle bar, an upright member connected to said angle bar, a lifting bar connecting said upright member to said cross bar, a double bar having one end connected to said lifting bar, a lever pivotally mounted upon said U-shaped member, and means for connecting said lever to said double bar.

1,569,803. RELAY. BENJAMIN E. GETCHELL, Plainville, Conn., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn., a Corporation of Connecticut. Filed July 10, 1922. Serial No. 573,965. 15 Claims. (Cl. 200—122.)



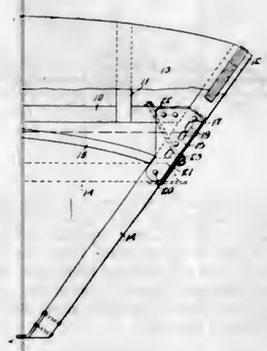
1. An electric relay comprising an insulating housing, a heater element mounted therein, a thermostatic element, a time lag element thermally and electrically connecting said thermostatic element with said heater element, an adjustable contact screw co-acting with said thermostatic element, and end caps to which the terminals of the heater element are secured.

1,569,804. RELAY CONSTRUCTION. BENJAMIN E. GETCHELL, Plainville, Conn., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn., a Corporation of Connecticut. Filed Mar. 10, 1923. Serial No. 624,142. 10 Claims. (Cl. 200—122.)



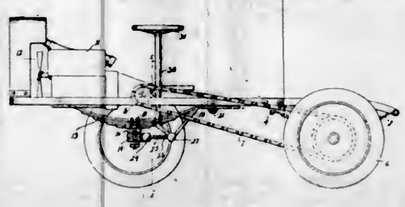
1. A two part insulating body having a longitudinal groove, a heater strip mounted in said groove, a thermostatic switch operated by the heat from said strip, anchor members mounted in said groove, end caps on said body having inwardly directed bosses extending into the ends of said groove, and means for securing said bosses to said anchor members, said strip being electrically connected to said end caps and an intermediate contact connected to said switch.

1,569,805. OIL BURNER. JOSEPH A. HEBERT, Freeport, Tex. Filed May 2, 1924. Serial No. 710,532. 4 Claims. (Cl. 158—74.)



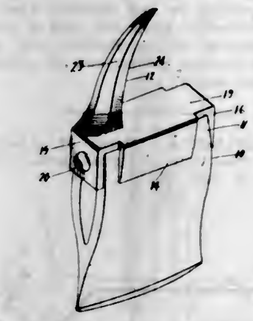
2. In an oil burner, an outer oil pipe, an inner air pipe, and an intermediate steam pipe, spaced apart to provide intermediate passages, a nozzle on said steam pipe having a forwardly flaring discharge orifice, a valve seat within said nozzle, a steam valve on said oil pipe, and an oil valve on said air pipe, said air pipe extending beyond said oil pipe and valve, said pipes being adjustable longitudinally to regulate or entirely close both the said valves in said nozzle, and means on said valves to direct the fluid from said nozzle in a spiral spray.

1,569,806. ANTICREEPER. WILLIAM W. HOLLAND, Wood River, Ill. Filed July 28, 1925. Serial No. 46,519. 9 Claims. (Cl. 238—317.)



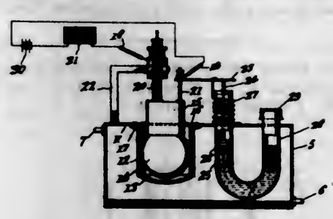
1. A rail clamp comprising a cam having an engaging surface of gradually increasing radius about the cam axis, a spike having projecting longitudinal edges and having its end portion including said edges turned at an angle about its axis oppositely to the direction of increase of the cam radius, and a hole at the axis of the cam to receive the spike, and means on the cam for causing the cam to maintain a fixed angular position relatively to the spike.

1,569,807. HINGE SUPPORT FOR AUTOMOBILE TOPS. MATTHEW R. HULL, Connersville, Ind., assignor to Rex Manufacturing Company, Connersville, Ind., a Corporation of Indiana. Filed Mar. 29, 1924. Serial No. 702,961. 4 Claims. (Cl. 296—102.)



1. In a vehicle top, a roof rail, a rear bow, a leg pivoted to the bow and adapted to fold up adjacent to the lower part of the top, a plate fixed to the rear side of the leg extending over the joint between the leg and the bow, plates at the inner and outer sides of the bow also extending over said joint said plates supporting the pivot for the leg and the outer plate being apertured to permit fastening of the trim, and a bolt extending diagonally through the roof rail the bow and the upper end of the first-named plate to hold said leg in extended position, substantially as set forth.

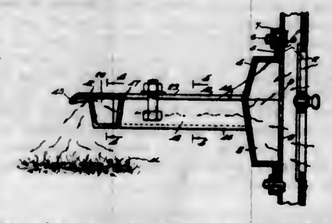
1,569,808. MOTOR VEHICLE. JAMES E. JENKINS, Highland Park, Mich. Filed Oct. 13, 1924. Serial No. 743,414. 1 Claim. (Cl. 180—1.)



A motor truck construction in which the axles for the drive and for the steering wheels are supported from semi-elliptical springs connected to the sills of the truck frame and in which the rear wheels are chain driven by the engine, a plate supported by the front springs and to which the front axle is pivoted, arms having a ball and socket connection with the front axle, links pivoted to the arms, an angle member having a ball and socket connection with the links, a steering post connected centrally with the angle member, and a stabilizing bar pivotally secured to the front axle and slidably connected to the frame.

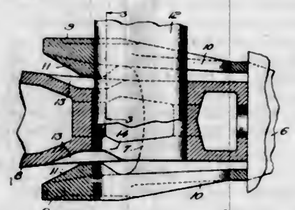
1,569,809. CUTTER. FRED JOHNSON and DAVID HNATUK, District of Algoma, Ontario, Canada. Filed Aug. 7, 1923. Serial No. 656,255. 1 Claim. (Cl. 7—1.)

In combination with the head of an ax blade, a cutter comprising a base, a pair of depending side flanges formed on said base for engagement with the side walls of the head, front and rear flanges depending from said base and being provided with openings adapted to register with a longitudinal bore formed through the head, a knife blade extending from the base in an opposite direction from the flanges and arranged at an angle with respect to the length of the base, and a bolt passing through the registering bore and openings for securing the cutter to the head, as and for the purpose specified.



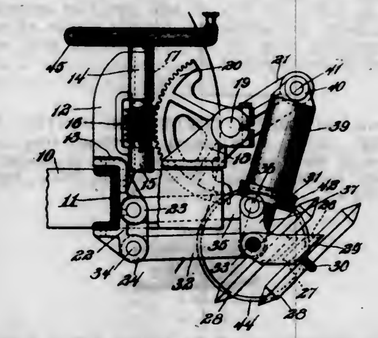
1,569,810. GASOLINE HEATER. ROBERT H. JOHNSON, Washington, D. C. Filed Jan. 28, 1925. Serial No. 5,361. 2 Claims. (Cl. 219—38.)

2. A gasoline heater comprising a tank having an inlet at the lower portion of one end and an outlet at the higher portion of the other end of the tank, a pocket extending downwardly from the top portion of the tank near the outlet end and having a rounded bottom, a cover for the tank, a lamp socket carried by and removable with said cover, a lamp fitted in the lamp socket and projecting into said pocket, fixed and movable contacts for the lamp socket outside said tank, a U tube extending into the tank near the inlet end and containing a fluid of high coefficient of expansion, a plunger in one leg of said tube coupled to said movable contact, a coil spring wound about said leg of the tube above the tank and acting to draw said plunger and contact downwardly, and means for closing the other leg of said tube.



1,569,811. AIR HEATER FOR FURNACES. ERNEST JORDAN, New York, N. Y. Filed Dec. 12, 1924. Serial No. 755,515. 3 Claims. (Cl. 110—175.)

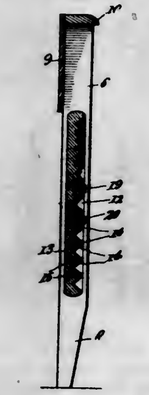
1. In an air heater for furnaces, a body formed with a pair of substantially V-shaped members presenting passage-ways extending to near the center of the furnace, and a plate covering said passage-ways, said plate being provided with a depending flange extending centrally into each of the passage-ways for dividing each



passage-way into substantially two parts, said plate overlapping said V-shaped member at the inner end for deflecting air from said passage-ways downwardly.

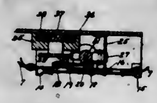
1,569,812. DRAFT RIGGING. BYERS W. KADEL, Baltimore, Md., assignor, by mesne assignments, to The Symington Company, a Corporation of Maryland. Filed Feb. 4, 1924. Serial No. 690,456. 10 Claims. (Cl. 213—69.)

1. In a railway draft rigging, the combination with center sills, of a coupler having depressions in opposite sides thereof, a yoke, a key connecting the yoke to said coupler, and means on said yoke adapted to provide relatively large and increased bearing areas for said key, said means projecting inwardly of the yoke arms and capable of moving into the depressions formed on the coupler.



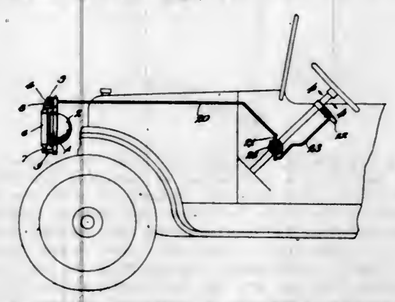
1,569,813. SCARIFIER FOR TRACTORS. RAYMOND W. KEELER, Galion, Ohio, assignor to The Galion Iron Works & Mfg. Co., Galion, Ohio, a Corporation of Ohio. Filed July 8, 1924. Serial No. 724,906. 3 Claims. (Cl. 262—8.)

1. The combination with a tractor, of a scarifying mechanism connected therewith comprising a tooth carrying bar, links pivotally connecting the bar to the rear end of the tractor and permitting upward and downward movement of the scarifying bar, means for



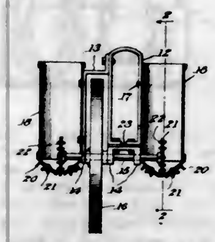
raising or lowering the scarifying bar comprising a segment gear having a radially extending arm, the arm at its extremity being laterally extended in opposite directions to form a transversely extending barrel, manually operable means engaging the segment gear whereby the segment gear may be oscillated, a pair of members pivoted to the axis of said elongated barrel and depending therefrom, a pair of members having telescopic engagement with the first named members and pivotally connected to the tooth carrying bar, means limiting the outward movement of one telescopic member with relation to its coacting other telescopic member, and a spring yieldingly resisting the inward movement of the members one into the other.

1,569,814. WASHBOARD. CHARLES W. KENNON, Tampa, Fla. Filed Oct. 29, 1923. Serial No. 671,498. 1 Claim. (Cl. 68—29.)



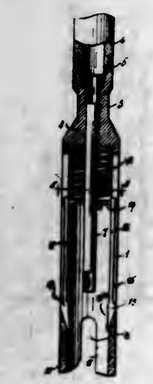
A washboard comprising a pair of side bars having channels in their intermediate portions, a base board having its side edges fitted into the channels in the bars and provided upon its outer face with substantially V-shaped ribs, each of said ribs being provided at its crest with a slot extending longitudinally thereof, and an inverted U-shaped metal strip for each slot, each of said strips being of resilient metal with their legs sprung to inherently urge the same apart toward a diverging position, each of said slots having their opposite walls spaced apart a distance less than the distance to which the legs of said strip are originally sprung apart, the intermediate rounded portion of each stop projecting from its slot substantially flush with the wall of the respective rib.

1,569,815. AUTOMATIC CUT-OFF FOR HEATING DEVICES. HUGH A. KIRKLAND, Portland, Oreg., assignor, by direct and mesne assignments, to Adolph A. Dekum, Portland, Oreg. Filed Mar. 5, 1920. Serial No. 363,561. 1 Claim. (Cl. 200—124.)



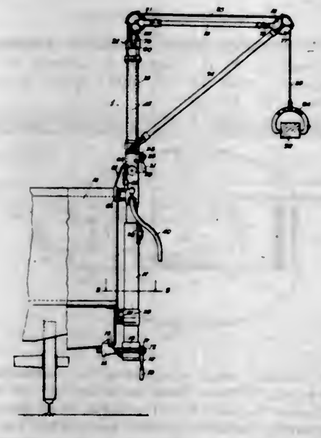
In an automatic cut-off for heating devices adapted to be heated by a heating agent, the combination with means for controlling the heat supply, of a heating wall adapted to be heated by said agent, a receptacle having a recess upon one side and secured tightly against said heating wall with recess sealing effect, a mass of material of relatively low fusibility permanently confined within said recess by the heating wall, a movable member mounted upon a shaft extending into the fusible material within the receptacle, the said member being held in fixed position by said material when hard and liberated for movement when soft, and a reciprocatory rod, spring actuated in one direction and operatively connecting said movable member and the means for controlling the heat supply.

1,569,816. REFLECTOR. PETER M. LARSEN, South Bend, Ind. Filed July 12, 1924. Serial No. 725,638. 3 Claims. (Cl. 240—45.2.)



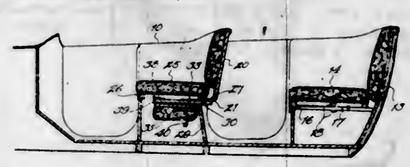
1. A reflector comprising a support, a plurality of reflector elements supported for swinging movement in the support, a shifter connected to all of the elements to simultaneously swing same, a bell crank lever connected to the support and having a pin and slot connection with the shifter, a rod pivoted to and extending from the bell crank, a centrally pivoted lever pivotally connected to the control rod and provided with a rib, a lock disc cooperating with the rib, and an operating handle, and a link between the lever and operating handle.

1,569,817. PLOW ATTACHMENT. GEORGE WILLIE LEE, Willow Spring, N. C. Filed July 28, 1923. Serial No. 654,400. 1 Claim. (Cl. 275—9.)



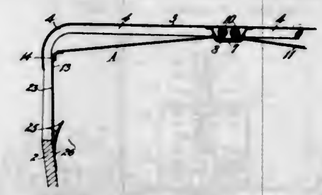
The combination with a plow having a beam, of a seeder attachment comprising a yoke through which the beam passes for a limited vertical movement, a laterally extending inverted substantially L-shaped arm secured to said yoke, an inverted U-shaped member secured to the lower end of the yoke and provided with alined bearings in its legs, a third bearing in the lower extremity of said L-shaped arm, an axle passing through the bearings for rotation therein a wheel fixed on the axle between the third bearing and the U-shaped member, said wheel extending within the space provided by the L-shaped arm, a pair of hoppers carried by the outer ends of said axle and fixed respectively to the yoke and to the L-shaped arm, and means secured to said yoke and extending forwardly parallel with said beam, said means having pivotal connection at its forward end with said beam permitting relative vertical movement of said yoke and preventing relative horizontal movement.

1,569,818. FISHING TOOL FOR WELLS. BERT LESTER LIGON, Electra, Tex., assignor to Ligon Tool Company, Electra, Tex., a Partnership. Filed Nov. 20, 1924. Serial No. 750,977. 3 Claims. (Cl. 294—102.)



1. A fishing tool for wells comprising the combination of a cylindrical body with a solid head and a hollow interior; the lower end of the body provided with longitudinal upwardly extended openings and dividing the body at this point into two parts of unequal length; longitudinal slots on opposite sides of the tool body, arms in the slots; said arms having tapered and toothed jaws and adapted to be moved downward under compression of a spring to engage the object to be removed from the well; and means for attaching the tool to a drill stem or tubing, and a feed water pipe traversing the head and neck of the tool, communicating with the drill tubing and depending well within the hollow interior of the tool.

1,569,819. MEANS FOR LOADING AND UNLOADING CARS. CHARLES E. LINDSAY, Albany, and CLINTON V. OGBIN, New York, N. Y.; Carolyn P. Lindsay executrix of said Charles E. Lindsay, deceased. Filed Jan. 31, 1922. Serial No. 533,008. 8 Claims. (Cl. 212—34.)



1. A device of the character described comprising a suitable supporting element, a cylinder telescoping within said element and adjustable with respect thereto, means carried by the supporting element and the cylinder for detachably attaching the device in operative position, a piston mounted in the cylinder, a tubular member carried by the upper end of said cylinder, and hoisting means carried by said tubular member and operated by the piston in the cylinder.

1,569,820. CONVERTIBLE SEAT FOR VEHICLES. HENRY CLAY LIPSCOMB and CLAYO POWERS LIPSCOMB, Oaknolia, La. Filed Feb. 12, 1924. Serial No. 692,325. 1 Claim. (Cl. 155—7.)

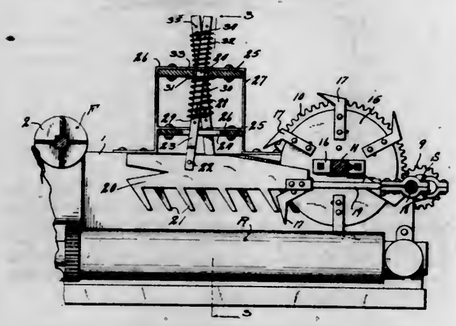
The combination with the rear seat of a vehicle, and elements movable forwardly therefrom, of a front seat including a hingedly mounted back and a rearwardly slidable horizontal seat portion, a supporting member hinged to the supporting member, on a level therewith and in the plane of the hinged back when horizontal, and cooperating with said hinged back to support the front seat when the latter is moved rearwardly, an extension hinged to the transverse member, and movable beneath the latter and outwardly therefrom to position on a level with the slidable horizontal portion of the front seat, and a transverse element supporting the central portion of the extension when the latter has been moved outwardly.

1,569,821. VEHICLE SIDE CURTAIN. HENRY JOSEPH MCDONNELL, Mount Waverley, Victoria, Australia. Filed Jan. 3, 1925. Serial No. 432. 3 Claims. (Cl. 296—140.)

1. An automobile hood provided with side curtains, a casing fitted to the top of the hood and including blocks fitted to the end bows, a strip secured longitudinally to said box, a cover attached to said strip and having its ends fixed to the hood material, spring actuated rollers in the casing, and flexible connections between said side curtains and rollers.

1,569,822. ROAD MAP AND CASE. SAINT PAUL MCGHEE, Laurinburg, N. C. Filed Dec. 10, 1923. Serial No. 679,805. 1 Claim. (Cl. 40—85.)

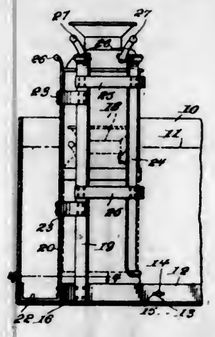
A device of the class described comprising a cylindrical casing having a slot therein, a spring roller mounted in the casing, a map strip carried by the roller and extending through the slot, a supporting bracket at each end of the casing, said bracket having



a curved central part and straight end parts, perforated to receive fastening means and a spring jaw for each bracket having a bolt receiving part at its upper end so that it can be bolted to the upper part of the bracket, for permitting the casing to be attached to a windshield frame of a vehicle the brackets permitting the casing to be attached to a part of a closed vehicle when the spring jaws are removed from the brackets.

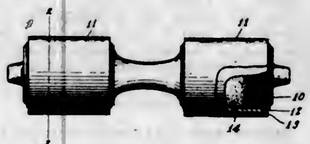
1,569,823. SHOE STRUCTURE. FRED MACCARONE, Brooklyn, N. Y. Filed Aug. 5, 1925. Serial No. 48,285. 6 Claims. (Cl. 36—19.)

1. A shoe structure including an upper, an outsole, and an insole consisting of a heel portion, a shank portion, and a marginal rand integral with the forward end of the shank portion and having a skived inner edge, said edge and the under side of the shank and heel portions having a continuous channel, stitching extending through the channel and connecting the upper to the insole, and stitching extending through the outsole, the upper, the rand and the shank and heel portions of the insole.



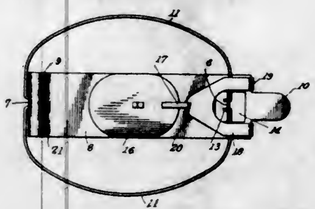
1,569,824. ATTACHMENT FOR CORN PICKERS. HENRY MAGNESS, Colton, S. Dak. Filed Feb. 19, 1925. Serial No. 10,386. 6 Claims. (Cl. 130—5.)

1. In combination with a set of husking rolls, a propeller blade positioned above each of the rolls, yieldable means for supporting each of said blades for oscillatory movement, means for oscillating the blades, vertically disposed discs positioned above and between adjacent rolls, said discs being provided with outstanding picker hooks, and means for rotating the discs.



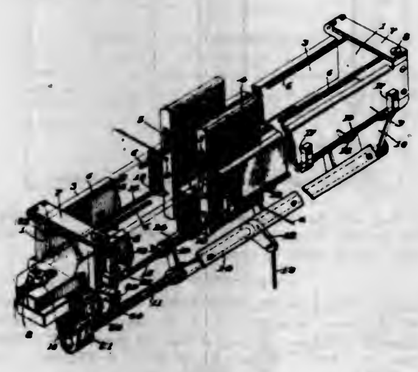
1,569,825. CAN HOLDER. ALFRED MAJOR, Holland, N. Y. Filed June 22, 1925. Serial No. 38,890. 1 Claim. (Cl. 31—4.)

The combination with a cooling tank for cans, of a can holder comprising a plurality of spaced bars arranged edgewise along the bottom of the tank longitudinally thereof, and connected at one end by an integrally curved portion, a holder proper including a plurality of vertically disposed stationary bars supported by said curved portion, and a plurality of relatively movable bars



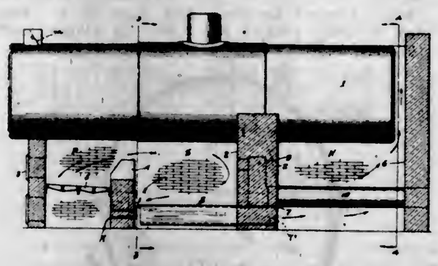
yieldably supported on the stationary bars, all of said bars being arranged in an annular series and having their upper ends flared outwardly.

1,569,826. RUBBER-COVERED SPINNING ROLLER. ALLAN B. MERRILL, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed July 30, 1925. Serial No. 47,154. 6 Claims. (Cl. 19—143.)



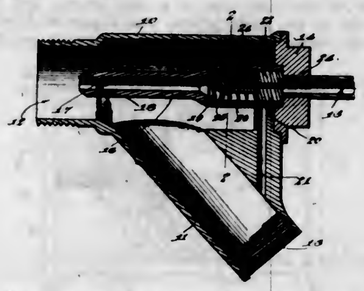
1. A spinning roll comprising a core, and a cover thereon having an outer portion of relatively-stiff, flexible, soft rubber, and an underlying cushion of relatively-soft rubber.

1,569,827. ANIMAL TRAP. CHARLES AGUSTUS RANCIER, Brooklyn, N. Y., assignor of one-half to William J. Boehmer. Filed Oct. 17, 1924. Serial No. 744,101. 6 Claims. (Cl. 43—92.)



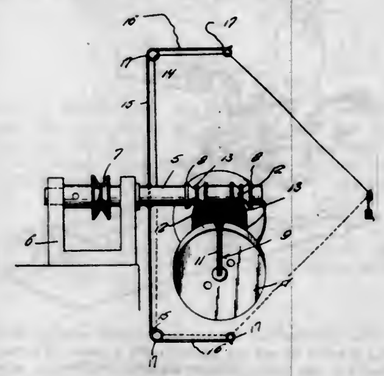
1. An animal trap comprising a combined spring member having a base, two uprights, and an overhead arm connected to one of the uprights, jaws having pivot ends extending inwardly toward each other and pivoted in said uprights, a pan hinged to the central part of said arm, and a latch hinged to the outer end of said arm and adapted to overlie both of said jaws near their pivotal ends when said jaws are spread, said jaws having shoulders engaged by said arm.

1,569,828. WARP STOP MECHANISM FOR LOOMS. MELVIN L. STONE, Lawrence, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Oct. 7, 1925. Serial No. 61,098. 7 Claims. (Cl. 139—349.)



1. In a warp stop mechanism for looms, the combination of a series of drop wires normally supported in raised position by the warp threads during weaving, warp supporting bars extending in parallel relation to the series of drop wires, a drop wire separator rock shaft mounted for rocking movement, a series of drop wire separators carried by the rock shaft, means for turning the rock shaft to move the drop wire separators between the drop wires, and a lock for holding the rock shaft in turned position.

1,569,829. FURNACE. JOHN T. ROWLEY, New York, N. Y., assignor to Eureka Furnace Coal & Oil Economy Company, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 20, 1924. Serial No. 757,095. 4 Claims. (Cl. 110—73.)

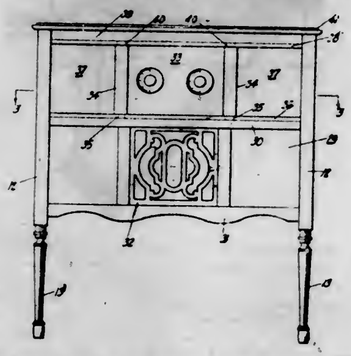


1. In a boiler furnace, in combination with a fire box, a bridge wall, a secondary combustion chamber having communication with said fire box over said bridge wall, a third combustion chamber, a wall separating the third and secondary combustion chambers, means for conveying air into contact by radiation, with the heated gases in the third combustion chamber and thence to the secondary combustion chamber, and a conduit passing through said last named wall and having an inlet adjacent to the rear face of the bridge wall, the cross sectional area of said conduit being substantially less than the cross sectional area of the secondary combustion chamber.

1,569,830. TRACK SANDER. JOHN H. WATTERS, Anniston, Ala. Filed Nov. 6, 1925. Serial No. 67,384. 6 Claims. (Cl. 291—11.)

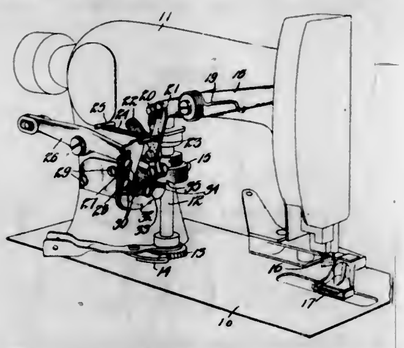
1. A track sander having sand inlet and outlet channels, an air nozzle having an air inlet and having outlet ports opening into the sand inlet and outlet channels, and a blast channel leading to the sand outlet channel, and a spring controlled valve normally seated in the air inlet and closing said blast channel, said valve having an opening therethrough equalling in area the areas of the said outlet ports of the nozzle to permit of the passage therethrough of a normal volume of air required for the supply of said ports, and said valve being movable by a greater volume of air against the tension of its spring to uncover the blast channel and permit much greater volume of air to pass directly to the sand outlet through said blast channel.

1,569,831. TEXTILE SPINNER AND TWISTER. FRED C. WERNER, Kingston, Pa. Filed Nov. 1, 1924. Serial No. 747,320. 13 Claims. (Cl. 117—23.)



1. In a device of the character described, a substantially horizontally disposed spindle, a bobbin, a bobbin supporting saddle for maintaining the bobbin in suspended relation with respect to the spindle having a member hooked at one end for quick detachable engagement with the upper surface of the spindle, and a flier operable by the spindle.

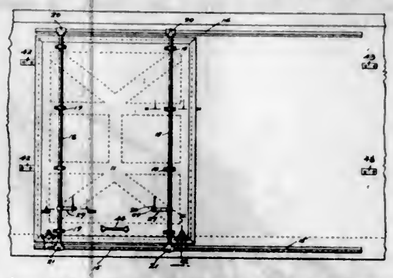
1,569,832. KNOCKDOWN CABINET. WILLIAM L. BYRNE and HARVEY A. BEESLEY, Los Angeles, Calif. Filed June 1, 1925. Serial No. 34,094. 3 Claims. (Cl. 45—52.)



1. In a radio cabinet, a strip having a groove in its upper surface, side portions having vertically, oppositely formed grooves, a top strip arranged with a groove in its

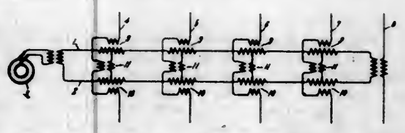
lower surface, said grooves defining an aperture having a groove around its inner edge, a pair of detachable panel elements, each resting at its bottom edge in the lower groove at one side edge in a side groove, and at its top edge in the upper groove, and a pair of detachable laterally shiftable upright grooved strips in which the

other edges of the panels are respectively placed, said strips also having tongues resting in the top and bottom grooves, as well as grooves defining with said top and bottom grooves, an aperture in which a radio panel can be detachably supported at its edges by the aid of said grooves.



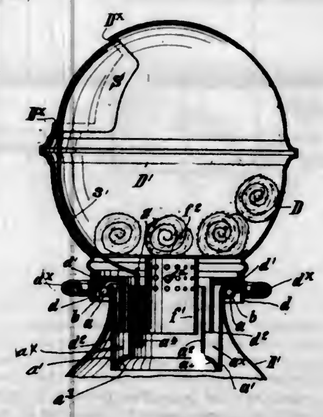
1,569,833. SAFETY DEVICE FOR BUTTONHOLE-SEWING MACHINES. FORREST R. COOSE, Waterville, Me. Filed July 29, 1925. Serial No. 46,917. 2 Claims. (Cl. 112—68.)

1. The combination with a button-hole sewing machine having a knife to cut the button-hole, a train of actuating devices for the knife, means whereby said train may be disabled at one point, means biased to hold said first-named means in operative position, and an upright feed shaft, of a collar on the shaft, a notch in the collar, an element constantly engaging said disabling means, and means held by said collar in position to retain said element in position to disable said train of mechanism until said last-named means falls into said notch, substantially as set forth.



1,569,834. CAR DOOR. BERT FULLER, Newark, Calif. Filed Sept. 5, 1923. Serial No. 661,106. 4 Claims. (Cl. 20—23.)

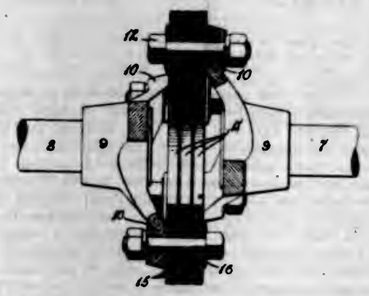
1. In a sliding and clamping door of the character described, means for clamping the door comprising screws arranged on the upper and lower edges respectively of the door for carrying the door to and from a door opening, and means for operating the screws in pairs comprising bevel gears secured respectively to one end of the screws, a pair of shafts revolvably supported across



the door and having a bevel gear at each end meshing with the first named gears, the screws at opposite ends of the shafts being of reversed pitch.

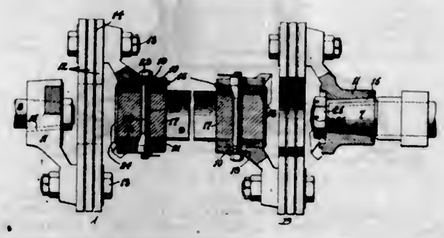
1,569,835. RADIO TRANSMISSION SYSTEM. EDWARD W. KELLOGG, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Jan. 30, 1925. Serial No. 5,737. 6 Claims. (Cl. 250—11.)

1. The combination in a radio transmitting system of a radiating system comprising a plurality of radiating units separated from one another by an appreciable fraction of a wave length of the waves to be radiated, a single transmission line for supplying to said radiating units currents having phase displacements corresponding to the geographical displacements of the units from one another, and means for preventing wave reflections over said transmission line from the points at which energy is supplied to the radiating units.



1,569,836. STERILIZING AND WATER-HEATING DEVICE. EDWARD KRONMAN, New York, N. Y. Filed Feb. 6, 1925. Serial No. 7,343. 5 Claims. (Cl. 167—3.)

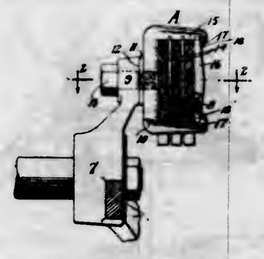
1. In water heating and sterilizing apparatus of the character designated, the combination with the neck of the steam generator, etc., of a sterilizing hood rotatably



mounted on said neck and formed with an access aperture on one side thereof, a stationary shutter positioned within said hood, means for manually rotating said hood, and a perforated drain floor in said hood formed with a recess to accommodate the standard supporting said stationary shutter, substantially in the manner and for the purpose set forth.

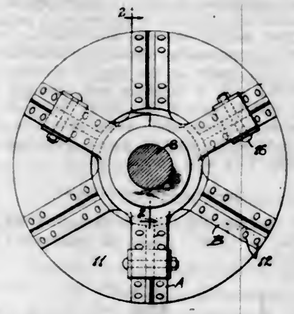
1,569,837. MEANS FOR DETERMINING TENSION OF BOLTS. HARRY P. MACDONALD, Montclair, N. J., assignor, by mesne assignments, to Spicer Manufacturing Corporation, South Plainfield, N. J., a Corporation of Virginia. Filed Mar. 26, 1920. Serial No. 369,146. 3 Claims. (Cl. 64—96.)

1. The combination with a torque transmitting flexible joint comprising a flexible member of yielding material and means gripping the same for torque transmission including a tension bolt, of means for indicating the tension on the bolt and thus preventing over stressing of the material.



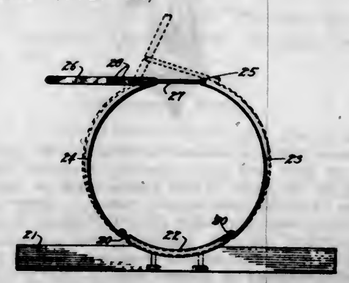
1,569,838. PROPELLER-SHAFT ASSEMBLY. HARRY P. MACDONALD, Montclair, N. J., assignor, by mesne assignments, to Spicer Manufacturing Corporation, South Plainfield, N. J., a Corporation of Virginia. Filed June 19, 1920. Serial No. 390,100. 9 Claims. (Cl. 64—29.)

1. In torque transmission assemblies, the combination of two spaced shafts, an intermediate or floating shaft therebetween, means forming a driving connection between the ends of the floating member and the respective shafts, said floating member being capable of sliding movement past one of said means substantially beyond its normal position relatively thereto.



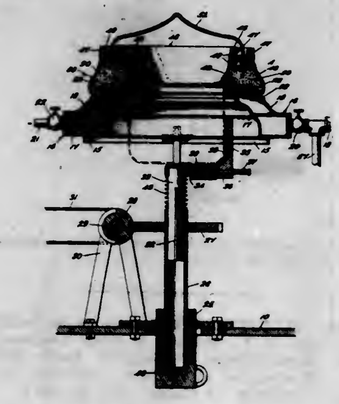
1,569,839. FLEXIBLE JOINT. HARRY P. MACDONALD, Montclair, N. J., assignor, by mesne assignments, to Spicer Manufacturing Corporation, South Plainfield, N. J., a Corporation of Virginia. Filed June 26, 1920. Serial No. 391,888. 2 Claims. (Cl. 64—96.)

1. In a torque transmitting joint, the combination of a spider, a flexible unit comprising a flexible member and clamp means attached thereto independently of the spider, and means for connecting the clamp means to the spider



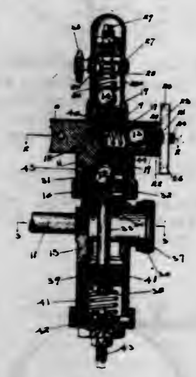
for the transmission of torque extending approximately parallel the line of torque.

1,569,840. FLEXIBLE JOINT. ANGUS S. MACDONALD, Great Neck, N. Y., assignor, by mesne assignments, to Spicer Manufacturing Corporation, South Plainfield, N. J., a Corporation of Virginia. Filed July 21, 1920. Serial No. 397,846. 2 Claims. (Cl. 64—96.)



1. In a flexible joint, the combination of a spider, a flexible disc, and means for connecting said disc, to the spider comprising a pair of plates on opposite faces of the disc and means for securing the plates together, one of said plates having a channel-like portion to embrace the spider.

1,569,841. BALL-LACING DEVICE. PLINY C. MANN, Greeley, Colo. Filed Mar. 15, 1924. Serial No. 699,519. 6 Claims. (Cl. 24—19.)

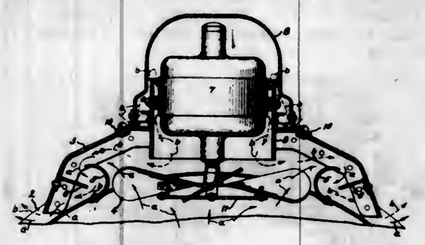


1. A device for holding foot balls and the like while being laced comprising a fixed curved member; movable curved members pivoted thereto and means contacting with the free extremities of said movable curved members for drawing and holding said members together all of said members adapted to contact with said ball.

1,569,842. HAT BLOCKING, FLANGING, AND FINISHING APPARATUS. JOSEPH L. MORAHAN, Jackson, Miss. Filed Mar. 2, 1925. Serial No. 12,668. 4 Claims. (Cl. 223—26.)

1. In an apparatus of the class described a hollow supporting member adapted to receive and support a hat with the brim resting thereon, said member being provided with steam discharge openings; means for supplying steam to the crown of the hat; a vertically movable shaft, provided with a finishing arm adapted to engage said crown, and to smooth and finish the same; a worm and means for driving the same; and a worm wheel carried by said shaft, adapted to be moved into and out of engagement with said worm.

1,569,843. VALVE. ALFRED B. MYERS, Portland, Oreg. Filed Mar. 3, 1924. Serial No. 696,702. 6 Claims. (Cl. 303—76.)



1. In a valve: a casing consisting of two parts and means to joint said parts together; a closure upon the bottom of the lower of said casing parts; a valve controlling an outlet port in said casing; a piston plunger adapted to coact with said valve to operate the latter; pneumatically operated mechanism for operating said plunger a spring to hold said plunger in position wherein said valve is closed; a chamber with an inlet port formed within said casing, said valve controlled outlet port communicating with said chamber.

1,569,844. PNEUMATIC OR AIR-CUSHION TIRE. JOHN ROBERT O'BRIEN, Marrickville, near Sydney, New South Wales, Australia. Filed Oct. 8, 1925. Serial No. 61,175. 1 Claim. (Cl. 152—22.)

In a vehicle tire, a body arranged with a series of chambers and a tube leading from each chamber and extending through the tire body to a recessed portion in the inner circumference thereof, an inflating valve embodying a body portion having bores extending therethrough, one for each tube connected to the chambers in the tire body, and nipples projecting from one end of the valve body in line with said bores, and means to connect the valve to said tubes comprising a rigid perforated disk engaged upon said tubes, a perforated disk of yielding material at the outer side of said rigid disk and in the perforations of which yielding disk the tubes are secured, and means to secure the rigid disk to the end of the valve body with the nipples engaging in the ends of the tubes with the yielding disk interposed between the rigid disk and valve.

1,569,845. VENTILATING APPARATUS. EDWIN J. MURPHY, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 29, 1924. Serial No. 716,788. 5 Claims. (Cl. 230—1.)

1. In combination in a searchlight, an arc chamber, a motor chamber and a motor therein, and a connecting chamber, a fan in the connecting chamber adapted to be driven by said motor, an outlet in the connecting chamber in proximity of the peripheral region of the fan, a baffle in proximity of the central region of the fan whereby when the fan is rotated the surrounding medium is drawn toward the fan and into the connecting chamber from the other two chambers and expelled through the outlet whereby circulation is established through both the arc and motor chambers, and openings in the motor and arc chambers so proportioned that a comparatively strong draft is created about the motor and a comparatively gentle draft is created about the arc region in the arc chamber.

Patents Nos. 1,569,846 to 1,570,603.

THE
OFFICIAL GAZETTE
OF THE
United States Patent Office.

Vol. 342—No. 3. TUESDAY, JANUARY 19, 1926. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $5.00 per annum; single numbers, 10 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

ADJUDICATED PATENTS.

(D. C. Ohio.) The Follen design patent, No. 55,600, for tire-tread surface, *Held* invalid, and, if valid, not infringed. *Follen* v. *Lambert Tire & Rubber Co.*, 8 F. (2d) 303.

TRADE-MARKS CANCELED.

66,224. Ointment. Robinson Bros. & Company Incorporated, Portland, Me., and Malden, Mass. Registered November 19, 1907. Canceled December 19, 1925.

67,915. Ointment. Robinson Bros. & Company Incorporated, Portland, Me., and Malden, Mass. Registered February 25, 1908. Canceled December 19, 1925.

77,546. Certain foods. Kansas City Preserving and Manufacturing Co., Kansas City, Mo. Registered April 19, 1910. Canceled December 19, 1925.

102,255. Canned fruits, including berries, and canned vegetables. Cobb Preserving Company, Fairport, N. Y. Registered February 2, 1915. Canceled December 19, 1925.

123,867. Face powder. Dr. Paul Sylvestre, New York, N. Y. Registered December 10, 1918. Canceled December 19, 1925.

148,072. Lumber. Hawkins Lumber Company, Boston, Mass. Registered November 8, 1921. Canceled December 19, 1925.

153,607. Certain named articles of stationery. Minneapolis Drug Company, Minneapolis, Minn. Registered March 21, 1922. Canceled December 28, 1925.

153,977. Certain named sporting goods. The Big Store Co., Cincinnati, Ohio. Registered April 4, 1922. Canceled December 28, 1925.

189,424. Men's, women's, and children's knit underwear and knit hosiery. Rathbun & Company, Utica, N. Y. Registered September 16, 1924. Canceled December 19, 1925.

199,245. Ginger ale. Hodde Brothers, Detroit, Mich. Registered June 2, 1925. Canceled December 28, 1925.

Interference Notice.

U. S. PATENT OFFICE, *Washington, Dec. 30, 1925.*

George F. Johnstone, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Lynn L. Bunnell, Main and Maple Avennes, Norwood, Cincinnati, Ohio, for registration of a trade-mark and trade-mark registered April 13, 1915, No. 103,815, to George F. Johnstone, 3527 Fourteenth Street NW., Washington, D. C., and a notice of such declaration sent by registered mail to said Johnstone, at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Johnstone, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN, *Acting Commissioner.*

Condition of Applications Under Examination at Close of Business January 8, 1926.

Room No.	(Total number of applications awaiting action, exluding Trade-Mark Division, 41,609; Trade-Mark Division, 2,080. Oldest new case, July 7, 1925; oldest amended, July 8, 1925. The dates given are 1925.) DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTIONS.	Oldest new application and oldest action by applicant awaiting office action. New.	Amended.	No. of applications awaiting action.
112	1. LOEFFLER, F. A., Closure Operators; Fences; Gates; Harrows and Diggers; Plant Husbandry; Plows; Planting; Scattering Unloaders.	Oct. 13	Oct. 17	581
126	2. HADEN, C. F., Bee Culture; Dairy; Preserving; Presses; Tobacco	Sept. 11	Aug. 12	589
331	3. RICH, WM. J., Electric Heating; Electrochemistry; Heating; Metal Founding; Metallurgical Apparatus; Metallurgy; Metal Treatment; Plastic Metal Working.	Sept. 12	Nov. 2	591
234	4. MERRITT, A. D., Conveyers, Chutes, Skids, Guides, and Ways; Conveyers, Fluid Current; Conveyers, Power Driven; Excavating; Handling—Hand and Hoist-Line Implements; Material or Article Handling; Pushing and Pulling Implements; Traversing Hoists.	Oct. 8	Oct. 17	558
108*	5. MACNAB, J. F., Harvesters; Jewelry; Music; Acoustics; Sound Recording and Reproducing; Tying Cords or Strands.	Aug. 8	Aug. 13	813
318	6. LEWERS, A. M., Bleaching and Dyeing; Chemistry; Chemistry—Carbon Compounds; Explosive, Pyrotechnic, and Match Compositions; Fertilizers; Substance Preparation; Hides, Skins and Leather; Sugar and Starch; Concentrating Evaporators.	Oct. 8	Oct. 2	1,034
106	7. JARBOE, C. G., Amusement and Exercising Devices; Toys; Optics; Photography	Oct. 15	Oct. 15	796
133	8. HENRY, C. C., Beds; Chairs and Seats; Furniture; Kitchen and Table Articles; Store Furniture	Oct. 16	Oct. 15	1,210
221	9. TRYON, F. M., Air and Gas Pumps; Hydraulic Motors; Injectors and Ejectors; Motors, Fluid; Motors, Fluid Current; Pumps.	Sept. 21	Sept. 28	626
118	10. HUNTER, O. F. (Acting), Motor Vehicles; Land Vehicles—Animal Draft Appliances, Bodies and Tops, Dumping.	Sept. 8	Sept. 18	1,055
148*	11. ARMSTRONG, H. C., Boot and Shoe Making; Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Whips and Whip Apparatus; Cutting and Punching Sheets and Bars; Driven, Headed, and Screw-Threaded Fastenings.	Oct. 12	Oct. 12	815
380	12. PIERCE, P. P., Machine Elements	Sept. 16	Sept. 23	707
154*	13. CLIFT, J. W., Bolt, Nail, Nut, Rivet, and Screw Making; Chain, Staple, and Horseshoe Making; Gear Cutting, Milling, and Planing; Metal Drawing; Metal Forging and Welding; Metal Rolling; Metal Working; Needle and Pin Making; Turning.	Oct. 1	Oct. 1	731
102*	14. BRUMBAUGH, N. J., Compound Tools; Farriery; Metal Bending; Metal Tools and Implements, Making; Sheet-Metal Ware, Making; Tools; Wire Fabrics and Structure; Wire Working; Metal Working, Assembling, and Blanks and Processes.	Sept. 9	Sept. 12	901
329	15. REDROW, W. L., Glass; Paper Making; Plastic Block and Earthenware Apparatus; Plastics	Oct. 8	Oct. 8	667
242*	16. SPENCER, C. J., Batteries; Resistances and Rheostats; Telegraphy; Telephony	Aug. 20	Sept. 3	975
307	17. RAFTER, G. S., Label Pasting and Paper Hanging; Nut and Bolt Locks; Ornamentation; Paper Manufactures; Printing; Type Casting; Sheet-Material Associating or Folding; Sheet or Web Feeding or Delivering; Type Setting.	Oct. 8	Oct. 19	384
229	18. PORTER, M. E., Motors, Expansible-Chamber Type; Power Plants; Speed-Responsive Devices	Aug. 14	Aug. 10	821
236	19. GLASCOCK, E. S., Furnaces; Heating Systems; Liquid and Gaseous Fuel Burners; Stoves and Furnaces.	Sept. 17	Oct. 20	532
179	20. GROVE, S. D., Miscellaneous Hardware; Closure Fasteners; Locks and Latches; Safes; Undertaking.	Oct. 13	Oct. 19	730
212	21. THURBER, W. L., Winding and Reeling; Textiles; Cloth Finishing	Sept. 23	Oct. 16	471
244*	22. COLWELL, J. H., Aeronautics; Amusement Devices, Games; Firearms; Ordnance; Ammunition and Explosive Devices; Ammunition and Explosive-Charge Making; Air Guns, Catapults, and Targets; Boats and Buoys; Ships; Marine Propulsion.	Oct. 13	Oct. 29	437
217	23. GROESBECK, W. D., Coin Handling; Recorders; Registers; Horology; Time-Controlling Mechanism.	Aug. 14	Aug. 14	338
147*	24. DURAS, C. O., Apparel; Apparel Apparatus; Garment Supporters; Sewing Machines	Nov. 2	Nov. 7	469
314	25. LIGHTFOOT, J. H., Agitating; Butchering; Centrifugal-Bowl Separators; Cutlery; Mills; Threshing; Vegetable and Meat Cutters and Comminutors; Gas Separation.	Oct. 15	Oct. 12	722
228*	26. HODGES, J. S., Electricity, Generation; Motive Power; Prime-Mover Dynamo Plants	July 27	July 18	732
214	27. ANDERSON, L. S., Brush, Broom, and Mop Making; Brushing, Scrubbing, and General Cleaning; Laundry; Washing Apparatus.	Nov. 9	Nov. 9	500
225	28. BENSON, A. R., Internal-Combustion Engines	Nov. 9	Nov. 6	698

DECISIONS IN PATENT AND TRADE-MARK CASES.

Commissioner's Decisions.

EX PARTE MARINELLO COMPANY.

Decided April 30, 1925.

1. TRADE-MARKS—DESCRIPTIVE—"BEAUTY AIDS FOR EVERY NEED."

A term which at once imparts information is descriptive.

2. SAME—RULE FOR DETERMINING REGISTRABILITY.

The most liberal rule which has been applied to registering marks is that words should be registered if they leave open to everybody else all words useful in describing any quality or property appertaining to the particular goods.

APPLICATION for registration of trade-mark.

ON APPEAL.

TRADE-MARK FOR TISSUE CREAM, MOTOR CREAM, ETC.

Application filed February 15, 1923, No. 176,087.

Mr. Max W. Zabel for the applicant.

FENNING, *Assistant Commissioner.*

Applicant appeals from the action of the Examiner of Trade-Marks refusing registration under the act of 1905 of "Beauty Aids for Every Need" as a trade-mark for a number of compositions for the treatment of the complexion, nails, and the hair.

It seems too clear to need extended argument that the words are employed in a purely descriptive sense and hence are inhibited from registration by the statute. Anyone who produces a line of similar articles may allege that he produces "Beauty Aids for Every Need."

In *Standard Paint Company* v. *Trinidad Asphalt Manufacturing Company*, 165 O. G. 971; 1911 C. D. 530; 220 U. S. 446, the Supreme Court quoted with approval the circuit court of appeals to the effect—

that no one can appropriate as a trade-mark a generic name or one descriptive of any article of trade, its qualities, ingredients, or characteristics, or any sign, word, or symbol which from the nature of the fact it is used to signify others may employ with equal truth.

In the *Elgin National Watch Company* v. *Illinois Watch Case Company*, 94 O. G. 755; 1901 C. D. 273; 179 U. S. 665, the Supreme Court said:

No sign or form of words can be appropriated as a valid trade-mark which, from the nature of the fact conveyed by its primary meaning, others may employ * * * with equal right, for the same purpose.

[1] It has been frequently indicated that a term which at once imparts information is descriptive, and it seems clear that applicant's mark here at issue at once imparts information that the goods are aids to procuring beauty.

[2] The most liberal rule which has been applied to registering marks is that words should be registered if they leave open to everybody else all words useful in describing any quality or property appertaining to the particular goods. The registration of the present mark would not leave useful words open to use.

The Examiner was right in holding that the device sought to be registered is merely an advertising slogan and in no way indicates origin or ownership, on the doctrine set out in *Ex parte Sanford Mills*, 144 MS. Dec. 389; *Ex parte Chocolate Products Company*, 144 MS. Dec. 103; and *In re The Dolly Varden Chocolate Company*, decided April 6, 1925, by the Court of Appeals of the District of Columbia, 333 O. G. 525 refusing registration of the slogan "When Words fail—send."

The Examiner of Trade-Marks is affirmed.

Supreme Court of the United States.

CONCRETE APPLIANCES COMPANY AND INSLEY *v.* GOMERY, SCHWARTZ, O'MEARA, ET AL.

Decided November 16, 1925.

1. INVENTION — MECHANICAL SKILL — USE OF KNOWN METHODS AND APPLIANCES FOR HANDLING NEW BUILDING MATERIAL.

The observations of common experience in the mechanical arts would lead one to expect that once the feasibility of using "wet" concrete in building operations was established the mechanical skill of those familiar with engineering and building problems would seek to make use of known methods and appliances for the convenient handling of this new building material.

2. SAME—SAME—SAME.

Failure to make use of obviously applicable, widely used, and generally understood methods and appliances for the elevation and distribution of mobile substances in combination, suitable to the particular work in hand, in dealing with a new plastic material capable of similar treatment would have evidenced a want of ordinary mechanical skill and of familiarity with construction problems and methods.

3. SAME—SAME—SAME—INDEPENDENT OPERATIONS AND PATENT APPLICATIONS OF SAME CHARACTER BY THOSE SKILLED IN THE ART.

The adaptation independently made by engineers and builders of familiar appliances to the movement and distribution of wet cement in building operations and the independent patent applications within a comparatively short space of time of devices for that purpose are in themselves persuasive evidence that this use in combination of well-known mechanical elements was the product only of ordinary mechanical or engineering skill and not of inventive genius.

ON a writ of certiorari to the United States Circuit Court of Appeals for the Third Circuit.

Mr. Stephen J. Cox for Concrete Appliances Co. et al.

Mr. George Bayard Jones for Gomery et al.

Mr. Justice STONE delivered the opinion of the Court.

In an earlier suit petitioners sought to enjoin an infringement of the Callahan patent No. 948,719, and the Circuit Court of Appeals for the Sixth Circuit held the patent valid. *Concrete Appliances Co.* v. *Meinken*, 278 O. G. 163; 1920 C. D., 378; 262 Fed. 958. Later the present suit was brought in

the District Court for the Eastern District of Pennsylvania to enjoin an infringement of the same patent by the respondents. The district court expressed the opinion that the claims of the patent did not involve invention, but in deference to the determination in the sixth circuit, dismissed the petitioners' bill on the ground of nonnfringement. 284 Fed. 518. On appeal, the Circuit Court of Appeals for the Third Circuit held that the patent was invalid for want of invention. 321 O. G. 4; 1924 C. D. 426; 291 Fed. 486. In view of the conflict of decision, the writ of certiorari was granted by this Court (264 U. S. 578) to review the determination in the third circuit. *Thomson Co.* v. *Ford Motor Co.*, 265 U. S. 445. Both suits involved claims numbered 1, 2, 5, and 13 of the Callahan patent for "material-transferring apparatus" designed for use in transferring concrete or other plastic materials from a suitable source of supply to working points desired on a building or other structure, in the course of construction.

In principle, the device concerned calls into operation gravity, in conveying mobile substances from an elevated central point to varying working points in building operations. The claims made by the patentee, which relate to a combination embraced in the apparatus described, when paraphrased and separated into their constituent elements, comprise: (1) a tower; (2) a boom oscillatory or swinging horizontally, adjustably connected with the tower and adapted to be arranged at various points in its height; (3) a conduit carried by the boom, extending laterally from the tower, connected to it and adjustable vertically at varying heights in the tower; (4) a means for raising plastic material to the height desired in the tower; and (5) a means for receiving the plastic material from the raising means and conducting it to the conduit, both the raising means and the receiving means being adjustable vertically at varying heights in the tower.

The apparatus described in the Letters Patent is capable of use in conveying "wet" or "mush" concrete from the point where it is prepared for use and distributing it to points where it is incorporated into a building in process of construction. When the mixed concrete is in readiness to be placed in the forms or molds in which it is allowed to "set" or harden into an integral part of the structure, it is elevated by the "raising means," usually a bucket, skip, or other suitable conveyer, to the "receiving means," a hopper, in which the concrete is deposited. From thence it flows by gravity into the conduit and through it to the form or mold, which may be in any part of the structure at a suitable level below the base of the hopper. As the building progresses, the conveyer, the hopper, and the attached conduit may be progressively raised within the tower so that gravity may carry the flowing concrete to any desired point at lower levels in the structure.

The several elements in the petitioners' claims which we have enumerated embrace familiar devices long in common use, separately or in smaller groups, both in this and in kindred mechanical arts. It is not argued that there is any novelty in such units or groups and the only serious question presented is whether in combination in the apparatus described, they constitute an invention. That the combination embodied in the described apparatus produces a useful result in the mechanical arts and in modified form is widely used in building operations is established. Our inquiry therefore must be addressed to the question whether the combination is novel and whether it passes the line simetimes tenuous and difficult of ascertainment which separates mechanical skill from invention. The pursuit of this inquiry involves a consideration of the state of the art prior to Callahan's application, of which elaborate proof was made in the trial court.

Because of an evident difference in the state of the proof in the two cases, the adjudications of this patent by the two circuit courts are, we think, only apparently conflicting. It is clear from an examination of the two records, the earlier of which is an exhibit in this suit, as well as from the opinion of the court in the sixth circuit, that that court did not have before it the detailed history of the practical development of the art, which was elaborately proved in the present case and which convinced both the district judge and the Circuit Court of Appeals in the Third Circuit that the plaintiff's appliance did not embody an invention. The question thus presented is one of fact, but notwithstanding the agreement of the two courts below, on this aspect of the case, the difference in result reached by the two circuit courts leads us to review the salient features of the state of the art at about January, 1908, when, according to petitioners, Callahan conceived the combination covered by the claims in his patent. See *Thompson Co.* v. *Ford Motor Co.*, supra, 447.

It is a fact of which we may take judicial notice (*King* v. *Gallun*, 109 U. S. 99) that the principle of conveying and distributing a mobile substance by gravity has found exemplification for centuries, in apparatus for lifting water by power, in buckets or other convenient form of conveyer to a central reservoir from which its flow is induced by gravity, through suitable conduits to fixed points or through movable pipes or hose to varying selected points. Long prior to the Callahan application the principle had been applied to other substances capable of flow under the action of gravity, such as grain, coal, crushed stone, sand, and iron ore. The proof is abundant that by 1905 it was common practice in the erection and use of grain elevators to provide for raising the grain by endless belt or other conveyer to the top of the elevator; then to discharge it into a receptacle called a garner or hopper from which it flowed by gravity through pipes or spouts having a swivel connection with the hopper and swinging laterally so that the lower end of the spout was movable in the arc of a circle. These spouts were capable of extension, variable at will by attaching additional sections appropriately swiveled, to the end of the section of the spout connecting with the hopper. The conduit or spout was supported, according to need and convenience, by an inclined cable attached at a suitable point above to the elevator tower, or by pivoted boom or gaff attached to the tower of the elevator and capable of being raised or lowered at its outer end. Apparatus of this type was commonly and successfully used for the unloading and storage of grain and for loading it from storage on to ships or cars in varying positions and distances from the elevator tower; sectional or telescopic spouts attached to the tower and to each other being used to secure the delivery of the grain in the desired direction, and at desired distances, the spout being raised or lowered and given direction by the use of boom and tackle. On occasion there was duplication of the apparatus on board ship by the use of a supplemental hopper and supplemental conduit or chute supported and controlled by boom and tackle located on the ship.

Similar apparatus was in use for the moving of coal by gravity through chutes so constructed as to be moved either vertically or horizontally and supported by cable or boom.

Before 1904–5 it was common practice for architects' specifications to require that concrete used in building operations be mixed "dry," that is, of a consistency which would not admit of its ready flow by gravity. This practice was resisted by engineers and contractors because it was cheaper and easier to use "wet" concrete, which could be conveniently distributed through chutes and conduits. For reasons which need not now be inquired into in detail, the increasing use in earlier years of "wet" concrete in all types of structural work had become the established practice by 1905. Contemporaneously with this increasing use and, as the proofs show, an active agency in inducing it, was the practical adaptation of the apparatus, used in moving and distributing grain and other substances of similar mobility, to all the requirements for the convenient handling and distribution of concrete by gravity in building operations. Without attempting to refer to all of the numerous instances of that adaptation it will be sufficient to indicate some of the more significant examples which mark its progress.

As early as 1902–3 in the construction of the Ingalls Building in Cincinnati, an apparatus was used for elevating concrete to a hopper from which it was discharged through movable metal chutes supported by horses, to varying required points on the floor area of a building in process of erection. This apparatus was described in The Engineering News of July 30, 1903.

In 1906 a like apparatus was used in the construction of a reenforced-concrete building in Norfolk, Va. Concrete was elevated in a tower to a hopper which was capable of being elevated from story to story as the work progressed. The chute attached to the mouth of the hopper by swivel was capable of lateral movement and supported by block and tackle attached to the top of the tower.

There is proof of the use at San Francisco harbor in 1904–5–6, in concrete construction, of substantially similar apparatus placed on a scow. It involved the use of a chute moved into different positions by a supporting boom.

In June, 1907, a similar apparatus was used in the construction of a steel-framed concrete building in St. Louis; although sketches, prepared at the time, called for a swinging boom for the support of a conduit, the boom was in practice dispensed with, as the steel skeleton of the building afforded a means of supporting the conduit.

In the summer of 1908 an appliance of the same sort was used in the construction of a concrete building at St. Joseph, Mo., the hopper being capable of elevation within the tower as required and the movable chute being supported by cables radiating from the top of the tower.

In 1906 the Great Lakes Dredge & Dock Co. built at Gary, Ind., a concrete cofferdam using a mixer placed on a car running on a trestle, with a wooden hopper beneath the mouth of the mixer and a movable steel chute extending from the hopper into the cofferdam, the chute being secured by ropes or wires extending to the bracing.

In 1907 in connection with this same construction the apparatus was modified by the addition of a mast to which was attached a swinging boom from which the movable steel chute was suspended. This was in successful operation several months and was constructed by a man who had never seen concrete handled in this manner but who was familiar with grain-elevator practice.

In July, 1908, five months prior to the filing of the Callahan application, an apparatus comprising the elements enumerated in the claims in suit was used successfully in constructing a concrete building in St. Louis. The hopper was vertically adjustable, but the boom was mounted at the top of the tower, so that there was no necessity for change of its location vertically as the building progressed. The use of a swinging boom attached to a building in process of erection or to a construction tower, which boom, was in practice raised from time to time as convenience of operation required, was then a well-known device.

In this state of the art, Callahan and several others, in the period 1904–1909, applied for patents on combinations for the conveying of wet concrete through spouts or chutes, their applications resulting in interferences.

Without more extensive examination of the record this state of the proof leads us irresistibly to the conclusion that the combination described in the Callahan application does not constitute an invention.

[1] The observations of common experience in the mechanical arts would lead one to expect that once the feasibility of using "wet" concrete in building operations was established, the mechanical skill of those familiar with engineering and building problems would seek to make use of known methods and appliances for the convenient handling of this new building material.

[2, 3] To say nothing of the universally known methods and appliances for raising and distributing water, there were ready at hand widely used and generally understood appliances for the elevation and distribution of mobile substances, such as grain and coal, which involved, both in principle and in practical detail, all the elements described in the Callahan claims. Failure to make use of these obviously applicable methods and appliances in combination, suitable to the particular work in hand, in dealing with a new plastic material capable of similar treatment would, we think, have evidenced a want of ordinary mechanical skill and of familiarity with construction problems and methods. The adaptation independently made by engineers and builders of these familiar appliances to the movement and distribution of wet cement in building operations and the independent patent applications, within a comparatively short space of time, for devices for that purpose are in themselves persuasive evidence that this use in combination of well-known mechanical elements was the product only of ordinary mechanical or engineering skill and not of inventive genius. *Atlantic Works* v. *Brady*, 23 O. G. 1330; 1883 C. D. 214; 107 U. S. 192. It is but—

> the suggestion of that common experience, which arose spontaneously and by a necessity of human reasoning, in the minds of those who had become acquainted with the circumstances with which they had to deal. *Hollister* v. *Benedict Manufacturing Co.*, 113 U. S. 59, 72.

This progressive adaptation, much of which preceded and some of which was contemporaneous with the Callahan adaptation, of well-known devices to new but similar uses—

> is but the display of the expected skill of the calling, and involves only the exercise of the ordinary faculties of reasoning upon the materials supplied by a special knowledge, and the facility of manipulation which results from its habitual and intelligent practice. *Hollister* v. *Benedict Manufacturing Co.*, supra, at page 73.

No novel elements were used by Callahan in his device. We are unable to find that their use in combination in it was more than the application to them of mechanical skill in the course of a natural development and expansion of the art. The decree of the court below is affirmed.

Court of Appeals of the District of Columbia.

THE AMERICAN TOBACCO COMPANY, INC., *v.* GORDON. GORDON *v.* THE AMERICAN TOBACCO COMPANY, INC.

Nos. 1,765, 1,766. Decided December 7, 1925.

1. TRADE-MARKS—SAME DESCRIPTIVE PROPERTIES, CONFUSION IN TRADE—DECEPTION OF PUBLIC.
   Two trade-marks may be said to be appropriated to merchandise of the same descriptive properties in the statutory sense when the general and essential characteristics of the goods are the same; that is, where there is such a sameness in the distinguishing characteristics as to be likely to result in confusion in the trade and deception of the public.
2. SAME—SAME—SAME—GOODS CAPABLE OF APPLICATION TO SAME GENERAL USE.
   Registration has been denied on the ground that the mark has been appropriated to merchandise of the same descriptive properties where it was opposed by one whose goods were capable of being applied to the same general use.
3. SAME—SAME—GOODS CAPABLE OF CONJOINT USE.
   The statute does not permit of an interpretation under which goods can be held to possess the same descriptive properties because they are capable of conjoint use.
4. SAME—SAME—CIGARETTES—PIPES AND TOBACCO CONTAINERS.
   Cigarettes, pipes, and tobacco containers are goods of different descriptive properties.
5. SAME—OPPOSITION—CITATION OF TRADE-MARK INFRINGEMENT AND UNFAIR COMPETITION CASES.
   Trade-mark and unfair competition cases are not pertinent to a statutory proceeding, such as an opposition.

APPEALS from Patent Office. Affirmed as to 1,765. Reversed as to 1,766.

Mr. Thomas J. Johnston for The American Tobacco Company, Inc.

Mr. Edgar M. Kitchin for Gordon.

Before MARTIN, Chief Justice, ROBB, Justice, and SMITH, Judge U. S. Court of Customs Appeals.

ROBB, *J.*:

Appeal from a decision of the Patent Office, in a trade-mark opposition proceeding, dismissing in part and sustaining in part the opposition to the registration by the party Gordon of the words "Pall Mall" as a trade-mark for pipes, cigar and cigarette holders, pouches, tobacco bags, humidors and cigar and cigarette containers.

Long prior to the adoption of this mark by Gordon, the American Tobacco Company had adopted and very extensively used the mark on cigarettes and contends that this use also had extended to cigarette containers. The Examiner ruled that cigarettes and the goods to which applicant's mark is applied are goods of different descriptive properties, within the meaning of the Trade-Mark Act, and that opposer's use of the mark in connection with cigarette containers was not a trade-mark use. The [First] Assistant Commissioner agrees with the Examiner, except as to cigarette holders, with respect to which he sustained the opposition.

The Trade-Mark Act of 1905 (33 Stat. 724), prohibits the registration of trade-marks identical with or deceptively similar to a known trade-mark, "and appropriated to merchandise of the same descriptive properties." Since the marks of the two parties in this case are identical, the only question here is whether these marks are applied to goods of the same descriptive properties, within the meaning of the statute.

[1, 2] We have ruled that two trade-marks may be said to be appropriated to merchandise of the same descriptive properties, in the statutory sense, when the general and essential characteristics of the goods are the same; that is, where there is such a sameness in the distinguishing characteristics as to be likely to result in confusion in the trade and deception of the public. *Phoenix P. & V. Co.* v. *John T. Lewis & Bro.*, 139 O. G. 990; 32 App. D. C. 285. Under this interpretation, we have denied the right of registration where the goods of the respective parties have been capable of being applied to the same general use. Thus, in *H. Wolf & Sons* v. *Lord & Taylor*, 202 O. G. 632; 41 App. D. C. 514, we held that hosiery and knitted underwear were goods of the same descriptive properties, since their essential characteristics were similar and both were used as articles of clothing. And in *Anglo-American Incand. L. Co.* v. *General Elec. Co.*, 215 O. G. 325; 43 App. D. C. 385, gas mantles and incandescent electric lamps were held to be capable of the same general use and of the same descriptive properties.

[3, 4] We now are asked to go a step farther and rule that goods capable of a conjoint use possess the same descriptive properties. In our view, however, the statute does not permit of such an interpretation. Whether the qualifying words, "goods of the same descriptive properties," aptly express the legislative intent, is not for us to determine. The statute must be taken as it is found, and, when so interpreted, we see no escape from the conclusion that cigarettes, pipes, and tobacco containers are goods of different descriptive properties.

[5] Several trade-mark infringement and unfair competition cases have been cited by the opposer, but as we many times have suggested such cases are not pertinent to a statutory proceeding like the present. The registration of this mark will not deprive the opposer of any rights it may have in an unfair competition suit.

We agree with the tribunals of the Patent Office that the use by the opposer of cigarette containers was not a trade-mark use, but we are unable to follow the [First] Assistant Commissioner in his ruling that cigarettes and cigarette holders are goods of the same descriptive properties. They are no more similar, in this sense, than tobacco and pipes would be. It results that the decision is affirmed as to appeal No. 1765 and reversed as to appeal No. 1766.

Affirmed as to No. 1765.

Reversed as to No. 1766.

ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,405,773, W. M. Folberth, Windshield-cleaning apparatus, decided December 18, 1925, claims 4, 7, and 9.

Pat. 1,536,782, W. E. Focke, Method of trimming heads and apparatus therefor, decided December 9, 1925, claims 2, 3, 8, 10, and 14.

Pat. 1,506,275, G. H. Stevenson, Protective means for electric currents, decided December 12, 1925, claims 28 and 29.

Pat. 1,428,597, R. L. Lemon, Shipping box for canned goods, decided December 29, 1925, claim 1.

Pat. 1,476,907, F. W. Martin, Furnace door, decided December 2, 1925, claims 3, 4, and 5.

Final decisions in interferences have been rendered against the following trade-marks:

T. M. 97,546, Puncture cure for pneumatic tires, The McGowan Company, Homestead, Pa. Registered June 9, 1914. Decided December 9, 1925.

T. M. 92,222, Art glass, International Shade Co., Springfield, Mass. Registered June 24, 1918. Decided December 11, 1925.

T. M. 95,066, Storage batteries, The Cook Railway Signal Company, Denver, Colo. Registered February 3, 1914. Decided November 21, 1925.

T. M. 121,594, Canned salmon, Cascade Packing Company, Anacortes, Wash. Registered May 14, 1918. Decided November 24, 1925.

TRADE-MARKS

OFFICIAL GAZETTE, JANUARY 19, 1926.

[VOL. 342. No. 3.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 184,002. (CLASS 24. LAUNDRY APPLIANCES AND MACHINES.) TINGUE, BROWN & CO., New York, N. Y. Filed Aug. 2, 1923.

No claim is made to the representation of a laundry net. A line of blue color extends around the open top edge of the net, as indicated by the color lines shown in the drawing.

Particular description of goods.—Laundry Nets.
Claims use since June 12, 1923.

Ser. No. 187,738. (CLASS 34. HEATING, LIGHTING, AND VENTILATENG APPARATUS, NOT INCLUDING ELECTRICAL APPARATUS.) LOUIS H. GEURINK, East Cleveland, Ohio. Filed Oct. 31, 1923.

PERFECTO

Particular description of goods.—Mixing Arm and Combustion Nozzle for Gas Stoves and Furnaces.
Claims use since Aug. 25, 1923.

Ser. No. 191,822. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) DURAND-MCNEIL-HORNER CO., Chicago, Ill. Filed Feb. 5, 1924.

WHITE BEAR

Particular description of goods.—Coffee, Pancake Flour, Pastry Flour; Mixture of Buckwheat, Wheat, and Corn Flour; Cereal Breakfast Food, Wheat Farina, Toasted Corn Flakes, Evaporated Milk, Apple Butter, Gelatin Dessert, Flavoring Extracts for Food Purposes, Popping Corn, Spaghetti, Prepared Mustard, Nutmeg, Paprika, Pepper, Horse-Radish, Fruit Preserves, Fruit Jelly, Plum Pudding, Mincemeat, Salad Dressing, Tomato Catchup, Malt Extract for Food Purposes, Peanut Butter, Honey, Shredded Coconut, Cocoa, Salted Peanuts, Candy, Vinegar, Olive Oil, Dried Beef, Sweet Pickles, Olives, Whole Mustard; Dried Fruits—Viz, Prunes and Currants; Plum Butter, Cheese, Cracked Wheat.
Claims use since 1910.

Claims use since Apr. 15, 1925.

Ser. No. 203,957. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) KEYES DAREN MILLS LTD., Dartford, England. Filed Oct. 16, 1924.

DAREN

Particular description of goods.—Bread and Wheat Germ Flour and Mixed Flour Containing Wheat Germs.
Claims use since Nov. 21, 1894.

Ser. No. 203,997. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) ANDS. KOCH A.-G., Trossingen, Germany. Filed Oct. 17, 1924.

Trade-  Mark.

Eingetragene-Schutzmarke.

No claim is made to the words "Trade-Mark" and "Eingetragene-Schutzmarke."
Particular description of goods.—Mouth Organs.
Claims use since Oct. 1, 1894.

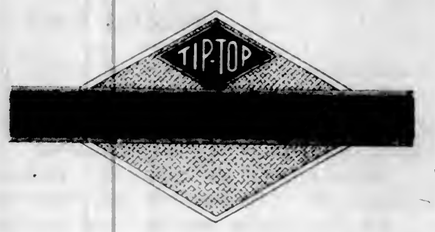
Ser. No. 204,267. (CLASS 39. CLOTHING.) MORRIS KLINE, doing business as Du-Hold Company, Cleveland, Ohio. Filed Oct. 22, 1924.

DU-HOLD

Particular description of goods.—Apparel Belts.
Claims use since about Oct. 13, 1924.

Ser. No. 204,662. (CLASS 21. ELECTRICAL APPARATUS, MACHINERY, AND SUPPLIES.) KAUPY & SCHÖNMANN, KABEL-ISOLIERBAND-UND GUMMIWAREN-ERZEUGUNG "DURABIT," Vienna and Perchtoldsdorf, Austria. Filed Oct. 31, 1924.

DURABIT

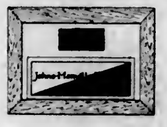


Particular description of goods.—Rubber Bands, Rubber Tape, and Insulating Compounds, All for Electric Insulation.
Claims use since Nov. 14, 1921.

Ser. No. 204,866. (CLASS 12. CONSTRUCTION MATERIALS.) THE PEROLIN COMPANY OF AMERICA, Chicago, Ill. Filed Nov. 5, 1924.

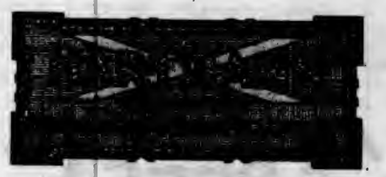
PERO BRIK

No claim is made to the word "Brik" apart from the mark shown in the drawing.
Particular description of goods.—Fire Brick in a Plastic Putty Form.
Claims use since December, 1922.



Ser. No. 205,250. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) HENRY C. THOMPSON, Hartford, Conn., assignor to The Thompson Specialties Inc., Springfield, Mass., a Corporation of Massachusetts. Filed Nov. 13, 1924.

The drawing contains the colors blue and yellow, as shown by the color lines therein.
Particular description of goods.—Materials for Coloring Low Spots on Balls or Rollers of Bearings as a Guide for Grinding—Namely, Bearing Blue.
Claims use since Oct. 31, 1924.



Ser. No. 205,483. (CLASS 12. CONSTRUCTION MATERIALS.) JOHNS-MANVILLE, INCORPORATED, New York, N. Y. Filed Nov. 18, 1924.

HOUSLINE

Particular description of goods.—Heat-Insulating Materials for Buildings, Composed Mainly of Hair Felt.
Claims use since Feb. 1, 1924.

Ser. No. 205,753. (CLASS 3. BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS.) HARTMANN TRUNK COMPANY, Racine, Wis. Filed Nov. 24, 1924.

No claim is made to the words "Cushion Top Wardrobe Trunks" apart from the mark shown in the drawing. The trade-mark is lined to indicate the colors black, red, and gold.
Particular description of goods.—Wardrobe Trunks.
Claims use since January, 1920.

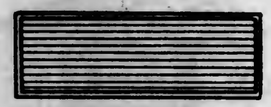
Ser. No. 206,087. (CLASS 39. CLOTHING.) SCHOLL MANUFACTURING COMPANY, INC., Chicago, Ill. Filed Dec. 1, 1924.

RE-FORM

Particular description of goods.—Boots, Shoes, and Slippers Made of Leather, Rubber, Fabric, and Combinations Thereof.
Claims use since February, 1917.

Ser. No. 206,179. (CLASS 2. RECEPTACLES.) MANNING, BOWMAN & Co., Meriden, Conn. Filed Dec. 3, 1924.

MB Means Best



Particular description of goods.—Lunch Boxes, Vacuum Bottles, Vacuum-Bottle Cases, Vacuum Carafes, Vacuum Food Jars, Vacuum Jugs, Vacuum Vessels for Containing Cracked Ice, Etc.
Claims use since Jan. 1, 1924.

Ser. No. 206,985. (CLASS 2. RECEPTACLES.) THE VORTEX MFG. CO., Chicago, Ill. Filed Dec. 19, 1924.

OVALCONE

Particular description of goods.—Paper Cups.
Claims use since Nov. 19, 1924.

Ser. No. 207,869. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) G. & W. HELLER, Vienna, Austria. Filed Jan. 9, 1925.

The lining of trade-mark drawing indicates the color blue.
Particular description of goods.—Candy.
Claims use since Mar. 5, 1904.

Ser. No. 208,791. (CLASS 5. ADHESIVES.) VICTOR F. VAN STAN, Philadelphia, Pa. Filed Jan. 28, 1925.

"MAR-MORA"
The Invisible Mender

Particular description of goods.—Adhesive Mending Cement.
Claims use since on or about Dec. 1, 1904.

Ser. No. 209,612. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) BENTLEY HARRIS MFG. CO., Conshohocken, Pa. Filed Feb. 16, 1925.

No claim is made herein to the name of the applicant apart from the mark shown in the drawing. The stippling on the background of the diamond-shaped figure and on the representation of conductors is not intended to represent color, but indicates shading only.
Particular description of goods.—Electrical Insulation.
Claims use since Dec. 29, 1924.

Ser. No. 210,030. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) AMERICAN BELTING & HOSE CO., Portland, Oreg. Filed Feb. 24, 1925.

GRIPPO

Applicant disclaims representation of the pulleys appearing in the mark apart from the mark shown in the drawing.
Particular description of goods.—Pulleys Made of a Composition Material Having Nonslip Characteristics.
Claims use since Sept. 1, 1924.

Ser. No. 210,992. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ACTIEN-GESELLSCHAFT FÜR ANILIN-FABRIKATION, Berlin, Germany. Filed Mar. 14, 1925.

Particular description of goods.—Plant Preventives, Fungicides, and Insecticides.
Claims use since Sept. 18, 1924.

Ser. No. 211,263. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) FRIEDLANDER-KOPPLE RADIO SERVICE, New York, N. Y. Filed Mar. 19, 1925.

Applicant makes no claim to the words "Well Built."
Particular description of goods.—B Batteries, Also A Batteries, Loud-Speaker Horns, Phones, Sockets, Rheostats, Radio Receiving Sets, Panels, Couplers, Variometers, Condensers, Transformers, Dials, A-Battery Eliminators, and B-Battery Eliminators.
Claims use since Jan. 1, 1923.

Ser. No. 211,314. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) WHITE & SONS, Galeton, Pa. Filed Mar. 19, 1925.

PINE CREEK

Particular description of goods.—Corn Meal, Corn and Oats Feed, Poultry Laying Mash, Self-Rising Pancake Flour, and Self-Rising Biscuit and Cake Flour.
Claims use since Dec. 1, 1924.

Ser. No. 211,965. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) ARGUS RADIO CORPORATION, New York, N. Y. Filed Apr. 1, 1925.

No claim is made to the word "Power."
Particular description of goods.—Radio Receiving Sets.
Claims use since Mar. 10, 1925.

Ser. No. 212,158. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) STEWART-WARNER SPEEDOMETER CORPORATION, Chicago, Ill. Filed Apr. 3, 1925.

Stewart-Warner

The trade-mark includes the name "Stewart" in the form of a facsimile of the signature of John K. Stewart, the founder of this company, and the name "Warner" is presented in a style conforming to that of said facsimile signature.
Particular description of goods.—Radio Receiving Sets.
Claims use since Jan. 24, 1925.

Ser. No. 214,514. (CLASS 39. CLOTHING.) A. STEIN & COMPANY, Chicago, Ill. Filed May 18, 1925. Under section 5b of the act of 1905 as amended in 1920.

PARIS

Particular description of goods.—Belts for Personal Wear.
Claims use since May 1, 1924.

Ser. No. 214,550. (CLASS 17. TOBACCO PRODUCTS.) STANLEY JAGGERS, doing business as Stanley Jaggers & Co., Hodgenville, Ky. Filed May 19, 1925.

Lincoln Cabin

Particular description of goods.—Smoking and Chewing Tobacco.
Claims use since Dec. 1, 1924.

Ser. No. 214,859. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) HENRY B. DUBINICK, New York, N. Y. Filed May 25, 1925.

The words "Radio Shade" are disclaimed apart from the mark shown.
Particular description of goods.—Combination Electric Radiocabinet, Shade, and Table Lamp.
Claims use since May 1, 1925.

Ser. No. 215,023. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) REASONER BROTHERS' ROYAL PALM NURSERIES, Oneco, Fla. Filed May 28, 1925.

No claim is made to the exclusive use of the word "Nurseries" or the words "Make Your Home and Town Attractive" apart from the mark shown in the drawing.
Particular description of goods.—Ornamental Plants, Trees, and Flowers.
Claims use since Dec. 1, 1918.

Ser. No. 215,092. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) PEERLESS PRODUCTS COMPANY, Los Angeles, Calif. Filed May 29, 1925.

Applicant disclaims the word "Peerless" apart from the mark shown in the drawing.
Particular description of goods.—Wax Distributor and Floor Polisher.
Claims use since Oct. 1, 1924.

Ser. No. 215,963. (CLASS 12. CONSTRUCTION MATERIALS.) THE BELDAM PACKING & RUBBER COMPANY LIMITED, London, England. Filed June 18, 1925.

Particular description of goods.—Asbestos Fiber for Lagging, Asbestos Covering for Boilers, Pipes, and the Like.
Claims use since 1922.

Ser. No. 216,770. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) B. K. FEED MILLS, Topeka, Kans. Filed July 2, 1925.

Particular description of goods.—Chick Meal.
Claims use since February, 1925.

Ser. No. 217,185. (CLASS 40. FANCY GOODS, FURNISHINGS, AND NOTIONS.) JAS. SMITH & SON, REDDITCH LIMITED, Redditch, England. Filed July 10, 1925.

The pictorial representation of the map of England is disclaimed apart from the mark shown by the drawing; also the pictorial representation of the needle is disclaimed.
Particular description of goods.—Pins—Namely, Office Pins, Toilet Pins, Safety Pins, Knitting Pins, Hatpins, Hairpins, and Tie Pins; Hand Sewing Needles, Bodkins, and Crochet Hooks, Being Goods of Ordinary Metal.
Claims use since Sept. 22, 1924.

Ser. No. 218,109. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) DR. PETER FAHRNEY & SONS CO., Chicago, Ill. Filed July 30, 1925.

The exclusive use of all wording with the exception of "Oleolo du Dr. Pierre," "Dr. Peter's Oleolo," the facsimile signature "P. Fahrney, M. D.," and the numerals "1780" shown in the drawing is disclaimed apart from the other features of the mark.
Particular description of goods.—Liniment for External Use.
Claims use since Nov. 1, 1913.

Ser. No. 218,110. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) DR. PETER FAHRNEY & SONS CO., Chicago, Ill. Filed July 30, 1925.

Exclusive use of all the wording with the exception of "Dra. Piotra," "Dr. Peter's," the facsimile signature "P. Fahrney, M. D.," and the numerals "1780" shown on the drawing being disclaimed apart from the other features of the mark.

Particular description of goods.—Liniment for External Use.

Claims use since 1893.

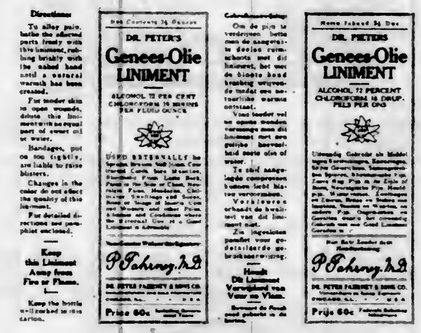
Ser. No. 218,111. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) DR. PETER FAHRNEY & SONS CO., Chicago, Ill. Filed July 30, 1925.

Exclusive use of all the wording with the exception of "Dr. Peters Ole-Oid," the facsimile signature "P. Fahrney, M. D.," and the numerals "1780" are disclaimed apart from the other features of the mark.

Particular description of goods.—Liniment for External Use.

Claims use since on or about Sept. 12, 1887.

Ser. No. 218,112. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) DR. PETER FAHRNEY & SONS CO., Chicago, Ill. Filed July 30, 1925.



Exclusive use of all wording with the exception of "del Dottor Pietro," "Dr. Peter's," the facsimile signature "P. Fahrney, M. D.," and the numerals "1780" shown on the drawing being disclaimed apart from the other features of the mark.

Particular description of goods.—Liniment for External Use.

Claims use since 1893.

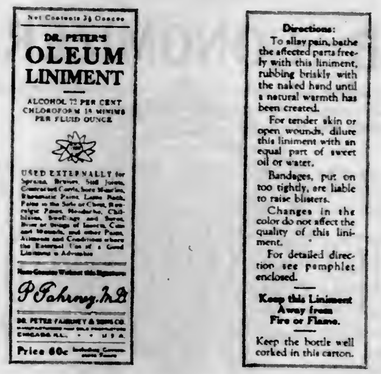
Ser. No. 218,113. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) DR. PETER FAHRNEY & SONS CO., Chicago, Ill. Filed July 30, 1925.

Exclusive use of all wording with the exception of "Dr. Pieter's," "Dr. Peter's," the facsimile signature "P. Fahrney, M. D.," and the numerals "1780" shown on the drawing being disclaimed apart from the other features of the mark.

Particular description of goods.—Liniment for External Use.

Claims use since January, 1895.

Ser. No. 218,114. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) DR. PETER FAHRNEY & SONS CO., Chicago, Ill. Filed July 30, 1925.



The exclusive use of all wording with the exception of "Fornis," the facsimile signature "P. Fahrney, M. D.," and the numerals "1780" shown on the drawing is disclaimed apart from the other features of the mark.

Particular description of goods.—Liniment for External Use.

Claims use since May 2, 1888.

Ser. No. 218,115. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) DR. PETER FAHRNEY & SONS CO., Chicago, Ill. Filed July 30, 1925.

The exclusive use of all wording with the exception of "Dr. Peter's," the facsimile signature "P. Fahrney, M. D.," and the numerals "1780" shown on the drawing is disclaimed apart from the other features of the mark.

Particular description of goods.—Liniment for External Use.

Claims use since May 2, 1888.

Ser. No. 218,116. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) DR. PETER FAHRNEY & SONS CO., Chicago, Ill. Filed July 30, 1925.

The exclusive use of all wording with the exception of "Dra. Petra," "Dr. Peter's," the facsimile signature "P. Fahrney, M. D.," and the numerals "1780" shown on the drawing is disclaimed apart from the other features of the mark.

Particular description of goods.—Liniment for External Use.

Claims use since 1894.

Ser. No. 218,117. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) DR. PETER FAHRNEY & SONS CO., Chicago, Ill. Filed July 30, 1925.

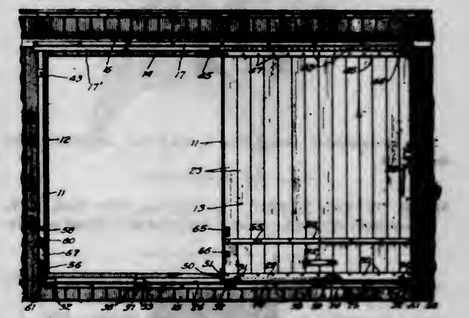
REISSUES

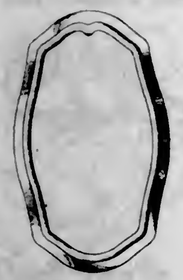


JANUARY 19, 1926.

16,254. PARKING LIGHT. FRANCIS B. LEECH and ELIJAH W. TITUS, Washington, D. C., assignors to Rae-Lite Manufacturing Co., Baltimore, Md., a Corporation of Maryland. Filed Aug. 13, 1924. Serial No. 731,881. Original No. 1,447,589, dated Mar. 6, 1923, Serial No. 478,275, filed June 17, 1921. 2 Claims. (Cl. 240—1.)

1. In a parking lamp, the combination of a casing including opposed sections of different colors, a retaining band passing over said casing at its color junction, said band being in interlocking engagement with said casing, the end portions of said band extending downwardly to form attaching means for the casing, a base having a portion adapted to be attached to an automobile fender or the like, and an upstanding socketed portion, the downwardly extending portion of the band entering the socket and secured to the walls of the upstanding portion.

16,255. CAR DOOR. FRANK JAGER, Chicago, Ill., assignor of one-half to Samuel A. Spry, Chicago, Ill.; Elizabeth J. Spry administratrix of said Samuel A. Spry, deceased. Filed Sept. 9, 1924. Serial No. 736,719½. Original No. 1,427,901, dated Sept. 5, 1922, Serial No. 321,619, filed Sept. 4, 1919. 19 Claims. (Cl. 20—22.)



1. A railway box car, the combination with the doorway frame providing an opening, of a door adapted to have longitudinal sliding movement exteriorly of the doorway frame to close said opening and provided along its lower marginal portion with a channel, an open sided track for said lower door portion comprising an angle-bar rail member having its inner vertical flange abutting the doorway frame below the opening, anti-friction balls in said channel operatively interposed between said lower marginal door portion and the horizontal flange of said rail member, and a spacing member positioned loosely in said channel and constructed and arranged with reference to said balls and said door to check the final closing or opening movement of the latter.

DESIGNS

JANUARY 19, 1926.

69,247. INSTRUMENT-CASE BEZEL. HARRY H. BASSETT, Flint, Mich. Filed Nov. 19, 1923. Serial No. 7,821. Term of patent 14 years.

The ornamental design for a radiocabinet as shown.

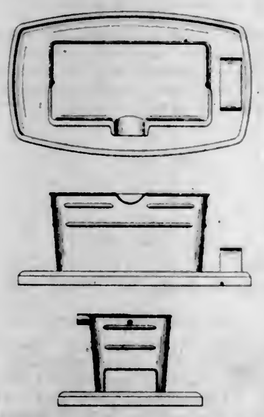
69,284. LICENSE-PLATE HOLDER. ALEXANDER RISPEL and LOUIS C. LIEDTKE, Chicago, Ill. Filed Oct. 21, 1924. Serial No. 11,135. Term of patent 3½ years.

The ornamental design for a license plate holder, as shown.

69,285. GEM-SET RING. MEYER L. ROBBINS, New York, N. Y., assignor to Untermeyer, Robbins & Co., New York, N. Y., a Corporation of New York. Filed Oct. 31, 1925. Serial No. 15,313. Term of patent 7 years.

The ornamental design for a gem-set ring, as shown.

69,286. FINGER RING. MEYER L. ROBBINS, New York, N. Y., assignor to Untermeyer, Robbins & Co., New York, N. Y., a Corporation of New York. Filed Oct. 31, 1925. Serial No. 15,314. Term of patent 7 years.

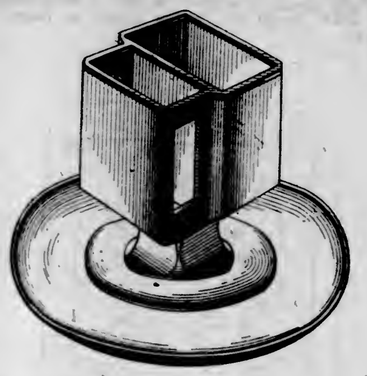


The ornamental design for a finger ring, as shown

69,287. GEM-SET FINGER RING. MEYER L. ROBBINS, New York, N. Y., assignor to Untermeyer, Robbins & Co., New York, N. Y., a Corporation of New York. Filed Oct. 31, 1925. Serial No. 15,316. Term of patent 7 years.

The ornamental design for a gem-set finger ring, as shown.

69,288. ASH RECEIVER. ROBERT A. RUSSELL, Ridgewood, N. J. Filed Nov. 19, 1925. Serial No. 15,473. Term of patent 7 years.

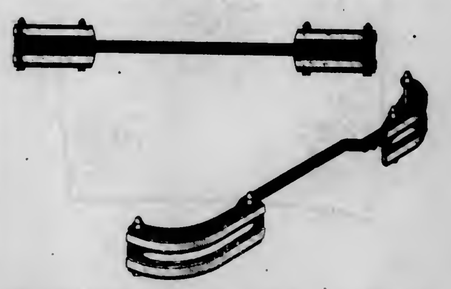


The ornamental design for an ash receiver substantially as shown.

69,289. DRESS-TRIMMING ORNAMENT. MAUDE SIEGEL, New York, N. Y., assignor to Franklin Simon & Co., Inc., New York, N. Y., a Corporation of New York. Filed Aug. 3, 1925. Serial No. 14,302. Term of patent 3½ years.

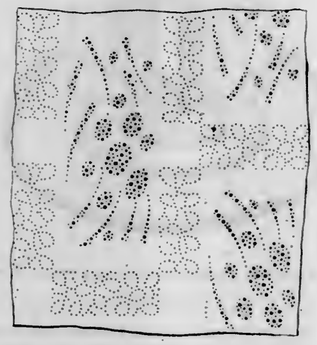
The ornamental design for a dress trimming ornament, as shown.

69,290. ASH TRAY. CARL T. SLOAN, Wilkinsburg, Pa. Filed Dec. 4, 1925. Serial No. 15,635. Term of patent 3½ years.



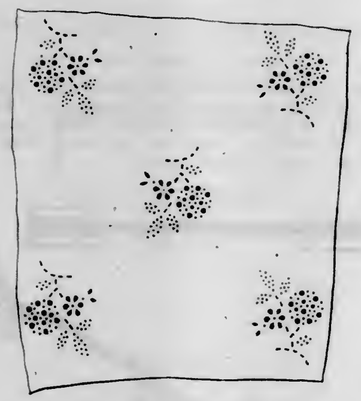
The ornamental design for an ash tray as shown.

69,291. WATCHCASE. ISIDOR TANNENBAUM, New York, N. Y. Filed June 26, 1925. Serial No. 13,912. Term of patent 3½ years.



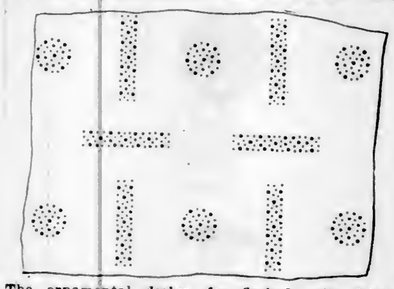
The ornamental design for a watchcase as shown.

69,292. FENDER GUARD FOR VEHICLES. HERBERT W. TINKER, Milwaukee, Wis., assignor to Federal Pressed Steel Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Oct. 30, 1925. Serial No. 15,294. Term of patent 14 years.



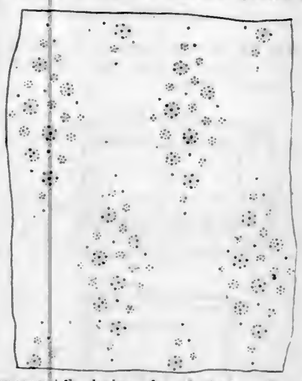
The ornamental design for a fender guard for vehicles, as shown.

69,293. FLOCKED VOILE FABRIC. EDWARD B. VANDERGAW, Brooklyn, and JULES HEINRICH, New York, N. Y., assignors to Fred Butterfield & Co., Inc., New York, N. Y., a Corporation of New York. Filed Oct. 23, 1924. Serial No. 11,169. Term of patent 3½ years.



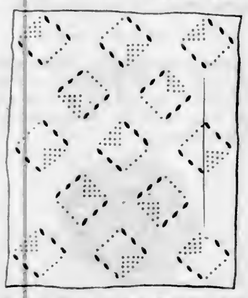
The ornamental design for flocked voile fabric, as shown.

69,294. FLOCKED VOILE FABRIC. EDWARD B. VANDERGAW, Brooklyn, and JULES HEINRICH, New York, N. Y., assignors to Fred Butterfield & Co., Inc., New York, N. Y., a Corporation of New York. Filed Oct. 23, 1924. Serial No. 11,170. Term of patent 3½ years.



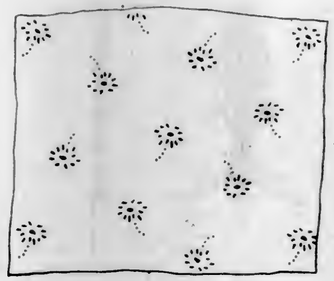
The ornamental design for flocked voile fabric, as shown.

69,295. FLOCKED VOILE FABRIC. EDWARD B. VANDERGAW, Brooklyn, and JULES HEINRICH, New York, N. Y., assignors to Fred Butterfield & Co., Inc., New York, N. Y., a Corporation of New York. Filed Oct. 23, 1924. Serial No. 11,171. Term of patent 3½ years.



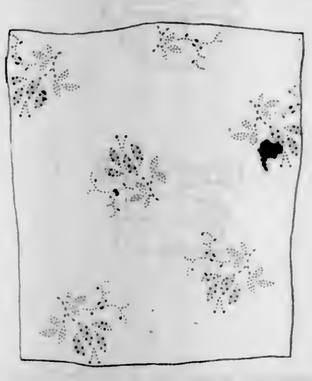
The ornamental design for flocked voile fabric, as shown.

69,296. FLOCKED VOILE FABRIC. EDWARD B. VANDERGAW, Brooklyn, and JULES HEINRICH, New York, N. Y., assignors to Fred Butterfield & Co., Inc., New York, N. Y., a Corporation of New York. Filed Oct. 23, 1924. Serial No. 11,172. Term of patent 3½ years.



The ornamental design for flocked voile fabric, as shown.

69,297. FLOCKED VOILE FABRIC. EDWARD B. VANDERGAW, Brooklyn, and JULES HEINRICH, New York, N. Y., assignors to Fred Butterfield & Co., Inc., New York, N. Y., a Corporation of New York. Filed Oct. 23, 1924. Serial No. 11,173. Term of patent 3½ years.

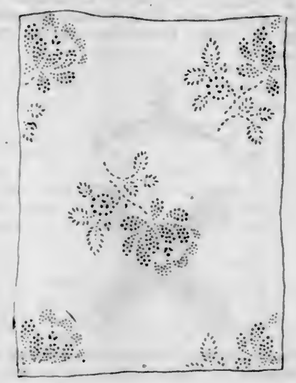


The ornamental design for flocked voile fabric, as shown.

69,298. FLOCKED VOILE FABRIC. EDWARD B. VANDERGAW, Brooklyn, and JULES HEINRICH, New York, N. Y., assignors to Fred Butterfield & Co., Inc., New York, N. Y., a Corporation of New York. Filed Oct. 23, 1924. Serial No. 11,176. Term of patent 3½ years.

The ornamental design for flocked voile fabric, as shown.

69,299. FLOCKED VOILE FABRIC. EDWARD B. VANDERGAW, Brooklyn, and JULES HEINRICH, New York, N. Y., assignors to Fred Butterfield & Co., Inc., New York, N. Y., a Corporation of New York. Filed Oct. 23, 1924. Serial No. 11,177. Term of patent 3½ years.



The ornamental design for flocked voile fabric, as shown.

69,300. FLOCKED VOILE FABRIC. EDWARD B. VANDERGAW, Brooklyn, and JULES HEINRICH, New York, N. Y., assignors to Fred Butterfield & Co., Inc., New York, N. Y., a Corporation of New York. Filed Oct. 23, 1924. Serial No. 11,180. Term of patent 3½ years.

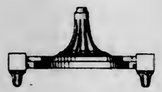
The ornamental design for flocked voile fabric, as shown.

69,301. FLOCKED VOILE FABRIC. EDWARD B. VANDERGAW, Brooklyn, and JULES HEINRICH, New York, N. Y., assignors to Fred Butterfield & Co., Inc., New York, N. Y., a Corporation of New York. Filed Oct. 23, 1924. Serial No. 11,181. Term of patent 3½ years.

The ornamental design for flocked voile fabric, as shown.

69,302. BASE FOR PORTABLE ELECTRIC LAMPS. GUSTAVE E. VILLARET, Leonia, N. J., assignor to William R. Noe & Sons, New York, N. Y., a Copartnership. Filed Apr. 14, 1925. Serial No. 13,116. Term of patent 7 years.

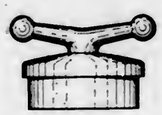
The ornamental design for a base for portable electric lamps, as shown.



69,303. BASE FOR PORTABLE ELECTRIC LAMPS. GUSTAVE E. VILLARET, Leonia, N. J., assignor to William R. Noe & Sons, New York, N. Y., a Copartnership. Filed Apr. 14, 1925. Serial No. 13,117. Term of patent 7 years.

The ornamental design for a base for portable electric lamps, as shown.

69,304. BASE FOR PORTABLE ELECTRIC LAMPS. GUSTAVE E. VILLARET, Leonia, N. J., assignor to William R. Noe & Sons, New York, N. Y., a Copartnership. Filed Apr. 14, 1925. Serial No. 13,118. Term of patent 7 years.

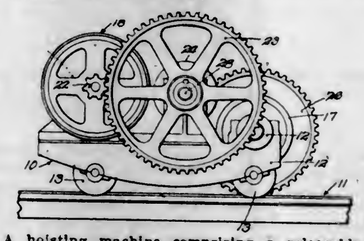


The ornamental design for a base for portable electric lamps, as shown.

69,305. PEDESTAL FOR PORTABLE ELECTRIC LAMPS. GUSTAVE E. VILLARET, Leonia, N. J., assignor to William R. Noe & Sons, New York, N. Y., a Copartnership. Filed Nov. 17, 1925. Serial No. 15,436. Term of patent 7 years.

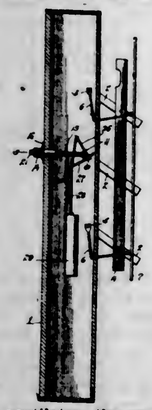
The ornamental design for a pedestal for portable lamps, as shown.

69,306. CAP FOR GASOLINE TANKS. OSCAR B. WELKER, Middletown, Conn., assignor to The Welker-Hoops Manufacturing Company, Middletown, Conn., a Corporation of Connecticut. Filed July 25, 1925. Serial No. 14,226. Term of patent 14 years.



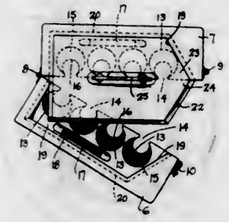
The ornamental design for a cap for gasoline tanks, as shown.

PATENTS



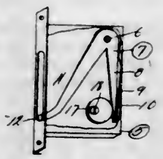
GRANTED JANUARY 19, 1926.

1,569,846. HOISTING MACHINERY. CHRISTIAAN W. AVELING, Lockport, Ill., assignor to Julia Aveling, Lockport, Ill. Filed Sept. 8, 1922. Serial No. 586,864. 12 Claims. (Cl. 254—173.)



1. A hoisting machine comprising a releasable load-grasping device, a holding drum, a lacing drum for controlling the releasing and grasping of said load-grasping device, a single motor for controlling both of said drums, transmission means between said motor and said drums including a delayed action transmission between the motor and holding drum, whereby the lacing drum may be given a limited movement, without any movement of the holding drum, to control the grasping and releasing of said load-grasping device, said transmission means including also an impositive drive between said motor and holding drum whereby in grasping the load an impositive force is exerted on the holding rope, permitting the holding rope to pay out, to allow the grasping device to dig into the material to be loaded, and exerting a yielding force to facilitate starting the movement of the holding drum, said transmission means including also a positive drive between the motor and the holding drum and means whereby said impositive drive is effective during the grasping operation of the load grasping device and whereby said positive drive is effective during the raising movement of the load.

1,569,847. AUTOMATIC WINDOW VENTILATOR. VICTOR M. ALLEN, Waverly, N. Y. Filed Aug. 14, 1920. Serial No. 403,567. 7 Claims. (Cl. 98—31.)

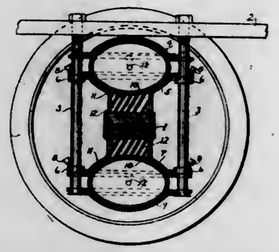


1. In a window ventilator, the combination of a plurality of pivotally mounted panels, means for causing the panels to move in unison, yieldable means to hold the panels normally in open position, and blast-receiving plates disposed at the ends of the panels and connected with some of them whereby to close the panels under abnormal wind pressure.

1,569,848. GAME-CHIP RACK. EUGENE BLACK, New York, N. Y. Filed June 12, 1925. Serial No. 36,585. 5 Claims. (Cl. 273—148.)

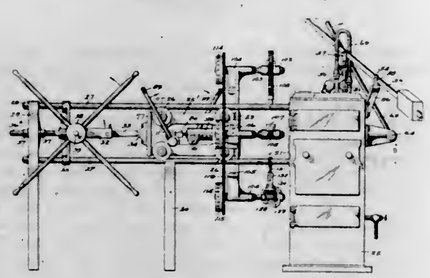
1. A game piece rack comprising hinged portions, a single cover for said hinged portions, and an undercut means formed in the edge of said portions and engaging said cover whereby the cover is rendered immovable after the hinged portions are swung together.

1,569,849. WINDOW-SASH FASTENER. BYRON E. BOWLES, Council Bluffs, Iowa. Filed Nov. 10, 1924. Serial No. 748,913. 1 Claim. (Cl. 292—124.)



The combination with a window sash, said sash being slidably mounted in a window frame, of a locking device for said sash, said device comprising a casing mortised in the side of the sash and having its outer side open, an inverted V-shaped lever pivotally mounted within the casing adjacent its upper inner corner, said lever having a downwardly extending arm adjacent the rear side of the casing, a leaf spring disposed within the casing and normally forcing said arm outwardly at its free end, a downwardly and outwardly extending arm carried by the V-shaped lever, said last named arm terminating in an angularly shaped member cooperating with the window frame, a cam rotatably mounted within the casing between the arms and cooperating with the first mentioned arm for forcing the same inwardly against the action of the leaf spring, said cam having its opposite sides provided with bosses rotatably mounted in opposite walls of the casing, one of said bosses registering with an aperture in the sash and provided with key receiving means.

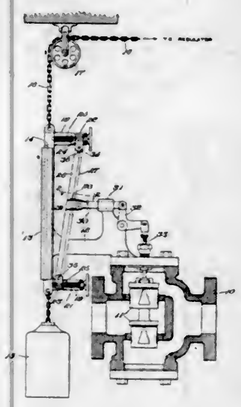
1,569,850. PNEUMATIC AUTOMOBILE SPRING. EDWARD EVERETT COTHRAN, Wright, Calif. Filed Sept. 14, 1921. Serial No. 500,538. 2 Claims. (Cl. 267—65.)



1. In a pneumatic spring of the character described and in combination, a vehicle axle, a chassis frame member, a pair of spaced vertically disposed elongated bolts fixed to the frame member and extending downwardly on opposite sides of the axle; a semi-elliptically shaped metal plate, having a square depression therein, fixed to the top of said axle; a semi-elliptically shaped metal plate, having a square elevation therein, fixed to the bottom of said axle; opposite sides of each of said plates being fixed to said bolts with collars; a pneumatic

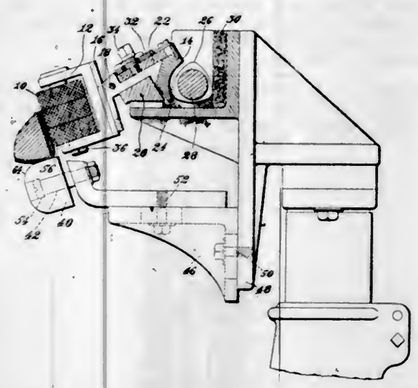
elliptically shaped bag with a square and solid rubber lug vulcanized to the bottom of said bag seated in said square depression in said plate fixed to the top of said axle; a pneumatic elliptically shaped bag with a square and solid rubber lug vulcanized to the top of said latter bag seated in said square elevation in said plate fixed to the bottom of said axle; said plates having a sliding connection

around said bolts through lubricated ball-bearings set in said collars integral with and upon opposite sides of each of said plates; a semi-elliptically shaped metal plate fixed to said bolts on opposite sides of said axle and covering said bag above said axle; a semi-elliptically shaped metal plate fixed to said bolts on opposite sides of said axle and supporting said bag below said axle.



1,569,851. DIE-CASTING MACHINE. JOHN B. BUSHNELL, Berkeley, Calif., assignor to Bushnell Manufacturing Co. Inc., Berkeley, Calif., a Corporation of California. Filed Oct. 2, 1922. Serial No. 591,713. 28 Claims. (Cl. 22—69.)

2. In a die casting machine, a stationary die head, a carriage, a movable die head fastened to the carriage, rollers for the carriage, and means for adjusting the center of the rollers with respect to the carriage.



1,569,852. VALVE MECHANISM. HAROLD L. COLBY, Milton, Mass., assignor to Charles W. McConnel, Boston, Mass., Eldon MacLeod, Westwood, Mass., and Fannie Burr Look, Los Angeles, Calif., trustees, doing business as Mason Regulator Company, Boston, Mass. Filed Nov. 7, 1923. Serial No. 673,390. 5 Claims. (Cl. 137—139.)

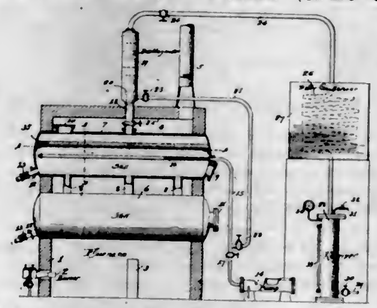
1. The combination with a valve, of an operating member therefor having a predetermined range of operative movement, and means connecting said operating member and valve for causing opening or closing movements of said valve proportional in amount to the extent of movement of said operating member throughout the range of operative movement of the latter, said connecting means being adjustable to vary the limits of movement of

said valve in either or both directions and thereby the extent of movement of said valve corresponding to a given movement of said operating member.

1,569,853. METHOD OF AND MACHINE FOR OPERATING UPON SHOES. CHARLES DE MINICO, Boston, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 20, 1919, Serial No. 325,237. Renewed Jan. 11, 1924. 37 Claims. (Cl. 12—51.)

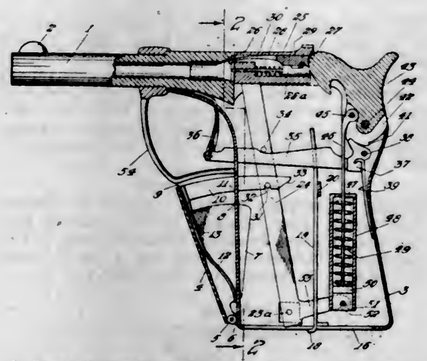
1. The method of operating upon a shoe the marginal portion of the upper of which is held by adhesion to the insole, which consists in moving said portion of the upper relatively to the insole in a direction to tighten the upper against the last, and applying successive pounding impulses to said portion in a direction to promote adhesion as the upper is being tightened as aforesaid.

1,569,854. ABRASIVE MITT. GEORGE W. DOERR, Orange, N. J. Filed Apr. 16, 1923. Serial No. 632,322. 2 Claims. (Cl. 15—227.)



1. An abrasive mitt, comprising a sheet of course textile fabric webbing having cut sides and selvaged ends, a

padded layer of steel wool secured to said webbing between its selvaged ends, said webbing being folded upon itself midway between its selvaged ends and having its

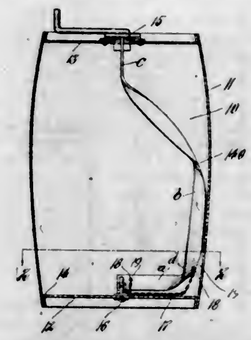


folded cut edges separately united to form a pocket for the hand, with said steel wool covering both faces of the completed mitt.

1,569,855. PROCESS OF TREATING OIL. GUSTAV EGLOFF and HARRY P. BENNER, Independence, Kans., assignors to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Aug. 20, 1920. Serial No. 404,902. 5 Claims. (Cl. 196—96.)

1. A process of treating hydrocarbon oils, comprising introducing a supply of oil to a still, in heating the still, in passing the vapors generated from the oil in the still through a filtering bed located in the vapor space of the still above the oil lever and above the oil inlet thereto, in subjecting the vapors to dephlegmation in discharging uncondensed vapors and in returning reflux condensate to the still below the filter bed.

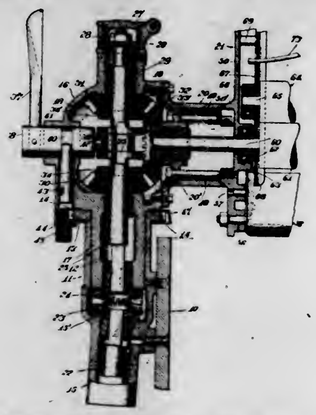
1,569,856. AUTOMATIC PISTOL. JOHAN EMIL ERIKSEN, Oslo, Norway. Filed May 11, 1925. Serial No. 29,464. 4 Claims. (Cl. 42—7.)



1. In an automatic pistol, a handle grip, an extension therefor movable relatively thereto, cocking levers carried by said extension and extending into said handle grip, a breech block, a firing pin carried thereby, a hammer contiguous to said breech block, releasable connection between said breech block and cocking levers, a trigger, a sear operatively connecting said trigger and hammer, and recoil mechanism connecting said releasable connection and hammer whereby the latter is automatically cocked after each discharge of the pistol.

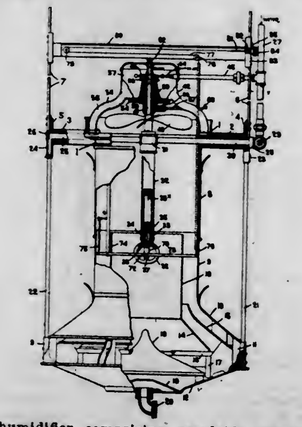
1,569,857. FENCEPOST DRIVER. CARL A. FARR, De Kalb, Ill., assignor to The American Steel and Wire Company of New Jersey, a Corporation of New Jersey. Filed Aug. 5, 1924. Serial No. 730,302. 3 Claims. (Cl. 61—77.)

3. A one-man fence post driving apparatus comprising a tubular open-ended sleeve member adapted to have a sliding fit on the post to be driven and to be mounted on the post so as to expose the upper end of the post, means for locking said sleeve in position on said post, and a driving member comprising a tubular shank portion of greater diameter than said sleeve and adapted to fit over and slide freely on said sleeve, and having a solid heavy upper end adapted to deliver driving blows to the upper end of the post when said driving member is reciprocated.



1,569,858. BARREL AGITATOR. CHARLES E. FARRINGTON, Phoenixville, Pa. Filed May 22, 1924. Serial No. 715,095. 3 Claims. (Cl. 259—107.)

1. An agitator for a barrel or like container, comprising an arm revoluble about the axis of the container and extending outwardly from said axis toward the side wall of said container and thence upwardly, and a flexible scraper having its ends attached to the arm and depending therefrom, so as to be dragged thereby over the bottom of the container when the arm is revolved,

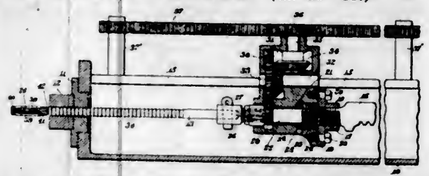


such scraper being of such length that its intermediate portion may operate in the angle formed by the bottom and side wall of the container.

1,569,859. WASHING-MACHINE WRINGER. ALVA J. FISHER, Evanston, Ill., assignor to Hurley Machine Company, Chicago, Ill., a Corporation of Illinois. Filed May 7, 1921. Serial No. 467,546. 2 Claims. (Cl. 68—32.)

2. In a power driven swinging wringer-structure, the combination of a vertically bored standard having a notched flange, a head bearing on said flange and having a stem entering said bore, a vertical shaft member carried by said head, a wringer structure carried by said head and having a horizontal shaft, reversible gearing between said head-shaft and wringer shaft, latch-means for engaging the standard-flange notches to position the wringer-structure, a spring-receptive cap detachably carried by the head and engaging under the flange, and a spring in said cap for normally pressing the latch toward releasing position.

1,569,860. HUMIDIFIER. WILLIAM B. HODGE, Charlotte, N. C., assignor to Parks-Cramer Company, Boston, Mass., a Corporation of Massachusetts. Filed Dec. 17, 1920. Serial No. 431,521. 15 Claims. (Cl. 261—115.)



1. A humidifier comprising regulable spray-producing means, means to project a blast of air through the spray including an enclosed water motor and a fan operable thereby located between said water motor and said spray-producing means and means for conducting away the waste water from the motor externally of the field of spray.

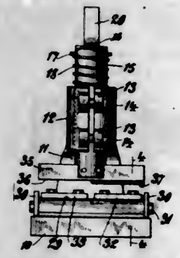
1,569,861. PROCESS OF PREPARING CEREAL FOOD. JOHN LEONARD KELLOGG, Battle Creek, Mich., assignor, by mesne assignments, to Kellogg Company, Battle Creek, Mich., a Corporation of Delaware. Filed Nov. 28, 1922. Serial No. 603,863. 2 Claims. (Cl. 99—11.)

1. The process of preparing a cereal food which comprises cooking bran under pressure in a closed receptacle, and adding flavoring material thereto during such cooking.

1,569,862. BROACHING MACHINE. FRANCIS J. LAPOINTE, Ann Arbor, Mich. Filed Mar. 11, 1924. Serial No. 698,548. 12 Claims. (Cl. 90—33.)

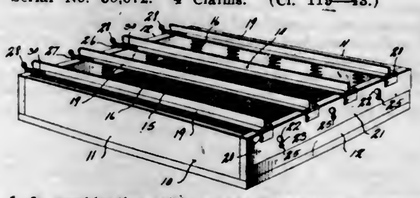
1. In a machine of the class described, a reciprocating head; a broach reciprocating therewith having a plurality of annular cutting teeth on its periphery; and means carried by said head for rotating the broach during its reciprocation.

1,569,863. CUP HOOK AND SUPPORT. CHRISTOPHER J. LAWLESS, Ericson, Nebr. Filed Apr. 19, 1924. Serial No. 707,636. 1 Claim. (Cl. 65—13.)



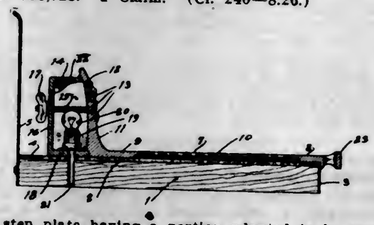
The combination with a cup, a handle member carried by said cup, a supporting hook carried by said handle member at its lower side and adapted to receive a support for the cup and hold the cup in substantially a horizontal position, said handle member and hook being formed from a single piece of metal bent upon itself to form the hook, said hook extending outwardly in the same direction as the handle and engaging the under side of the handle.

1,569,864. ELECTRIC SWITCH. HENRY E. LEPPERT, New Britain, Conn., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn., a Corporation of Connecticut. Filed Aug. 4, 1925. Serial No. 48,044. 6 Claims. (Cl. 200—168.)



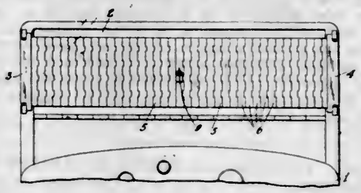
1. A snap switch comprising a yoke, an operating lever extending through said yoke, a slide having a hooked connection with said yoke and a loose connection with said lever.

1,569,865. COLLAPSIBLE-TUBE-CLOSING APPARATUS. HERMAN B. LERMER, Newark, N. J., assignor to Hygienic Tube Co., Newark, N. J., a Corporation of New Jersey. Filed Feb. 12, 1925. Serial No. 8,616. 5 Claims. (Cl. 113—54.)



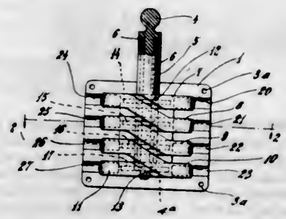
1. A portable seaming apparatus for closing collapsible tube ends comprising a stand, a spring supported plunger slidable therein, a die block on said stand, said block having a narrow longitudinal groove, a bar carried by said plunger to indent the tube end by pressing it into the groove, and a manually operable lever to actuate said plunger.

1,569,866. EGG TRAY FOR INCUBATORS. PETER LIEUWEN, Harrison, S. Dak. Filed Aug. 13, 1925. Serial No. 50,072. 4 Claims. (Cl. 119—43.)



1. In combination with an egg tray having relatively deep side and end walls and a screened bottom upon which the eggs may rest, a structure removably secured to the egg tray comprising an upper structure overlying the upper edge of the tray, a plurality of transversely and longitudinally spaced springs secured to the upper structure and extending downwardly therefrom and a flexible screen secured to the lower ends of the springs for engaging the upper surface of the eggs, said top structure including a plurality of papallel bars adapted to overlie the upper end of the tray, an attaching bar to which the ends of the first named bars are secured, means detachably connecting the attaching bar to one wall of the incubator tray from which the bar is unremovable while the first named bars overlie the top of the tray and means at the opposite ends of the first named bars for detachably securing the first named bars to the opposite wall of the tray.

1,569,867. ILLUMINATED STEP PLATE. WILLIAM LINDSAY, Denver, Colo. Filed Dec. 18, 1924. Serial No. 756,725. 1 Claim. (Cl. 240—8.26.)



A step plate having a portion adapted to be secured to the upper surface of a running board, a stop wall projecting upwardly from one edge of said surface, said wall having a plurality of openings, lenses in said openings, a casing adapted to be secured to the rear surface of said wall, said casing having a bottom member adapted to rest upon the running board, an electric socket secured to the bottom and means comprising bolts for securing the casing to the stop wall.

1,569,868. ANTITHEFT DEVICE. HENRY LOEB, New York, N. Y. Filed May 20, 1924. Serial No. 714,573. 3 Claims. (Cl. 296—84.)

1. In combination with a windshield, casings secured at the sides thereof, spring members within said casings, said spring members normally curved slightly away from their point of attachment to the casings, sheet metal plates pivoted to one another and to said spring members, means to secure certain of said plates, within each casing and means to lock the said plates in extended position across the vision portion of said windshield.

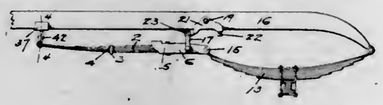
1,569,869. CONNECTER SWITCH. FREDERICK P. McINTOSH, New York, N. Y., assignor to Kar Engineering Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 9, 1922. Serial No. 580,677. 9 Claims. (Cl. 179—91.)

5. In a connecter, a base, a first and second switching contact projecting from said base, a contact spring connected with the first switching contact, and having an end terminating at one side of said base, three contact springs extending from one side of said base to the opposite side, a fifth contact spring connected with the second switching contact and having an end terminating at the opposite side of the base, a plurality of conductors each contacting at one end with the end of a spring at one side of the base and at the other end with the end of the adjacent spring at the opposite side of the base, apertures in the two sides of the base in alinement with the ends of the contact springs and through which the contact springs may be engaged and separated from the cooperating conductor end.

1,569,870. PROCESS FOR REFINING OILS. JACQUE C. MORRELL, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Aug. 28, 1922. Serial No. 584,870. 1 Claim. (Cl. 196—33.)

A step in a process for refining and purifying mineral oil, consisting in subjecting the oil to the action of alkali metal plumbite in water solution, in then removing substantially all the alkali metal plumbite solution from the oil, in then treating the freed oil with a metallic

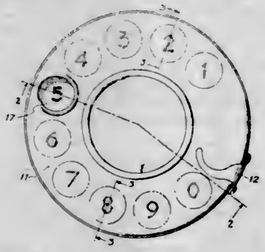
sulphide capable of hydrolyzing in water to complete the reaction of the plumbite solution, and in then removing the separated precipitate and sulphide compounds.



1,569,871. PROCESS FOR REFINING HYDROCARBON OIL. JACQUE C. MORRELL, Chicago, Ill., assignor to The Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Aug. 31, 1922. Serial No. 585,550. 2 Claims. (Cl. 196—33.)

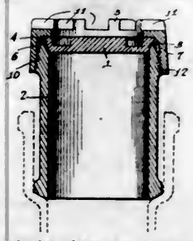
1. A step in a process for refining or purifying hydrocarbon oils, consisting in subjecting the oil to treatment with sodium plumbite in water solution, in extracting the sodium plumbite solution, in then introducing a sulphide in water solution, withdrawing the products of this reaction and then introducing a flocculating agent to precipitate the other products of reaction, and in then withdrawing the precipitated material.

1,569,872. PROCESS FOR REFINING CRACKED HYDROCARBON OIL. JACQUE C. MORRELL, Chicago, Ill., assignor to The Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Aug. 31, 1922. Serial No. 585,551. 2 Claims. (Cl. 196—33.)



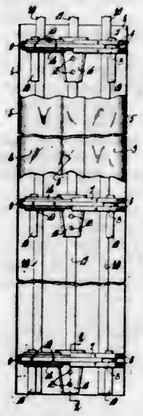
1. A step in a process for refining hydrocarbon oil consisting in subjecting the oil to an alkali metal plumbite in water solution, agitating the mixture, in then extracting the plumbite solution from the oil, in then introducing sulphide in water solution to the oil to assist the reaction caused by the plumbite, in then removing the sulphide with any products of reaction.

1,569,873. SHOCK ABSORBER FOR VEHICLES. SAMUEL A. MOSS, Oakland, Calif. Filed Oct. 3, 1921. Serial No. 504,925. 3 Claims. (Cl. 267—19.)



1. A shock absorber for vehicles comprising a multiple leaf spring of gradually increasing flexibility from a base to a flexible end, a housing having a socket therein in which said base is disposed, a transverse rib on the wall of said socket and a bolt extending through the base of the spring in the socket and pressing the spring against said rib.

1,569,874. INDICATING MEANS FOR CALLING DIALS. NEAL D. NEWBY, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 14, 1923. Serial No. 680,732. 5 Claims. (Cl. 179—90.)



1. In a calling device the combination of a numbered member, of a finger wheel having a number of finger-holes corresponding to the numbers on said member, another wheel mounted on the finger wheel and independently operable for selecting one of said numbers and means carried by the selecting wheel for indicating the number selected after each operation of said finger wheel.

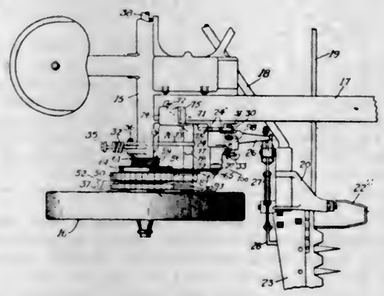
1,569,875. CLOSURE FOR PIPES, VALVES, AND OTHER VESSELS. HORACE CHARLES NIXON, Saskatoon, Saskatchewan, Canada. Filed May 3, 1920. Serial No. 378,540. 3 Claims. (Cl. 137—76.)

1. A closure of the character described comprising a tubular metal member having one end beveled off in opposite directions providing a double tapered terminal and exteriorly threaded below said beveled portion, a plate closure for said end comprising a metal disc having an annular flange projecting from its upper face at its periphery, the outer face of said flange tapered to fit tightly within the tapered end of the tube, an annular lip oppositely tapered and pendent from the upper edge of said flanges and adapted to fit fluid tight over the outer taper of said end, and an internally threaded metallic cap adapted to engage the said exteriorly threaded portion, and engage and secure the plate closure in position to form an inner and outer seal of the tapered end.

1,569,876. CONCRETE FORM. HAROLD ELWIN NOYES, Claremont, N. H. Filed Mar. 24, 1923. Serial No. 627,287. 38 Claims. (Cl. 25—128.)

1. A concrete form comprising form carrying sections having form portions telescopic in intersecting directions, and separate internal wedge mechanisms for moving the same in each directions.

1,569,877. APPARATUS FOR MAINTAINING CONSTANT TEMPERATURE ON A PORTION OF THE BODY. SAMUEL LOGAN OWENS, Washington, D. C. Filed July 3, 1924. Serial No. 723,980. Renewed Dec. 1, 1925. 2 Claims. (Cl. 128—258.)

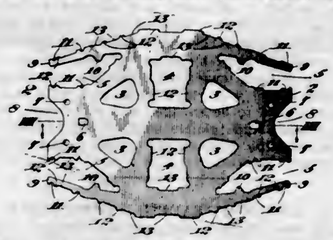


1. A container of the class described comprising a tubular member of resilient material closed at one end,

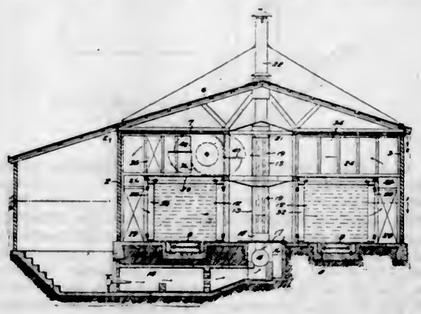
elements adapted to effectually close the open end of the member, said elements comprising wide flaps arranged oppositely on the sides of the tubular member, and means for fixedly securing said member to a part of the human or animal body, said means including ears arranged oppositely along the sides of the tubular member below

said elements and another ear at the closed end of the member and cords adapted to be tied around the container at suitable places and to said ears thereby dividing the container into a plurality of substantially non-communicating compartments, thus breaking up the wave motion of the contents.

1,569,878. POWER LIFT FOR MOWER BARS. CHARLES PEARSON, Chicago, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed Sept. 19,1921. Serial No. 501,812. 21 Claims. (Cl. 56—273.)



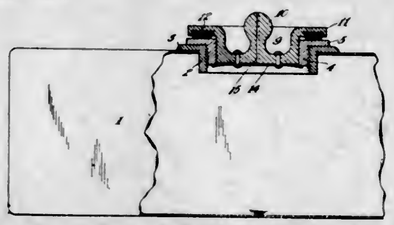
1. A mower including in combination a frame, a cutting mechanism pivotally connected to said frame, adjusting mechanism for said cutting mechanism, and power actuated resilient means for adjusting said cutting mechanism when said mower is in a standing position.



21. A mower including in combination a frame, traction wheels therefor, a cutting mechanism pivotally connected to said frame, adjusting mechanism for said cutting mechanism, traction power storing mechanism on said frame comprising a spring, means for tensioning said spring comprising a member rotatable with said wheel and to which the spring is attached, means controlled by the tension of said spring for connecting and disconnecting said member and wheel, and operating connections between said storing mechanism and adjusting mechanism.

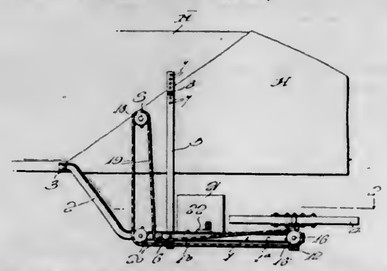
1,569,879. MAKING SIDE FRAMES. LINDSAY C. PRITNER and HENRY C. DORRIS, Johnstown, Pa. Filed Aug. 15, 1922. Serial No. 581,929. 9 Claims. (Cl. 29—164.)

1. The steps in the method of forming a pressed metal side frame, which consists in taking a plain plate, simultaneously cutting the margins thereof and the openings therein, then die forming flanges around the margins of certain portions of said plate and certain of the openings therein, then bending said plate about its intermediate portion in such a way as to place the flanges of the two halves substantially opposite each other, and welding the halves together at the flanges.



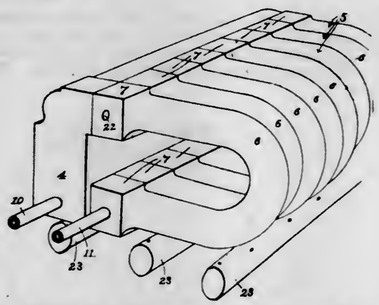
1,569,880. DRYING APPARATUS. CLAUDE REES and CHARLES F. HINE, San Francisco, Calif. Filed Oct. 22, 1924. Serial No. 745,147. 18 Claims. (Cl. 34—19.)

1. A drying apparatus comprising a house, two parallel tracks arranged in the house and adapted to receive trucks loaded with tiers of trays containing the material to be dried, a horizontal partition dividing the house into upper and lower chambers, a heater arranged in the house between the two tracks and disposed in both chambers and means for circulating air through the two chambers serially.



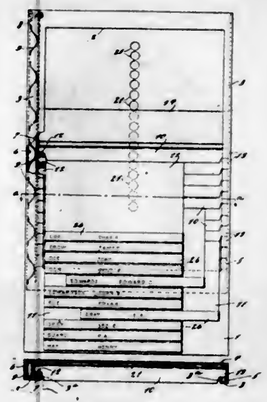
1,569,881. TANK OR CAN CLOSURE. JAMES S. REID, Cleveland, Ohio, assignor to The Easy-On Cap Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 30, 1920. Serial No. 369,909. 1 Claim. (Cl. 220—40.)

In a closure device of the type having a tubular member with spaced recesses and cam portions and a cap member with gasket means for engaging the top portion of the tubular member with sealing effect, an improved cap member provided with a locking member extending across the underside of said cap member and secured



thereto, said locking member and cap member being provided with vent means therethrough, said locking means having spaced individually acting spring end portions extending radially outwardly and adapted to enter the recesses of the tubular member and engage the cam portions thereof upon relative rotation of said cap and tubular members, whereby when the cap member is applied to the tubular member the yielding end portions of the locking means will yield freely and fully and cause the gasket means to be engaged and compressed between the cap member and tubular member with sealing effect but without undue compression of the gasket means.

1,569,882. STRAW-SPREADING ATTACHMENT. WILLIAM F. RESCHKE, Wichita, Kans., assignor to International Harvester Company, Chicago, Ill., a Corporation of New Jersey. Filed Sept. 5, 1922. Serial No. 586,371. 3 Claims. (Cl. 275—8.)



1. A straw spreading attachment for harvester threshers comprising a frame having side bars mounted on the rear end of the harvester thresher for pivotal movement about a horizontal axis, a rotatable distributer carried on a transverse shaft mounted between said side bars, means on said side bars adjacent the shaft whereby said distributer may be tilted in a plurality of planes on the axis of said shaft transverse to the line of travel of the machine, the same means adapted for clamping said distributer in any of such tilted positions.

1,569,883. COMBINATION BURNER AND GENERATOR. CHARLES C. RICHARDSON, New York, N. Y., by process of law assignor to Hydrola Heater Corporation, a Corporation of New Jersey. Filed Jan. 2, 1923, Serial No. 610,086. Renewed Oct. 22, 1923. 6 Claims. (Cl. 158—56.)

1. A generator unit comprising a U-shaped body portion having the ends thereof squared, the opposite side faces of said ends having an opening therein, and the opposite side faces of said unit arranged to contact with the faces of a second unit, said unit having the squared ends thereof disposed in parallel relation relative to each other.

1,569,884. VISIBLE-INDEX DEVICE. WILLIAM A. RINGLER, New York, N. Y., assignor to The Globe-Wernicke Company, a Corporation of Ohio. Filed Mar. 22, 1920. Serial No. 367,617. 7 Claims. (Cl. 129—16.)

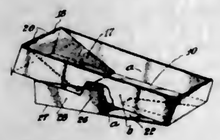
1. An index device comprising a frame having guideways along opposite sides thereof, a plurality of index cards, carriers disposed in said guideways and supporting each of said cards for sliding movement laterally of the frame and for pivotal movement about the axis of support to position any card so as to enable the ready entry of information upon either face thereof without removal of the member from the frame.

4. A visible index device comprising a frame having guideways along opposite sides thereof and also having a series of spaced apertures in the rear wall thereof and extending parallel with the guideways, a plurality of index members slidably mounted in said guideways, a bar also slidably mounted in said guideways and adapted to hold the index members together in one end of the frame, and a spring device carried by the bar and engageable in any of the apertures to retain the bar in adjusted positions.

6. A visible index member comprising a card carrier of spirally rolled sheet material, the overlapping edges of the carrier being spaced a short distance apart, a card having a narrow portion of one edge bent at an angle to the face thereof, the body of said card being slidable between the overlapping edges of the carrier with the bent narrow portion within the spiral.

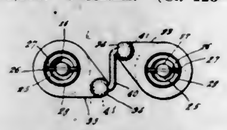
7. A blank for use with a visible index comprising a sheet of pliant material capable of receiving written or printed information, said sheet having lines of perforations extending transversely thereof at spaced distances along the same in order to facilitate separation of the sheet at the desired places into individual cards, said sheet also being scored transversely thereof a short distance from each end and a short distance from each side of each of the lines of perforations, whereby any desired data or information may be first typewritten at suitable intervals along the length of the sheet, the sheet separated along the lines of perforations, and bent along the scoring substantially as described.

1,569,885. SLED. IDE L. ROBBLEE, Southbridge, Mass. Filed July 9, 1923. Serial No. 650,373. 1 Claim. (Cl. 280—25.)



In a sled, an unbent flexible runner, an unbent top piece having a seat portion joined at the forward end of the runner and forming an angle therewith, an inflexible pedestal piece between the top piece and the runner intermediate the ends of the runner and top piece, rigidly

secured to the top piece to prevent lateral movement of the pedestal, but free and unsecured as respects the runner and so positioned with respect to the seat portion



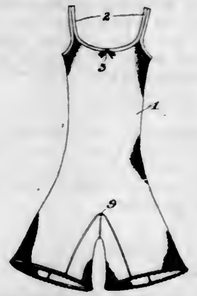
that the weight of the operator on the seat portion will bend up the front end of the runner to form the usual upturned runner portion, and at the same time provide a resilient seat for the operator.

1,569,886. DISPLAY RECEPTACLE. BENJAMIN ROSENBERG, Brooklyn, N. Y. Filed Feb. 25, 1922. Serial No. 539,127. 4 Claims. (Cl. 206—44.)

1. A receptacle comprising a body having lateral extensions capable of being folded longitudinally thereof to form side walls, the latter being collapsed upon themselves and capable of being united at their ends, and a cover hinged midway of its length and being movably and integrally connected to one end of said body and provided with lateral extensions capable of being folded with respect to the cover and united at their ends, said extensions projecting to a point short of the length of said cover and capable of embracing the opposite side walls of the body when the cover is moved into position to cover the body of the box or into position beneath the body to elevate the latter.

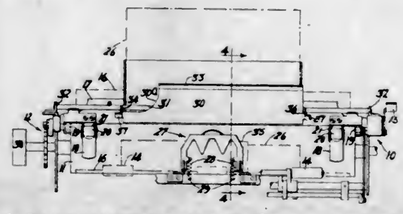
1,569,887. POPPET-VALVE ROTATOR. CHARLES E. SARGENT, Rock Island, Ill. Filed July 15, 1922. Serial No. 575,355. 6 Claims. (Cl. 123—90.)

5. In combination, two poppet valves arranged to operate dis-simultaneously, a sleeve on the stem of each of said valves, means interposed between each sleeve and its valve-stem for causing turning of the valve-stem and valve in one direction but not in the other upon oscillation of its associated sleeve, and a crank connecting the sleeves of the two valves to cause the oscillation of each sleeve about its axis as the associated valves are respectively operated.



1,569,888. STEERING WHEEL. HARRY E. SHELLER, Portland, Ind. Filed Oct. 26, 1923. Serial No. 670,962. 1 Claim. (Cl. 74—33.)

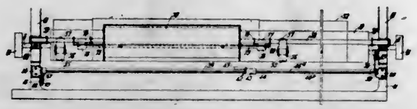
A steering wheel having a rim portion and a plurality of spokes, a collar connecting the inner ends of said entire wheel including said spokes, said rim portion, spokes and collar being composed of an inner layer or core of vulcanized rubber with a filler having an outer layer of rubber adapted to present a smooth uninterrupted surface over the entire wheel in combination with a metallic hub disposed within said collar during vulcanization of the wheel, to be permanently united thereto,



said metallic hub being provided on its periphery with a plurality of staggeredly positioned projections for causing a permanent interlocking engagement between said collar and said metallic hub.

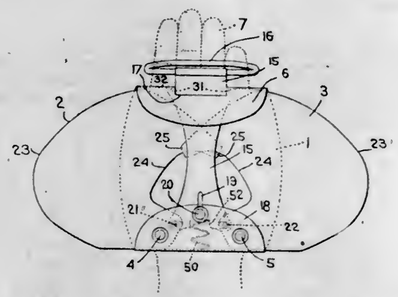
1,569,889. LADY'S UNDERGARMENT. WALTER L. SIEWERS, Winston-Salem, N. C., assignor to The Maline Mills Company, Winston-Salem, N. C., a Corporation of North Carolina. Filed July 12, 1924. Serial No. 725,707. 1 Claim. (Cl. 2—78.)

In combination with a tubular bifurcated nether garment slit in the middle, at the front and back, from the bottom thereof for a short distance thereabove, a substantially pentagonal crotch insert, composed of a pair of pentagonal elements, each of said elements having a re-entrant angle, such elements being stitched together along the edges forming the re-entrant angle, thereby causing the resultant insert to be of substantially pentagonal shape and warped so as to conform to the contour of the body adjacent the crotch, the seam produced by stitching such elements together running from front to back of the garment transversely of the crotch, the insert being free from seams vertically of the legs, the insert extending at a relatively high point at the back of the garment to constitute a seat for the same, and the elements of such insert extending to the bottom of the leg portions of the garment and forming complementary parts thereof.



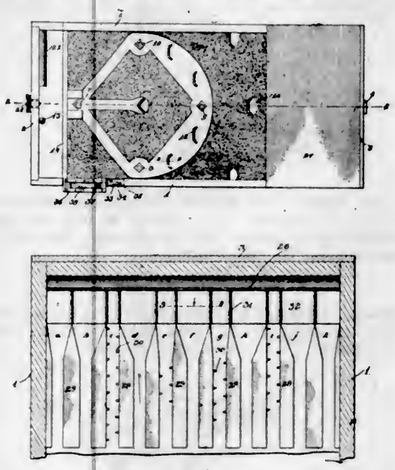
1,569,890. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 10, 1922. Serial No. 599,985. 9 Claims. (Cl. 197—127.)

1. In a typewriting machine for typing a brief inscription at one operation upon a short slip and at the head of a long work-sheet, and for thereafter typing a brief



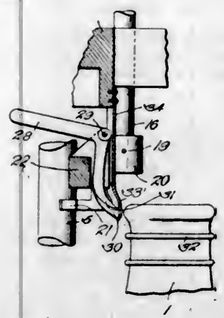
inscription at the foot of the long work-sheet, all at a single insertion of the long work-sheet and the short slip in the machine; in combination, a revoluble platen, an aligning plate above the platen, at the front thereof, a leading-edge gage on the aligning plate for gaging the short slip and the long work-sheet by their leading edges to collate them, a flexible sheet in the machine, outside the long work-sheet, forming a feeding gripper and front-insertion guide for the short slip, the flexible sheet-gripper and guide being wider than the long work-sheet and the short slip, leading-edge gages on the aligning plate, outside the bounds of the long work-sheet and the short slip, and considerably below the first-mentioned leading-edge gage, for positioning the guide and gripper-sheet with its upper margin above the writing line and overlapping the lower margin of the gaged short slip, but leaving the upper portion of said slip exposed for typing, feed-rolls cooperating with the platen to feed the long work-sheet and the gripper-sheet backward, and causing them to draw the short slip down to writing position, the feed-rolls being releasable when the short slip has been typed, to permit the long work-sheet to be advanced to position for typing at the foot thereof, while the guide and gripper sheet remains stationary below the writing line, and means for gripping the guide-sheet stationary during such advance of the long work-sheet.

1,569,891. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 7, 1923. Serial No. 679,069. 14 Claims. (Cl. 197—138.)



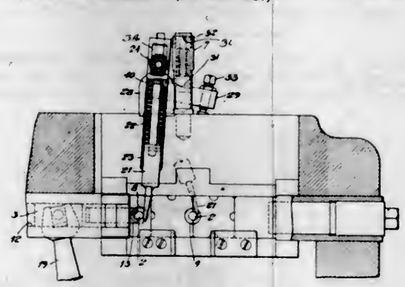
1. In a typewriting machine, a platen, a platen-carriage, a releasable work-piece-feeding mechanism co-operating with the platen, and control means for releasing said mechanism, comprising a bar mounted on the carriage extending lengthwise of the platen, and a lever slidingly mounted on the bar for controlling the releasing of said mechanism from positions in front of the platen.

1,569,892. SWIMMING APPLIANCE. LE ROY FLETCHER SNAPP, Brooklyn, N. Y. Filed May 1, 1925. Serial No. 27,280. 8 Claims. (Cl. 9—21.)



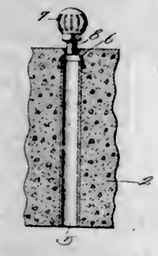
1. A swimming appliance comprising a body adapted to be secured to the palm of the hand, wings pivoted to the body and swingable in planes parallel thereto, and means to open and close the wings by an opening and closing movement of the fingers.

1,569,893. GAME APPARATUS. HERMAN W. STEINMETZ, Rochester, N. Y. Filed Jan. 18, 1922. Serial No. 530,205. 7 Claims. (Cl. 273—138.)



1. In a game apparatus, the combination with a game board having upper and lower runways, the upper runway being provided with a plurality of separate channels, of a projectile adapted to initially traverse the lower runway, a curved guide connecting the runways adapted to raise the projectile onto the upper runway and directed into one of the channels and a cover for the latter.

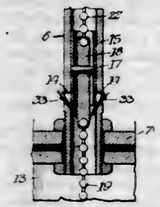
1,569,894. WIRE-CUTTING ATTACHMENT FOR MILK-BOTTLE-CAPPING MACHINES. GUSTAV STRANDT, Milwaukee, Wis., assignor to Milwaukee Dairy Supply Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed May 24, 1922. Serial No. 563,316. 6 Claims. (Cl. 226—92.)



3. In a bottle capping machine having a stationary member and a reciprocatory cross-head, a ring severing device carried by said cross-head and comprising a knife adapted for movement radially outwardly of a bottle beneath said capping machine, said stationary member having a portion disposed in the path of said knife when said cross-head is moved from said bottle, whereby to move said knife radially outwardly of said bottle when said cross-head is moved from said bottle, said knife being provided with means for automatically moving it toward said bottle when said cross-head is moved to bottle capping position, and means for holding said bottle during the ring severing operation.

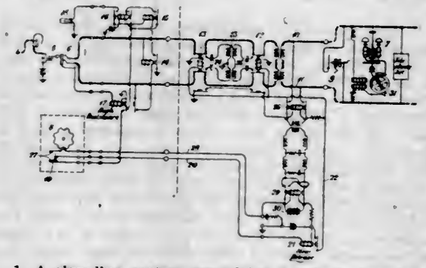
1,569,895. HOLDER FOR THE BLANK IN MACHINES FOR MAKING RIVETS, SCREW BLANKS, AND THE LIKE, AND IN OTHER UPSETTING MACHINES. SVENING HILMER SVENSSON and KARL OSKAR ENGKVIST, Bofors, Sweden, assignors to Aktiebolaget Bofors, Bofors, Sweden. Filed May 8, 1923. Serial No. 637,603. 6 Claims. (Cl. 10—25.)

1. The combination of a die, a mechanism for cutting blanks from stock and delivering the same to said die, said mechanism including a cutter, a blank holder, a carrier for said holder, said carrier being pivotally suspended above the die at a part, not moving in the operation of the machine and yielding means for moving the blank holder downwardly in relation to the carrier and for permitting the blank holder to perform a resilient movement with respect to said carrier in the opposite direction.



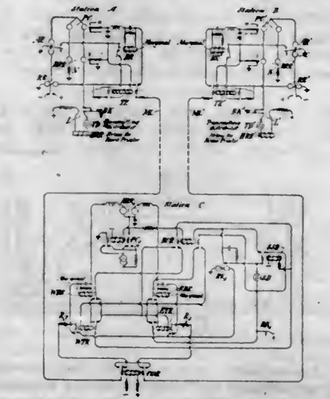
1,569,896. FILTERING TANK. INOS B. TANNER, Chicago, Ill., assignor to Joseph E. Nelson & Sons, Chicago, Ill., a Firm composed of John E. Nelson and William H. Nelson. Filed Aug. 4, 1924. Serial No. 730,052. 1 Claim. (Cl. 210—145.)

A filtering tank provided with a horizontal partition formed of moulded concrete spaced from its bottom and top, in combination with upright pipes moulded within said partition and communicating at their lower ends with the space beneath the partition and at their upper ends with the space above the partition; nipples moulded within the partition at its top side and assembled at their lower ends with the upper ends of said pipes; and filtering heads assembled and communicating with the upper ends of said nipples.



1,569,897. AUTOMATIC REGULATING MEANS. CHARLES M. TERRY, Decatur, Ill., assignor to A. W. Cash Company, Decatur, Ill., a Corporation of Delaware. Filed Mar. 26, 1925. Serial No. 18,352. 6 Claims. Cl. 236—85.)

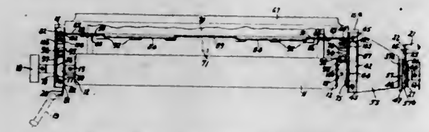
1. In a regulating device of the class described, the combination of a hydraulic motor, having a piston with a hollow piston rod provided with ports, a valve slidable in said piston for controlling said ports, the ports being formed to direct the streams of liquid flowing through said ports at an inclination away from said valves, and



a pressure responsive member controlling the operation of said valve.

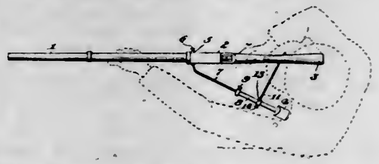
1,569,898. SIGNALING SYSTEM. JOHN F. TOOMEY, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 24, 1924. Serial No. 739,629. 5 Claims. (Cl. 179—89.)

1. A signaling system comprising a private branch exchange, a line circuit terminating thereat, a plurality of way stations associated with the line circuit, signaling means at each way station, means at the private branch exchange for selectively operating the signaling means at the way stations, and means associated with the line circuit and responsive to the operation of said signaling means for permitting the transmission of an audible signal to the private branch exchange.



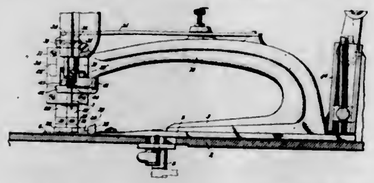
1,569,899. TELEGRAPH REPEATER. GILBERT S. VERNAM, Brooklyn, and EDWARD F. WATSON, Yonkers, N. Y., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed May 24, 1922. Serial No. 563,313. 7 Claims. (Cl. 178—71.)

1. In a signaling system, a line circuit, a repeater station associated with said line circuit and terminal stations associated with each end of said line circuit, trans-



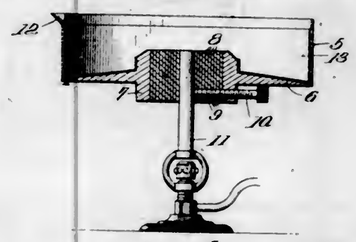
mitting apparatus and receiving apparatus at each terminal station, a pole changer transmitter and a polar receiving relay at said repeater station, an operating circuit for said pole changer transmitter controlled over the contacts of said polar receiving relay, and switching means at said repeater station whereby said polar receiving relay may be connected to either section of said line and said pole changer transmitter may be connected to the other section of said line.

1,569,900. TYPEWRITING MACHINE. HARRY H. VICKERS, Corona, Long Island, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 15, 1922. Serial No. 543,971. 10 Claims. (Cl. 197—135.)



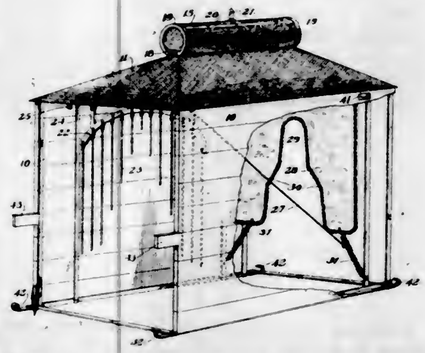
1. In a front-strike typewriting machine, the combination with a revoluble platen and a feed-roll, of a work-collating device, comprising a shelf extending upwardly in rear of the platen and receiving a condensed record-sheet inserted between the feed-roll and platen, and also comprising a collating plate on edge intermediate said shelf and the platen upon which is adjusted a card or work-piece with a carbon therefor, said intermediate plate having at its top edge a gage against which the work-piece and carbon are trued up when presented in inverted condition between the platen and the condensed record-sheet, said plate being mounted to be swung forwardly clear of the platen to give access to the typed and returned card for removing the same from the machine.

1,569,901. ATTACHMENT TO FIREARMS. JOSEPH D. VIRDIN, Baltimore, Md. Filed Aug. 27, 1925. Serial No. 52,805. 6 Claims. (Cl. 42—57.)



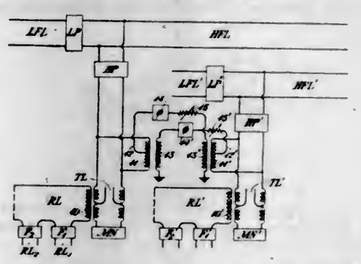
1. An attachment for fire arms comprising an auxiliary bracing stock and means connecting said stock with the side of the fire arm, both the main and auxiliary stocks being used simultaneously in the usual manner.

1,569,902. MACHINE FOR SEWING ON BUCKLES. JOSEPH VOLLMAN, Elizabeth, N. J. Filed Aug. 18, 1922. Serial No. 582,602. 8 Claims. (Cl. 112—104.)



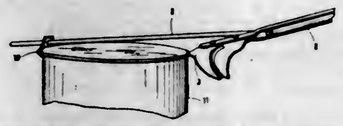
1. A work-holder for article-attaching sewing machines comprising, a work-support having an upstanding guide adapted to be embraced by and to position an apertured article, said guide having an upright wall adapted to engage a loop of flexible material linked with said article and crowd such loop closely in contact with the inner wall portion of the article embraced thereby, and a presser-member movable toward and away from said work-support and having a work-engaging surface portion disposed at one side of and closely adjacent said upstanding wall and adapted to press the upper and under portions of such loop snugly into engagement with the upper and under wall portions of the article.

1,569,903. PROTECTOR FOR LABORATORY BURNERS. RALPH W. WILTON, Washington, D. C. Filed Oct. 24, 1922. Serial No. 596,612. 2 Claims. (Cl. 126—40.)



1. A protector for laboratory burners, including a gas burner tube, a receptacle having a bottom provided with a hub, said hub surrounding the burner tube, and means carried by the hub engaging the tube for supporting the receptacle on the tube at the desired elevation.

1,569,904. TRAP FOR CATTLE FLIES. JOSEPH WRIGHT, Lancaster, Wis. Filed Mar. 21, 1924. Serial No. 700,912. 8 Claims. (Cl. 119—56.)

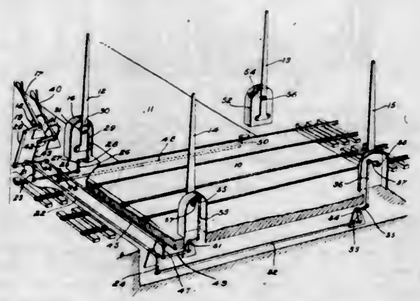


8. In a trap of the class described, the combination of a passageway having opposed side walls, a transversely disposed curved bar near the entrance to the passageway and having supporting arms rigidly secured to and extending upwardly from the bar and having their upper ends pivotally connected to the walls of the passageway, a series of spaced flexible elements depending from the bar and progressively decreasing in length from the ends of the bar toward its center, a third arm extending upwardly from the bar beyond said pivotal connections, an apron depending within the passageway near its other end a roller upon which said apron is mounted for vertical adjustment, springs connecting the lower corners of the apron to the side walls, a flexible element connecting the intermediate portion of one of the springs to the end of said third arm, whereby a displacement by an animal passing therebeneath will rock said bar and agitate the flexible elements, and means to entrap flies dislodged from the animal by said apron and flexible elements.

1,569,905. METHOD AND APPARATUS FOR NEUTRALIZING RADIOINTERFERENCE ON WIRE LINES. HERMAN A. AFFEL, Brooklyn, N. Y., and LESTER M. ILGENFRITZ, Orange, N. J., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed Nov. 20, 1922. Serial No. 602,218. 7 Claims. (Cl. 179—78.)

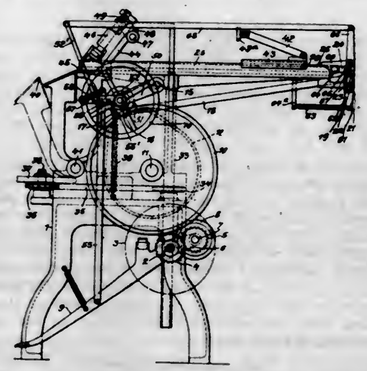
1. In the operation of a wire signaling system, the method of overcoming interference due to components flowing in series over the two sides of the line circuit as a result of electromotive forces impressed upon the line by a radio signaling station, which consists in causing the desired signaling currents to flow serially only over the line conductors, obtaining components flowing over the sides of a line circuit in parallel due to electromotive forces impressed thereon from the interfering radio signaling station and applying such electromotive forces to oppose the interfering series component.

1,569,906. TIN-CAN OPENER. CHARLES BAEHR, Le Locle, Switzerland. Filed May 25, 1925. Serial No. 32,812. 2 Claims. (Cl. 30—3.)



1. A can opener including a blade formed with a V-shaped cutting edge, a handle rigidly secured to the blade and extending away from the same, said handle being provided with an aperture adjacent to the blade, a wire having a hook at one end engaging said aperture, and a gripper mounted on the wire near its opposite end and adapted to grip the edge of the can.

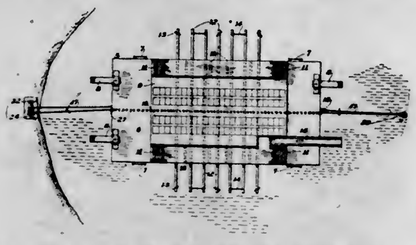
1,569,907. SAFETY SIGNAL. WILLIAM E. BEARD, Buckner, Mo. Filed Nov. 1, 1923. Serial No. 672,231. 3 Claims. (Cl. 240—8.22.)



1. In a lamp, a casing, a closure panel for the casing formed of light transmitting material and having a plurality of conical spaced depressions in its outer surface, and a conical shaped transparent block secured in each depression so that its base is in substantially co-planer relation with and exposed at the outer face of the panel, the transparent blocks having their surfaces silvered from base to apex whereby light from within the casing may pass through the panel between the depressions, and whereby light from the outside of the casing will be reflected outwardly of the casing by the blocks.

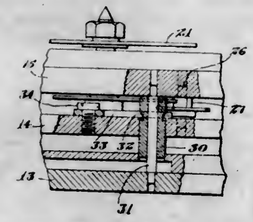
1,569,908. RAILROAD-CROSSING GATE. EDWARD E. BEECHER, Brooklyn, N. Y. Filed July 7, 1924. Serial No. 724,681. 2 Claims. (Cl. 39—62.)

1. In a railroad crossing the combination with a pair of gates pivoted at each side of the track, the pivots of the gates being provided with arms, of parallel shafts extending transversely of and across the track and each provided with arms, connections between the arms of one transverse shaft and the arms of the pivots of diagonally arranged gates, connections between the arms of the other transverse shaft and the arms of the pivots of the other diagonally arranged gates, and means for rocking each transverse shaft.



1,569,909. FEEDING MECHANISM FOR BOOK-SEWING MACHINES. ULRICH BISCHOF, Horgen, Switzerland, assignor to Gebr. Staubli, Horgen, Switzerland. Filed Dec. 13, 1920. Serial No. 430,359. 5 Claims. (Cl. 112—21.)

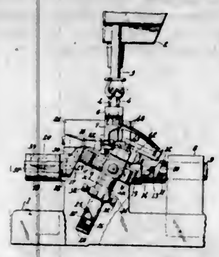
5. In a book sewing machine the combination of a book table for receiving a pile of fastened sheets in the upright position, with drivers for straightening the lower part of said pile, means for imparting to and fro motion to the drivers, plates fixed on the book table, a tappet mounted on each plate and having a triangular cross section, a sliding pin located on each end of each driver,



said pin, being situated in the vicinity of the adjacent tappet, for the purpose, that when the drivers are moved in one direction, the pins will slide over the tappets and press the drivers against the pile, and when the drivers are moved in the other direction, said pins will pass underneath the tappets and keep the drivers out of action upon the said sheets.

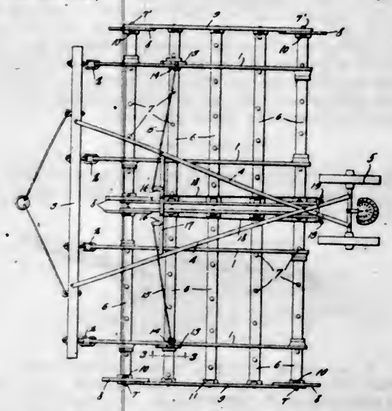
1,569,910. BATHING BARGE. CLAUDE SOUTHWORTH BOHANNON, Nokomis, Fla., assignor of one-half to William E. Stevens, Nokomis, Fla. Filed Feb. 18, 1925. Serial No. 10,054. 1 Claim. (Cl. 115—7.)

A device of the character described comprising a barge provided with a continuous tubular guideway extending longitudinally through the hull thereof near the water line, a mooring station located off shore, a sheave supported by said station, a cable attached at one end to the outer end of the barge, extending thence about said sheave and through said guideway to a point on the shore and thence back to the inner end of the barge to which it is attached, and means located at said point on the shore to move the cable in either direction to tow said barge back and forth between the mooring station and said point on the shore.



1,569,911. RELEASE LEVER. FREDERICK W. BOLD, Chelsea, Mass., assignor to Charles H. Pearson, Brookline, Mass. Filed Jan. 2, 1925. Serial No. 285. 1 Claim. (Cl. 102—36.)

In a time fuse, the combination of a longitudinally mounted plunger, a spring associated therewith and normally tending to hold the plunger in its normal position, a rotatably mounted shaft, a lever secured thereto and engaging with the plunger, a non-circular hub secured to said shaft, a rotatably mounted sleeve, and a lever secured thereto and engaging with the non-circular hub whereby rotation of the sleeve is prevented and the force exerted on the plunger by the engaging end of the lever is less than the restoring force exerted on the plunger by its engaging spring.

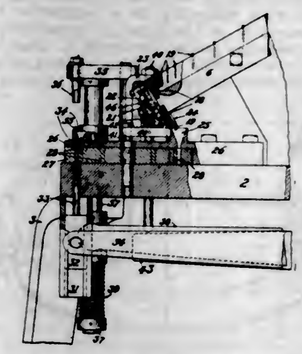


1,569,912. SEWING-MACHINE LOOPER MECHANISM. ANDREW B. CLAYTON, Union, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Mar. 14, 1922. Serial No. 543,735. 8 Claims. (Cl. 112—200.)

1. In a sewing machine, in combination, a reciprocating needle, a looper, a looper-clamp, a looper-carrier, means for adjustably securing the looper-clamp upon said looper-carrier, a looper-carrier support, means for adjustably securing the looper-carrier upon said support,

and looper-actuating means operatively connected with said looper-carrier support for imparting endwise and sidewise movements to the looper.

1,569,913. HARROW. ROBERT CRABTREE, Forbes, N. Dak. Filed Feb. 1, 1924. Serial No. 689,965. 1 Claim. (Cl. 55—34.)

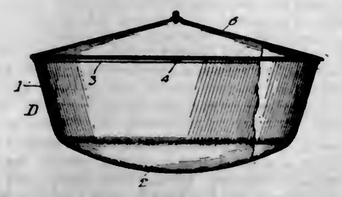


A harrow of the class described comprising a frame, bars rotatably mounted in the frame, spikes passing through the bars, semi-circular plates on the ends of the outer bars, a spike carried by each plate, clips connected with the ends of the inner bars, connecting strips connected with the clips and the plates for causing the bars to rotate in unison, the strips being connected with the plates by the spikes of said plates, ratchet means connected with one of the bars for holding said bars in a position with the spikes raised and the plates engaging the ground to act as runners, or for holding the bars in a position with the spikes vertical or inclined and manually operated means for actuating the ratchet means and for holding them in inactive position to permit the bars to rotate to free the spikes of trash.

1,569,914. PINNING AND NAILING MACHINE. FRANK CURTIN and HENRY CURTIN, Gloversville, N. Y., assignors to Curtin-Herbert Co. Inc., Gloversville, N. Y., a Corporation of New York. Refiled for abandoned application Serial No. 635,427, filed Apr. 30, 1923. This application filed Jan. 29, 1925. Serial No. 5,664. 4 Claims. (Cl. 1—1.)

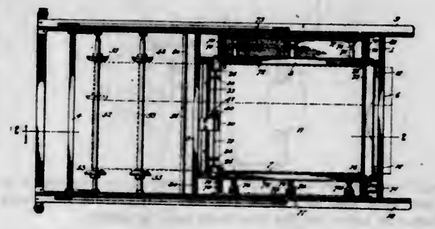
1. In a machine of the class described, a table; a hopper supported above said table; an inclined feed tube leading from said hopper; a disc with a series of spaced radial grooves in the face thereof, rotatively mounted

adjacent the discharge end of said tube; means for causing step rotation of said disc; a guard to prevent egress of a nail from said grooves during a major portion of their downward travel; a second disc rotatively mounted below said grooved disc and having a series of circumferentially spaced holes therethrough; means for causing step rotation of said second disc; means for locking said second disc; means for releasing said lock-



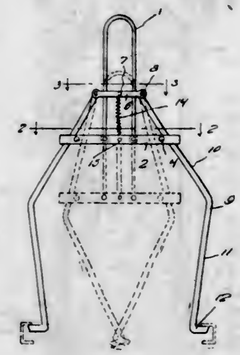
ing means at intervals; a plunger slidably mounted beneath said second disc and in line with one of the holes therethrough when said disc is locked; a work supporting member with an opening therethrough to pass said plunger; yielding gripping means mounted adjacent said opening and adapted to grip a nail placed therein; a presser foot with an opening therein; means for raising and lowering said presser foot; and means for imparting reciprocating motion to said plunger.

1,569,915. COLORING COMPOSITION. ALBERT DAVID, Chicago Heights, Ill., assignor, by mesne assignments, to Dip-It Inc., New York, N. Y., a Corporation of New York. Filed May 21, 1921. Serial No. 471,438. 1 Claim. (Cl. 8—6.)



A fluid coloring, dyeing or tinting composition comprising, in combination, a saponaceous body, a liquid carrier, glycerine in sufficient quantity to substantially prevent caking of the mixture on exposure to the air, and a dye dissolved partly in said liquid carrier and partly in said glycerine.

1,569,916. SYSTEM OF WATER TRANSPORTATION AND A NOVEL BOAT FOR USE IN CONNECTION THEREWITH. HARRY H. FISHER and WALTER B. RITTENHOUSE, Chicago, Ill., assignors to Bylesby Engineering and Management Corporation, Wilmington, Del., a Corporation of Delaware. Filed Dec. 11, 1922. Serial No. 606,201. 3 Claims. (Cl. 114—0.5.)

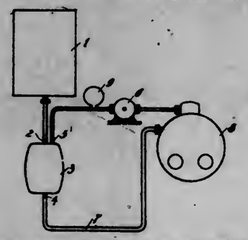


1. A boat for the purpose set forth consisting of a shallow bowl-shaped shell the circular wall of which flares upwardly and merges into a downwardly-convex bottom, and means on the exterior of the circular wall of the boat for making hoisting connections thereto.

1,569,917. MULTIBILLING PLATEN EQUIPMENT. HARRY ARTHUR FOOTHORAP, Harrisburg, Pa., assignor to Elliott-Fisher Company, a Corporation of Delaware. Filed Aug. 24, 1921. Serial No. 494,943. 38 Claims. (Cl. 197—120.)

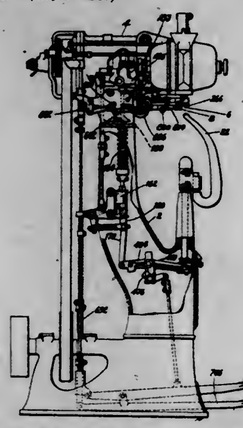
1. The combination with a support, of a flat platen having hinged connection at its front end with the support, and depressible from the writing plane.

1,569,918. GRAPPLE. ROY I. FLYNN, Wagner, S. Dak. Filed July 6, 1925. Serial No. 41,637. 2 Claims. (Cl. 294—97.)



1. A grappling device of the class described including an inverted U-shaped yoke, a pair of bars fixed to the terminals of the yoke, so as to extend rectangularly to the sides thereof, the other ends of the bars being curved inwardly toward each other, pins extending between the bars adjacent the ends thereof, sleeves on the pins, a second pair of bars of shorter length than the first pair, pins extending between the terminals of the second pair of bars, a yoke extending between the second pair of bars, grappling arms pivoted at their upper ends to the pins of the second pair of bars and extending between the first pair of bars and between the sleeves and terminals thereof, a coil spring of the traction type disposed between the two pairs of bars for normally drawing them toward each other.

1,569,919. METHOD OF FEEDING STEAM BOILERS FROM AN UNHEATED TANK. HANS GLEICHMANN, Siemensstadt, near Berlin, and WALDEMAR STENDER, Berlin-Charlottenburg, Germany, assignors to Siemens-Schuckertwerke Gesellschaft mit beschränkter Haftung, Siemensstadt, near Berlin, Germany, a Corporation of Germany. Filed Nov. 25, 1924. Serial No. 752,272. 1 Claim. (Cl. 122—451.)

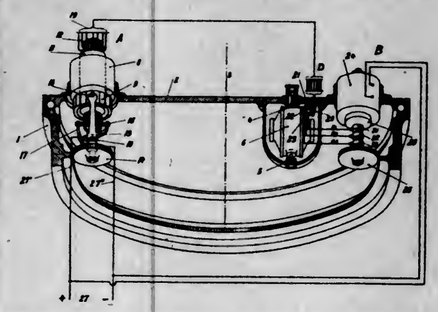


The improved method of feeding steam boilers with water from an unheated tank which consists in com-

pressing steam derived from the boiler to be fed to a pressure greater than the boiler pressure, conducting

said compressed steam into the space above the water in said tank and in forcing the feed water from said tank into the boiler by the increased tank pressure.

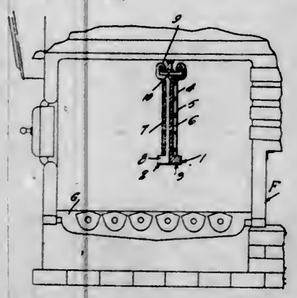
1,569,920. FASTENING-INSERTING MACHINE. GEORGE GODDU, Winchester, and FRED L. MACKENZIE, Beverly, Mass., assignors to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 29, 1921. Serial No. 496,200. 36 Claims. (Cl. 1—18.)



1. A shoe machine having means for operating about the periphery of a sole, and mechanism for relatively moving the operating means and the work to vary the position upon the sole at which the operation is performed, said means being controlled by a variation in a characteristic of the peripheral portion of the sole operated upon.

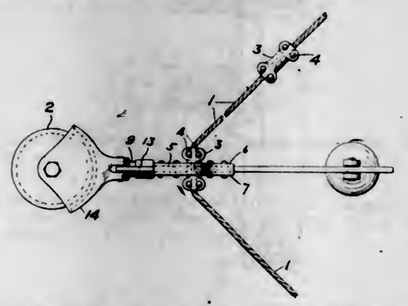
1,569,921. ALLOY FOR PEN POINTS. MELVIN M. GOLDSMITH, Chicago, Ill., assignor of one-half, by mesne assignments, to Goldsmith Bros. Smelting & Refining Company, Chicago, Ill., a Corporation of West Virginia. Filed Nov. 16, 1923. Serial No. 675,221. 5 Claims. (Cl. 75—1.)

1. An osmium alloy comprising 10 to 20 per cent of ruthenium, 3 to 10 per cent of nickel, and the rest osmium, 65 to 85 per cent.



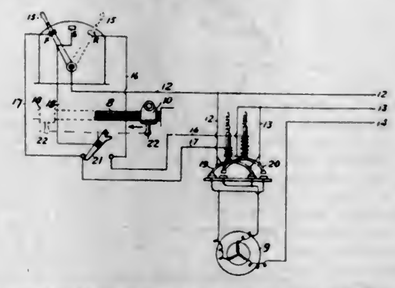
1,569,922. ELECTRIC CONTROL SYSTEM FOR ALL MOVABLE ELEMENTS OPERATING BY A VERY SMALL POWER, AND CHIEFLY FOR THE GYROSCOPIC COMPASS. ELIE GRANAT, Paris, France, assignor of one-half to Compagnie des Forges et Aciéries de la Marine et d'Homécourt, Paris, France, a French Corporation. Filed May 14, 1924. Serial No. 713,307. 2 Claims. (Cl. 177—351.)

1. In an arrangement for electrically controlling a revoluble device through a revoluble element pivotally mounted on said device, the combination of a transmitting electric machine borne by the controlled device and comprising a field magnet and an armature, means for feeding field magnet and armature with direct current, a commutator on armature, m equidistant brushes mounted on the controlled revoluble device and disposed round commutator, a distributor comprising m contact segments disposed on the controlled revoluble device on a portion of a circle surrounding the controlling revoluble element, wires connecting the m equidistant brushes of the commutator of the armature respectively with the m corresponding contact segments, a brush holder mounted on the revoluble controlling element, n brushes held by said brush holder and adapted to move along



contact segments of distributor, a receiver consisting of a synchronous motor, stator of the receiver being provided with a polyphase winding of n phases rotor of the receiver being fed by direct current, wires connecting each of the n vertices of the polyphase winding with the corresponding brush on revoluble controlling element, means whereby rotation of the rotor causes the rotation of the revoluble controlled device, means whereby the potentials of the n segments of the distributor which are in contact with the n brushes mounted on the controlling element when latter and the controlled device are in concordance produce at each moment in rotor of receiver a field in equilibrium with the field produced in stator at the same time.

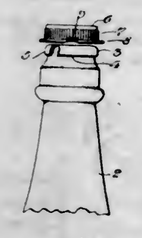
1,569,923. DEVICE FOR FURNACES. AUSTIN GUDMUNDSEN and HIRAM WILLIAM CLARK, Salt Lake City, Utah. Filed Feb. 4, 1924. Serial No. 690,579. 1 Claim. (Cl. 110—93.)



In a device of the character described, a furnace having a firebox, a channel iron supported within the firebox, partitioning members having their upper ends constructed to provide spaced hooks, rollers supported by the hooks, said rollers adapted to move over the flanges of the channel iron at opposite sides of the channel iron, said partitioning members adapted to provide a movable partitioning member across the upper portion of the firebox.

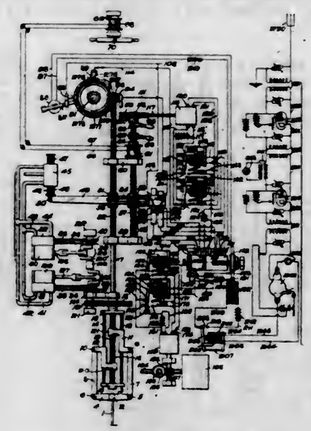
1,569,924. DRAG-SCRAPER BACK-POST BLOCK. WILLIAM E. HALE, Fort Washington, Pa., assignor to R. H. Beaumont Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 14, 1922. Serial No. 600,791. 5 Claims. (Cl. 254—100.)

1. In drag scraper gear the combination with a back post block of a wire rope or cable, two-part spools, fastenings for connecting the two parts of the spools to secure the latter to the wire rope or cable, a saddle shaped to conform to the middle part of a spool and turnable thereon, and a locking plate for the saddle.



1,569,925. DRAG SCRAPER. WILLIAM E. HALE, Fort Washington, Pa., assignor to R. H. Beaumont Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 4, 1923. Serial No. 622,835. 4 Claims. (Cl. 172—239.)

1. In a drag scraper the combination of continuously acting unidirectional power means, power application control devices, screw-and-nut mechanism adapted to actuate said devices to cause forward and reverse and neutral application of power, a motor for actuating said screw-and-nut mechanism, manual controller provisions for establishing circuits through the motor for forward and reverse and for establishing a neutral circuit path, set for stop mechanical limit stops for the motor and a circuit changer and interrupter interposed in the neutral circuit path and responsive to the travel of the nut to maintain the forward and reverse circuits through the motor until the nut reaches mid-travel position and operates the circuit changer and interrupter to stop the motor with the power application control device in position for neutral application of power.

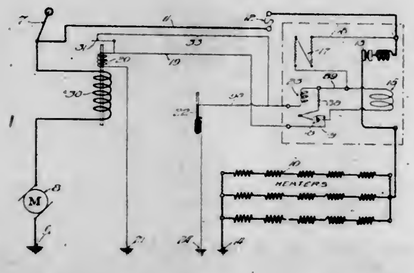


1,569,926. CONTAINER SNAP-ON ROTATABLY RELEASABLE CAP. CHARLES HAMMER, Hollis Court Boulevard, N. Y. Filed Jan. 8, 1925. Serial No. 1,148. 3 Claims. (Cl. 215—44.)

1. A metal cap adapted for use with a container neck having a shoulder and a recess therein comprising a top having a depending resilient skirt provided with an inwardly extending locking lug, the skirt and lug being so proportioned with respect to the container shoulder and recess as to permit the cap to be readily snapped on over the shoulder of the container with the lug

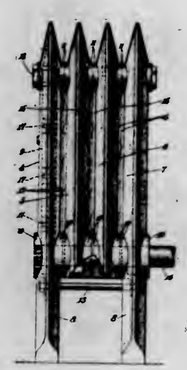
locking under such shoulder whereby it cannot be normally freely snapped off, and releasable by rotating said cap to bring its locking lug into register with said recess in the container shoulder.

1,569,927. SYSTEM OF AND MECHANISM FOR CONTROLLING MOVING BODIES BY RADIANT ENERGY. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Filed Nov. 26, 1919, Serial No. 340,698. Renewed Feb. 23, 1924. 11 Claims. (Cl. 114—21).



1. A system for the control of moving bodies comprising in combination, a vessel having a rudder, a prime mover to turn said rudder to starboard or to port, means including a commutator to govern the action of said prime mover, and means responsive to radiant energy from a distant control station to move said commutator and including means whereby a second signal is automatically sent at a predetermined time after the sending of the last preceding signal.

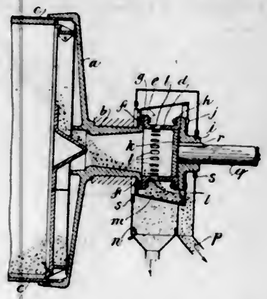
1,569,928. CAR-HEATING SYSTEM. WILLIAM G. HARTWIG, Chicago, Ill., assignor to Railway Utility Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 10, 1923. Serial No. 679,528. 2 Claims. (Cl. 219—20.)



2. In an electric system for driving and heating street cars and the like and in combination with the motor, heater and motor and heater circuits thereof, a contactor in the heater circuit, an electro-magnet controlling the contactor, a switch in shunt to the coil of the

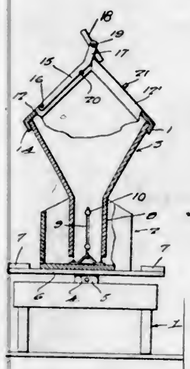
electro-magnet, a thermostat and electro-magnetic coil controlling said switch, a second switch also in shunt to the coil of the contactor, an electro-magnet controlling the same having opposing coils, one of which is

constantly energized when the car is in service and the other of which is connected in the motor circuit and so wound as to oppose the first mentioned coil and neutralize it when the motor operates under a predetermined load.



1,569,929. RADIATOR. OTTO HASELAU, New York, N. Y. Filed Oct. 3, 1921. Serial No. 505,167. 7 Claims. (Cl. 257—151.)

4. A radiator having a plurality of vertical separable hollow radiator units each substantially diamond shaped in horizontal cross section and having an upright heating fluid passage therein, and passages connecting the units at the bottom thereof, said last mentioned passages all lying in substantially the same horizontal plane, the central vertical lines of said units being arranged in substantially the same plane and said units having external vertical reinforcing ribs at opposite vertical corner edges thereof which ribs extend toward and abut corresponding ribs on adjacent units.

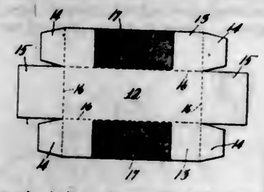


1,569,930. TUBE MILL OR BALL MILL. PETER VILHELM ADOLF AAGE HERBST, Holte, Denmark, assignor to F. L. Smidth & Co., New York, N. Y., a Corporation of New Jersey. Filed Aug. 29, 1925. Serial No. 53,285. 2 Claims. (Cl. 83—9.)

1. In a mill of the character described, the combination of a shell or drum, a hollow trunnion by which the shell or drum is supported, the trunnion being closed at one end and provided with openings in its peripheral wall for the passage of material, a driving shaft axially

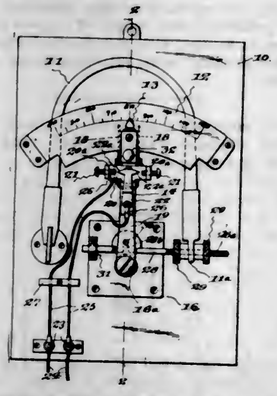
in line with the drum or shell, and a coupling member through which the driving shaft is operatively connected with the trunnion.

1,569,931. CHICKEN FEEDER. RANCY BLAIN HERRINGTON, Wolbach, Nebr. Filed Feb. 3, 1925. Serial No. 6,567. 4 Claims. (Cl. 119—55.)



4. In a structure of the class described, a feed hopper, said hopper being open at its top, a pair of cover sections for closing said top, one of said sections being stationary, and the other section being relatively movable, a pair of arms pivotally connected at corresponding ends to the intermediate portion of the ends of the movable cover section, an anti-roost board disposed between and pivotally connected to the opposite ends of said arms, stop pins disposed upon the ends of said movable cover section, the intermediate portions of the arms being engageable with said stop pins, and an additional stop pin on the relatively stationary cover section with which said board is engageable when the movable section is swung to open position.

1,569,932. BOX OR CARTON. ELLON S. HILL, New Hampton, N. H., assignor to Box Board Products, Inc., New York, N. Y., a Corporation of New York. Filed June 8, 1922. Serial No. 566,680. 2 Claims. (Cl. 229—6.)

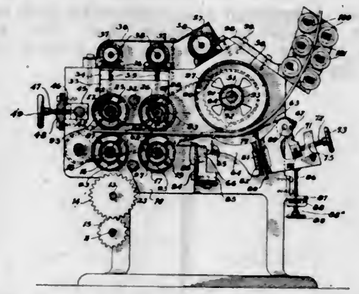


2. A paper box having side wall portions of one-piece construction devoid of folds or pleats, the mid-

length portions of said side walls having separate reinforcing panels of paper stock adhesively secured there-

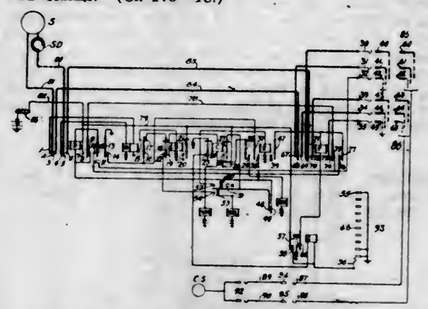
to, said panels being of considerably less length than said walls.

1,569,933. THERMOSTATIC SWITCH. ROBERT H. HOUK, Joliet, Ill. Filed July 20, 1922. Serial No. 576,387. 1 Claim. (Cl. 200—137.)



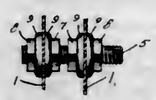
A thermostatic switch comprising a base, a dial secured to the base, a main pointer arm of insulating material having its upper portion formed with a slot receiving the lower edge portion of said dial, a spring carried by said main pointer arm and engaging the rear side of said dial to hold the main pointer arm in position, a pivot element supporting said main pointer arm, a switch arm of insulating material mounted on said pivot element and having a contact finger, contacts carried by said main pointer arm and located on opposite sides of said contact finger, a longitudinally movable bar having its intermediate portion formed with a slot opening out through the lower end thereof and slidably receiving a pin carried by said switch arm, said slot being extended at right angles to the axis of the bar and having side walls in engagement with said pin whereby the longitudinal movement of the bar will operate said pin and the switch arm carrying the pin, and a thermostat connected to said bar.

1,569,934. SIDEWALK MAT. BONAVENTURO IZZO, Bronx, N. Y. Filed Jan. 12, 1925. Serial No. 1,984. 2 Claims. (Cl. 15—238.)



1. A mat of the character described comprising parallel longitudinal stripe each standing on one of its longitudinal edges with the other longitudinal edge thereof lying in the plane of the mat surface, said strips being formed with recesses in their lower edges in a manner to provide supporting legs, and flat transverse strips having their ends formed integral with the longitudinal strips at their upper portions to provide a flat surface.

1,569,935. MACHINE FOR BENDING WOOD. LORENZO JOHNSON, Louisville, Ky. Filed Jan. 22, 1924. Serial No. 687,808. 17 Claims. (Cl. 144—255.)



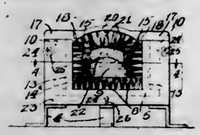
1. In a wood bending machine, the combination of a pressure roll, a concave former cooperating therewith, feed rolls in front of the pressure roll and former, certain of said rolls being hollow and having an inner perforated drum forming a gas burner, and means for supplying gas to said burner.

1,569,936. MACHINE-SWITCHING SYSTEM. EDMUND LAND, Ridgefield Park, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Oct. 24, 1923. Serial No. 670,554. 14 Claims. (Cl. 179—18.)

1. A switch comprising a plurality of sets of brushes and rows of terminals, there being one test brush in each set of brushes, and means for rendering all test brushes effective on certain terminal rows and a lesser number effective on other rows.

1,569,937. MATTRESS. ERBEN E. LA TURNER, Jerome, Idaho. Filed July 31, 1923. Serial No. 654,881. 1 Claim. (Cl. 5—348.)

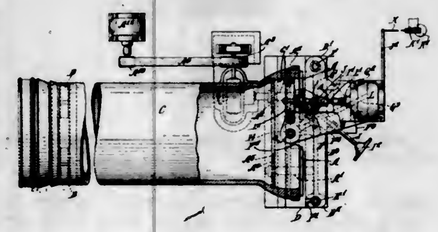
A mattress comprising a plurality of inflatable resilient tubes, means for introducing air into one tube, connections communicating with adjoining tubes; and means whereby each tube is held independently of the other



tubes and rendered removable independently of the other tubes, said means comprising separate nuts threaded on each connection, the nuts being located between adjoining tubes and engaging the outer surfaces of adjoining tubes, and other nuts threaded on each connection, the last-specified nuts being respectively located within adjoining tubes and engaging the inner surfaces of said tubes.

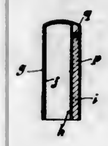
1,569,938. COMBINED PARALLEL RULE AND COMPASS. STANLEY G. LE GRESLEY, Flint, Mich. Filed June 12, 1923. Serial No. 644,836. 1 Claim. (Cl. 33—158.)

A compass including a bar, a series of teeth disposed on the bar, a point fixed on the bar, a sleeve member slidably mounted on the bar, a point carried by the sleeve member, the axis of the last mentioned point being parallel with the axis of the first mentioned point, and a latch member pivoted upon the sleeve member and having its end portion adapted to engage in the spaces between the teeth of the bar, said end portion when engaged in one of the spaces between the teeth of the bar being disposed in alignment with the axis of the point carried by the sleeve member.



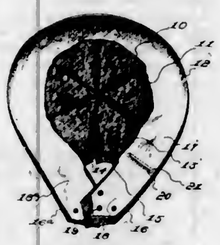
1,569,939. SHOE-CLEANING DEVICE. MAX J. SPERLING, Chicago, Ill. Filed Aug. 8, 1923. Serial No. 656,402. 6 Claims. (Cl. 15—161.)

1. A shoe cleaning device comprising a casing having an opening in one end and in the top, means on said casing for supporting the same, a tip brush and a top brush in said casing, a bottom brush and side brushes also mounted in the casing, and an end plate removably engaged on the open end of the casing for holding the bottom brush and the side brushes in place within the casing against longitudinal removal.



1,569,940. GRINDING AND POLISHING MACHINE. THOMAS P. ANTHONY, Edgewater Park, N. J., assignor, to United States Cast Iron Pipe & Foundry Company, Burlington, N. J., a Corporation of New Jersey. Filed Jan. 3, 1924. Serial No. 684,114. 2 Claims. (Cl. 51—88.)

1. A grinding and polishing machine having in combination means for supporting and rotating a pipe having a spherical socket at its end, a main frame carrying a pivot located to lie normally in an approximate diametric line of the spherical pipe socket, when a pipe is in position to be ground, a second frame pivoted on the main

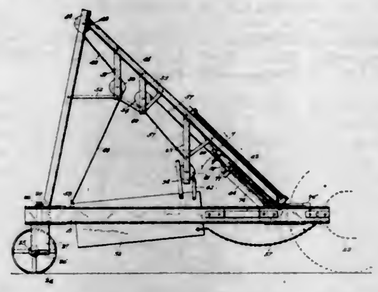


frame pivot, means for angularly adjusting said second frame, a polishing wheel supported on said second frame in position to contact with the spherical pipe socket and means for pressing said polishing wheel against the pipe socket.

1,569,941. POCKET LIGHTER. WILHELM BALTRUSCH, Elberfeld, Germany. Filed Apr. 17, 1924. Serial No. 707,281. 7 Claims. (Cl. 76—7.1.)

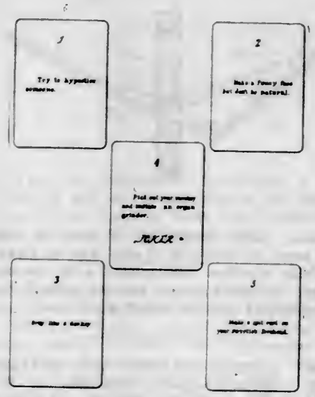
1. A pyrophoric pocket lighter comprising in combination: a combustible container, a chosen- or scroop-like scraper mounted on said container, a double-walled cap for covering said scraper and said container, a pyrophoric element arranged between the two walls of said double-walled cap, and an opening in the outer wall of said cap for exposing the operative face of said pyrophoric element.

1,569,942. REVERSIBLE HAT. JOSEPHINE M. BARNHILL, San Francisco, Calif., assignor to Frederick A. Brinkman, San Francisco, Calif. Filed Aug. 20, 1925. Serial No. 51,483. 3 Claims. (Cl. 2—197.)



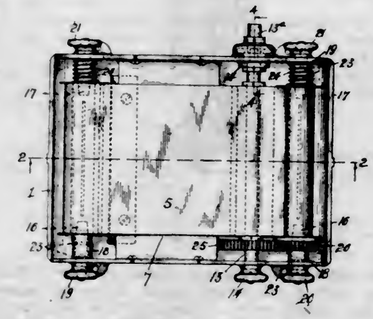
1. A hat having a crown of soft and flexible material and having a brim formed of two thicknesses of soft and flexible material of different colors, the hat being reversible to bring either face of the brim outside, the two thicknesses of the brim being unattached to each other except at the junction with the crown throughout nearly the entire extent of the brim to permit independent manipulation of these two thicknesses.

1,569,943. PROCESS FOR THE EXTRACTION OF HELIUM FROM GASES CONTAINING THE SAME. ROBERT ROGER BOTTOMS, Lakewood, N. J. Filed Dec. 27, 1924. Serial No. 758,338. 1 Claim. (Cl. 183—115.)



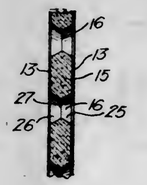
The process of separating helium from gaseous mixtures containing the same consisting in conducting the compressed gaseous mixture through one series of passages in a countercurrent heat interchanger and thence into a condenser where the constituents of the said gaseous mixture including the greater part of the helium present, at high pressure is reduced to the liquid phase, and to the minimum temperature reached in the process; reducing the pressure by passing the resulting liquids through a throttle valve into a liquid collecting pot, where the dissolved helium is released, passes into the gaseous phase and is withdrawn; passing the liquids into a condenser, re-evaporating the said liquids to the gaseous phase, and passing the re-vaporized gases out of the apparatus through a second series of passages in the aforementioned countercurrent heat interchanger at low pressure, substantially as set forth in the foregoing specification.

1,569,944. TRACTOR SCOOP. SOUTHWICK W. BRIGGS, Glenmont, Md. Filed Apr. 27, 1925. Serial No. 26,247. 9 Claims. (Cl. 37—129.)



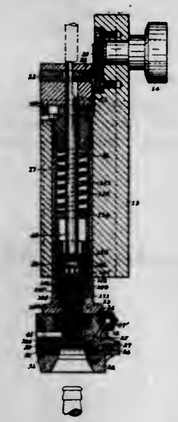
1. A scoop attachment for tractors comprising a frame adapted for connection to a tractor, a fluid circuit mounted on the frame including a pair of hydraulic cylinders, means adapted to be connected to the tractor for forcing a circulation of fluid through said circuit, a scoop pan mounted in the frame, and connections between the opposite ends of the pan and said cylinders for controlling the filling and dumping of the pan by the operation of the cylinders.

1,569,945. PLAYING CARDS. VERTNER D. BRITTINGHAM, Denver, Colo. Filed May 22, 1925. Serial No. 32,041. 4 Claims. (Cl. 273—152.)



1. A deck of playing cards comprising a plurality of cards numbered consecutively, each card having a separate "stunt" printed on its face and one of said cards being marked "Joker."

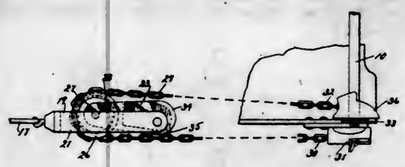
1,569,946. ROUTE METER. EDWARD F. BUETTNER, EMERY GANUN, and HENRY K. THROM, Toledo, Ohio. Filed Apr. 20, 1925. Serial No. 24,388. 2 Claims. (Cl. 40—42.)



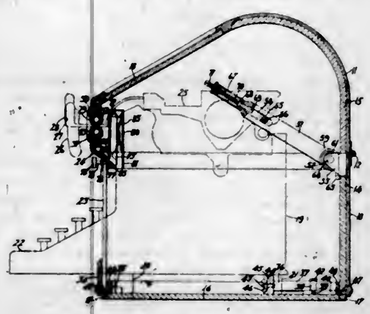
1. In a route meter, a case having a window in its front side, spools removably mounted in spaced relation in the case from one to the other of which a route tape winds across said window, a guide within the case for holding a tape in adjacent relation to said window as it feeds across the same, a feed roll mounted within the case for engagement with the tape, a shaft carrying the feed roll and axially shiftable from without the case, a drive shaft section adapted to have connection with a driving source, a clutch for connecting said shaft and shaft section and releasable by an axial shifting of the first shaft and geared connection between said first shaft and the tape winding spool of the pair for driving one from the other, said connection being separable upon a clutch releasing movement of the first shaft to permit a manual turning of the winding spool.

1,569,947. WALL-BOARD LATH. JOSEPH A. BUTTRESS, South Pasadena, Calif. Filed July 3, 1922. Serial No. 572,707. 1 Claim. (Cl. 72—124.)

A plaster board comprising: a layer of plaster; a sheet of paper on each side of said layer of plaster; said board having openings therethrough, such openings being formed of two frusto conical co-axial holes having their smallest diameter near the center of the board.



1,569,948. BOTTLE FILLING AND SEALING MACHINE. AMOS CALLESON, Brooklyn, N. Y. Filed Dec. 14, 1921. Serial No. 522,207. 12 Claims. (Cl. 226—77.)

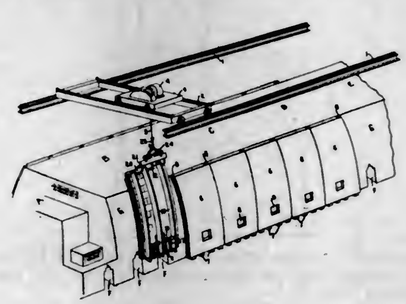


1. In combination, opposed means to exert affixing pressure on a container and closure interposed between them, one being movable toward and from the other to exert such pressure and one including a container-opposed position and having said portion yieldable therein and one having means during the pressure stroke first to pass a fluid under seal into the container and then affix the closure thereto, and means, controlled by the pressure of the fluid while passing under seal into the container, to lock said container-opposed portion in non-yielding relation to that one of said means having said portion.

1,569,949. BRAKE MECHANISM FOR RAILWAY CARS. PERCY B. CAMP, Maywood, Ill., assignor to Universal Draft Gear Attachment Company, a Corporation of Illinois. Filed Apr. 11, 1925. Serial No. 22,341. 10 Claims. (Cl. 74—110.)

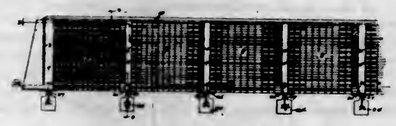
1. In a brake mechanism for railway cars, the combination of a foundation brake gear, a jaw operatively connected with the foundation brake gear, a lever pivoted at one end in the jaw and having a sheave at the opposite end, a brake shaft and a chain looped about the sheave and lever with one end in winding engagement with the brake staff and the other end anchored.

1,569,950. TYPEWRITING MACHINE. GEORGE W. CAMPBELL, Hartford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed May 10, 1922. Serial No. 559,693. Renewed June 16, 1925. 19 Claims. (Cl. 197—186.)



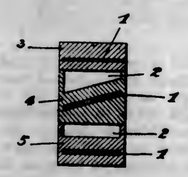
1. In combination with a sound-deadening casing for a typewriting machine having sound-sealing relations with certain parts of the machine to permit operation of the machine by parts thereof projecting to the outside of the casing, means for locating the feet of the machine to maintain such sound-sealing relations, said locating means comprising a bar pivoted at one end to the casing, and means for locking the bar.

1,569,951. SCAFFOLD ANCHOR. PAUL E. COOPER, Somerville, Ohio. Filed Aug. 28, 1925. Serial No. 53,149. 7 Claims. (Cl. 304—22.)



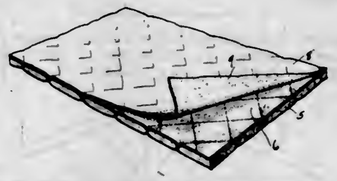
1. A scaffold anchor comprising vertically disposed coacting jaws for engagement with opposite sides of a roof seam and adapted to support a hanger bar, fingers extending forwardly from said jaws to overlap the upper edge of the hanger bar and prevent upward movement of the bar out of engagement with the anchor, and means for moving said jaws towards each other and retaining them in tight gripping engagement with a roof seam.

1,569,952. APPARATUS FOR BURNING BRICKS. WILLIAM W. DICKINSON, Jr., Little Rock, Ark. Filed Jan. 4, 1923. Serial No. 610,598. 6 Claims. (Cl. 25—132.)



1. A kiln scoving consisting of rigid rectangular independently movable panels of non-metallic heat-resisting material supported in upright position upon the exterior of the kiln, each of said panels bowed outwardly between its upper and lower ends and the body of the kiln being sloped to conform approximately therewith.

1,569,953. APPARATUS FOR BURNING BRICKS. WILLIAM W. DICKINSON, Jr., Little Rock, Ark. Filed July 13, 1923. Serial No. 651,215. 13 Claims. (Cl. 25—137.)

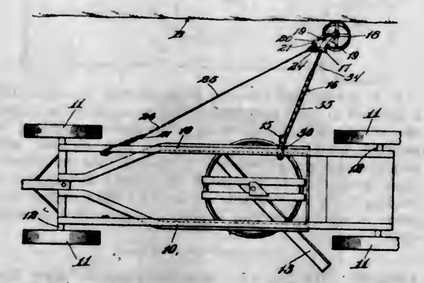


1. In kiln construction, the combination with parallel side walls, of cross walls connecting the same and having openings at their bottoms, bricks built within said walls in open-work relation, said bricks spaced from one side of each cross wall to define an open flue with which said openings communicate, and said walls being built up with and supported by and removed with said bricks, means for drawing air through successive kilns, and means for burning fuel in said flues in front of said openings.

1,569,954. COMPOSITE STRUCTURAL UNIT. JOSEPH G. DONALDSON and HENRY L. COLBS, Hamilton, Ohio, assignors to Guardian Metals Company, Hamilton, Ohio, a Corporation of Delaware. Filed June 29, 1923. Serial No. 648,410. 13 Claims. (Cl. 29—181.)

1. As a new article of manufacture, a core of high heat resisting material, sheath material associated therewith, and an air-chamber formed within the composite mass so constituted.

1,569,955. WATERPROOF QUILTING. RICHARD FALTER, New York, N. Y. Filed Sept. 19, 1924. Serial No. 738,732. 2 Claims. (Cl. 154—50.)

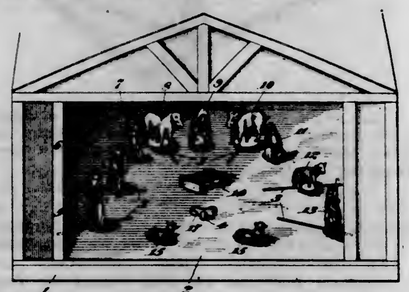


1. An article of manufacture comprising a quilted flannel padding and an outside flannel sheeting, said flannel padding and sheeting being united and rendered waterproof on the inner surface thereof.

1,569,956. METHOD OF PRODUCING A PHARMACEUTICAL PREPARATION AND A PHARMACEUTICAL PREPARATION THUS PRODUCED. LARS FLODQUIST, Stockholm, and INGE GUSTAFSSON BLOMQUIST, Stocksund, Sweden, assignors to Aktiebolaget Pharmacia, Liljeholmen, Stockholm, Sweden, a Joint Stock Company Limited of Sweden. Filed Sept. 20, 1923. Serial No. 663,802. 2 Claims. (Cl. 167—7.)

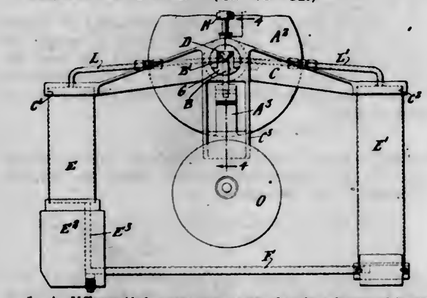
1. A method of producing a pharmaceutical preparation which comprises adding about 50 parts by weight of dextrose mixed with about 10 parts by weight of levulose to a sufficient quantity of water to obtain a semi-fluid solution at common inside temperature, thereafter adding to said solution about 20 parts by weight of adrenalin solution containing 1 part by weight of adrenalin in about 1000 parts by weight of water, dissolving in the solution 10 parts by weight of cocaine, adding 0.75 parts by weight of isoamylhydrocuprein dissolved in water as 1 part by weight of phenol or a corresponding quantity of cresol is added, whereupon water is added in such an amount that the whole mixture contains 100 parts by weight.

2. A pharmaceutical preparation consisting of about 50 parts by weight of dextrose, 10 parts by weight of levulose, 0,02 part by weight of adrenalin, 10 parts by weight of cocaine, .75 part by weight of isoamylhydrocuprein, 1 part by weight of phenol, and 28.23 parts by weight of water.



1,569,957. ROAD GRADER. MARTINUS FLUTO, Wyndmere, N. Dak. Filed Nov. 6, 1924. Serial No. 748,233. 5 Claims. (Cl. 280—150.)

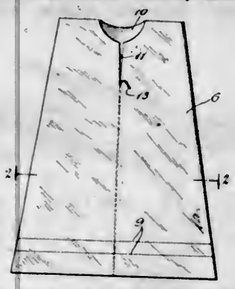
1. In combination with a road grader having a longitudinally extending frame member, an extensible bar pivoted to said frame member and swingable from a position where it parallels the frame member to a position where it extends outwardly, downwardly and slightly rearwardly from the frame member, said rod being of greater length than the vertical distance between its pivot and the ground, a caster-wheel carried by



the outer end of the bar, and a flexible connection between the caster-wheel and said longitudinally extending frame member at a point in advance of such pivotal connection.

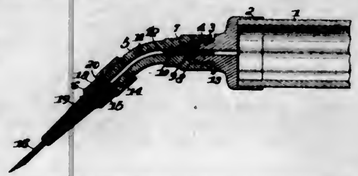
1,569,958. RELIGIOUS AUTOMATA. JOSEPH C. FREIDHOFF, Johnstown, Pa. Filed Nov. 1, 1922. Serial No. 598,303. 5 Claims. (Cl. 46—40.)

1. In an automaton, a floor provided with a slot therein, a figure mounted over said slot provided with a crank secured thereto and extending below the floor, a pitman pivotally connected to said crank, and a motor operated crank connected to the opposite end of said pitman; whereby the figure will be moved backward and forward along the slot and reversed at the end of each linear movement to face in the direction of the succeeding linear movement.



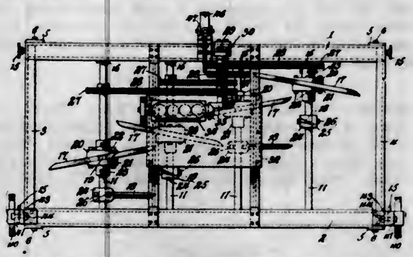
1,569,959. DIFFERENTIAL PRESSURE GAUGE. JOSEPH W. GAMBLE, deceased, late of Philadelphia, Pa.; Martha Gamble, executrix, Philadelphia, Pa., assignor to Cochrane Corporation, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 2, 1921. Serial No. 441,908. 3 Claims. (Cl. 73—31.)

1. A differential pressure gauge having in combination a pivoted U tube and means for connecting the tops of the U tube with the sources of pressure comprising two parallel torsional tubes mades of thin eleastic metal firmly connected at one end to the U tube structure in close proximity to its point of pivotal suspension extending for a considerable distance at right angles to its plane of oscillation and rigidly anchored to their other ends.



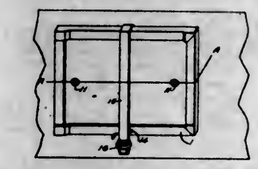
1,569,960. RAINCOAT. WALTER BEISLER, New York, N. Y. Filed July 3, 1925. Serial No. 41,257. 2 Claims. (Cl. 2—88.)

1. A raincoat formed from a single length of material divided intermediate its ends with a transverse folding line to form front and back portions, the longitudinal edges of which are secured together, one of said portions being provided with an opening and a slit communicating therewith, and means formed on one of said portions extending from said slit to the bottom of said portion defining a line of severance, whereby said portion may



be readily ruptured along said line, and said portion transformed from one continuous portion into two fragmentary sections.

1,569,961. HYPODERMIC SYRINGE. MAHLON FLOYD BAUCHERT, El Paso, Tex. Filed Oct. 8, 1919. Serial No. 329,251. 4 Claims. (Cl. 128—218.)

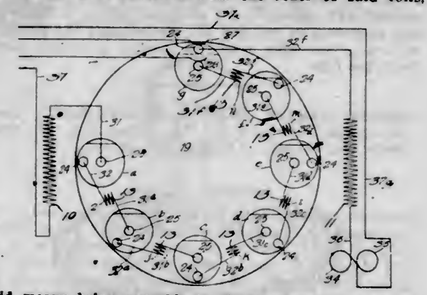


1. A hypodermic syringe including a combined coupling and flow regulating member comprising a joint-forming ball and a tubular member with a bore of predetermined diameter, extending through and beyond the ball thereby providing means for retaining the coupling in place upon separation of cooperating receiving parts and also means enabling the grasping and removal of the coupling.

1,569,962. PLOW. LEE PERKINS BIGGERS, Palmersville, Tenn., assignor of sixteen per cent to Homer Buckley, Martin, Tenn., sixteen per cent to Blaine Biggers, St. Louis, Mo., and sixteen per cent to Edward McAuliff, East St. Louis, Ill. Filed Nov. 4, 1922. Serial No. 599,108. 7 Claims. (Cl. 97—39.)

1. In a wheeled plow, a plurality of parallel shafts disposed substantially in the line of travel, sector-shaped disk plows rigidly mounted on the shafts in planes oblique to the axes of the respective shafts, a pulverizing tooth on each shaft also inclined to the direction of the shaft, and a motor to which the shafts are geared to rotate in unison, said shafts being so disposed that certain of the disk sectors on each side of the implement will engage the ground simultaneously while others on each side are above the ground, whereby the load is distributed so as to obtain a continuous and substantially uniform action.

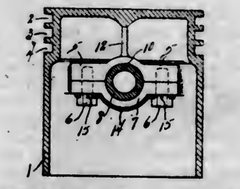
1,569,963. CONTAINER FOR AUTOMOBILE REGISTRATION CARDS. JACK BROWNE, Oklahoma City, Okla. Filed Aug. 26, 1925. Serial No. 52,620. 1 Claim. (Cl. 40—17.)



A metallic container, as described, having one open end, and comprising a metallic slide having one L-shaped end slidably fitting into said open end of said container, a certificate and a sheet of isinglass thereover, fitting in groove in said L-shaped end, and into said container, slots in front and back of said container, and in said slide, certificate and sheet of isinglass conjugate with each other, a seal-strap passing therethrough and around said container between raised portions on back thereof, and sealed taut around said container by a metallic seal, male and female screw members securely fastening container to instrument board of an automobile.

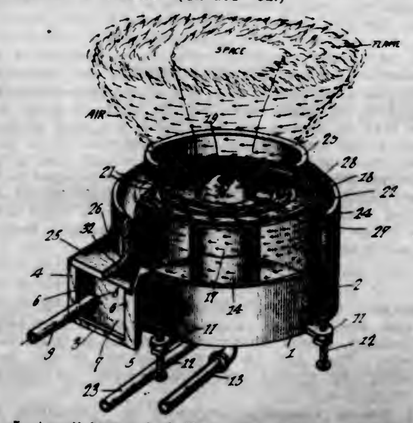
1,569,964. TRUSS. GEORGE W. CARDEY, Lancaster, Wis., assignor of one-half to Joseph A. McCoy, Lancaster, Wis. Filed Feb. 13, 1925. Serial No. 8,996. 2 Claims. (Cl. 128—112.)

1. A truss comprising a waist line belt of elastic and pliable vulcanized rubber, and a pad attached to said belt including a casing having an inner member formed of elastic and pliable vulcanized rubber, said belt embodying a pair of similar bands connected at their ends and substantially free of connection with each other throughout the remaining portions thereof, means carried by the ends of the bands for adjustably connecting the same, said pad casing further embodying an outer casing member interposed between the bands of the belt and secured to the latter, and a filling of padding material between the members of the pad casing inwardly of the belt bands.



1,569,965. TRANSFER SWITCH. CHAUNCEY C. CHAPIN, Sterling, Colo. Filed July 18, 1924. Serial No. 726,755. 3 Claims. (Cl. 171—242.)

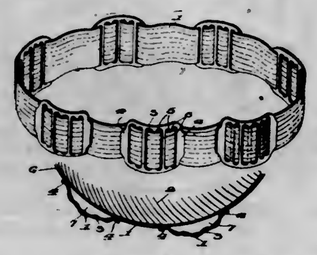
2. In combination with a transformer having a primary coil, a secondary coil and a plurality of coil sections of relative small inductance, means for connecting the coils and coil sections in two electrical circuits, one of said circuits including all or a part of the coil sections in series relation with one of the said coils, and the other circuit including the remainder of the said coil sections in series relation with the other of said coils,



said means being operable to simultaneously change the respective connections so as to subtract a particular coil section from one circuit and add it to the other.

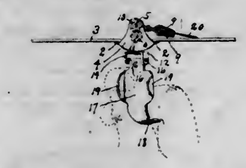
1,569,966. PISTON. DANIEL E. CLAYPOOL, Fort Worth, Tex. Filed Nov. 24, 1922. Serial No. 602,921. 1 Claim. (Cl. 74—108.)

A piston having a head provided with annular grooves for piston rings and a skirt having an unbroken periphery and bearing members wholly within said piston the upper part of the bearing being integral with the skirt, and a hollow open ended pin having an aperture through its wall intermediate its ends and held in place by said bearing members and having its ends projecting in close proximity to the walls of the piston, and said piston having oil ducts leading from the lowest groove to the open ends of said pin.



1,569,967. OIL BURNER. WILHELM G. DANIELSEN, Independence, Mo. Filed Mar. 16, 1925. Serial No. 15,944. 5 Claims. (Cl. 158—92.)

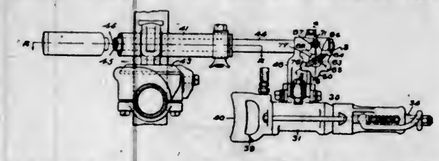
5. An oil burner including a base having an air chamber, means for directing air under pressure tangentially into said chamber, a central core within said chamber,



a spreading disk supported by the core in the upper portion of the air chamber and having a central supply opening and concentric oil retaining means, a deflecting ring supported by the base and overhanging the marginal portion of the disk, said ring having a central outlet above the disk.

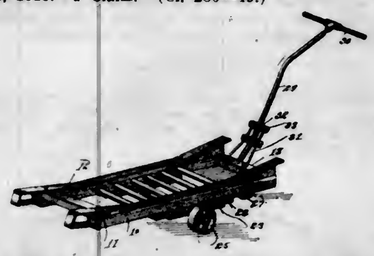
1,569,968. GARTER, ARMLET, OR LIKE BAND. LEON M. DAVIS, Fairmont, W. Va. Filed Oct. 24, 1924. Serial No. 745,653. 1 Claim. (Cl. 241—5.)

A garter, armlet or like band comprising a member adapted to encircle a portion of the body of a wearer, and a bearing member for spacing a portion of said encircling member from the encircled portion of the body of the wearer, said bearing member comprising a longitudinally arched body having contact portions at its opposite ends turned outwardly and upwardly to produce smooth contact faces next to said band and having spaced apart transverse slots through which said encircling member may be threaded to extend between said contact portions and the encircled portion of the body of the wearer.



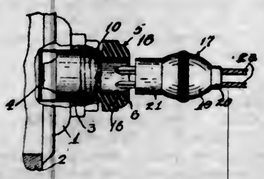
1,569,969. RAZOR STROPPER. EDWARD B. GIBFORD, Adrian, Mich. Filed Jan. 10, 1922. Serial No. 528,218. 3 Claims. (Cl. 51—153.

1. In a razor stropping device, the combination of a channel shaped base having rounded edges and upwardly extending perforated ears, a pair of shafts mounted in said ears and gears connecting the shafts, a roller on one shaft to depress the strop below the plane of the edges of the base, a razor blade holder mounted on the other shaft, and a handle connected to said base by a universal joint at one side of the middle point of said razor blade holder and comprising a plate having a curved outer end and side flanges to receive a finger and the thumb of the hand by which the stropping device is moved along the strop.



1,569,970. DRILLING APPARATUS. GEORGE H. GILMAN, Boston, Mass., assignor to Sullivan Machinery Company, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 14, 1915, Serial No. 21,435. Renewed Nov. 2, 1922. Serial No. 598,646. 30 Claims. (Cl. 121—4.)

1. Drilling apparatus comprising in combination a drill bit; automatic drill bit rotating means; a percussive engine; pressure fluid actuated feeding and retracting means for moving said percussive engine toward and away from the work, said feeding and retracting means being offset from but in substantially parallel relation to said drill bit; drill bit retaining means engaging said percussive engine and said drill bit and permitting retraction of said drill bit when said percussive engine



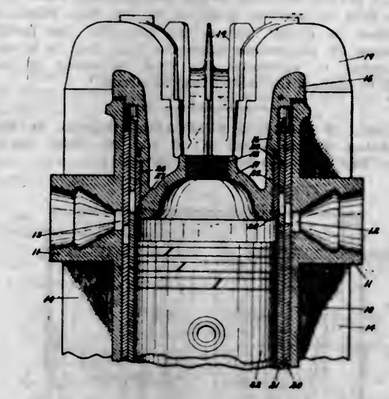
is retracted by said retracting means; and coordinately controlled pressure fluid control means permitting simultaneously effective operation of said retracting means and said drill bit rotating means or, at the option of the operator, operation of said retracting means without operation of said drill bit rotating means.

1,569,971. TRUCK. PITTMAN GILLIAM, Cleveland, Ohio. Filed Sept. 8, 1922, Serial No. 586,908. Renewed Dec. 14, 1925. 1 Claim. (Cl. 280—49.)

In a truck, a frame including a pair of spaced longitudinally extending side members, wedge shaped blocks arranged upon the upper faces of the side members at the forward terminal thereof, truck irons carried by the upper faces of the side members having their forward terminals inclined upwardly and resting upon the inclined faces of the wedge blocks, a transverse connecting member secured to the upper faces of the side members at the rear terminals thereof having its upper face inclined downwardly toward the transverse center of the truck, the rear terminals of the truck irons being inclined upwardly and resting upon the inclined face of the transverse connecting member, the extreme rear terminals of the truck irons being extended rearwardly of the transverse member and provided with depending and inwardly extending extensions engaging the rear terminals of the side members, anti-friction members carried by the side members, and wheels for supporting the frame.

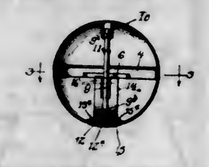
1,569,972. PULL-OFF PLUG. JOHN B. GLOWACKI, Chicago, Ill. Filed Aug. 11, 1919. Serial No. 316,668. 3 Claims. (Cl. 173—343.)

1. A device of the class described, including in combination a socket comprising a threaded metallic sleeve, a cylinder of insulating material within said sleeve, a pair of parallel metallic contacts arranged in apertures



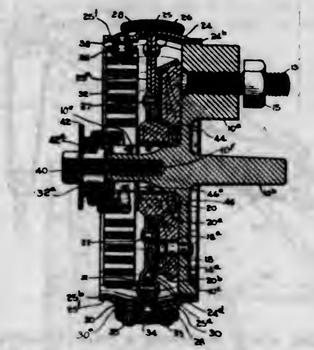
within said cylinder, a central boss at the end of said cylinder, an electrical connection between one of said contacts and said boss, and another electrical connection between the other of said contacts and said sleeve, a plug comprising a metallic sleeve, an insulating lining within said sleeve, and a pair of parallel metallic contacts fitting into and projecting from said lining to engage the pair of first mentioned contacts, said second pair of contacts being apertured in their inner ends detachably to receive a pair of leads.

1,569,973. LENS. FRIEDRICH K. GOETTERT, San Francisco, Calif. Filed July 30, 1923. Serial No. 654,750. 1 Claim. (Cl. 240—48.4.)



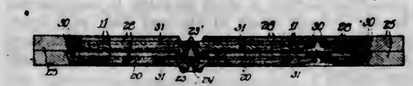
A lens comprising a lens-shaped receptacle of transparent material filled with a transparent liquid having means thereon allowing the same to be secured in front of a vehicle headlight and having a central aperture allowing the lens to be filled therethrough and a stopper for closing the aperture, the aperture and the stopper being disposed to absorb light rays emanating from the headlight.

1,569,974. PACKING RING. OTTO W. GREENE, Elyria, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 13, 1921. Serial No. 436,985. 6 Claims. (Cl. 123—75.)



2. In a sliding sleeve valve engine, a cylinder head and a junk ring formed of metallic materials having different coefficients of expansion, said head having a socket for the reception of said ring, one edge of the ring and the corresponding wall of the socket being beveled whereby the variation in relative dimensions due to expansion and contraction will be compensated for and a tight fit maintained.

1,569,975. BANK. AUGIE L. HANSEN, Chicago, Ill., assignor to A. L. Hansen Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed May 25, 1923. Serial No. 641,321. 4 Claims. (Cl. 46—36.)

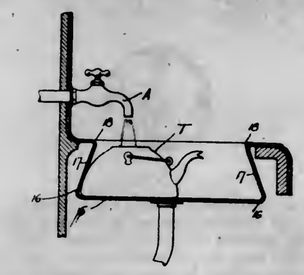


1. A bank comprising a pair of hemispherical sections adapted to be secured together in abutting engagement, one of said sections having an internal flange interfitting with the edge of the other section, said flange and last mentioned section having complementary slots therein adapted to register with each other to form a coin slot, and locking members formed at the ends of said coin slot for locking said sections against relative rotation.

1,569,976. REBOUND CHECK. ROBERT H. HASSLER, Indianapolis, Ind. Filed Feb. 14, 1925. Serial No. 9,198. 5 Claims. (Cl. 267—10.)

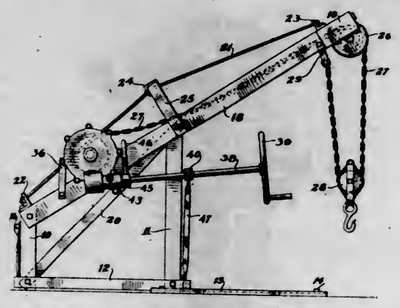
1. In a rebound check, an oscillating drum, a friction element, means for oscillating the drum, spring means for maintaining pressure on the friction element, said means consisting of a spirally wound member, the larger diameter convolutions exerting a torsional pull and the central convolutions exerting an axial pressure.

1,569,977. METHOD OF MAKING CONCRETE TILES. ARTHUR G. HATCH, Duluth, Minn. Filed Jan. 17, 1924. Serial No. 686,871. 2 Claims. (Cl. 25—155.)



1. The method of making concrete tile or the like which comprises the application of oil to suitable forms, the deposition of coloring material upon the oil film on the forms, and the placing of plastic concrete in the forms.

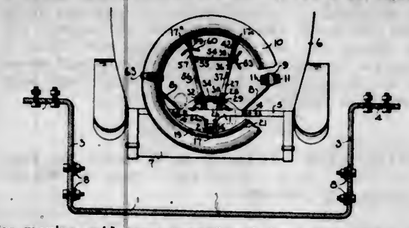
1,569,978. SINK. CHARLES E. HOWARD, Los Angeles, Calif. Filed Aug. 2, 1924. Serial No. 729,789. 2 Claims. (Cl. 4—187.)



1. A sink having the side walls thereof converging from the bottom to the top to dispose its bottom side edges beyond the top side edges and that side wall which

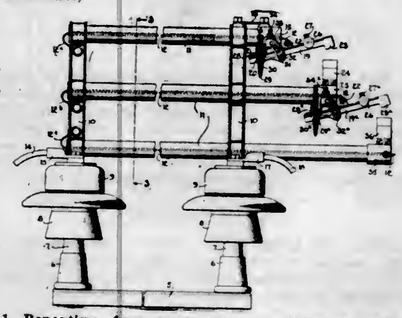
is adapted to be disposed directly beneath a faucet being inclined from the top of the sink in a direction outwardly

and rearwardly from the sink, so that a vessel having sides diverging from top to bottom may have its mouth disposed directly beneath the faucet.



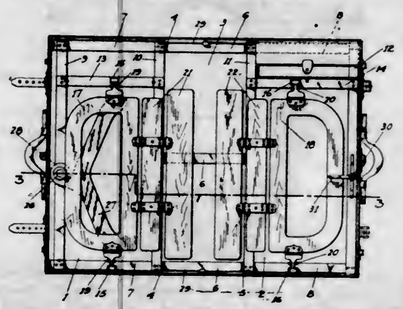
1,569,979. HOISTING CRANE. OSCAR S. HUBBARD, Farmland, Ind. Filed Nov. 20, 1923. Serial No. 675,875. 1 Claim. (Cl. 212—142.)

A hoisting device comprising a frame including front and rear posts, parallel angle irons connecting the lower ends of the posts and having out-turned flanges constituting runners, a truck bed, parallel tracks secured longitudinally to the upper surface of said truck bed and having overhanging flanges beneath which said angle irons are slidable, a pair of upwardly and rearwardly converging beams secured to the upper ends of the posts and forming a boom, hoisting tackle carried by the end of the boom, a drum journaled on the forward portions of said beams for winding up the hoisting tackle, a bar secured transversely of the rear posts and projecting to one side of said frame, a bearing at the extremity of said projecting portion, a shaft mounted in said bearing and having a hand wheel at its rear end, and means for operatively connecting the front end of said shaft to the drum for rotating the latter to wind up said hoisting tackle.



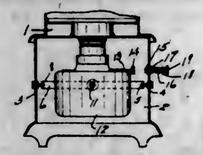
1,569,980. COMBINED SPARE-TIRE CARRIER AND RIM CONTRACTOR AND EXPANDER. HORACE K. JOHNSON, John Day, Oreg., assignor of one-third to Ira G. Boyce and Clara A. Boyce and one-third to Frank C. Hacheney, all of John Day, Oreg. Filed June 19, 1922. Serial No. 569,194. 21 Claims. (Cl. 224—29.)

1. In a rim contractor and expander, a rigid base member adapted to be secured to a fixed support, clamping means on the base member for engaging a split wheel rim at a point remote from the split portion, a pair of arms oscillatable toward each other in the same vertical plane, means for pivotally connecting said arms to said base member, clamping means on the ends of said arms for engaging the ends of the split portion at each side thereof, means connecting the arms together



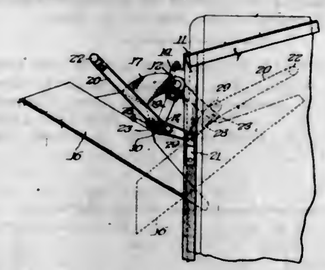
for moving said arms toward and from each other with the ends of the split rim connected thereto, and means for moving one of said arms so as to shift the split ends of the rim out of circular alignment.

1,569,981. EXPULSION-TYPE REPEATING FUSE. TOMLINSON FORT JOHNSON, Jr., Atlanta, Ga. Filed Aug. 12, 1922. Serial No. 581,453. 14 Claims. (Cl. 200—126.)



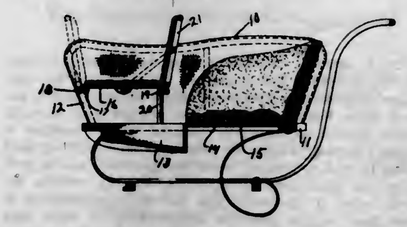
1. Repeating fuse apparatus comprising a pair of fuses, a gravity operated switch between said fuses normally held in inactive position by the fuse which is connected in circuit, means for retarding the initial movement of the switch after the first fuse is blown, and means to accelerate the final movement of the switch to connect the second fuse in circuit.

1,569,982. WARDROBE SUITCASE. GABRIEL M. KAPRIELIAN, Fresno, Calif. Filed Aug. 20, 1924. Serial No. 733,107. 4 Claims. (Cl. 190—41.)



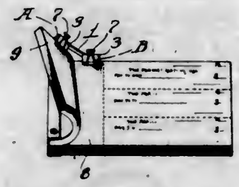
1. In a suit-case, guides arranged therein, a flat presser element, and pinch clamps on the presser element to engage the guides and position the presser element, such presser element having a rigid flap hinged along one edge thereof.

1,569,983. KEROSENE HEATER. PAUL ADOLF KAYSER, San Francisco, Calif. Filed Aug. 15, 1925. Serial No. 50,380. 1 Claim. (Cl. 126—96.)



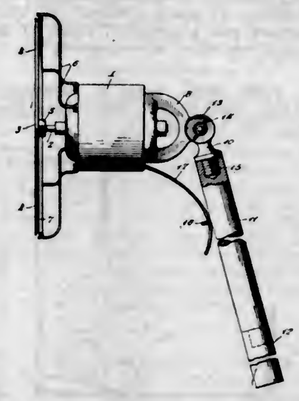
In a kerosene heater as described, embodying a case, a kerosene reservoir in said case; bearings for said case; threaded pins with reduced pivot points engaging said bearings; a flat ring pivoted on said pivot points; bearings formed in said flat ring; pivot bearings for said kerosene reservoir; threaded pins with reduced points secured in the bearings of said flat ring, engaging the pivot bearings of said kerosene reservoir; a wick screw shaft for said kerosene reservoir; the half of a jaw clutch mounted on said wick screw shaft; a bearing on the outer side of said case; a shaft journaled in said bearing; the other half of said jaw clutch on said shaft; a coil spring on said shaft; and a hand wheel for said shaft.

1,569,984. SHAFT-ROCKING MECHANISM. PERCY RAYMOND KEMBLE, West Allis, Wis., assignor to The T. L. Smith Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Feb. 14, 1924. Serial No. 692,683. 2 Claims. (Cl. 74—5.)



1. Shaft rocking means comprising an arm keyed to the shaft, a lever pivotally supported adjacent the shaft, means carried by an intermediate portion of the lever slidably engaging the arm, a handle on the free end of the lever, and stop means carried by the end of the arm preventing disengagement of the arm and means carried by the lever.

1,569,985. BABY CARRIAGE. ERIC KUNIHOLM, Gardner, Mass., assignor to O. W. Siebert Company, Gardner, Mass. Filed Aug. 14, 1922. Serial No. 581,617. 2 Claims. (Cl. 296—63.)

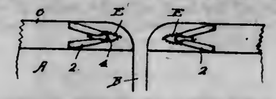


1. A baby carriage comprising a body having a seat at one end, an auxiliary seat permanently fixed in raised position at the other end of said body, a back for said seat, a pair of links pivoted directly to said back and to said seat and reversibly connecting the center of each side of the back with the center of each side of the seat, and means to secure either edge portion of said back to an edge portion of said seat.

1,569,986. HOLDER FOR CHECK BOOKS. LOUIS G. KURTZEBORN, St. Louis, Mo. Filed June 3, 1922. Serial No. 565,607. 3 Claims. (Cl. 24—81.)

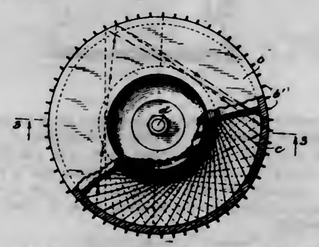
1. A holder for supporting portions of a bank check book separated from one another, comprising a pair of clamping members spaced apart from one another each having a vertically disposed back portion, and a resilient member pivotally secured to the back portion of each of said clamping members for holding them in their spaced apart relation.

1,569,987. HEDGE TRIMMER. VINCENZO LAMBERTI, Brooklyn, N. Y. Filed Aug. 19, 1925. Serial No. 51,087. 1 Claim. (Cl. 30—11.)



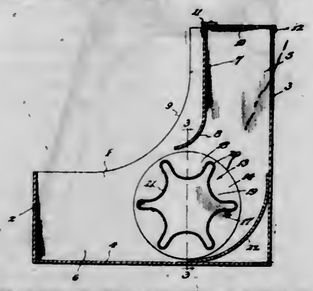
A hedge trimmer including a motor, a guard carried by said motor, and including an annular ring, a cutter having a hub mounted upon the shaft of said motor, said cuter also having opposed blades extending from said hub to the periphery of said ring, a bracket carried by said motor and having an extension, a sectional handle having one of the sections thereof pivoted to said extension to permit of various angular adjustments of the handle relative to said motor, and means for securing said handle in its adjusted position.

1,569,988. COLLAR-BAND ATTACHMENT. ALBERT W. LAND, Topeka, Kans. Filed Nov. 18, 1921. Serial No. 516,186. Renewed Aug. 3, 1925. 1 Claim. (Cl. 2—127.)



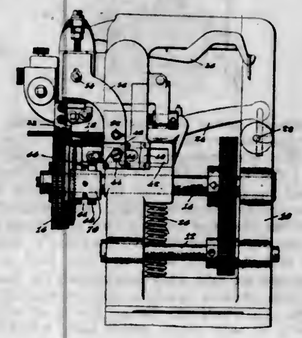
In combination with a shirt having a collar band with button holes adjacent to its ends, attachments consist-

ing of flat strips of material of uniform width, folded into V-form loops and secured at their spaced ends to



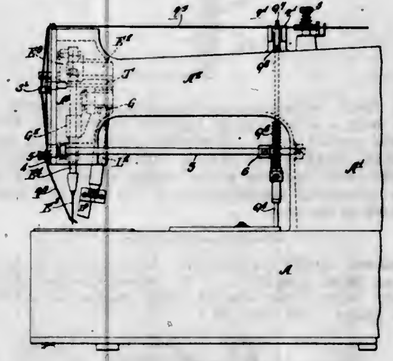
said collar band adjacent to the button holes, the bight of said loops lying intermediate the ends of the button holes to vary the effective length of the neck band.

1,569,989. UNIVERSAL JOINT. AUGUST H. LEIPERT, New York, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed June 19, 1923. Serial No. 646,329. 3 Claims. (Cl. 64—96.)



1. A universal joint of hyberbolic form having circular flanges for connection, respectively, to driving and driven members and composed of sheets of cord fabric cut on the bias and laid up with the main strands extending in parallelism in opposite directions and crossing, respectively, at points between the driving and driven members, and a carrier of rubber of hyperbolic form in which said sheets are embedded.

1,569,990. FEED BOX. ERSUL E. LOVERING, Watford City, N. Dak. Filed Nov. 17, 1924. Serial No. 750,395. 4 Claims. (Cl. 119—54.)

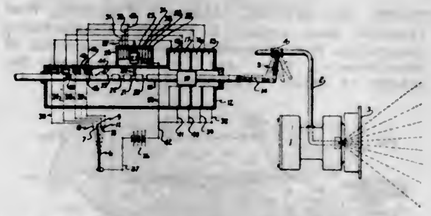


1. A feed box having a bottom, and side, front and rear walls, a partition wall extending between the side walls in advance of the rear wall and defining, in conjunction therewith, a feed hopper, the portion of the box in advance of the partition wall constituting a feed trough, a freely rotatable drum mounted between the side walls below the lower edge of the partition wall and at the lower front of the hopper and having a circumferential series of feed collecting pockets to collect the feed from the hopper and deliver the same to the trough during rotation of the drum, and a guide plate in the lower rear portion of said hopper extending between the side walls thereof and having its upper edge portion secured to the rear wall of the hopper, said guide being curved downwardly and forwardly in converging relation to the drum and having its lower portion extending beneath the drum in close proximity thereto and secured to the bottom of the hopper.

1,569,991. MACHINE FOR USE IN THE MANUFACTURE OF SHOES. THOMAS LUND, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 16, 1921. Serial No. 501,127. 32 Claims. (Cl. 12—27.)

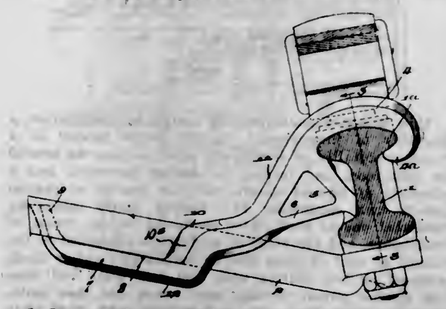
32. A stock-treating machine comprising, in combination, an instrumentality progressively to operate upon a piece of stock, means continuously in engagement with the stock during the operation of said instrumentality thereon for measuring a characteristic of the stock, and means controlled by the measurement so made for changing the location of the instrumentality inwardly with respect to the edge of the stock.

1,569,992. THREAD PULLER FOR AUTOMATIC STOP SEWING MACHINES. MICHAEL MCCANN, Glenmorris, N. Y., assignor to Frederick Osann Company, New York, N. Y., a Corporation of New York. Filed May 16, 1925. Serial No. 30,752. 3 Claims. (Cl. 112—242.)



1. In a sewing machine having an automatic stop device for arresting the motion of the machine, the combination therewith of a tension device through which the threads pass located close to the needles and movable through a path substantially parallel to the needles, a machine element, means for holding and retracting said element in and to normal retracted position, means connecting the said machine element with the tension device to move it upward when the machine element is moved from normal position and downward when said element returns to normal position, and means moving in coordinated relation to the stop motion actuating mechanism whereby the said machine element is shifted from normal position immediately before the machine is stopped and permitted to return to normal position substantially simultaneously with the starting of the machine.

1,569,993. FISH LURE. SIDNEY B. MACLEOD, South Chicago, Ill. Filed Nov. 20, 1924. Serial No. 750,995. 3 Claims. (Cl. 43—46.)

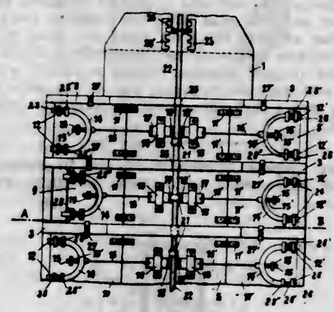


1. A fish lure, comprising a fish-like structure having throughout substantially the yielding resilient qualities of a natural fish, and a weighting mass therein substantially as yielding as the body part of the lure.

1,569,994. THERMOSTATIC CONTROL DEVICE FOR FUEL BURNERS. DORR R. MARTIN, Detroit, Mich. Filed Feb. 3, 1922. Serial No. 533,855. 6 Claims. (Cl. 236—76.)

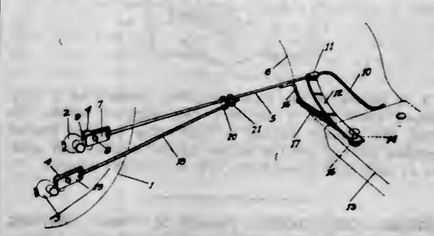
2. The combination with a fluid fuel burner for a heating appliance, of a temperature controlled device for varying the flow of fuel to the burner, said device being actuated through variation in temperature of the heated area and consisting of a valve adapted to be actuated to vary the volume of flow of fuel to the burner, an element movable to operate the valve, a series of solenoids in axial alignment, a core therefor carrying the said movable element, a series of circuits for each solenoid, a contact point for each circuit, a thermostat, a contact member movable by the thermostat from one contact point to the other to successively complete the respective circuits, a decrease in temperature of the area heated causing the thermostat to increase the flow of fuel and an increase in temperature of the heated area causing the thermostat to decrease the flow of fuel.

1,569,995. AXLE BRACE AND POSITIONER. JAMES A. MEDANS, South Boston, Va. Filed Jan. 22, 1925. Serial No. 4,130. 4 Claims. (Cl. 267—66.)



1. In a device of the character described, a brace member having means adapted to engage with the front axle of an automobile to secure the brace member thereto, said brace member having an arm adapted to engage under a radius rod of the automobile, said arm having shoulders adapted to engage the radius rod to prevent lateral displacement of the brace member, the arm being held engaged with the radius rod solely by virtue of its disposition under the rod and by virtue of the action of the shoulders.

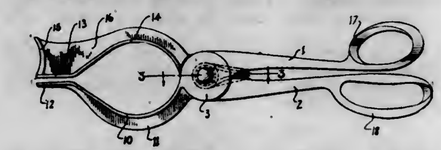
1,569,996. ALLOY. JAMES I. MEE, Hamilton, Ohio. Filed Feb. 6, 1925. Serial No. 7,388. 4 Claims. (Cl. 75—1.)



1. As a new composition of matter, an alloy steel comprising tungsten, vanadium, carbon, chromium, sulphur, copper, iridium, and pig iron in substantially the proportions set forth.

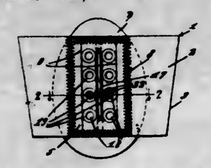
1,569,997. DISCHARGING DEVICE FOR VEHICLES. CONRAD MÖLLER, Berlin-Charlottenburg, Germany. Filed Dec. 30, 1924. Serial No. 758,933. 3 Claims. (Cl. 298—34.)

1. A discharging device for vehicles, comprising, in combination with the car bottom: a plurality of movable closing members for hatchways provided in said bottom along both sides of the car body, and separately releasable means for retaining said members in closed position; a longitudinal shaft located below the car-bottom and adapted to be turned in either direction, as well as to be shifted longitudinally; arms affixed to said shaft, transversely disposed slides attached to the car bottom between said closing members and being engaged singly by said arms; and means connecting said slides with the separately releasable retaining means of the individual hatchway closing members.



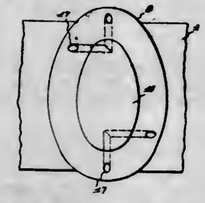
1,569,998. PET-COCK-OPERATING DEVICE. ARCHIE MYERS, Sacramento, Calif. Filed Dec. 13, 1924. Serial No. 755,650. 2 Claims. (Cl. 137—139.)

1. An operating device for petcocks disposed in vertically spaced relation including a pair of rods, means on said rods for attachment to the handles of the pet-cocks, a handle on one of said rods, and connecting means between the rods arranged to cause both rods to turn



together after the handle has been turned through a certain arc and enabling the connection with the petcock handles to be individually made without disconnecting the rods from each other.

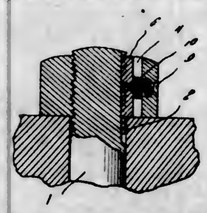
1,569,999. CLOTHES TONGS. VICTOR E. NELSON, Redford, Mich. Filed June 8, 1922. Serial No. 566,745. 2 Claims. (Cl. 68—6.)



1. A clothes tongs for feeding clothing into a wringer comprising two levers pivoted together intermediate their ends, the levers being formed to provide a pair of handles at one end and a pair of clamping jaws at the other end, the said jaws being arched away from each other adjacent the pivot point and being flattened at the extreme end to extend in parallel relation when closed, an arcuate extension formed integrally with one of the said jaws for engaging one of the rolls of the wringer, and a web connecting the extension with the said jaw.

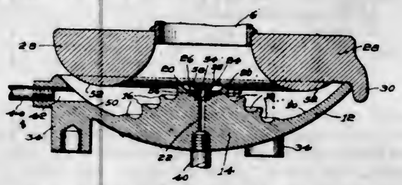
1,570,000. ARCH SUPPORT. ISAAC M. PEASE, Cincinnati, Ohio. Filed Aug. 4, 1923. Serial No. 655,623. 2 Claims. (Cl. 36—71.)

1. In a device of the class described, a loop-shaped band having a longitudinal slit, a pad, and a fastener carried by the pad, the fastener being movable in the slit.



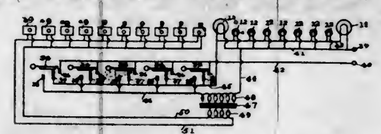
1,570,001. ARCH SUPPORT. ISAAC MERRICK PEASE, Cincinnati, Ohio. Filed July 8, 1924. Serial No. 724,823. 4 Claims. (Cl. 36—71.)

1. A device of the class described comprising a loop-shaped band and a resilient foot support within the band, the support having a ventilating passage located between the top and the bottom of the support and opening at both ends through the side wall of the support.



1,570,002. NUT LOCK. JOSEPH M. PERRY, Mayfield, Pa. Filed Apr. 23, 1925. Serial No. 25,364. 1 Claim. (Cl. 151—10.)

In a structure of the class described, a nut provided with a vertical groove opening through the top and bottom and into the usual central screw threaded bore, there being a pocket formed at the center of the groove, a retaining key fitted into said groove, and having its ends flush with the top and bottom of the nut, said key being provided with a pair of projections slidably disposed in said pockets and permitting transverse movement but preventing longitudinal movement of the key in said



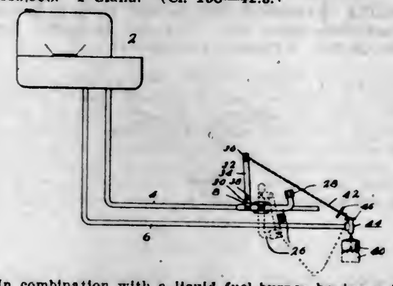
groove, a coil spring having one end disposed in said pocket and its other end bearing against said key, said key being formed with a screw threaded hole, and a retracting bolt carried by said nut and having its threaded shank extending into said screw threaded hole.

1,570,003. OIL BURNER. ALBERT V. PICKERING, West Townsend, Mass., assignor to Townsend Manufacturing Corporation, West Townsend, Mass., a Corporation of Massachusetts. Filed Aug. 4, 1923. Serial No. 655,690. 4 Claims. (Cl. 158—92.)

2. A burner of the class described having, in combination, a lower member of bowl-like form having a central conical projection provided with a vertical oil inlet leading to the top thereof, an upper member having a convexed lower surface, supported on the upper edge of said lower member in spaced relation thereto to form a flame outlet slit between them, having an air intake above said oil inlet, and a burner tip in said inlet closing it against an inrush of air provided with side ports for supplying oil for consumption in the heat chamber between said members.

1,570,004. DETECTIVE PHOTOGRAPHIC SYSTEM. RALPH R. REED, Bellingham, Wash. Filed Jan. 21, 1925. Serial No. 3,770. 1 Claim. (Cl. 240—2.)

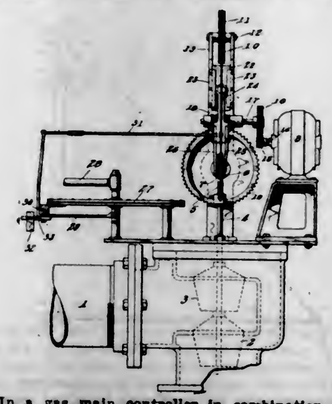
In a detective photographing system in combination, a plurality of incandescent electric lamps located in a room, a plurality of electrically operable cameras located in said room and focused on desired locations, and a plurality of manual electric switches located at desired points each comprising two contact plates separately insulated one of said plates connected to the circuit of said lamps, and the other of said plates connected to the circuit of said cameras and an oscillatable switch blade adapted to first contact with said first plate and close the electric circuit through said lamps and then maintaining said contact make contact with said other plate and close the electric circuit through the electric mechanism of said cameras.



1,570,005. MEDIUM FOR BLEACHING, CRACKING, AND DESULPHURIZING PETROLEUM AND OTHER HYDROCARBON COMPOUNDS AND PROCESS OF PREPARING SAME. HERMAN REINBOLD and HUGO REINBOLD, Omaha, Nebr.; said Hugo Reinbold assignor to said Herman Reinbold. Filed Jan. 21, 1924. Serial No. 687,654. 14 Claims. (Cl. 23—233.)

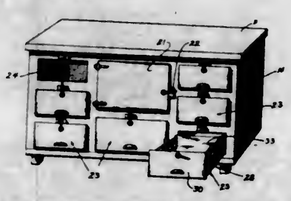
2. The use of hydrous silicic acid in combination with a metal chloride as an oil treating medium.

1,570,006. PROCESS FOR TREATING ALUMINO-SILICATES. HERMAN REINBOLD and HUGO REINBOLD, Omaha, Nebr.; said Hugo Reinbold assignor to said Herman Reinbold. Filed Jan. 21, 1924. Serial No. 687,655. 12 Claims. (Cl. 23—111.)



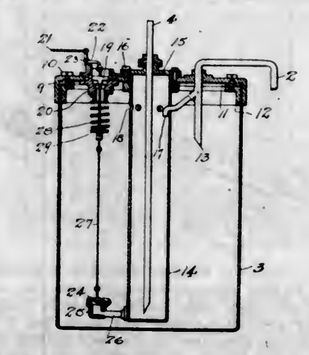
3. A process of treating alumino-silicate minerals, of the bentonite variety, for use as a water softening agent, comprising, grinding and sizing the mineral, calcining the sized mineral; treating the calcined mineral with a soluble aluminum compound and drying out the excess moisture.

1,570,007. AUTOMATIC CUT-OFF. NOVA E. RICHARDSON, Kansas City, Mo. Filed Aug. 6, 1923. Serial No. 655,995. 1 Claim. (Cl. 158—42.3.)



In combination with a liquid fuel burner having a feed pipe and an overflow pipe, a valve connected to said feed pipe, an arm fixed upon the valve stem, a weight fixed to said arm, links connected to said arm, a hammer pivotally connected to said links and adapted to swing downwardly and impinge against the weight on the arm to effect closing of the valve, and mechanism associated with the burner for actuating the hammer.

1,570,008. GAS-MAIN CONTROLLER. RALPH B. RICHARDSON, Peoria, Ill. Filed Apr. 21, 1921. Serial No. 463,299. 7 Claims. (Cl. 50—10.

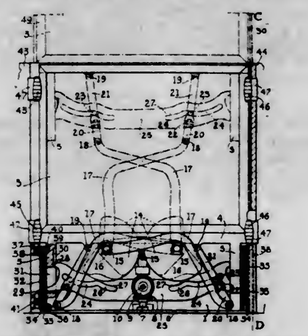


1. In a gas main controller in combination with the valves of a collecting main, a motor, reciprocally operated means for actuating said valves, means for continuously operating said valve actuating means from said motor, said valve actuating means including oscillatory means arranged for connection with said valves to alternately move the same in opposite directions, an actuating means operable by and under the changed conditions of pressure in said collecting main, a rocker arm connected between said actuating means and said oscillatory means, and an adjustable weight connected with said rocker arm, whereby the pressure at which the fluid is to be handled may be regulated.

1,570,009. REFRIGERATOR. ALBERT D. SANDERS, Jr., Evanston, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed June 15, 1922. Serial No. 568,398. 4 Claims. (Cl. 62—58.)

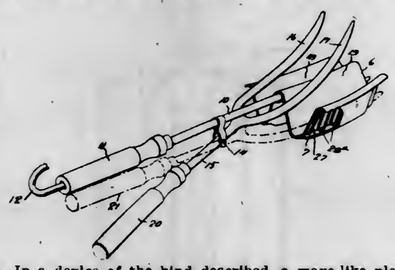
1. In a refrigerator the combination of a casing having a food chamber and an ice chamber therein, drawers in said food chamber and accessible from the side thereof, said drawers having non-foraminous ends and a movably adjustable partition of non foraminous material supported in said drawer.

1,570,010. FUEL-FEEDING SYSTEM. HEBER SCOWCROFT, Jr., Ogden, Utah. Filed Jan. 23, 1925. Serial No. 4,209. 4 Claims. (Cl. 158—46.5.)



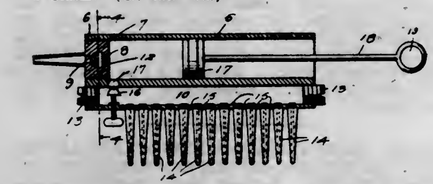
1. In a fuel feeding system a reserve tank and a standpipe therein, an inlet feed pipe normally adapted to fill both tank and stand pipe simultaneously, an outlet feed pipe communicating with the standpipe, fuel control means for normally closing communication between said tank and standpipe, vent means for normally closing said tank against atmospheric pressure, and means for opening said tank to the atmosphere, said fuel control means and vent means being so constructed that movement of one means produces a corresponding movement of the other means.

1,570,011. MECHANISM FOR RAISING AND LOWERING THE WINDOW FRAMES IN CONVERTIBLE VEHICLE BODIES. JACQUES EGIDE SERSTÉ, Brussels, Belgium. Filed Aug. 7, 1924. Serial No. 730,644. 18 Claims. (Cl. 296—48.)



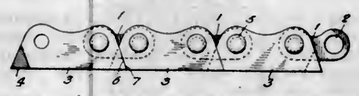
1. In a convertible vehicle body, the combination with a side wall of said body and a window frame adapted

to be lowered into a groove in said side wall, of a set of levers for moving said frame along said groove, a second set of levers at an angle to the first set for laterally moving said frame at a predetermined point of its travel, and means for operating said sets of levers.



16. In a convertible vehicle body, the combination with a panel of said body, door hinges on said panel having their spindles in front of said panel, and a folding frame comprising windows and hinges connecting said windows with each other, said window frame being adapted to be lowered into a groove in said side wall, of means for moving said frame along said groove, and means for laterally moving said frame at the top of its travel to bring said window hinges respectively into alignment with said door hinges.

1,570,012. ELECTRIC HAIR WAVER. ROBERT P. SIMMONS, Cleveland, Ohio. Filed July 31, 1924. Serial No. 729,218. 11 Claims. (Cl. 219—24.)

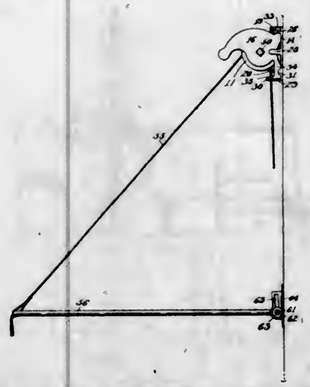


3. In a device of the kind described, a wave-like plate, flexible heating elements arranged upon the outer members of said plate, said heating elements comprising an insulated wire wound back and forth, and a cover attached to said plate and covering said heating elements.

1,570,013. FOUNTAIN COMB. NEWMAN W. SMITH, May, Ill. Filed Mar. 31, 1923. Serial No. 629,116. 1 Claim. (Cl. 132—13.)

A fountain comb comprising a barrel for containing liquid, having a nozzle threaded into one end, said nozzle having a threaded opening adapted to receive a valve, a piston slidably mounted in said barrel, a smaller barrel carried by the first mentioned barrel and having communication therewith, a valve controlling such communication, and a plurality of removable tines associated with the smaller barrel and having longitudinal bores therein which open into the smaller barrel.

1,570,014. SPROCKET CHAIN. HARRY P. STEVENS, New York, N. Y. Filed May 20, 1924. Serial No. 714,623. 5 Claims. (Cl. 74—32.)



2. A chain comprising pivots and successive links having transverse ends which are adapted to abut on one side of a central longitudinal line connecting said pivots when said links are in alignment, said ends having longitudinally overlapping offset portions, the offsets on opposite sides of the chain being in opposite directions, to prevent transverse displacement when the links are in alignment, said links being independent of each other when the chain is flexed to separate said ends.

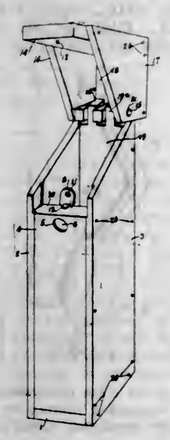
1,570,015. FASTENER FOR LACES. DAVID F. TROXELL, Rockbridge Baths, Va. Filed Apr. 23, 1925. Serial No. 25,317. 3 Claims. (Cl. 24—117.)

1. In a lace fastening device, a button having a foot adapted to be attached to a garment, a shank extending from the outer face of said foot, at substantially right angles thereto, a head at the outer end of the shank, said head being elongated with a V-cut at one of its narrow edges, and said shank having a half-round cross section with its flat side coinciding with said V-cut.

1,570,016. AWNING. JOHN C. TRUEMPER, Indianapolis, Ind. Filed May 1, 1924. Serial No. 710,432. 6 Claims. (Cl. 156—44.)

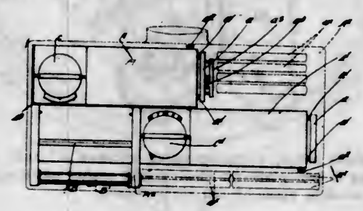
1. In an awning an extending arm, a supporting bracket for said arm, said bracket and arm having interengaging elements permitting rotation of the arm at one

position on the bracket and providing a sliding, nonrotating relation at another position said bracket having means for limiting the sliding movement of the arm in both directions.



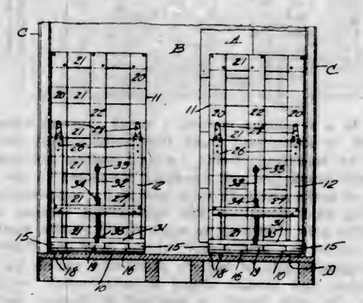
4. An awning support comprising two casing brackets, and two roller supporting brackets, one of said roller supporting brackets and one of said casing brackets being formed to interlock vertically and horizontally in one direction and to be relatively longitudinally slidable in the other horizontal direction; and the other casing bracket and roller supporting bracket being formed to interlock horizontally in both directions and to interlock vertically in one direction and to be vertically slidable in the other direction.

1,570,017. HEATER. HERBERT B. TYLER, Valparaiso, Ind. Filed May 19, 1921. Serial No. 470,857. 10 Claims. (Cl. 257—136.)



3. In a heater of the class described, a casing having a bottom inclined downwardly to an aperture, a radiator within the casing, a grate spanning the casing above the radiator, a vertically reciprocable door supported from above the bottom of the casing for closing the aperture therein, and an upwardly spring-pressed plunger disposed substantially flush with the grate at a point in the center thereof above the door for operating the same to open the aperture.

1,570,018. CONTAINER. DEAN T. WADDELL, Greenfield, Ohio, assignor to The Irwin Auger Company, Wilmington, Ohio, a Corporation of Ohio. Filed June 28, 1924. Serial No. 723,001. 1 Claim. (Cl. 217—5.)

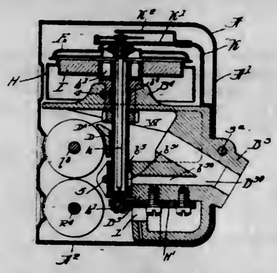


In a new article of manufacture consisting of a receptacle for bits, a bottom, side walls, a front wall and a rear wall, the front wall being shorter than the height of the side walls, and portions of the rear wall extending above the height of the side walls, a top pivotally mounted on said extended portions of the rear wall, portions of the back wall of the top interlocking with the portions on the rear wall of the box and the front of the top extended into a space formed between the side walls of the box, the side walls of the top and body of the receptacle being cut on an angle to the horizontal.

1,570,019. PIANO PLAYER. JOHN WEARHAM, Westminster, London, England, assignor to Vickers Limited, Westminster, London, England, a British Company. Filed June 20, 1922. Serial No. 569,598. 10 Claims. (Cl. 84—107.)

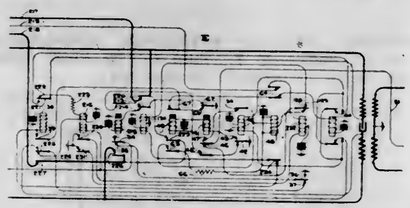
1. A piano player provided with strikers, comprising means for detachably connecting the player to a piano so that the strikers can operate upon the keys of the piano and means whereby the body of said player can be reduced in length after removal from the piano.

1,570,020. PORTABLE BULKHEAD. FREDERICK E. WELSH, Buffalo, N. Y. Filed July 20, 1925. Serial No. 44,786. 8 Claims. (Cl. 105—369.)



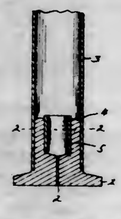
2. In a portable bulkhead of the character described, the combination of a base section, a folding section disposed transversely thereof and adapted to extend upwardly therefrom, said folding section being movably connected at its lower end to said base section, and a bracing member which is movably connected at one end to one of said sections and is adapted to extend at an angle therefrom, and an abutment on said other section against which the free end of said bracing member is adapted to bear to prevent movement of said bracing member when pressure is exerted against said upright section.

1,570,021. PRODUCTION OF UNITS OF COMBINED SPEEDOMETER AND ODOMETER. FREDERIK G. WHITTINGTON, Evanston, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Sept. 1, 1922. Serial No. 585,581. 8 Claims. (Cl. 235—96.)



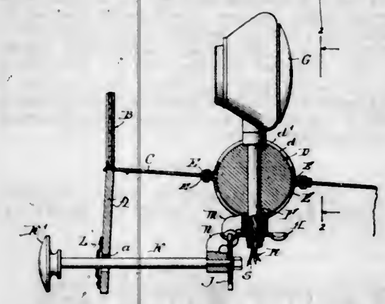
8. In a combined speedometer and odometer, a power unit support adapted for mounting on it a speedometer mechanism and a first odometer unit, the latter in po-

sition for mounting thereon a second odometer unit with the speed and mileage indicating members of the speedometer and odometers respectively exposed for reading at



the same plane, a casing which encloses all said units having a face plate for closing said casing positioned at said reading plane of the several units.

1,570,022. AUTOMATIC TELEPHONE SYSTEM. JOHN WICKS, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 23, 1918. Serial No. 259,323. 36 Claims. (Cl. 179—27.)



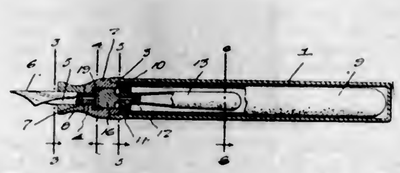
1. In a telephone system, a trunk line, an automatic switch in which said trunk line terminates at the near end, an operating circuit for said switch superimposed on said trunk line and normally connected to the same pole of battery at both ends, means for temporarily connecting said circuit at the distant end thereof to the opposite pole of battery to operate said switch, means for also connecting said circuit at the near end thereof to the opposite pole of battery after said switch has been operated, and release means in said switch responsive when the said circuit is restored to normal condition at the distant end.

1,570,023. CAM FOLLOWER AND METHOD OF MAKING SAME. MERRILL M. WILCOX, Saginaw, Mich. Filed July 24, 1922. Serial No. 577,264. 8 Claims. (Cl. 29—156.4.)

1. A cam follower comprising a base having an extension formed with an axial recess and a stem telescopically engaging said extension, a tubular sleeve secured within the recess of said extension.

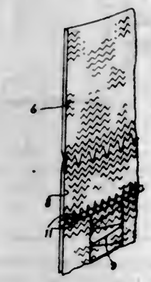
1,570,024. DIRIGIBLE SEARCHLIGHT. ANDREW C. WOOD and LEO L. MEYERS, Chicago, Ill., assignors to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Sept. 24, 1923. Serial No. 664,362. 4 Claims. (Cl. 240—61.)

1. A dirigible headlight for a motor vehicle, comprising in combination with a dash and cowl of the vehicle a circular plate mounted in the cowl for rotation in a vertical fore-and-aft plane; a searchlight support comprising a stem journaled in said plate transversely to the axis thereof, and extending through the plate transversely to the cowl; a gear on the lower end of said stem below the cowl and plate; a rotatable and longitudinally movable operating shaft extending through the dash and having at its forward end a gear meshing with the gear on the lamp stem, and journal bearing means for the lower end of the lamp stem and forward end of the operating shaft, adapted for holding in mesh the gears on said shafts respectively; the parts having a joint between the lower journal bearing of the lamp stem and the slide bearing of the operating stem in the dash for accommodating change of angle between the two shafts resultant from longitudinal adjustment of the operating shaft.



1,570,025. HAND GRIP. JOHN VAN DOREN YOUNG New York, N. Y. Filed Apr. 26, 1923. Serial No 634,703. 6 Claims. (Cl. 190—57.)

1. In a device of the class described, a hand grip and a back hand rest connected thereto by rigid means and means for pivotally connecting these parts with an article to be carried.

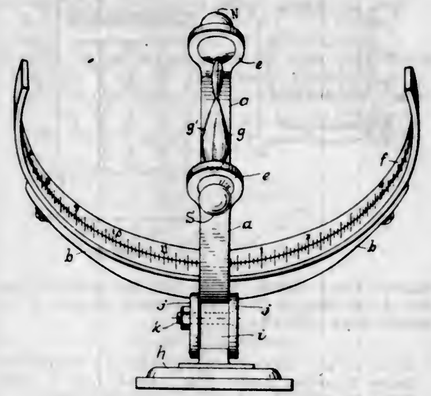


1,570,026. FOUNTAIN PEN. FRANK E. ADAMSON, Greenville, Ill. Filed Dec. 23, 1924. Serial No. 757,678. 6 Claims. (Cl. 120—42.)

1. A fountain pen comprising a barrel, a head mounted in the forward end thereof, a feed bar carried by said head, an outer ink reservoir, an inner ink reservoir in said barrel, a nipple supported in said head and having ink passages communicating with the outer and

inner reservoirs respectively, and means for normally cutting off the supply of ink from the inner reservoir to said feed bar.

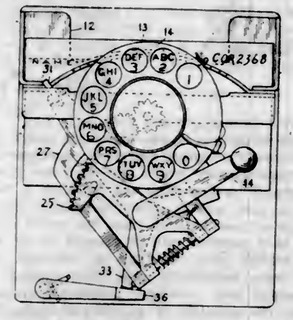
1,570,027. METHOD OF MAKING HOSIERY. JOHN M. ALLEN, Toronto, Ontario, Canada. Filed Apr. 9, 1925. Serial No. 21,989. 6 Claims. (Cl. 66—4.)



1. A method of making hosiery consisting in knitting an outer stocking with a pocket welt at the top and a fabric strip extending from the bottom of the pocket welt, and securing an inner stocking to the outer stocking and connecting the upper edge of said inner stocking to the free edge of said strip.

1,570,028. PAVING COMPOSITION. JOSEPH HAY AMIES, Philadelphia, Pa. Filed Apr. 1, 1924. Serial No. 703,541. 2 Claims. (Cl. 106—31.)

1. The process of making a bituminous paving composition consisting of subjecting one-tenth portion of the natural soil of the grade to a temperature of about 2000 degrees F., in a blast heater, placing the balance of the natural grade soil in a mixing machine and macerating with boiling hot water then adding the foregoing heated soil to the contents of the mixer, then adding to each 9 cubic feet of this highly heated mass 20 to 30 pounds of finely granulated quick lime, and finally adding a quantity of bituminous material in a highly heated state.

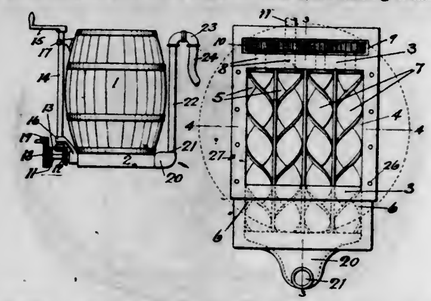


1,570,029. SUN DIAL. SAMUEL W. BALCH, Montclair, N. J. Filed Apr. 18, 1922. Serial No. 554,648. 2 Claims. (Cl. 33—62.)

1. In a sun-dial for indicating mean time, a dial bearing a circular arc with time graduations, and a gnomon shaped so that every day shall be represented by a point on the surface the abscissa of which measured from the axis of the circular arc is the sine of the sum of the equation of time and the product of the sun's semi-diameter with the secant of the slope at the point

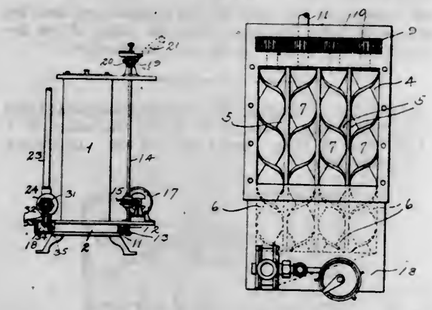
with respect to the axis of the circular arc, and the ordinate of which measured from the plane of the circular arc is the tangent of the sun's declination.

1,570,030. AUTOMATIC TELEPHONE-CALLING TRANSMITTER. SAMUEL W. BALCH, Montclair, N. J. Filed June 5, 1924. Serial No. 717,946. 12 Claims. (Cl. 179—90.)



1. A calling transmitter controlled by a perforated card comprising means for transmitting impulses in rapid succession independently of perforations in the card, means for interrupting and separating the transmission of the impulses into groups of various numbers of impulses, and means traversing the perforated card for controlling the sizes of the several groups from the locations of the perforations.

1,570,031. GREASE-DISPENSING DEVICE. JACOB BALDNER, Xenia, Ohio. Filed Mar. 21, 1921. Serial No. 453,978. 6 Claims. (Cl. 221—67.)

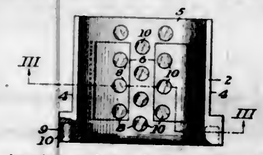


1. In an apparatus for dispensing semi-solids from a reservoir including a base member, a series of independent channels therein extending in parallel relation and all communicating with the interior of the common reservoir, each channel terminating in a bore, a pressure chamber common to all the bores, conveyor screws located in the channels, and extending thence into said bores, the helical direction of the pitch of successive screws being reversed, intermeshing driving

gears for the several screw conveyors, for rotating the succeeding screws in reverse directions, actuating means

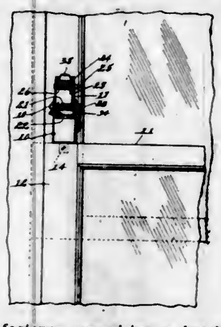
therefor and a conduit leading from the pressure chamber of less capacity than the combined capacity of the several screw conveyors.

1,570,032. GREASE-DISPENSING APPARATUS. JACOB BALDNER, Xenia, Ohio. Filed June 7, 1921. Serial No. 475,637. 14 Claims. (Cl. 221—102.)



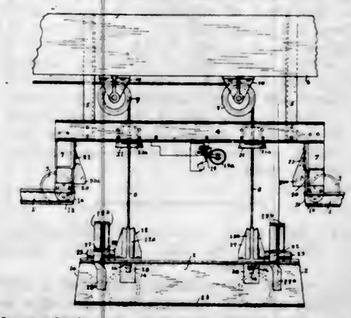
1. In an apparatus of the character described, a reservoir, a plurality of spiral conveyors communicating therewith, a chamber into which the conveyors discharge, an outlet conduit leading from the chamber, a rotary valve member in said conduit driven in unison with the conveyors but of less capacity than the series of conveyors whereby back pressure will be created at the intake side of said rotary valve, the flow of material under such pressure being resisted by said valve member, and separated thereby into successive measured charges of uniform size, the quantity of material discharged being determined by the operations of said valve member.

10. A dispensing apparatus for lubricant or the like, wherein an electric motor is utilized for actuating an ejector of known capacity to discharge the commodity operated upon from a supply reservoir, characterized by a controller switch for the motor comprising two relatively movable contact members actuated by said motor thru which the motor current is supplied, said members being adapted to break the contact at predetermined points in their path of travel whereby the motor will be arrested when the ejector has been operated sufficiently to discharge a predetermined quantity of material, a shunt circuit connecting said relatively movable contact members, a coin controlled circuit closer in said shunt circuit by the closing of which the motor is set in operation for a succeeding period of ejector discharge.



14. In an apparatus for dispensing lubricant or the like, the combination with a supply reservoir, ejector means, a pressure chamber in which a quantity of the material is accumulated under pressure, a discharge conduit leading therefrom, and a rotary measuring valve controlling the outflow from said chamber through said conduit.

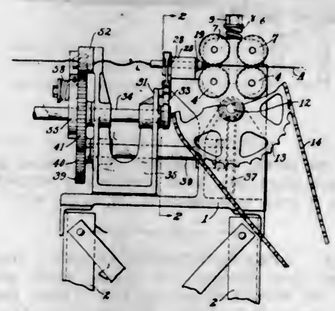
1,570,033. BEARING OR BEARING LINER. ROBERT J. BANNER, Youngstown, Ohio. Filed Apr. 2, 1923. Serial No. 634,729. 3 Claims. (Cl. 308—56.)



1. In a bearing, a brass body portion, babbitt inserts therein on opposite sides of the center line of said body portion, and a longitudinal row of wooden plugs extending through said body portion intermediate said babbitt inserts with their end grain constituting part f the wearing surface of the bearing, substantially as described.

1,570,034. SASH FASTENER. JOHN O. BECVAR, Brookfield, Ill. Filed Jan. 19, 1925. Serial No. 3,262. 2 Claims. (Cl. 292—219.)

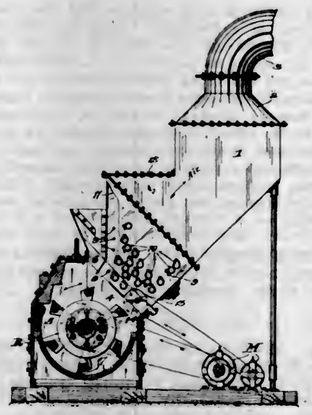
1. A sash fastener comprising a bracket member arranged for mounting it on the stile of one window sash, an eccentric case pivoted in said bracket and having a frictional covering strip thereon for engaging the adjoining stile of the other sash, lugs struck up from said eccentric and bent over to hold said strip in position, resilient means to press said eccentric into engagement with said other stile, and means on said eccentric to engage said bracket and hold the eccentric in its inoperative position.



1,570,035. DROP TRACK SECTION. EARL T. BENNINGTON, Cleveland Heights, Ohio, assignor to The Cleveland Crane & Engineering Company, Wickliffe, Ohio, a Corporation of Ohio. Filed Nov. 28, 1924. Serial No. 752,685. 14 Claims. (Cl. 214—126.)

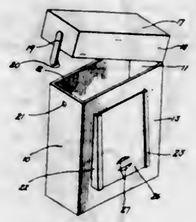
1. In a device of the character described, a track having a gap therein, a fixed member above the gap, a drop track section adapted when in its uppermost position

to bridge the gap, and interfitting tapered projections and sockets on the track section and fixed member for aligning the drop track section with the fixed track.



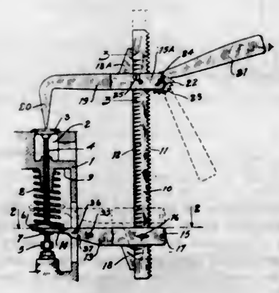
1,570,036. PROCESS AND MACHINE FOR SHAPING WIRE. FRANK H. BEYER, Akron, Ohio, assignor to John R. Gammeter, Akron, Ohio. Filed Oct. 5, 1921. Serial No. 505,627. 37 Claims. (Cl. 29—33.)

1. A process for preparing wire for the manufacture of grommets or other uses, comprising feeding a length of wire through a spiralling device and rendering said spiralling device inoperative for a predetermined period.



25. In a machine for the purposes set forth, means for feeding a wire, means for forming spiral and straight portions in the wire, a cutting device for the wire operated in timed relation to the forming means and a trough to receive the spiralled wire.

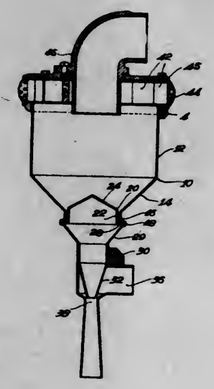
1,570,037. PULVERIZED-FUEL APPARATUS. JOSEPH K. BLUM, Scarsdale, and DANIEL L. BRAINE, Brooklyn, N. Y., assignors to K-B Pulverizer Corporation, New York, N. Y., a Corporation of New Jersey. Filed June 8, 1923. Serial No. 644,230. 8 Claims. (Cl. 83—11.)



1. In a pulverized fuel apparatus, a disintegrator chamber with the rotor therein and having an outlet for pulverulent material, a suction discharge conduit for the fines, and enlarged separating chamber disposed obliquely and connecting said outlet with said suction conduit, said enlarged separating chamber being unobstructed throughout and provided adjacent said outlet with supplemental air inlets and above said inlets with a substantially horizontal top deflecting wall.

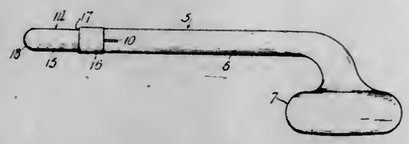
1,570,038. COMBINATION MATCH AND CIGARETTE HOLDER. MILLARD D. BURRIS, Bloomfield, N. J. Filed Oct. 10, 1924. Serial No. 742,743. 4 Claims. (Cl. 206—41.)

1. A device of the class described comprising a container receiving the packet of cigarettes, a cover for said container, means for releasably locking the cover on said container, means for removably mounting a book of matches on said container comprising a retainer plate having pointed prongs on its concealed face, the back of the book of matches being adapted to be gripped by the prongs when in position between the wall of the container and the retainer plate, guide bars mounted vertically on the wall of the container and adapted to support said retainer plate, and means for supporting the retainer plate so that the pointed prongs thereof enter the material forming the back of the book of matches.



1,570,039. VALVE-SPRING COMPRESSOR. GROVER D. BUSSARD, Littleton, Colo. Filed Jan. 3, 1925. Serial No. 333. 1 Claim. (Cl. 29—86.3.)

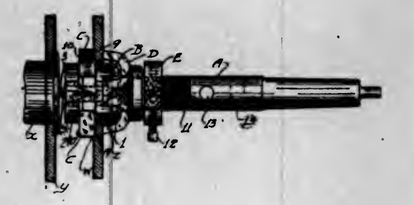
A valve spring compressor comprising a rack having gear teeth along one side, a bracket secured to one end of said rack and projecting laterally therefrom a second bracket slidably connected with the said rack, said brackets lying substantially in the same plane, a segmental pinion rotatably connected to the slidable bracket, said pinion being adapted to cooperate with the teeth on the rack in all but one position, means for turning said pinion, a pawl and ratchet device between the



slidable bracket and the rack for holding the slidable bracket in adjustable position and a stop plate projecting outwardly from each bracket, said plates being adapted to engage the side of the rack.

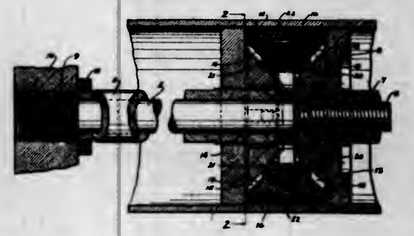
1,570,040. AIR CLEANER. MILTON E. CHANDLER, Chicago, Ill. Filed Sept. 9, 1921. Serial No. 499,467. 14 Claims. (Cl. 183—85.)

1. In a cleaner, a large shell, a small shell, one end of said large shell and one one end of said small shell being of the same diameter and juxtaposed, and a baffle dividing the space inside said shells into two chambers in open communication wtih each other, two of said members having annular lips and the third having an annular bead gripping said lips to unite all three into a rigid structure.



1,570,041. ELECTRODE FOR HIGH-FREQUENCY GENERATORS. RAYMOND G. CLARK, Chicago, Ill., assignor, by mesne assignments, to Adolph W. Gast, Chicago, Ill. Filed Mar. 12, 1923. Serial No. 624,334. 2 Claims. (Cl. 174—89.)

1. In an electrode of the kind described, the combination of a tubular glass body having a reduced end extension and a terminal cap enclosing and being cemented to said reduced end and including a part extending beyond said reduced end part to embrace a part of said tubular body.

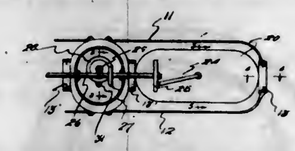


1,570,042. FACING TOOL FOR GASKET SEATS. SAMUEL B. CLAY, St. Louis, Mo., assignor to Heine Boiler Company, St. Louis, Mo., a Corporation of Missouri. Filed Nov. 19, 1923. Serial No. 675,777. 4 Claims. (Cl. 90—12.)

1. A tool for the purpose described, comprising a shank, a head on said shank that is adapted to be inserted through a hand hole or tube hole in a boiler header or water box, a plurality of pivotally mounted cutters on said head provided with parallel cutting edges disposed at substantially right angles to the longitudinal

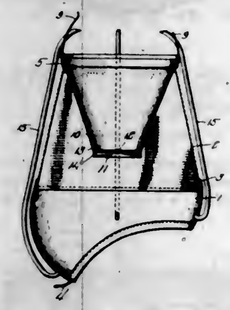
axis of the shank, and shoulders on said head against which said cutters bear when the shank is revolved in a direction to cause said cutters to act on the work.

1,570,043. PUMP-PACKING-EXPANDING DEVICE. ALFRED JULES CORMIER, Los Angeles, Calif., assignor to A. W. Warr, Los Angeles, Calif. Filed Aug. 27, 1924. Serial No. 734,415. 5 Claims. (Cl. 74—108.)



1. In a piston packing expander the combination of a piston rod, of a stationary coniform piston element carried thereby having a plurality of radially disposed keyways formed on its conical face, a sleeve carried by said piston rod having an exterior threaded end portion, a movable coniform piston element having a plurality of radially disposed keyways formed on its conical face mounted on the threaded end of said sleeve, an expansible packing mounted in the space between said coniform piston elements, and a plurality of packing expanding members having inclined inner walls arranged behind said packing and between said piston elements for expanding said packing on a forward movement of said movable piston element, said inclined walls of each expanding member being provided with a key for engaging the keyways formed on the piston elements to prevent a turning movement of the movable piston element.

1,570,044. AEROPLANE PROPELLING MECHANISM. HENRY M. COSBY, Flint, Mich. Original application filed Apr. 13, 1925, Serial No. 22,649. Divided and this application filed July 27, 1925. Serial No. 46,244. 3 Claims. (Cl. 244—25.)

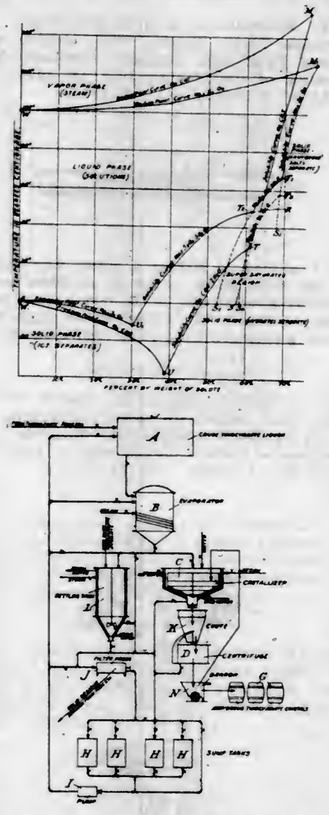


1. An aeroplane propeller of the class described, adapted for use with aeroplanes having a body, comprising U-shaped track-bearing members having the ends of the legs secured to said body; a channel-bearing substantially oval-shaped carried by said legs at their

outer ends in spaced relation to said body; channel-bearing and substantially oval-shaped track members mounted on said body; a spoon-shaped propeller having a trunnion projecting outwardly from each end; a

roller mounted on each of said trunnions, one of said rollers adapted to engage in said spaced track and the other adapted to engage in the track mounted on said body.

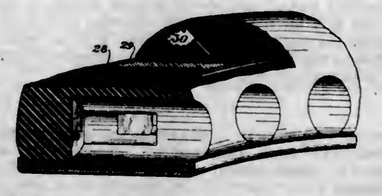
1,570,045. HAIR-DRYING APPARATUS. FELIX COUNE, Chicago, Ill. Filed May 7, 1925. Serial No. 28,563. 10 Claims. (Cl. 34—26.)



1. An appliance for introducing a drying medium to the head in the process of drying hair comprising a head fitting member for fitting about the head, means at the upper end of said member adapted to be attached to a conduit supplying a source of drying medium, means within said member for directing a part of the drying medium downwardly against the upper central portion of the head, and additional means for directing the other part of said drying medium upwardly from the lower portion of the head, whereby, by the meeting of said hair drying medium, to create a forced circulation thereof about the head and upwardly out of said head fitting member.

1,570,046. PROCESS OF SULPHONATING BETA NAPHTHOL. MOSES L. CROSSLEY, Somerville, and GEORGE S. SIMPSON, Plainfield, N. J. Filed Oct. 14, 1922. Serial No. 594,607. 5 Claims. (Cl. 260—155.)

1. The process of sulphonating beta-naphthol, which comprises reactingupon it with sulphuric acid in the presence of a boron compound containing oxygen.



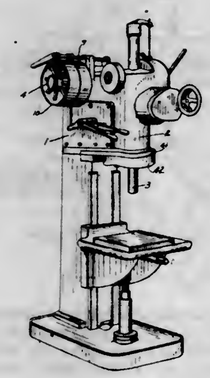
1,570,047. RECOVERY OF THIOCYANATES AND THIOSULPHATES. MARC DARRIN, Wilkinsburg, Pa., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 16, 1923. Serial No. 612,919. Renewed June 11, 1925. 17 Claims. (Cl. 23—75.)

15. The process of recovering sodium thiocynate from aqueous solutions containing sodium thiocynate, sodium thiosulphate, and finely divided impurities, which consists in concentrating the solution until its boiling temperature at 760 millimeters of mercury or its equivalent at other pressures, is about 130 to 135° C., cooling to between the transition points of sodium thiosulphate pentahydrate and sodium thiocyanate hydrate, and seeding with crystals of a hydrate of sodium thiosulphate to thereby cause a gelatinous precipitate of sodium thiosulphate capable of entrapping the finely divided impurities, separating the gelatinous precipitate with the entrapped impurities, concentrating the filtrate until its boiling temperature is in the neighborhood of the boiling

temperature of a saturated solution of sodium thiocyanate cooling so as to cause the crystallization of anhydrous sodium thiocyanate, and separating the sodium thiocyanate crystals from the mother liquor, substantially as described.

1,570,048. VEHICLE TIRE. EARLE HENRY DICKENSHEET, Kansas City, Mo., assignor to Faultless Pneumatic Tire Company, Seattle, Wash., a Corporation of Washington. Filed Aug. 25, 1920. Serial No. 405,828. 3 Claims. (Cl. 152—1.)

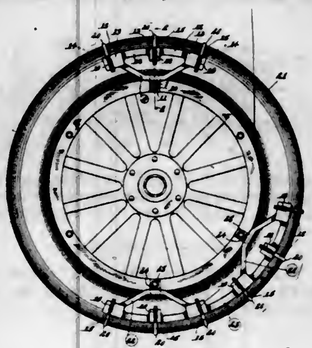
2. A vehicle tire comprising a solid annular body, a plurality of lateral passageways alternately extending from the opposite sides of the tire and overlapping.



to communicate at their inner ends, and laminated fabric reinforcing members embedded within the tire and extending circumferentially thereof, to bridge the overlapping ends of the cavities.

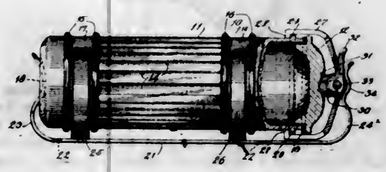
1,570,049. METHOD OF MAKING REAMERS. JAMES B. DILLARD, Shaker Heights, Ohio, assignor to The Cleveland Twist Drill Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 15, 1925. Serial No. 37,139. 5 Claims. (Cl. 76—108.)

1. In a method of making a spiral flute expansion reamer, the steps which consist in providing longitudinally extending radial slots in the reamer body, twisting said body to impart the desired spiral angle to such slots, and subsequently providing corresponding spiral flutes.



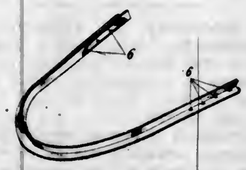
1,570,050. DRILLING MACHINE. FRANK W. DINE, Minster, Ohio, assignor, by mesne assignments, to The National Automatic Tool Company, Richmond, Ind., a Corporation of Indiana. Filed Aug. 1, 1923. Serial No. 655,128. 7 Claims. (Cl. 77—27.)

1. In a drilling machine, the combination with a housing having a drive shaft receiving portion and a front bearing portion, of a spindle movable in the latter, a series of different spindle-driving shafts, bearing means in the drive shaft receiving portion of the housing to receive any one of said shafts without change, a removable top part for the drive shaft receiving portion of the housing, bearing means in the latter, a pulley shaft insertible in said bearings, and a geared connection between the selected drive shaft and the pulley shaft.



1,570,051. ANTISKID ATTACHMENT FOR VEHICLE WHEELS. FRED DOMBROWSKI, Chicago, Ill. Filed Apr. 13, 1925. Serial No. 22,533. 7 Claims. (Cl. 301—51.)

5. In combination in a device of the kind described, a shoe member having means for securement with the rim securing means and having a portion extending alongside the tire and are shaped in formation corresponding with the shape of the tire, radially arranged bearings in said arc-shaped portion, pin members movable lengthwise in



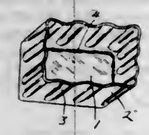
said bearings, and resilient means forcing said pin members outwardly into position to engage the roadway, substantially as described.

1,570,052. FIRE-EXTINGUISHING DEVICE. ORLANDO R. ERWIN, Forest Hills, N. Y. Filed Apr. 1, 1921. Serial No. 457,797. 8 Claims. (Cl. 169—35.)

1. Fire extinguishing apparatus comprising a container of the same internal dimensions throughout and entirely open at one end, a cap for the open end, and a holder for the container releasably engaging the same and released by movement of the container away from the holder in one direction, the holder engaging the cap to maintain the same in sealed condition, the release of the container from the holder releasing the cap.

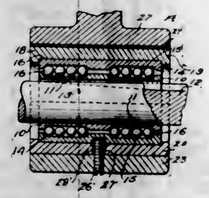
1,570,053. TOE BINDER. JOSEPH FAUBSE, Brockton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 29, 1922. Serial No. 564,407. 13 Claims. (Cl. 12—107.)

1. A toe binder for use in lasting shoes comprising a member adapted to be applied about the toe of a shoe over the feather of the insole and having upper engaging faces arranged to extend about the toe in angular relation to each other for engagement respectively with



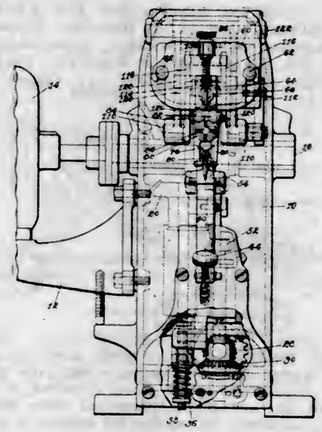
the upstanding margin of the upper and with a portion of the upper which lies upon the feather of the insole for holding the upper in substantial conformity to the angle between the feather and the rib of the insole.

1,570,054. MOLD FOR SASH-WEIGHT CORES. JOHN J. FLEMING, Vineland, N. J. Filed Sept. 29, 1925. Serial No. 59,251. 6 Claims. (Cl. 22—173.)



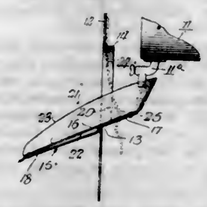
1. A mold for making sash weight cores including a casing having a mold cavity; a bar slidably mounted in the casing passing through the cavity and having a marking thereon disposed in the cavity, and a second bar slidably mounted in the casing adjacent the first mentioned bar.

1,570,055. HEAT-TREATING CONTAINER. RUDOLPH F. FLINTERMANN, Detroit, Mich., assignor to Michigan Steel Castings Company, Detroit, Mich., a Corporation of Michigan. Filed May 5, 1924. Serial No. 711,270. 4 Claims. (Cl. 263—49.)



1. A heat treating container comprising a cast structure of a heat resisting alloy having integral bottom and side walls, the side walls being formed with uninterrupted vertical corrugations forming a wavy surface free from straight portions intermediate said corrugations, the entire surface of said container being free from sharp corners.

1,570,056. BEARING. LEWIS FRITZ, Chicago, Ill. Filed July 3, 1925. Serial No. 573,717. Renewed July 25, 1915. 2 Claims. (Cl. 308—189.)



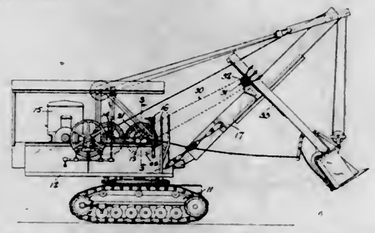
1. A ball bearing of the class described including an inner race ring comprising parts having opposite channels formed therein and adapted to be mounted to embrace a shaft with one of the parts keyed to the shaft, an outer race ring comprising parts provided with opposite channels, a series of balls arranged between the race rings for operation in the channels, a shell comprising parts provided with recesses adapted to accommodate the race ring parts, said shell and the lower part of the outer race being provided with registering bores, and a member adapted to be mounted with an end inserted in the bores.

1,570,057. SEAM RUBBING. FREDERICK M. FURBER, Revere, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 16, 1921. Serial No. 461,793. 52 Claims. (Cl. 69—7.)

1. In a seam-rubbing machine, in combination, means to open a seam, a power-actuated support and feed device for the opened seam, and a heated, power-actuated member to flatten the opened seam against the support as it leaves the seam-opening means.

1,570,058. DRAIN SPOUT FOR WASHING MACHINES AND THE LIKE. WILLIAM H. GEORGE, Fairfield, Iowa, assignor to The Dexter Company, Fairfield, Iowa, a Corporation of Iowa. Filed June 1, 1922. Serial No. 565,058. 2 Claims. (Cl. 137—9.)

2. In a device of the kind described, a plate having a transverse shoulder formed between its end and notches at the ends of said shoulders, one longitudinal margin of said plate at one end thereof being slit to provide a bent-over tongue, and a spout member fixed to one side of said plate.



1,570,059. FUEL. GRANT HAMMOND, New Haven, Conn., assignor to Fuel Development Corporation, Wilmington, Del., a Corporation of Delaware. Filed June 17, 1922. Serial No. 569,184. 5 Claims. (Cl. 44—9.)

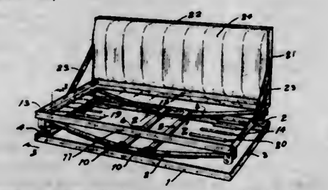
1. A combustible mixture comprising kerosene, a light freely ignitible hydrocarbon, and small quantities of acetone, glycerine and butyl alcohol.

1,570,060. FUEL. GRANT HAMMOND, New Haven, Conn., assignor to Fuel Development Corporation, Wilmington, Del., a Corporation of Delaware. Filed May 3, 1923. Serial No. 636,467. 3 Claims. (Cl. 44—9.)

1. A fuel comprising of kerosene, gasoline, butanol and benzol.

1,570,061. HOISTING MECHANISM FOR EXCAVATING CRANES. ARTHUR G. HENRICKS, Wauwatosa, Wis., assignor to Harnischfeger Corporation, Milwaukee, Wis., a Corporation of Wisconsin. Filed Mar. 25, 1925. Serial No. 18,083. 14 Claims. (Cl. 214—132.)

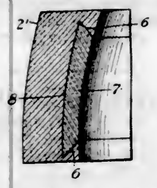
1. In an excavator crane, a shaft, a spider loosely mounted thereon and adapted to receive and operate a driving sprocket for power shovel operation or drums of different size and shape for various other kinds of excavating equipment, and mechanism adapted to connect said spider to said shaft for rotation thereby in either direction.



1,570,062. PROCESS OF MAKING NONSTATIC FILM. HARRY J. HOFFMAN, Stamford, Conn., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Oct. 12, 1921, Serial No. 507,363. Renewed June 22, 1925. 11 Claims. (Cl. 91—68.)

1. The process of making non-static photographic film which comprises applying to the film a conductively-increasing-substance composition, as distinguished from mixing such substance in the film dope, such composition comprising a conductivity-increasing-substance in a solvent for the film, and drying.

4. The process of making non-static photographic cellulose ester film which comprises applying to the film an electrolyte solution comprising an electrolyte dissolved in cellulose ester solvent, and drying.

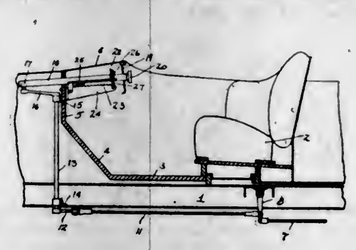


11. The process of making ammonium nitrate-bearing non-static cellulose ester photographic film which comprises applying to the film, in quantity to fix on the film an amount of ammonium nitrate substantially equal to .25% of the weight of the film, an ammonium nitrate solution comprising ammonium nitrate dissolved in cellulose ester solvent in the proportions of substantially 2 parts of electrolyte to 98 parts of solvent, and drying.

1,570,063. SPRING SEAT FOR TRUCKS AND AUTOMOBILES. HARLEIGH R. HOLMES, Littleton, Colo. Filed Oct. 16, 1924. Serial No. 743,934. 1 Claim. (Cl. 155—9.)

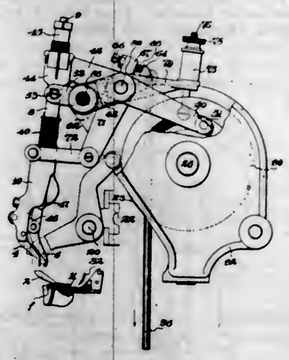
A seat for automotive trucks, comprising, in combination, a substantially rectangular frame of angle iron adapted to rest upon the truck body, said frame being arranged with one flange of the angle irons lying in the plane of the bottom of the frame, a pair of transverse bars (5 & 6) extending from the flange of one longitudinal member to the corresponding flange on the other longitudinal member, a semi-elliptical spring secured at its center portion to the ends of said transverse bars, said springs extending parallel with the side angles of the frame, said springs having their convex sides down, a second frame of substantially the same size and shape as the first frame adapted to be supported from the ends of said springs by shackles (18) which are pivoted to the ends of U-shaped brackets (15) by means of a bolt (17).

1,570,064. METHOD OF MAKING CRUCIBLES. ARTHUR JOHN JACKMAN, Forest Hills Borough, Pa., assignor to Vesuvius Crucible Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Mar. 18, 1925. Serial No. 16,344. 15 Claims. (Cl. 263—48.)



2. As an article of manufacture, a crucible for a metal melting operation wherein slag is formed, having a graphitic body portion adapted to contact with the bulk of the metal and having a portion adapted to contact with the slag and made from a material more resistant than the said body portion to the corrosive action of the slag, substantially as described.

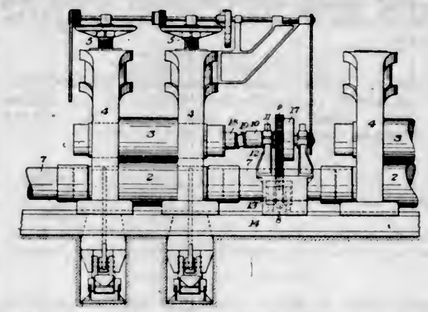
1,570,065. FISHING TOOL. MONROWE WALTER JONES, Ardmore, Okla. Filed Nov. 20, 1922. Serial No. 602,107. 3 Claims. (Cl. 294—102.)



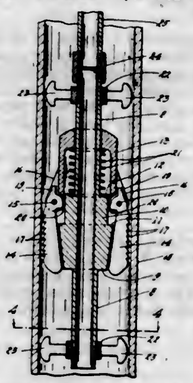
2. A device of the class described, comprising a tubular shaft having a stem movable therein, said stem being moved upon its contact with the object to be removed, means for rotating said stem during its movement within said tubular shaft, gripping jaws carried by the stem, yielding elements for holding said jaws in an inactive position during their turning movement, and a member movable upon said stem upon its engagement with the tubular shaft for breaking said yielding elements and forcing said jaws into engagement with said object.

1,570,066. BRAKE ACTUATING MEANS FOR MOTOR CARS. CYRUS B. KURTZ, Lakewood, Ohio. Filed Oct. 26, 1921. Serial No. 510,599. 5 Claims. (Cl. 74—89.)

1. In a motor car, the combination with a movable brake actuating member, of a rod mounted in the dash and instrument boards of the car, a pivoted shaft having connection with said actuating member and said rod, a rack mounted between said dash and instrument boards adjacent to the path of movement of said rod, and a spring-pressed pawl on said rod, said pawl normally engaging said rack and maintaining said rod against movement.



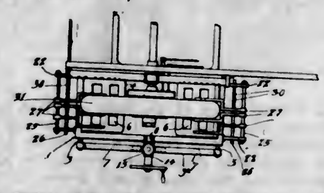
1,570,067. METHOD OF MAKING SHOES. FRED N. LA CHAPELLE, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 28, 1919. Serial No. 285,804. 29 Claims. (Cl. 12—145.)



1. That improvement in methods of making shoes which consists in cutting an upper short by a predetermined allowance for stretching of the upper, assembling the upper with an innersole on a last, successively bringing portions of the edge of the upper by a positive predetermined pull applied transversely of its edge to a predetermined point on the innersole, and permanently securing said portions of the upper successively.

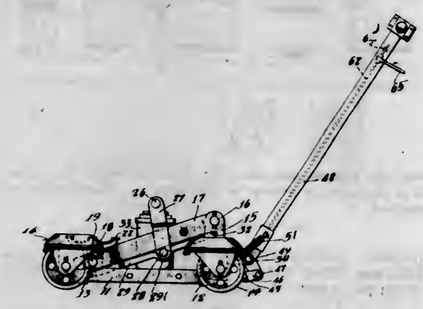
1,570,068. ROLLING MILL. LEIF LEE, Youngstown, Ohio. Filed July 2, 1921. Serial No. 482,159. 5 Claims. (Cl. 80—54.)

1. In a rolling mill, a roll stand, an upper and lower roll journaled in the stand, roll adjusting mechanism for permitting the spacing of the upper roll with relation to the lower roll, a driving spindle operatively connected to the lower roll, a gear shaft in fixed spaced relation to the driving spindle, a universal connection between the gear shaft and the upper roll, and slip gear connections between the spindle and the gear shaft, whereby the upper roll is frictionally driven by the spindle, substantially as described.



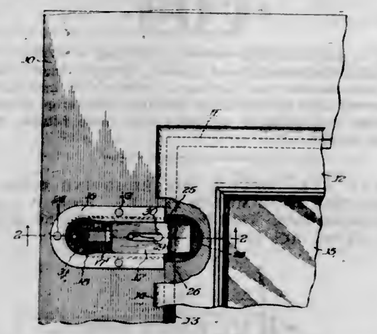
1,570,069. PIPE-GRIPPING DEVICE. PETER GUSTAF LEONARD, West Tulsa, Okla. Filed Feb. 16, 1925. Serial No. 9,493. 7 Claims. (Cl. 103—219.)

1. A pipe gripping device comprising a member with gripping elements pivoted thereon, spring actuated means in said member and having a portion for moving said elements into pipe gripping position, and stop means to engage said gripping elements and force release movement thereof.



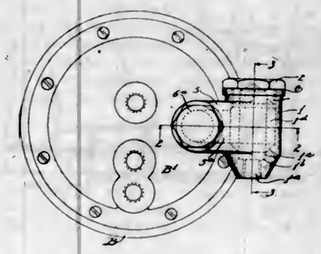
1,570,070. DEVICE FOR REMOVING TIRES OR WHEELS FROM MOTOR TRUCKS. EDGAR C. LYMAN, Burbank, Calif. Filed Dec. 4, 1923. Serial No. 678,381. 7 Claims. (Cl. 214—1.)

1. In a device of the class described, the combination of a substantially U-shaped frame, holding members mounted on said frame to pivot on a substantially horizontal axis and adapted to support a wheel from the ground in one position and permit the wheel to be lowered



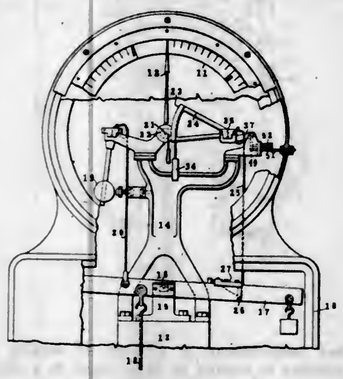
on the ground in another position, said members being in position to engage the bottom of the same in performing said operation, means for controlling the pivoting of the holding members, each of the holding members being secured solely to one side of the central opening of the frame.

1,570,071. JACK. JOSEPH MERCIER, Los Angeles, Calif., assignor of one-half to Lute G. Gillelen, Los Angeles, Calif. Filed Dec. 1, 1924. Serial No. 753,140. 8 Claims. (Cl. 254—2.)



1. A jack comprising a frame, a lever fulcrumed at one end on the frame, a rest tiltably mounted relative to the lever on the opposite end of the lever, means to prevent tilting of the rest relative to the frame as the lever operates, a link pivoted to the lever intermediate of the ends thereof, an operating lever pivotally mounted on the frame, and means operated by the last mentioned lever and connected with the link to move the link into a position to hold the free end of the first mentioned lever elevated.

1,570,072. LOCKING MEANS. OTTO H. MERZ, West Allis, and PETER D. HUMLEKER, Fond du Lac, Wis., assignors to Convertible Door Manufacturing Company, West Allis, Wis., a Corporation of Wisconsin. Filed July 25, 1925. Serial No. 45,975. 2 Claims. (Cl. 292—152.)

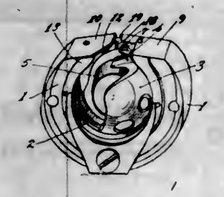


1. A locking device of the class described comprising a body part formed integral of sheet metal and having a longitudinally extending groove, a locking bar within said groove, interlocking engagement between the side edges of said bar and the sides of said groove for confining said bar to sliding movement in said groove, a detent deflected from the bottom of said groove cooperating with said bar to limit the outward movement thereof, and a second detent in the bottom of said groove for cooperating with said bar to lock it in outer position.

1,570,073. STRAINER FOR VACUUM TANKS. JOHN K. OLSEN, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Sept. 1, 1922. Serial No. 585,629. 2 Claims. (Cl. 210—164.)

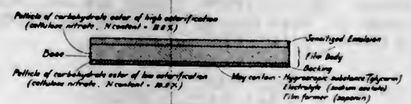
1. A fuel inlet fitting for fuel feed tanks comprising a tubular body threaded at one end for pipe connection to a fuel supply pipe, primarily counterbored from the opposite end to form a shoulder near the threaded end and secondarily counterbored to within a short distance of said shoulder and provided with a cap for closing the second counterbore which has a bore at its inner end of the diameter of the first counterbore; a strainer sleeve whose ends are seated in the first counterbore of the body and in the bore of the cap; said body having a lateral outlet from the second counterbore and means for connecting it for discharge through said lateral outlet.

1,570,074. SCALE. LOUIS A. OSGOOD, Hartford, Conn., and ELMER E. WOLF, Springfield, Ohio, assignors to E. and T. Fairbanks and Company, St. Johnsbury, Vt., a Corporation of Vermont. Filed Feb. 14, 1924. Serial No. 692,673. 6 Claims. (Cl. 265—62.)



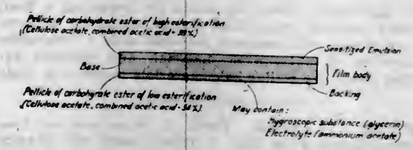
1. A scale including, in combination, a weighing mechanism, a registering mechanism, means connecting the mechanisms, a pivotally mounted element, forming a part of said registering mechanism, a movable support for said element and a member having screw threads, said member co-operating with said support to shift the same.

1,570,075. SHUTTLE CASING FOR SEWING MACHINES. GEORGE G. PAINE, Ludlow, Ky. Filed Apr. 4, 1924. Serial No. 629,747. 1 Claim. (Cl. 112—196.)



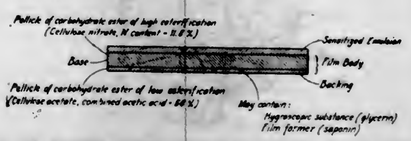
In a device of the character specified, the combination of a flat topped shuttle casing, a shuttle, a bridge plate, an admission aperture for a threaded needle in the

shuttle casing, and a thread cutting knife, said flat topped casing cut-away adjacent the admission aperture, a diagonally edged bridge plate disposed on the flat



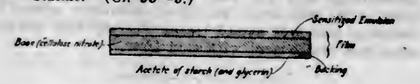
topped shuttle casing a radial groove at the front edge of the bridge plate and a transverse groove on the top of the casing adjacent the radial groove whereby said grooves receive the cut thread from the needle.

1,570,076. NONSTATIC PHOTOGRAPHIC FILM. EARLE C. PITMAN, Parlin, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Sept. 16, 1920. Serial No. 410,746. 45 Claims. (Cl. 95—9.)



1. A photographic film having a backing containing sodium acetate.

1,570,077. NONSTATIC PHOTOGRAPHIC FILM. EARLE C. PITMAN, Parlin, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Sept. 16, 1920, Serial No. 410,747. Renewed June 22, 1925. 31 Claims. (Cl. 95—9.)

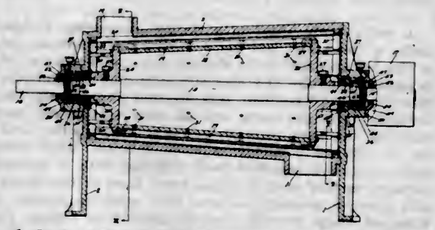


1. A transparent flexible, thin, substantially neutral photographic film having a body of carbohydrate ester containing glycerine.

1,570,078. NONSTATIC PHOTOGRAPHIC FILM. EARLE C. PITMAN, Parlin, N. J., assignor to E. I. Du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Sept. 16, 1920. Serial No. 410,748. 30 Claims. (Cl. 95—9.)

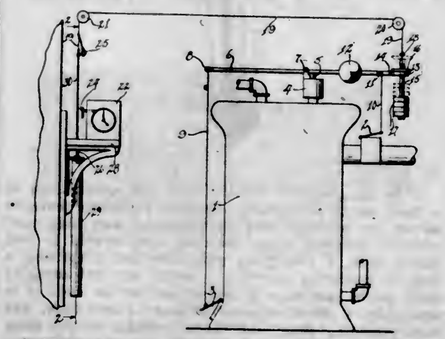
1. A photographic film containing a substance capable of reducing surface tension.

1,570,079. NONSTATIC FILM AND BACKING SOLUTION FOR USE IN MAKING THE SAME. EARLE C. PITMAN, Parlin, N. J., assignor to E. I. Du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Sept. 16, 1920. Serial No. 410,749. 14 Claims. (Cl. 95—9.)



1. A photographic film comprising acetate of starch.

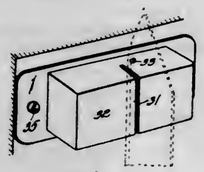
1,570,080. REFRIGERANT. ROSCOE R. STITT, Marquette, Mich. Filed Feb. 2, 1925. Serial No. 6,449. 4 Claims. (Cl. 252—5.)



1. A new product for use as a refrigerant or similar purposes, comprising methyl-chloride and methyl-alcohol.

1,570,081. GRAIN HULLER. JAMES J. ROSS, Portland, Oreg., assignor to The J. J. Ross Mill Furnishing Company, Portland, Oreg., a Corporation of Oregon. Filed Mar. 15, 1923. Serial No. 625,340. 7 Claims. (Cl. 83—30.)

1. In a grain huller, the combination of a horizontally disposed internally conical shell provided with a grain inlet and an outlet, and a rotatable drum having an external conical form corresponding to the internal form of the shell, with a series of separated, projecting, longitudinally disposed bars fixed in the inside wall of the shell, and a series of bars fixed in like manner in the outside wall of the drum, the opposing bars of the said two series being separated by a constant gap substantially equal to the average maximum dimension of a kernel of the grain which the machine is designed to hull.

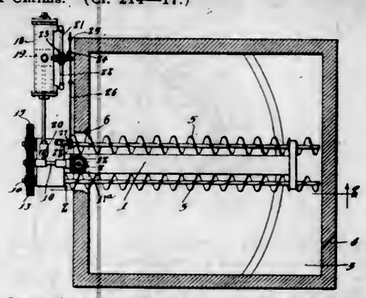


1,570,082. TIME-CONTROLLED REGULATOR FOR HEATING SYSTEMS. HOWARD W. ROYCE, Chicago, Ill. Filed Apr. 13, 1925. Serial No. 22,845. 2 Claims. (Cl. 161—8.)

2. The combination with a heating system having a thermostatic control device including a weighted actuating lever for accelerating and diminishing the inten-

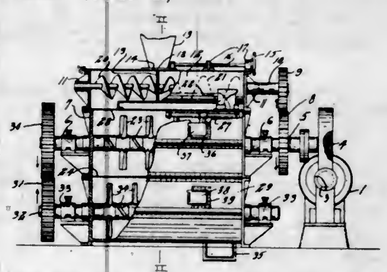
sity of the heat source in said system, of a rod, a plurality of weights removably disposed on said rod, said rod being constructed so as to engage with said weighted lever whereby the weights thereon may augment the force of the weight normally on said lever, means for maintaining said rod with its weights out of engagement with said lever, and time controlled means for releasing said first named means whereby said rod may move into engagement with said lever.

1,570,083. KNIFE-BLADE SHARPENER. CHARLES RUNZI, St. Louis, Mo. Filed Apr. 2, 1923. Serial No. 629,383. 1 Claim. (Cl. 51—214.)



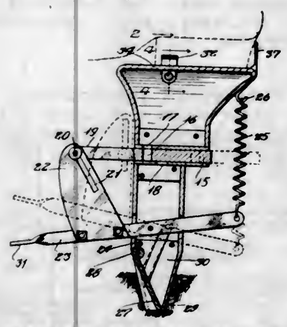
A knife blade sharpening device comprising a base plate, a cover for said plate having a transverse slot in the top and side walls thereof, wire holders arranged in opposed relation and pivotally supported by said base plate, a pair of resilient legs directed downwardly and inwardly from the outer end of each wire holder and engaging the base plate to normally support the holders in inclined positions, a block mounted upon each holder, abrasive members each provided with a beveled abrasive surface secured to the inner faces of the blocks, said abrasive members crossing each other to provide a V-shaped blade receiving recess adapted to change its angles upon pressure being brought to bear against the abrasive members while drawing a knife blade over the beveled abrasive surfaces thereof.

1,570,084. ELECTRIC-RESISTANCE ELEMENT. THOMAS C. RUSSELL, Chicago, Ill. Filed Feb. 7, 1924. Serial No. 691,087. 4 Claims. (Cl. 201—63.)



1. In an electrical heating unit, the combination of a rigid rod of non-metallic electrical resistance material having its terminal ends electro-plated with high temperature resistant metal, terminal caps secured to said plated ends, a connecting plug structure comprising a body of insulating material, a center terminal engaging with one of said caps to secure said rod at one end to said body, a sleeve terminal secured to said body, and bars extending from said sleeve terminal to the other terminal cap, said bars electrically connecting said other cap with said sleeve terminal and also assisting in supporting said rod.

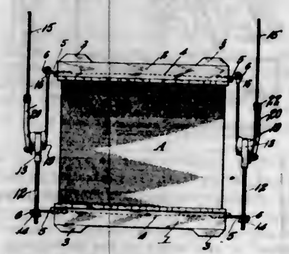
1,570,085. EXCAVATOR. WALTER E. SAXE, Los Angeles, Calif. Filed Jan. 31, 1925. Serial No. 6,001. 11 Claims. (Cl. 214—17.)



1. In a bin excavator the combination of a bin with an opening in its side wall, a boom and a conveyor device carried by the boom pivoted substantially at the opening, means for actuating the conveyor device, a hopper for receiving the material from the conveyor device, and automatic means for swinging the boom to and fro.

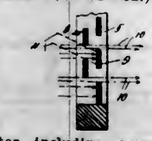
1,570,086. NODULIZATION. JOHN C. SCHAFFER, Pittsburgh, Pa. Filed Mar. 15, 1924. Serial No. 699,610. 9 Claims. (Cl. 18—1.)

1. Apparatus embodying means for tempering a finely divided material with liquid, supply means for uniformly combining said tempered material with a determined proportion of untempered material, and material agitating means for rolling said materials together in clods.



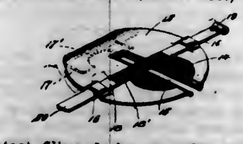
1,570,087. PLANTER. LOUIS V. SCHNOEBELEN, Iowa City, Iowa. Filed July 3, 1924. Serial No. 724,029. 1 Claim. (Cl. 111—98.)

In a corn planter, a hopper, means thereon for attaching it to the shoe of an operator, a chute extending downwardly from the hopper and communicating



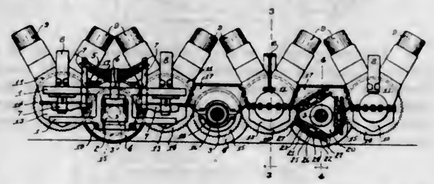
therewith, a slidable gate between the hopper and chute operative to transfer seed from the hopper to the chute, a shoe at the lower end of the hopper having an opening for the escape of the seed, a closure hinged in the shoe in such relation to the wall of the shoe as to guard and unguard the discharge opening in the shoe, a pivot extending through the chute, a lever extending through opposed walls of the chute and mounted on the pivot, a link connecting the said lever with the closure, an arm secured to the lever, the said arm projecting into operative relation with the gate and having a slot, a stud on the gate operating in the said slot of the arm, a bearing plate on one end of the lever adapted to be pressed into engagement with the soil, and means for exerting a pull on the other end of the lever.

1,570,088. TURNOVER MECHANISM. LOUIS J. SCHWAB, Peoria, Ill. Filed Mar. 8, 1924. Serial No. 697,947. 11 Claims. (Cl. 214—130.)



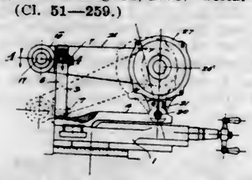
1. In a turn-over mechanism for a stack of sheets, the combination with base-boards between which the stack of sheets is compressed, of coacting coupling means arranged for connection with opposite base-boards, including two cables adapted for connection with a raising and lowering means, and means for automatically exerting additional clamping action thru the cables as the stack is turned.

1,570,089. VENTILATOR. ALTER L. SCHWARTZBERG, Shreveport, La. Filed Apr. 10, 1925. Serial No. 22,156. 2 Claims. (Cl. 98—31.)



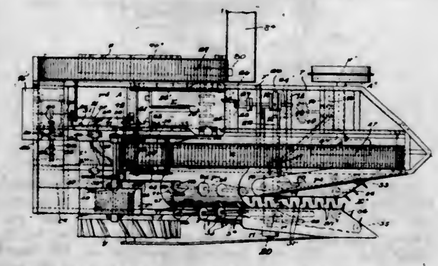
1. A ventilator including spaced inner and outer series of horizontal slats, the slats of each series being arranged in spaced vertical relation, the upper portions of the slats of the outer series overlapping the lower portions of the slats of the inner series, and the lower edges of the slats of the outer series being arranged in planes slightly spaced above the planes of the upper edges of the slats of the inner series.

1,570,090. CONTACT-FILING DEVICE. JOHN H. SIMPSON, Providence, R. I. Filed July 26, 1922. Serial No. 577,687. 2 Claims. (Cl. 29—80.)



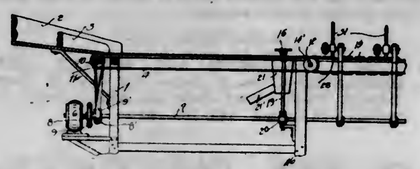
1. A contact filing device comprising a substantially flat metallic member adapted to position and retain one contact point in fixed relative position with relation to another contact point of a spark coil, in combination with a file member adapted to cooperate therewith and simultaneously file the coacting surfaces of said contact points while in said relative position.

1,570,091. LOCOMOTIVE AND VEHICLE DRIVE MECHANISM. FRED F. SMALL and CARL E. NAGEL, Oakland, Calif. Filed June 24, 1924. Serial No. 722,056. 25 Claims. (Cl. 105—62.)



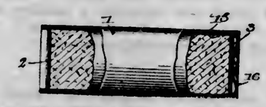
1. A driving mechanism for locomotives and other vehicles comprising an axle; a vehicle propelling wheel mounted thereon; a power driving member; and a driving connection between said power member and said wheel, said connection including a variable speed planetary-gear mechanism mounted about said axle and a resilient power transmitting member.

1,570,092. GRINDING MACHINE. JOHN A. SMITH, Bellevue, Ky. Filed Aug. 24, 1923. Serial No. 659,191. 4 Claims. (Cl. 51—259.)



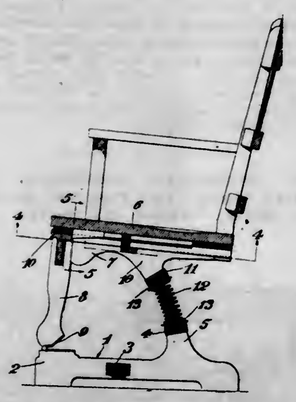
1. A frame having angularly related extensions, means for adjustably attaching the frame to a support, a bearing adjustable lengthwise of one of the extensions having a spindle rotatable therein, a motor pivotally attached to the other extension and adapted to swing toward and away from the first extension, and having its pivot parallel with said spindle, means for clamping the motor after swinging adjustment, and driving connection between said spindle and motor.

1,570,093. SUGAR-CANE HARVESTER. WILLIAM SNODGRASS, Senado, Cuba. Filed Sept. 23, 1922. Serial No. 590,140. 5 Claims. (Cl. 56—16.)



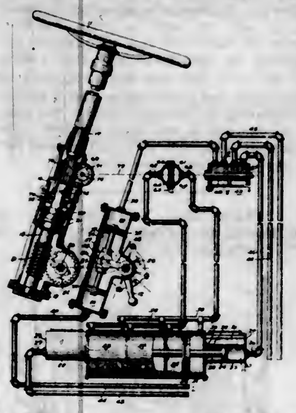
1. In a sugar cane harvester, a rotary cutter, means for cutting cane and delivering the stalks to said cutter whereby said stalks including tops and blades will be severed into short sections, and means for submitting the sections of the stalks to an air blast whereby to separate the lighter objects from the heavier.

1,570,094. FRUIT GRADER. JAMES O. STEVENS, Post Falls, Idaho. Filed Apr. 13, 1925. Serial No. 22,538. 5 Claims. (Cl. 209—71.)



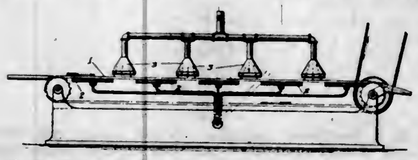
1. The combination with a longitudinal conveyer of a laterally disposed crane, means for adjusting said crane vertically with relation to said conveyer, an endless distributer belt carried by said crane in the path of movement of the fruit on the conveyer, and means for positively adjusting the tension of the belt.

1,570,095. GREASE-HANDLING METHOD AND MECHANISM. GUSTAV STRANDT, Milwaukee, Wis. Filed May 12, 1921. Serial No. 468,823. 1 Claim. (Cl. 206—56.)



As a new article of manufacture, a package of grease including a tubular shell, a flexible lining disposed within said shell, and closure caps frictionally retained within said lining, one end margin of said lining being folded over one of said caps and being adapted when distended to comprise a tubular extension beyond said shell to guide the contents of said shell into a grease gun barrel of like diameter.

1,570,096. CHAIR. STEPHEN STRANSKY, Darby, Pa. Filed Oct. 22, 1924. Serial No. 745,243. 1 Claim. (Cl. 155—55.)

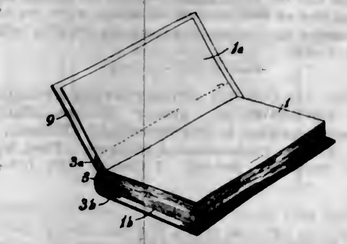


A chair including a base having horizontally extending connected side members; a seat having a back rest, and side members for supporting the seat; legs supporting the front of the seat and being hinged to the front end of the side members provided on the base; upwardly and forwardly projecting extensions on the side members of the base; downwardly and rearwardly projecting extensions on the middle part of the side members supporting the seat; and coiled springs interposed between said extensions on the base and on the side members supporting the seat.

1,570,097. FLUID-PRESSURE-CONTROL SYSTEM. JAMES W. SUMNER and ALDEN G. RAYBURN, Los Angeles, Calif., assignors to Emory Winship, San Francisco, Calif. Filed June 7, 1923. Serial No. 643,877. 10 Claims. (Cl. 180—80.)

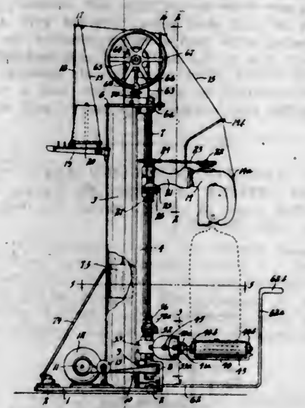
1. In a fluid pressure control system, a member the movement of which is to be controlled, a fluid pressure device for moving the member, movable means for controlling the operation of said device, means whereby the extent of movement of the controlled member is limited by the extent of movement of the controlling means and means for creating the fluid pressure, comprising a pair of fluid pressure cylinders, means whereby one of the cylinders is caused to exert a force so as to produce a fluid pressure in the other cylinder, and means connecting the other cylinder with the fluid pressure device.

1,570,098. PROCESS OF RENDERING PAPER TRANSPARENT. CHARLES E. SWETT, West Roxbury, Mass., assignor to United States Envelope Company, Springfield, Mass., a Corporation of Maine. Filed May 18, 1922. Serial No. 562,030. 2 Claims. (Cl. 91—70.)



1. In the art of rendering paper transparent by the application thereto of an impregnating substance, the improvement which consists in subjecting the paper to recurring alternate heating and cooling periods of short duration to obtain accelerated penetration and solidification of the impregnating substance.

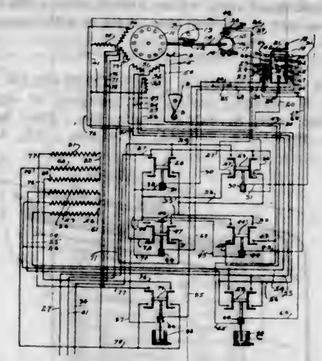
2. In the art of rendering paper transparent, the improvement which consists in applying to the paper an impregnating substance, and heating the paper at intervals, alternately with exposures to atmospheric temperature, to obtain solidification of said impregnating substance.



1,570,099. BINDING OF BOOKS. HENRY TAYLOR, South Chingford, London, England. Filed Sept. 15, 1921. Serial No. 500,852. 1 Claim. (Cl. 281—23.)

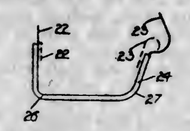
The method of binding books consisting in applying a suitable adhesive to the back edges of the gathered leaves or folded sections sewn or stitched together in the usual way and with end papers adapted to form the inside cover lining, and cementing thereto a single composite strip of fabric and paper of which one side is previously impregnated with a suitable adhesive and dried, the strip being wide enough to cover the back edges and extend some distance on to the end papers, and after folding these extending portions on to the end papers applying paste or cement on their outer sides and

also on the exposed portions of the end papers, and then pressing the cover thereon, so that such pressure will cause moisture to pass through the overhanging portions of the strip and moisten the dried adhesive and cause these portions to adhere to the portion of the end papers under them on which the adhesive was not applied.



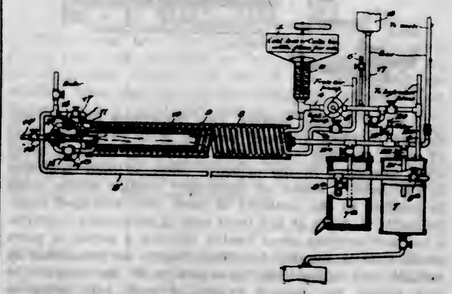
1,570,100. BAG-SEWING MACHINE. FRANK J. THULL, Minneapolis, Minn. Filed July 17, 1924. Serial No. 726,501. 23 Claims. (Cl. 112—11.)

23. A bag closing machine comprising a base, a guide column extending vertically from said base, a head having a bag closing mechanism mounted on said column and adjustable substantially throughout the whole length thereof, a bag supporting and conveying table mounted on said column and adjustable substantially throughout the whole length thereof, and means for synchronously operating said bag closing mechanism and said bag conveying table, whereby the machine may be adjusted to directly receive and close bags of all standard sizes.



1,570,101. HOISTING AND LOWERING CONTROL MECHANISM. ERNEST B. THURSTON, Toledo, Ohio, assignor to The Haughton Elevator & Machine Co., Toledo, Ohio, a Corporation of Ohio. Filed Sept. 30, 1922. Serial No. 591,642. 12 Claims. (Cl. 172—152.)

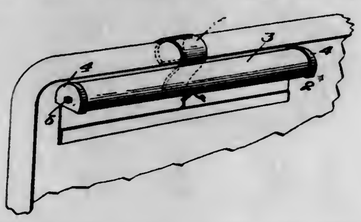
4. An alternating current electric motor, uncounterweighted load actuating connections from the motor, means normally holding the motor, power connections for releasing the motor from said means, first and second speed switches, a resistance for one of the speeds of



the motor, and a controller for load lowering operation of the motor cutting in said resistance after the operation of one of said switches.

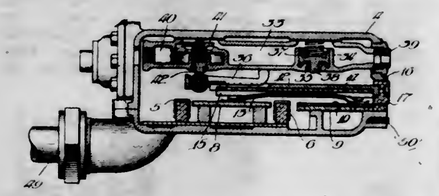
1,570,102. GUTTER BRACKET. WILLIAM ALBERT BETHRIDGE TOPP, Annandale, near Sydney, New South Wales, Australia. Filed Feb. 23, 1923. Serial No. 620,774. 4 Claims. (Cl. 108—29.)

1. A gutter bracket comprising a strip of light sheet metal bent to correspond to the sectional configuration of the gutter which it is to support, marginal reinforcing beads formed therewith, a wire extending through said beads, the medial portion of said wire extending from the forward end of the bracket and adapted to extend over the gutter supported thereby, and the extremities of said wire projecting from the rear end of the bracket.



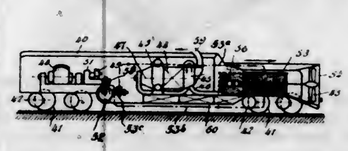
1,570,103. METHOD OF TREATING COAL PRODUCTS. WALTER E. TRENT, New York, N. Y., assignor, by mesne assignments, to Trent Process Corporation, Wilmington, Del., a Corporation of Delaware. Filed Sept. 23, 1919, Serial No. 325,632. Renewed July 18, 1925. 17 Claims. (Cl. 44—1.)

1. The method of treating coal which consists in introducing the coal in a finely divided state with a fluxing agent to a moving fluid current, in conveying the



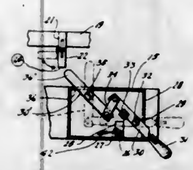
coal and fluxing agent through a heat zone to remove the volatile by-products of the coal from the carbonaceous content and to cause a union of the ash-forming substances and the fluxing agent, and in then collecting the carbon content of the coal free of its volatile by-products.

1,570,104. AUTOMOBILE MAP CONTAINER. FREDERICK W. VANCIL, Joplin, Mo., assignor of eighty-five per cent to H. R. Valfer, Joplin, Mo. Filed Sept. 29, 1924. Serial No. 740,544. 1 Claim. (Cl. 40—85.)



A map holder comprising an elongated container including a body open at its ends and along its under side and having its walls converging towards its open under side, the free side edge portion of one wall being curved away from the other wall, a shaft extending axially in said body and having flattened end portions removable caps for the open ends of said body having flanges snugly fitting upon the same and conforming to the transverse contour thereof to hold the caps against rotation upon the body, said caps having openings snugly receiving the flattened end portions of said shaft to mount the shaft and prevent rotation thereof, a map carrying roller rotatably mounted upon said shaft within said body, a rewind spring coiled about said shaft with one end secured to the shaft and its other end secured to said roller, and a supporting hook secured to said body at one side thereof midway its length and extending upwardly therefrom, said hook being of sufficient width to prevent tilting of the container when suspended from a windshield frame by the hook.

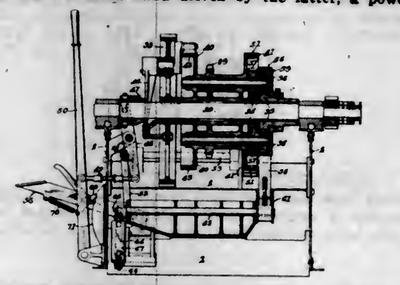
1,570,105. ELECTRIC COUPLING FOR RAILWAY VEHICLES. HERBERT E. VAN DORN, Chicago, Ill. Filed Feb. 11, 1920, Serial No. 357,779. Renewed July 9, 1925. 4 Claims. (Cl. 173—332.)



1. In an electric coupler, two transverse rows of stationary contacts arranged parallel with each other and at some distance apart, said stationary contacts being cross connected in the opposite order of their positions in the rows, a series of stationary contact strips equal in number to the contacts in each row, arranged longitudinally in front of the front row of stationary contacts, a contact-carrying plate having thereon a series of pairs of electrically connected contact fingers corresponding in number and disposition transversely of the coupler to said strips, the contact fingers of each pair being so positioned and proportioned that in a neutral position of the plate the front finger rests on one of said strips and the rear finger lies between the two rows of stationary contacts while in a second position of the plate the rearmost contact finger engages with one of the stationary contacts in the rear row and the forward contact finger engages with the corresponding contact strip, while in a third position of the plate the rearmost finger of each pair rests upon one of the stationary contacts of the front row and the front finger projects far enough beyond the front end of said housing to engage with one of the contact strips in a co-operating coupler lying in coupling relation thereto.

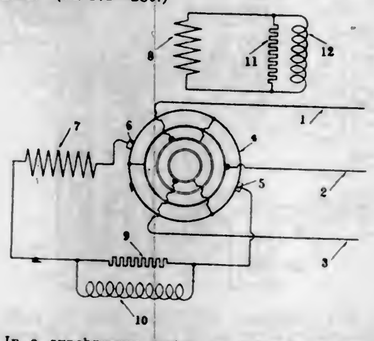
1,570,106. AIR-COOLED CONDENSATION APPARATUS FOR LOCOMOTIVES. RUDOLF WAGNER, Hamburg, Germany, assignor to The Superheater Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 3, 1924. Serial No. 696,463. 7 Claims. (Cl. 105—36.)

1. In a condensing system for steam locomotives, an enclosing shell or body defining a chamber located adjacent to the front of said locomotive, said shell being provided at the front thereof with an unobstructed aperture in communication with said chamber, whereby the forward travel of the locomotive will cause a current of cooling air to be forced into said chamber, and the side walls of said shell being provided with apertures communicating with said chamber whereby the outside air currents due to the motion of said locomotive will produce a suction effect upon the air passing through said front aperture to said chamber, and a condenser located within said chamber adjacent to said side apertures.



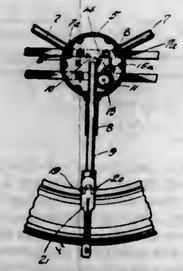
1,570,107. CIRCUIT-CONTROLLING MEANS FOR SIGNALING DEVICES. LAWRENCE H. WALSH, Chicago, Ill. Filed June 20, 1923. Serial No. 646,708. 2 Claims. (Cl. 200—59.)

1. A signal control switch for vehicle steering mechanism including a support on the steering post; a finger arranged to move with the steering rod; a circuit closing member on the post; an operating lever connected for actuating the circuit closing member; and a hinged trip part carried by said finger for interlocking with the operating lever and finger when the steering rod is moved in one direction.



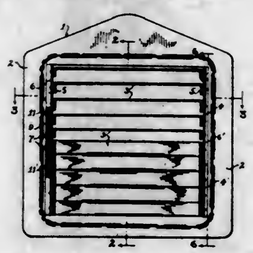
1,570,108. EXCAVATOR CRANE. LEWIS WEHNER, Milwaukee, Wis., assignor to Pawling and Harnischfeger Company, West Milwaukee, Wis., a Corporation of Wisconsin. Filed Feb. 20, 1922. Serial No. 537,676. 11 Claims. (Cl. 214—135.)

1. In an excavator crane, the combination with a dipper arm and a constant speed non-reversible motor for operating the same, of a shaft interposed between said arm and motor and driven by the latter, a power



transmitting member loosely mounted on said shaft and connected to said arm, and means arranged on said shaft for driving said member in either direction.

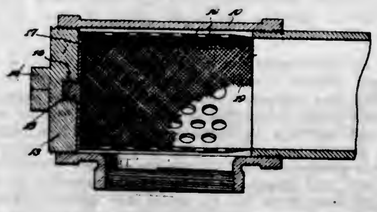
1,570,109. ALTERNATING-CURRENT MOTOR. HANS WEICHSEL, St. Louis, Mo., assignor to Wagner Electric Corporation, St. Louis, Mo., a Corporation of Delaware. Filed Nov. 26, 1923. Serial No. 676,901. 8 Claims. (Cl. 172—280.)



3. In a synchronous motor, an induced member provided with an exciting winding, means for impressing an alternating current E. M. F. on said winding at starting means for impressing a direct current E. M. F. on said winding at synchronous speed, a resistance in circuit with said winding, and an inductance in shunt with said resistance.

1,570,110. TIRE RACK. FLOYD E. WELLER, Toledo, Ohio. Filed Oct. 19, 1923. Serial No. 669,572. 1 Claim. (Cl. 224—29.)

In a tire rack, the combination of a housing, a plurality of fixed arms removably carried by said housing, a movable arm having rack teeth extendible to and from said housing, a drive gear carried by said housing and engageable with said rack teeth, locking means associated with said drive gear and operable from without said housing for locking said movable arm in predetermined position, and tire engaging and locking means associated with the extremity of said movable arm, and actuable to locking position upon engagement of the tire upon said rack.

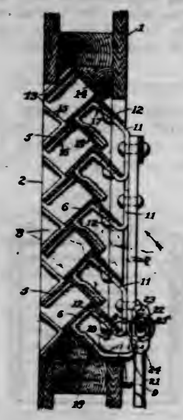


1,570,111. SHUTTER MECHANISM FOR AUTOMOBILE RADIATORS. WALTER HALPENNY WICKWARE, Ottawa, Ontario, Canada. Filed Aug. 18, 1924. Serial No. 732,881. 6 Claims. (Cl. 257—132.)

1. A shutter device for automobile radiators having in combination a plurality of groups of vanes, and means for opening and closing said groups of vanes successively, said means comprising a projecting element secured to one vane of each group, and a shiftable operating member having means thereon for engaging directly and successively the said projecting elements.

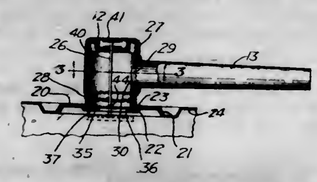
3. A shutter device for automobile radiators having shutter operating means comprising a bar having guiding slots therein, pins on some of the shutter vanes passing through said guiding slots and a plate having cam plots formed therein and embracing said pins, said slots being so shaped as to successively operate the shutter vanes.

1,570,112. PIPE TRAP. EDWARD J. WILEY, Hollidays Cove, W. Va. Filed Aug. 28, 1923. Serial No. 659,752. 3 Claims. (Cl. 210—164.)



1. In a pipe trap, the combination of a fitting open at its ends and provided at one side thereof with an outlet, a plug closing one end of the fitting and reversible from said end of the fitting to the other end thereof, and a straining member carried by the plug to extend across said outlet and having an open unobstructed end, the straining member being of such dimensions that the unobstructed end abuts the adjacent end of a pipe engaged in the end of the fitting opposite the plug when the plug is inserted.

1,570,113. CAR VENTILATOR. WILLIAM E. WINE, Toledo, Ohio. Filed Mar. 31, 1924. Serial No. 703,170. 16 Claims. (Cl. 98—31.)

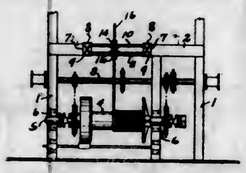


1. A ventilator comprising a frame, cross bars each formed of a plate bent in the shape of an angle and the apex of each cross bar lying in a vertical plane,

cooperating correspondingly formed slidable shutters arranged to move towards and away from the legs of the cooperating cross bars, the movement of the shutters

being in a plane extending across the frame of the ventilator and the movement of the shutters opening and closing the spaces between said cross bars.

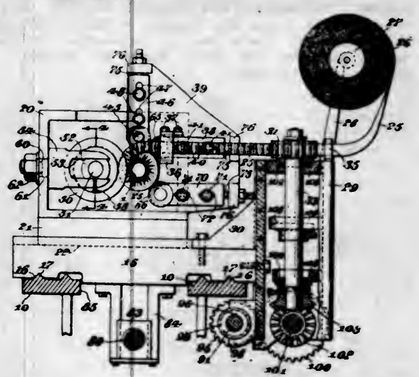
1,570,114. SWING-SPOUT VALVE. OZRO N. WISWELL, Los Angeles, Calif., assignor to Swingspout Measure Co., a Corporation of California. Filed May 31, 1922. Serial No. 564,748. 2 Claims. (Cl. 221—26.)



1. An attachment for a container comprising: a stationary tubular member adapted to be secured in an opening of a container and having a discharge opening; a rotatable cap telescopically engaging said tubular member and having a discharge opening adapted to register with the discharge opening of said tubular member; a closure member closing the passage through said tubular member; and means for changing the position of said closure member so as to render the passage through said tubular member open when force is applied to said means, said tubular member and said cap, said rod having an enlarged head protected by a depression in said cap.

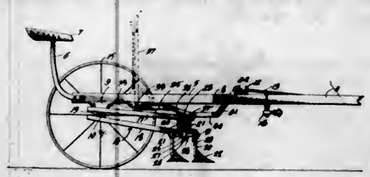
1,570,115. STORAGE BATTERY. WILLIAM H. WOOD, South Euclid, Ohio. Filed Aug. 7, 1922. Serial No. 580,319. 12 Claims. (Cl. 136—77.)

1. A fully charged negative plate for a storage battery consisting of spongy metllic lead having magnesium sulphate in its pores.



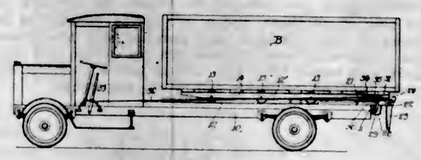
1,570,116. LINE GUIDE. MILES F. YOUNT, Beaumont, Tex. Filed June 11, 1925. Serial No. 36,427. 3 Claims. (Cl. 242—158.)

1. A line guide including a pair of bearing members spaced apart, an oblong bearing at the free end of each bearing member and an oblong bearing intermediate the ends of each bearing member, bearing rods



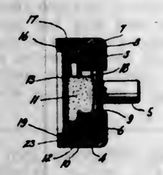
whose ends are adjustably mounted in the respective bearings a rotatable guide mounted on each rod, each guide being movable lengthwise with respect to its rods.

1,570,117. APPARATUS FOR APPLYING HELICAL RIBS TO PIPES. HANS J. ZIMMERMANN, Mannheim, Germany, assignor to Schutte and Koerting Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 30, 1922. Serial No. 609,797. 5 Claims. (Cl. 153—64.5.)



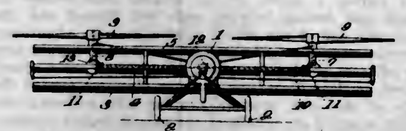
1. In an apparatus for coiling bands on pipes, the combination, with a rotary pipe support, of means for corrugating a band from edge to edge, means for feeding said band to a pipe mounted on said support, and means for stretching the outer edge portion of said band to remove the corrugations therefrom as it is wound upon said pipe.

1,570,118. COTTON BLOCKER OR CHOPPER. JAMES W. BAIRD, Beeville, Tex. Filed Apr. 11, 1924. Serial No. 705,889. 2 Claims. (Cl. 97—23.)



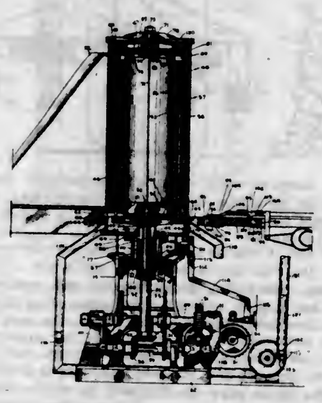
1. An agricultural implement of the class described including a wheeled frame, a plurality of arms pivoted on the frame, a plow beam extending transversely of the frame and attached to the arms, a plurality of plows mounted below the plow beam and attached thereto, means for raising and lowering the plow beam by pivoting the arms, a second beam mounted on the frame, means for bracing the second beam, and a plurality of links arranged in pairs pivoted to the plow beam and to the second beam.

1,570,119. REMOVABLE-BODY TRUCK. WILLIAM M. BAXTER, Chicago, Ill., assignor to Ideal Removable Body Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 2, 1923. Serial No. 610,245. 18 Claims. (Cl. 214—38.)



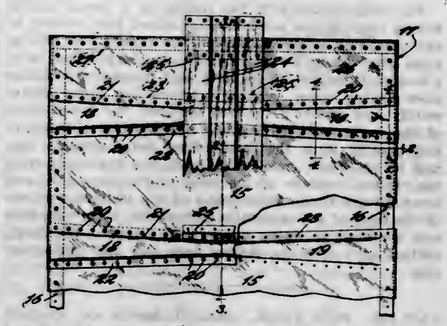
1. In a removable body truck, the combination of a chassis frame, and a track thereon, said track including a rear pivoted section adapted to be automatically elevated into engagement with the front edge of a platform upon engagement of said section with said platform and constituting a skid for the travel of the truck body between said chassis frame and platform.

1,570,120. TELEPHONE DEVICE. ARTHUR F. BENNETT, Richmond Hill, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 6, 1923. Serial No. 678,941. 5 Claims. (Cl. 179—122.)



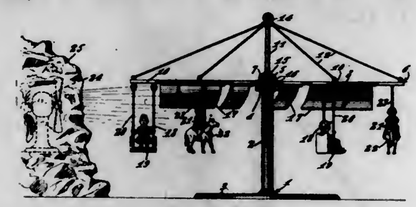
1. In a telephone transmitter, a container for comminuted material, a resilient member located within said container in contact with the comminuted material, and a mounting for said member adapted to change the shape of said member in response to the heat variations in said comminuted material.

1,570,121. HELICOPTER. HENRY A. BERLINER, Washington, D. C. Filed Nov. 9, 1923. Serial No. 673,714. 4 Claims. (Cl. 244—15.)



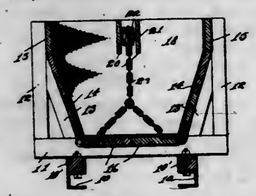
1. A helicopter including in combination, a fuselage, oppositely rotating lifting propellers spaced from each other and having their axes normally parallel and perpendicular to a plane passing longitudinally and centrally from the fuselage, means for rotating said propellers, and means for tilting the axes of the propellers relative to each other in opposite directions and in a direction at right angles to the plane containing the axes of the propellers for creating a turning torque in a horizontal plane.

1,570,122. CAN-END DRIER. DAVID LOGAN BISSET, Montreal, Quebec, Canada, assignor to A. R. Whittal Can Company, Limited, Montreal, Quebec, Canada. Filed July 9, 1924. Serial No. 725,027. 8 Claims. (Cl. 34—11.)



1. In a can end drier, an inner cylindrical casing and an outer cylindrical casing forming an annular drying chamber therebetween and having external and internal threads respectively forming a spiral path through said chamber, a vertical shaft suitably driven at the lower end, a frame mounted on the upper end of said shaft and driven thereby and formed of upper and lower spiders connected by rods, extending through said chamber at intervals and adapted to engage the can ends, rigid supports for said outer and said inner casings, and means for circulating hot air in forced draft including said annular chamber.

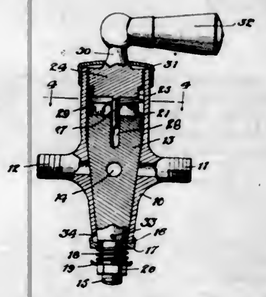
1,570,123. CAR ROOF. CHARLES DAVID BONSALL, Pittsburgh, Pa., assignor to P. H. Murphy Company, New Kensington, Pa., a Corporation of Pennsylvania. Filed Nov. 21, 1921. Serial No. 516,600. 13 Claims. (Cl. 108—5.4.)



13. In a metal car roof, a plurality of roof sheets extending from side to side, each sheet having one edge overlapping the edge of the adjacent sheet and parallel ribs in each sheet extending from opposite sides of the sheet, the ribs on the upper side of the overlap extending upward and the ribs on the underside extending downward.

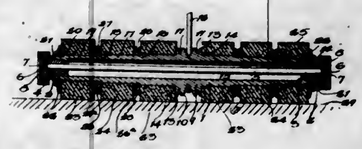
1,570,124. FLYING JENNY. WALTER R. BRANHAM, Fort Valley, Ga. Filed Apr. 7, 1924. Serial No. 704,789. 1 Claim. (Cl. 272—31.)

A toy merry-go-round comprising a pedestal provided adjacent to its upper end with an outstanding flange, the pedestal terminating at its upper end in a stub shaft, disposed above the flanges, a rotatable member comprising a hub, a rim and spokes connecting the hub with the rim, the rim approximating in width the length of the spokes, outstanding projections on the periphery of the rim, and a post carried by and upstanding from the hub, the hub being mounted rotatably on the stub shaft, the hub cooperating with the flange to support the rotatable member; guys extended between the upper portion of the post and the said outstanding projections of the rim figure supports disposed below the rotatable member and carried by the said outstanding projections of the rim, and means for rotating the rotatable member, said means embodying depending vanes carried by the rim of the rotatable member.



1,570,125. DUMPING-WAGON BOX. WILLIAM C. BRUHN and HERMAN C. BRUHN, Spirit Lake, Iowa. Filed Feb. 7. 1924. Serial No. 691,304. 1 Claim. (Cl. 298—35.)

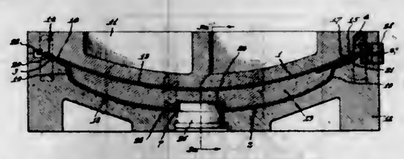
The combination with the chassis of a motor vehicle having longitudinal bars, of longitudinal bars secured to and extending longitudinally on the chassis bars, transverse sills secured on the second-named longitudinal bars, a receptacle erected on the sills, said receptacle including sides having upper vertical portions and lower downwardly and inwardly inclined portions, the lower edges of the lower portions resting on the cross sills above and parallel with the longitudinal bars, uprights carried by the outer ends of the sills and connected with the vertical portions of the sides of the receptacle, and doors hinged to the lower edges of the inclined portions of the sides of the receptacle between the transverse sills and arranged to swing downwardly between the longitudinal bars and the chassis bars and said transverse sills.



1,570,126. STOP COCK. JOHN H. BRUHN and AKACIUS E. MATZ, Dubuque, Iowa. Filed Feb. 27, 1925. Serial No. 12,014. 4 Claims. (Cl. 251—99.)

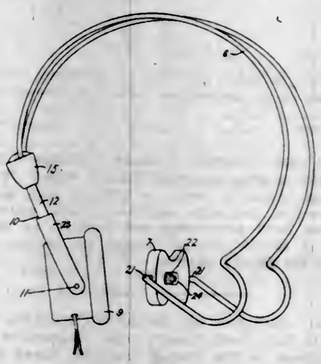
2. In a device of the character described, a valve casing, a plug rotatively mounted therein and adapted to cover and uncover the ports thereof, said plug having its upper end provided with a reduced extension, whereby a peripherally extending shoulder is formed, said extension being slotted to form two abutments, said plug being provided with a centrally arranged opening, a key section arranged above said plug and within said casing, said section being provided with a downwardly extending complementary abutment having its ends spaced from the periphery of the section thereby forming a shoulder adjacent said periphery, said complementary abutment being provided with a centrally arranged depending guide pin adapted to engage the opening in the plug at all times, and a coil spring adapted to be seated on said shoulders and surround said abutments, and adapted to normally hold the key section and plug apart, said spring being held against lateral displacement by the walls of the casing and by the abutments.

4. In a device of the character described, a valve casing, a plug rotatively arranged therein, a key section arranged adjacent said plug and adapted to interlock therewith, a coil spring adapted to engage the plug and key section adjacent their respective peripheries to normally hold them apart, and a guide pin carried by the key section and engaging an opening in the plug at all times.



1,570,127. FLOOR CLEANING AND POLISHING DEVICE. EUGENE J. BUACH, Memphis, Tenn. Filed Sept. 11, 1923. Serial No. 662,124. 1 Claim. (Cl. 15—230.)

A cleaning and polishing roller comprising a tubular core having a pulley portion located intermediate its length and having between each end thereof and the proximate end of the pulley portion a series of integral portions stepped in outer diameter and each merged into the adjacent portion by an annular shoulder, said second named portions decreasing in outer diameter toward the ends of the core, annular cleaning and polishing elements mounted on certain of the second named portions, annular spacing members spacing adjacent cleaning and polishing elements apart, and means engaging with the extreme end portions of the core to retain said cleaning and polishing elements and the spacing members against axial movement on the core.

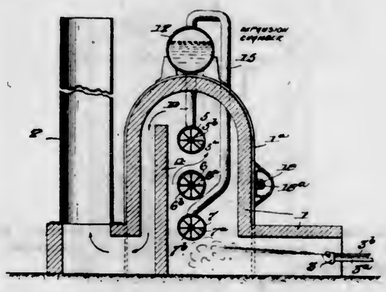


1,570,128. PROCESS OF MAKING WATER BAGS. HOWARD G. CARTER, Detroit, Mich. Filed June 28, 1924. Serial No. 722,940. 9 Claims. (Cl. 18—58.)

2. The method of manufacturing a water bag which consists in the moulding of a bag with an annular inwardly flanged filler opening in one side thereof and a temporary opening in the end of said bag, reversing said bag through said end opening, attaching a filler ring to

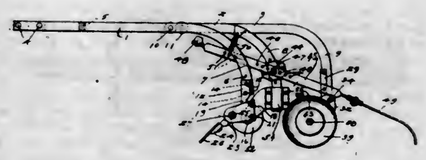
the flange of said filler opening, restoring the bag to normal non-reversed condition through said end opening, and thereafter sealing said end opening.

1,570,129. SUPPORT FOR HEAD TELEPHONE RECEIVERS. HARRY R. CLARKE, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 8, 1922. Serial No. 605,625. 5 Claims. (Cl. 179—156.)



1. A support for telephone receivers comprising a receiver fork, a thimble rotatably connected to said receiver fork, means engaging said receiver fork to prevent the removal of said thimble, said means and said thimble mutually locking each other, and means rigidly securing said thimble to said head band.

1,570,130. HOOK AND EYE. WILLIAM F. CONAHAN, Aurora, Ill. Filed Apr. 6, 1925. Serial No. 21,129. 1 Claim. (Cl. 24—230.)

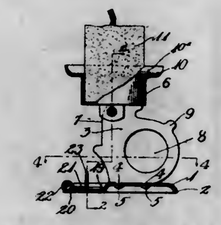


A fastener including a hook section and an eye section, said eye section having an opening, said eye section having an integral arm bent upwardly and forwardly, the forward end of the arm terminating at a point an appreciable distance beyond the forward edge of the eye section, a hook section, a tongue stamped from the body portion and depending therefrom, said tongue adapted to fit in the opening to connect the hook and eye sections, said arm engaging the hook section to force the tongue within the opening, and said hook section having upstanding lateral flanges adapted to embrace the side edges of the arm throughout a portion of the length of the arm, to guide the hook section into the eye section.

1,570,131. TREATING PETROLEUM OILS. ROLAND B. DAY, Lansdowne, Pa. Filed Aug. 5, 1921. Serial No. 489,936. 3 Claims. (Cl. 196—68.)

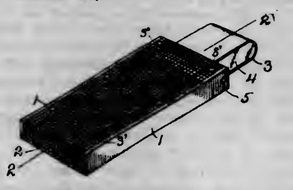
1. In the production of low boiling hydrocarbons from high boiling hydrocarbon oils, the process which comprises maintaining a first treatment chamber constantly full of liquid oil, maintaining a pool of oil in a second chamber and at a level above that of said first chamber and constantly connected by a communicating body of liquid with the oil of said first chamber, said communicating body of liquid extending from the interior and top of said first chamber to the interior and bottom of said second chamber, applying heat to the exterior of said first chamber sufficient to crack some of the oil therein, and leading off aeriform products from above said pool of oil, the even heating of liquid within said first treatment chamber being effected and the formation of carbon on the inner surface of the walls of said first chamber being prevented solely by violently agitating the liquid material continuously during the application of heat to said first chamber.

1,570,132. CULTIVATOR ATTACHMENT. SAMUEL DEVENBAUGH, Lagrange, Ind. Filed Aug. 13, 1923. Serial No. 657,124. 2 Claims. (Cl. 97—5.)



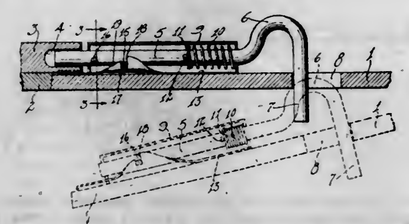
1. An attachment for agricultural machines comprising in combination with the frame, a beam having a rearwardly and downwardly curved extension, a land wheel adjustably mounted on the lower end of said curved extension, a rake arm pivoted upon said extension to swing in a vertical plane, means for adjusting the pivot point of said arm longitudinally thereof, a rake carried on the rear end of said arm, and means for yieldingly maintaining said rake in engagement with the ground in the rear of said machine.

1,570,133. CANDLESTICK. FRANK DI BELLA, New York, N. Y. Filed June 4, 1925. Serial No. 34,907. 4 Claims. (Cl. 67—23.)



1. A candle stick comprising a base, a plate secured thereto and rising therefrom in a vertical plane, said plate having a horizontal upper edge and a vertical edge at right angles to said upper edge, and a candle socket having a downwardly projecting lug pivoted to said plate

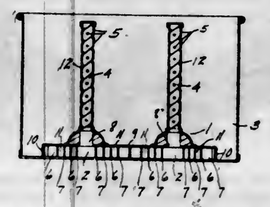
in the angle between said two edges, the bottom of said socket being normally in contact with said upper edge but being adapted also to contact with the other edge



when the base is swung to an upright position, said base having means whereby it may be suspended in upright position.

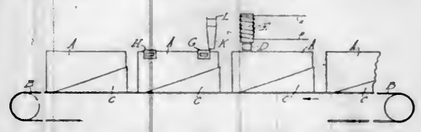
1,570,134. INSECT CONTAINER. JACOB F. DIEMER, Liberty, Mo. Filed Oct. 5, 1925. Serial No. 60,486. 6 Claims. (Cl. 6—9.)

2. An insect container comprising a casing having an opening, and a U-shaped food receptacle slidable in said opening to and from a position in which the closed end of the receptacle will close said opening.



1,570,135. AUTOMATIC LATCH. GEORGE C. EMMERT, Mount Morris, Ill. Filed Mar. 8, 1924. Serial No. 697,892. 3 Claims. (Cl. 292—334.)

1. An automatic latch comprising a casing, a spring pressed bolt slidably carried by said casing, lugs carried by said bolt, a bolt retaining member having a groove adapted to receive said bolt, the walls of said groove having notches therein, said notches being adapted to receive said lugs to hold said bolt in retracted position, said retaining member having a portion projecting beyond said casing, this portion being swung into operative position when said lugs are received in said notches.

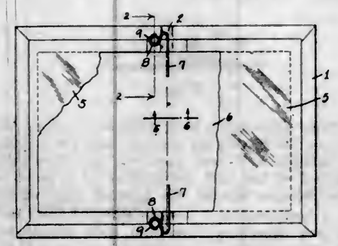


1,570,136. WASHBOILER. ADAM E. FISHER, St. Louis, Mo. Filed Oct. 22, 1923. Serial No. 670,046. 1 Claim. (Cl. 68—30.)

In a clothes washing device embodying flat basal steam forming chambers having percolating tubes rising therefrom; a plurality of channel strips mounted edgewise and spirally intercoiled in substantially parallel relation within the basal chamber beneath each tube, the outer ends of the strips being separated and flared

straight towards separate corners of each basal chamber and the inner ends being spirally directed towards the base of the percolating tube.

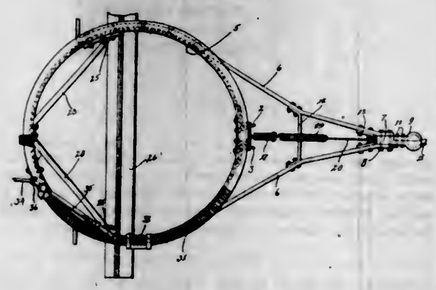
1,570,137. PROCESS OF GLAZING BRICK. ANDREW FISCHER, Jr., Chicago, Ill. Filed June 21, 1924. Serial No. 721,497. 3 Claims. (Cl. 91—72.)



1. The herein described steps in a process of glazing brick which consists in pre-heating the surface of a normally non-conducting brick to bring it into condition for conducting electricity, applying glazing material to the heated brick and fusing said material by the passage of an electric current through the surface of the brick and the glazing material.

1,570,138. PROCESS OF TREATING FILTER BAGS. JOHN D. GAT, North Canton, Ohio, assignor, by mesne assignments, to The Hoover Company, North Canton, Ohio, a Corporation of Ohio. Filed Apr. 30, 1921. Serial No. 465,893. 1 Claim. (Cl. 183—44.)

The process of rendering suction sweeper bags dust retaining which consists in subjecting the bag to a solution of approximately 100 lbs. of petrolatum and 60 lbs. of paraffin and 150 gallons of gasoline then evaporating the gasoline.



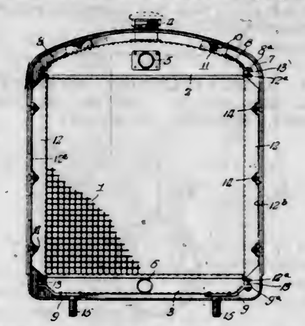
1,570,139. DISPLAY HOLDER. GEORGE E. GATES, Comstock, Mich. Filed Nov. 13, 1922. Serial No. 600,550. 1 Claim. (Cl. 129—40.)

A double folder of boards with a hinged center, transparent sheets for each side retained by the cover material at the edges and forming pockets open at their inner edges, hooks secured to one of the boards at the top and bottom of the said hinge with projecting fingers

parallel to and within the hinge for receiving a folded menu or card, each of said hooks being formed with an eye and being retained by an eyelet therethrough, as specified.

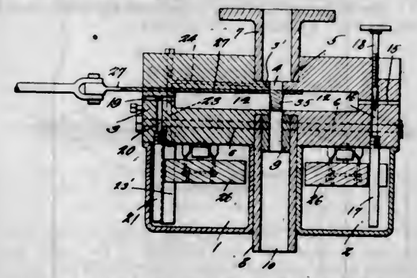
1,570,140. ROAD GRADER. CLARENCE EUGENE GILBERT, Aberdeen, S. Dak. Filed May 15, 1925. Serial No. 30,581. 5 Claims. (Cl. 37—156.)

1. A road grader of the character described comprising a frame including a split annulus, a circle rotatably mounted in said split annulus, a grader cutting edge carried by said circle, means for normally contracting said split annulus so as to frictionally engage with said circle, and manually opesated means for rotating said circle with respect to said split annulus when said split annulus is expanded.



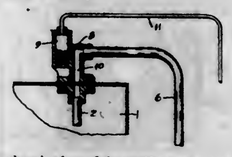
1,570,141. HAIR WAVER. JOSEPH GLANTZ, New York, N. Y. Filed Dec. 3, 1924. Serial No. 753,629. 1 Claim. (Cl. 132—38.)

A hair waver comprising a plate having an offset portion, a plurality of divergent prong elements integral with said offset portion adapted to enter the hair to be waved, a second plate hingedly engaged with said first named plate, said second plate being offset to fold closely adjacent the first plate which the prongs are received together with the hair thereon, said plate and prongs being curved, to conform to a person's head, a spring normally pressing said prongs towards said plate, and an angular lug on the second plate constituting means for manipulating said plate to release the prongs.



1,570,142. RADIATOR FOR MOTOR VEHICLES. JOSEPH D. HARRIS and TALMADGE M. DALGARN, Detroit, Mich. Filed Apr. 22, 1921. Serial No. 463,561. 6 Claims. (Cl. 257—125.)

1. A radiator for motor vehicles, comprising an outer casing or shell, upper and lower tanks and an interposed core located in said shell, said core being secured to said tanks, brackets carried by said tanks at the ends thereof, vertical strips extending between said brackets at the sides of the core but having no connection therewith, and means for releasably clamping the ends of said strips to said brackets, said means on clamping the strips



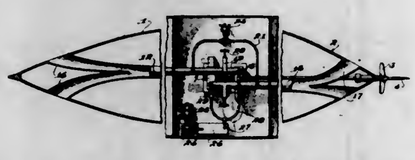
to the brackets acting to draw the tanks and core tightly together, said strips being secured to the sides of said shell for holding the assembled core and tanks therein.

1,570,143. CARBURETOR. WILLIAM A. HEIDE, Detroit, Mich. Filed Oct. 1, 1919. Serial No. 327,777. 1 Claim. (Cl. 261—18.)

In a carburetor the combination with separate fuel bowls and blocks each having a pocket communicating with one of the bowls, of means for admitting air to the pockets, a conduit between the blocks having a slot in its walls, a fuel controlling throttle movable transversely of the slot and within the pockets, there being spaced fuel openings in the throttle either one of which is movable into register with the slot, and a rib carried by the throttle and movable therewith into either of the pockets to close communication between said pocket and the slot.

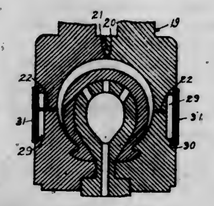
1,570,144. PRESSURE-CONTROLLED TEMPERATURE REGULATOR FOR ARTIFICIAL REFRIGERATORS. FRED J. HEIDEMAN, Detroit, Mich., assignor to The Freezerator Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 21, 1923. Serial No. 620,548. 2 Claims. (Cl. 62—4.)

1. In a mechanical refrigerating apparatus, a circulatory system for a refrigerant, said system including an expansion coil, a pumping unit for propelling the refrigerant through said system, an outlet fitting for



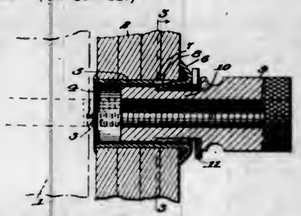
said coil chambered to form a receptacle for a fluid highly responsive expansively to a temperature increase, a pressure-responsive device exercising control of said pumping unit and a fluid duct connecting said receptacle to said pressure responsive device.

1,570,145. LIGHT-REFLECTING ORNAMENT. HUGO HELLER, Milwaukee, Wis. Filed Mar. 20, 1925. Serial No. 16,945. 16 Claims. (Cl. 41—10.)



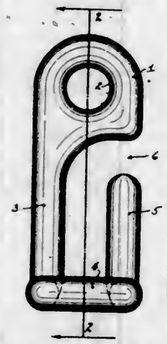
1. As a new article of manufacture, a Chirstmas tree ornament provided with a body fashioned of metallic foil having its surface decorated with color and provided with means for supporting it from the branch of a Christmas tree.

1,570,146. MARINE PROPULSION. JULIAN P. HENDRICKSON, Chehalis, Wash. Filed May 18, 1925. Serial No. 31,138. 5 Claims. (Cl. 115—34.)



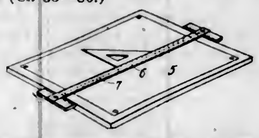
1. In a marine vehicle, injector means therein opening onto the bow and stern portions of the same, fluid operable means communicating with said injector means and adapted to be selectively connected to the vehicle propeller shaft, a source of compressed air within the vehicle connected to the inner ends of each of said injectors, means for supplying compressed air to said source and maintaining the pressure thereof, and other means connected to the inner portions of said injectors for maintaining a partial vacuum therein, at times.

1,570,147. MOLD. DANIEL EDWARD HENNESSY, Milwaukee, Wis., assignor, by mesne assignments, to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Aug. 19, 1921, Serial No. 493,591. Renewed Feb. 27, 1924. 15 Claims. (Cl. 18—42.)



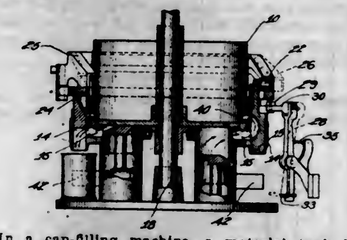
1. In combination, a mold provided with vents opening through a face thereof, and means adapted to segregate said vents.

1,570,148. FASTENER. VON H. HERR, Philadelphia, Pa., assignor of one-third to Charles W. Herr, one-third to Frank H. Mattingly, and one-third to Robert Y. Willett. Filed Apr. 27, 1925. Serial No. 26,160. 4 Claims. (Cl. 85—32.)



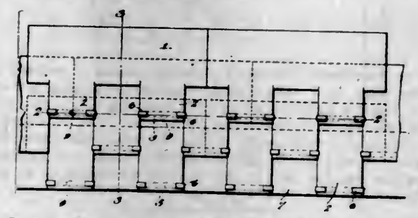
1. A fastener comprising a bushing to be secured in a member to be fastened, the bushing formed with inwardly and rearwardly projecting tongues struck therefrom, a sleeve nut swivelled in the bushing to engage a mating member projecting from a support and means formed in the sleeve nut to receive said tongues.

1,570,149. SAFETY HOOK. GEORGE F. HICKOK, San Francisco, Calif. Filed June 27, 1925. Serial No. 39,936. 2 Claims. (Cl. 24—123.)



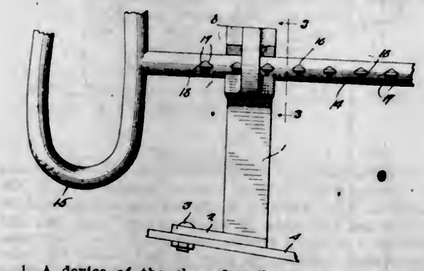
1. A safety hook formed from a single bar of metal, said bar having an attaching head formed at and offset from one end, and the remainder of said bar being bent to a U-shape, the bight of said U-shape being bent at right angles to its legs, and the free leg thereof terminating at a distance from said head equal to the space between said legs.

1,570,150. T SQUARE. SAMUEL S. HINDS, Brooklyn, N. Y. Filed June 26, 1923. Serial No. 647,864. 1 Claim. (Cl. 33—80.)



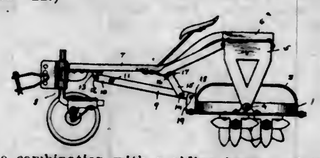
A drawing instrument of the class described comprising a ruler graduated in opposite directions along its opposed edges respectively and having a series of apertures therethrough at different points throughout its length, and a cross head at each end of said ruler one of said cross heads being adapted to be positioned at any of said points to accommodate different size drawing boards.

1,570,151. CAN-FILLING MACHINE. AUGUST HOLMQUIST, Hoopeston, Ill., assignor, by mesne assignments, to Sprague-Sells Corporation, Hoopeston, Ill. Filed Apr. 26, 1920. Serial No. 376,535. 14 Claims. (Cl. 226—97.)



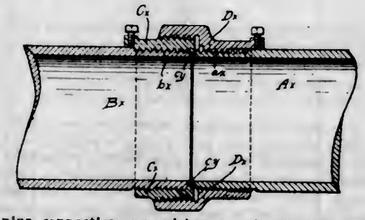
1. In a can-filling machine, a material tank having apertures therein, measuring devices adapted to be filled therefrom, a cut-off plate to open and close said apertures, means for filling cans from said measuring devices, and means normally operating, upon the absence of a can, to permit the material in a measuring device to be forced back into said tank, while the aperture through which the material entered said device is closed by said cut-off plate.

1,570,152. ROOF COVERING. JAMES ELMER HOOKER, Tampa, Fla. Filed Aug. 26, 1925. Serial No. 52,601. 5 Claims. (Cl. 108—8.)



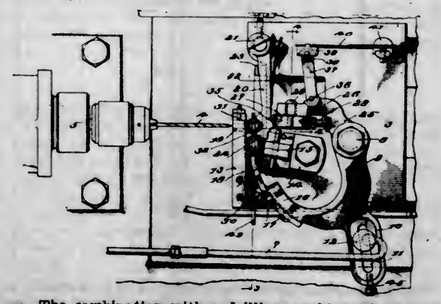
5. A roofing unit comprising a shingle having an extending flap portion and a locking strip attachable to a support underneath said flap portion and having end portions adapted to be bent across the edges of the flap portion and onto the flap portion to hold it in place.

1,570,153. OPERATING MEMBER. MAURICE R. HORRELL, Chanute, Kans., assignor of two-thirds to The Western Drilling Tool & Supply Co., Chanute, Kans. Filed Sept. 14, 1925. Serial No. 56,298. 2 Claims. (Cl. 74—39.)



1. A device of the class described, comprising a support having an opening provided with an extension, an operating rod slidable and rotatable in the opening and having a lateral projection adapted to pass through the extension, the suport having a seat wherein the projection is adapted to be lodged, the support having an inclined surface over which the projection rides when the operating rod is rotated to engage the projection in the seat.

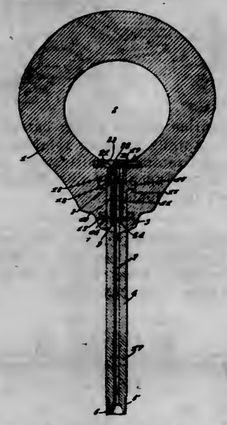
1,570,154. HARROW. OLOF H. JOHNSON, Duluth, Minn. Filed June 1, 1925. Serial No. 33,885. 2 Claims. (Cl. 55—11.)



1. The combination with a riding harrow of the class described, of a pivotally mounted rotatable frame carrying independently rotatable cultivating elements, said frame having runners upon one side thereof for selective engagement with the ground.

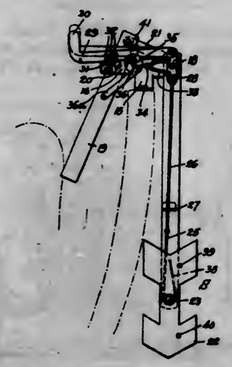
1,570,155. PIPE CONNECTION. VICTOR KARBOWSKI, Chicago, Ill., assignor of one-half to Charles Laskowski, Baltimore, Md. Filed Aug. 9, 1924. Serial No. 731,114. 1 Claim. (Cl. 285—146.)

A pipe connection comprising a pair of pipe sections each having a standard threaded end, a sleeve arranged to be screwed on the end of one section and having a portion of its exterior surface threaded, a union having a portion threaded internally to engage the end of the other section, and being provided with another portion threaded to engage the exterior threads of said sleeve, said sleeve having an integral inwardly extending annular flange adapted to close the space between the pipe ends, said inwardly extending annular flange being pressed upon by the ends of the pipe sections when the parts are connected, and constituting a packing ring for preventing leakage.



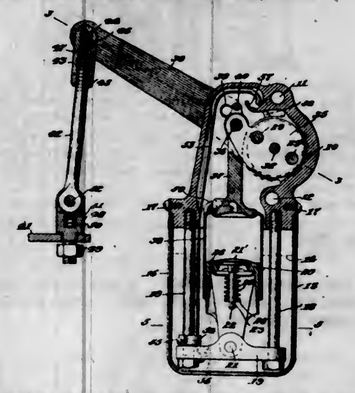
1,570,156. DRILLING FIXTURE. HARRY T. KINGSBURY and EDWARD J. KINGSBURY, Keene, N. H. Filed Apr. 3, 1923. Serial No. 629,717. 22 Claims. (Cl. 77—5.)

1. The combination with a drilling machine, of a work support, a guide carried by said support, a clamping member adjacent said guide, and means operated by the



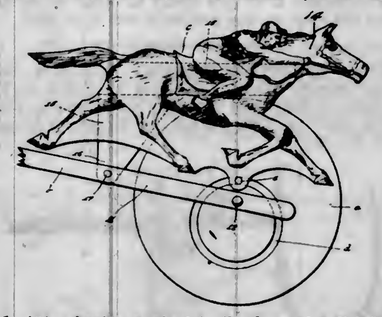
drilling machine for operating the clamping member during the forward movement of the drill for holding the nipple and means carried by the clamping member for discharging the nipple on the rearward movement of the drill.

1,570,157. VALVED AIR BAG. CHRISTOPHER B. KNEPPER, Akron, Ohio. Filed Mar. 18, 1925. Serial No. 16,500. 8 Claims. (Cl. 18—45.)



1. A valved air bag comprising a hollow flexible body portion, a tubular valve stem having a laterally extending flange at its inner end, said stem having its flanged inner terminal portion embedded in said body portion at a point removed from the inner periphery of the latter, a flanged cap seated in and projecting from the inner end of said stem, said cap embedded in said body portion and having a portion of one face of its flange extended from said inner periphery, a headed tubular element seating in said cap and threadedly engaging with said stem for tghtening and coupling said cap relative to the stem, the opening formed by said element providing a continuation of the opening formed by the stem for supplying air to said body portion.

1,570,158. DIRECTION SIGNAL. NORMAN W. KNIGHT, Los Angeles, Calif. Filed Mar. 1, 1924. Serial No. 696,390. 7 Claims. (Cl. 116—51.)

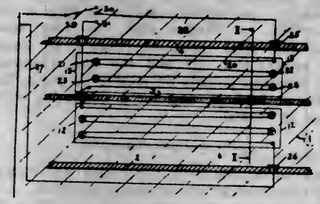


1. A direction signal comprising an arm normally occupying a non-signaling position and adapted to be moved to a signaling position, a semaphore movable on the arm to occupy various signaling positions, adjustable means by which the semaphore is moved to any desired signaling position upon movement of the arm from non-signaling to signaling position, and means automatically controlling the adjustable means to cause the semaphore to occupy a predetermined signaling position upon a succeeding movement of arm from non-signaling to signaling position only when the adjustable means has not been previously adjusted to cause the semaphore to occupy any other than the predetermined position.

1,570,159. SHOCK DIFFUSER. FRANK F. LANDIS, Waynesboro, Pa. Filed Nov. 13, 1924. Serial No. 749,760. 30 Claims. (Cl. 188—88.)

1. In a shock diffuser, a chamber adapted to be fixed to the body of a vehicle said chamber containing a body of liquid, a fixed depending yoke extending below the level of the liquid, a piston on said fixed yoke, a movable cylinder for said piston having its lower rim below the level of said liquid, and connections from said cylinder to the running gear of the vehicle, substantially as set forth.

1,570,160. FIGURE WHEELED TOY. FENELON MCCOLLUM, Jr., Mansfield Depot, Conn. Filed Nov. 8, 1923. Serial No. 673,587. 3 Claims. (Cl. 46—45.)

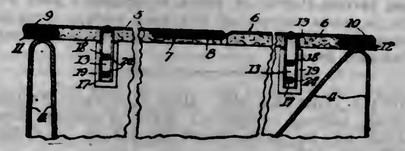


1. A toy having a wheel in the form of a disk having an eccentric cut in each side, a bushing fixed in the center of said wheel, a handle having a bifurcated or forked end, the arms of which straddle said disk and bushing, a sleeve of greater axial length than said bushing clamped between the arms of said handle and upon which said wheel and bushing are journaled, a figure of an animal straddling said disk and resting upon said eccentrices, said figure having a part extending down between the arms of said handle rearwardly of said disk, and a pin for pivotally connecting the part to said arms of said handle.

1,570,161. MOTOR FUEL. RALPH H. MCKEE, New York, N. Y. Filed Nov. 19, 1923. Serial No. 675,728. 8 Claims. (Cl. 44—9.)

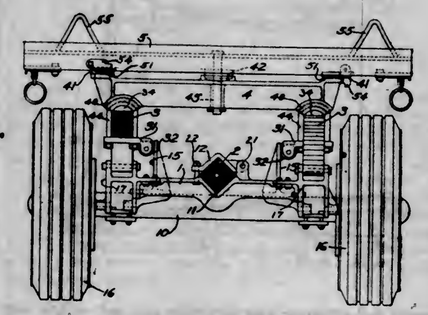
1. A mixed fuel for internal combustion engines comprising a homogeneous mixture of the gasoline-like fraction of shale oil, alcohol and ethylene.

1,570,162. MEANS AND METHOD FOR WARMING FLOORS. JOHN W. MCKEEHAN, Contra Costa County, and GEORGE J. HENRY, San Francisco, Calif. Filed Nov. 18, 1922. Serial No. 600,537. 13 Claims. (Cl. 219—19.)



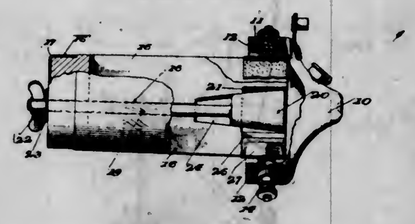
2. An electric heater adapted to heat the floors of rooms and comprising a casing adapted to be fixed to the underside of a floor and an electric resistance within said casing comprising a plurality of loops in a plane substantially parallel with the floor.

1,570,163. NAPKIN MOISTENER. FRANK H. MATTINGLY, Washington, D. C., assignor of one-third to Albert E. Zintl, Woodbury, N. J., and one-third to Robert V. Willett, Washington, D. C. Filed Feb. 28, 1925. Serial No. 12,462. 5 Claims. (Cl. 62—1.)



1. A receptacle for the purpose set forth containing water and formed with rupturable collapsible walls, whereas when the walls are collapsed the water will percolate through the ruptured portion of the walls.

1,570,164. TEMPORARY COVER FOR BATHTUBS. LEO MAYER, Chicago, Ill. Filed Mar. 9, 1925. Serial No. 13,978. 8 Claims. (Cl. 4—173.)

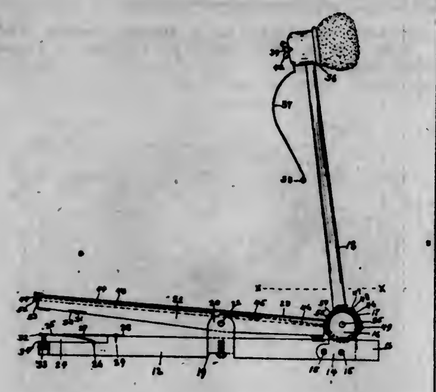


1. In a cover for bath tubs and the like, U-shaped ribs projecting from the cover for guiding and retaining said cover with respect to the opening of the bath tub to be covered, and a movable member of said rib projections for adapting the cover to be guided and retained with respect to bath tubs of varying sized openings.

1,570,165. TRAILER. IRA J. MERRILL, Seattle, Wash. Filed July 23, 1923. Serial No. 653,190. 11 Claims. (Cl. 280—33.4.)

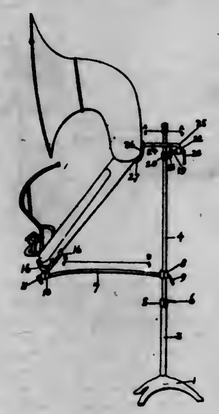
1. The combination with a bolster, springs under each end of the bolster and a transversely curved sliding connection between each of the springs and the bolster, the axes of curvature thereof extending in a longitudinal direction and positioned well below the said connection.

1,570,166. GRINDING TOOL. ALONSO MORRIS, Sabina, Ohio. Filed June 1, 1923. Serial No. 642,835. 4 Claims. (Cl. 51—194.)



1. In a device of the character described, a body, said body being split longitudinally throughout a portion of its length from a point adjacent to but spaced from one end to and through its other end, whereby one end of the boody is expansible and the other end is inexpansible, an abrasive material encircling said expansible end, and means for expanding said expansible end, said means being operable from the inexpansible end of the body.

1,570,167. PEDAL-OPERATED DRUM BEATER AND CYMBAL SOUNDER. AUGUST MORTENSEN, San Francisco, Calif., assignor to The "Frisco" Mfg. Co. Inc., San Francisco, Calif. Filed May 29, 1924. Serial No. 716,784. 2 Claims. (Cl. 84—422.)



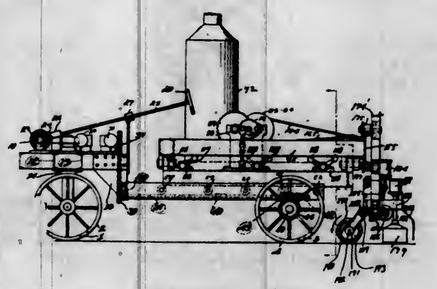
1. In a drum beater, a base having upstanding ears, an oscillatory shaft journaled between said ears, a spring actuated drum beater extending from said shaft, a treadle fulcrumed to said base, an operative connection between said shaft and said treadle, said connection comprising a flexible band, one end of said band being secured to said shaft, said band thence passing underneath said shaft and having the other end thereof secured

to adjusting means, said adjusting means consisting of a longitudinally disposed rod, a longitudinal groove provided in said treadle in which said rod operates,

means for adjusting and retaining said rod within said groove, thus normally retaining the drum beater in position of use but permitting said rod to be removed from said groove in the collapse of the drum beater.

1,570,168. MUSICAL-INSTRUMENT SUPPORT. AUGUST MORTENSEN, San Francisco, Calif., assignor to The "Frisco" Mfg. Co. Inc., San Francisco, Calif. Filed Feb. 19, 1925. Serial No. 10,382. 2 Claims. (Cl. 248—40.)

1. A device of the class described, comprising a base member, a tubular standard secured upon said base member, said standard provided with a vertically adjustable member, a horizontally disposed curved supporting member mounted on said vertically adjustable member, means for holding said curved supporting member in different positions of adjustment, a curved instrument supporting element pivotally mounted on said curved supporting member, a horizontally disposed bar member mounted on said vertically adjustable member above the said horizontally disposed curved supporting member and spaced therefrom, means for securing the bar member in different positions against movement, a horizontally disposed arm part pivotally supported by said bar member, said arm part provided with instrument supporting means, said instrument supporting means cooperating with the aforementioned curved instrument supporting elemeat to support an instrument, and operative means whereby the vertically adjustable member including the cooperating instrument supporting means connected thereto may be swung in substantially a horizontal plane.

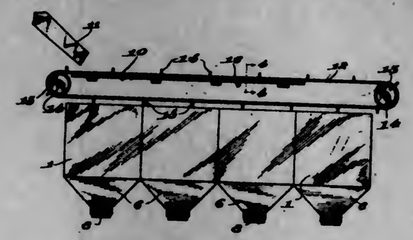


1,570,169. PLASTIC COMPOSITION, A PUTTY OR A FILLER CEMENT. MARK W. NELSON, Lincoln, and WALTER F. NELSON, College View, Nebr. Filed Jan. 9, 1925. Serial No. 1,481. 3 Claims. (Cl. 106—8.)

1. A plastic composition, adapted to form a putty or a filler cement, for window sash, the joint where the glass and the wood meet, to produce an impervious joint to water, dust, air and the like, comprising of eleven to fourteen pounds of plaster of Paris, three to five ounces of litharge, and for a cementing substance, two quars of varnish.

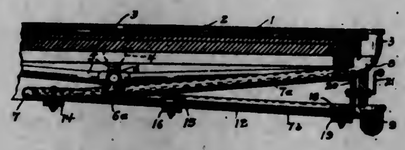
1,570,170. PROCESS FOR RECOVERING VANADIUM FROM PETROLEUM HYDROCARBONS. ALFRED OBERLE, Oak Park, Ill., assignor of one-half to Thomas E. Scofield, Kansas City, Mo. Filed June 25, 1924. Serial No. 722,309. 6 Claims. (Cl. 23—16.)

1. A process for extracting vanadium from petroleum hydrocarbons which consists in treating the hydrocarbons to drive off the volatile materials and subjecting the residue to a leaching action with a vanadium solvent fluid to recover the vanadium compounds therefrom, removing the solvent and recovering the vanadium compounds.



1,570,171. ROAD-WORKING APPARATUS. THOMAS S. O'BRIEN, Oakland, Calif., assignor to Lesser-Carson Company, a Copartnership consisting of Harry Lesser, Francis L. Carson, and Thomas S. O'Brien, San Francisco, Calif. Filed Oct. 10, 1923. Serial No. 667,666. 13 Claims. (Cl. 94—49.)

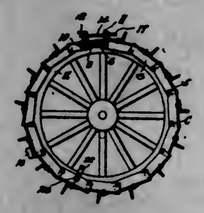
1. A road working apparatus comprising a truck, a longitudinally movable frame thereon, means to move said frame in either direction, a transversely extending beam carried thereby, a means to prepare a road surface, a frame supporting said road surface preparing means, and means to move said frame back and forth along said beam.



1,570,172. GRAVEL BIN. MURT L. O'NEIL, Warland, Mont., assignor to Robert J. O'Neil, Swissbome, Oreg. Filed July 28, 1924. Serial No. 728,774. 3 Claims. (Cl. 214—17.)

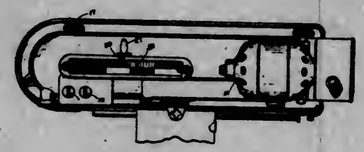
1. In a device of the class described, a plurality of open-topped bins arranged in series and in juxtaposition, a platform spaced above said bins and extending over all but one of them, an endless conveyor arranged to travel along the length of the series of bins and having

its upper run traveling over the surface of said platform and its lower run traveling over the open tops of said bins.



1,570,173. POOL-TABLE-BALL COLLECTING AND RETURNING DEVICE. EUGENE F. O'NEILL and ELMER L. KERN, Minneapolis, Minn. Filed Jan. 2, 1925. Serial No. 247. 22 Claims. (Cl. 273—11.)

1. In combination with a game table having pockets and balls adapted to be driven therein, of means for collecting the balls entering said pockets, and means combined with said last mentioned means for returning said balls successively to the top of the table.



2. A pool table comprising pockets having in combination, means for collecting the balls entering any of said pockets, and means for singly returning the last ball pocketed to the top of the table.

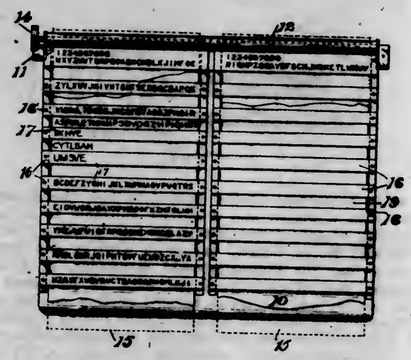
1,570,174. TRUCK TIRE TRACTION CHAIN. WILLIAM PATERSON and MAY H. PATERSON, Oakland, Calif. Filed Apr. 20, 1925. Serial No. 24,699. 4 Claims. (Cl. 301—40.)

1. In a truck tire traction chain, a series of angle plates, pivotally connected together at the ends of the perpendicular sides of said angle plates, arranged in pairs to fit around the periphery and side rims of a truck wheel, the lateral flanges of each pair of said angle plates being flush with the face of the rubber tire of a truck wheel, a transverse angle plate fixed at each of its ends to the lateral flanges of said pair of angle plates forming continuous enclosing links around the periphery and sides of the tire of said wheel, the outwardly projecting angle of said transverse angle plates mounted upon each pair of said side angle plates, forming traction grippers.

1,570,175. PRINTING MACHINE. WALTER B. PAYNE, Rochester, N. Y., assignor to The Todd Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Nov. 12, 1923. Serial No. 674,207. 6 Claims. (Cl. 197—6.2.)

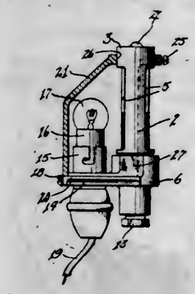
4. In a machine of the class described, the combination with a platen and a carrier shiftable to bring a plurality of type forms selectively into printing relation with said platen, manual means for shifting said carrier and a dial for indicating said movement, of a stop movable toward and from the path of movement of said carrier and having a beveled portion on one side thereof for engagement by the carrier during movement of the latter in one direction for displacing said stop, spring means normally retracting said stop, a key and a bell crank lever connecting said key and stop for advancing the latter to active position.

1,570,176. PROCESS FOR DEGASSING AND DEOXIDIZING STEEL. SAMUEL PEACOCK and NELSON E. COOK, Wheeling, W. Va. Filed Mar. 3, 1925. Serial No. 12,993. 1 Claim. (Cl. 75—49.)



The process of degassing and simultaneously deoxidising molten iron and steel metal which consists in adding to said metal anhydrous tri-sodium aluminate thereby forming compounds with any eutectoids present that melt in said metal and liberating any compounds of oxygen and carbon that are associated with said eutectoids.

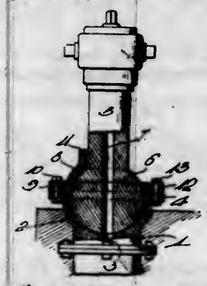
1,570,177. SANDING BLOCK. JAMES B. POINTER, Cleveland, Ohio. Filed Jan. 29, 1923. Serial No. 615,589. 1 Claim. (Cl. 51—187.)



A smoothing and finishing tool, comprising a clamping hand-hold member made of spring metal having an arched top and straight depending side walls connected by reverted spring portions, whereby a set of blades placed between said sidewalls may be held frictionally in contact in various adjusted positions, in combination with a plurality of thin metal blades adjustably mounted between said walls adapted to extend variable distances beneath the bottom edges thereof conformable with different patterns of work to be operated upon, and clamping bolts extending through said side walls and said blades adapted to positively clamp the blades when adjusted.

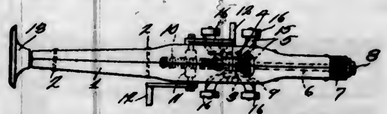
1,570,178. CODE MACHINE. FRANK PREVOST, Lead, S. Dak. Filed Dec. 13, 1923. Serial No. 680,810. 9 Claims. (Cl. 35—13.)

1. A device of the character deacribed comprising a code sheet having parallel rows of symbols thereon and an element carrying a master row of symbols to be disposed in register with separate aligned symbols of the parallel rows.



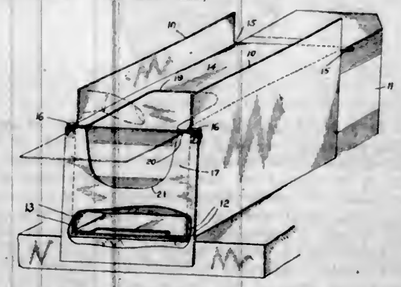
1,570,179. DEVICE FOR ILLUMINATING OIL GAUGES. MORTON D. PROUTY, ROLLIE CRAIG, CLIFFORD RAWLINGS, and HARRY CARLSON, Galva, Iowa. Filed May 16, 1924. Serial No. 713,777. 2 Claims. (Cl. 240—2.)

1. A device of the type described comprising a gauge glass, an upright supporting said gauge glass, a base member extending rearwardly of said upright, an incandescent lamp supported on said base member at one side of said gauge glass, a combined protector and reflector element arranged to seat closely upon said base member and to encompass said lamp, said element being further formed to encompass said upright at the upper end thereof, whereby said element may not move out of engagement with respect to said upright, and a set screw projected through that portion of said element encompassing said upright for tightly securing the element to said upright.



1,570,180. WATER PLUG. WILLIAM Z. PULLIAM, Los Angeles, Calif. Filed July 16, 1925. Serial No. 44,069. 4 Claims. (Cl. 137—13.)

1. A hose-feeding water plug comprising a base adapted to be stationarily mounted at one edge of a street, and a normally upright plug body pivotally connected with said base for downward swinging if struck a blow by a vehicle on the street, the pivotal connection between said plug body and said base comprising a joint permitting downward swinging of said body on any of

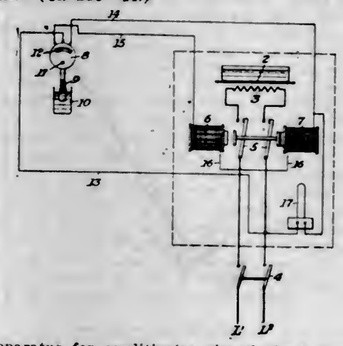


a plurality of paths according to the direction in which the blow is delivered, said plug body and base having communicating water ports.

1,570,181. BORING MACHINE. JOHN B. OWENS, Oleika, Ky. Filed Jan. 16, 1923. Serial No. 612,961. 1 Claim. (Cl. 255—46.)

The combination with a coal mine drilling machine comprising a casing having a breast plate at one end thereof, an axially alined driving shaft at the forward end of the casing and rotatably mounted in bearings therein, of a gear train and operating mechanism for said drive shaft, said mechanism comprising a transversely disposed drive shaft extending through the casing, a transversely disposed counter shaft extending through the casing in parallel relation to the transversely disposed drive shaft, meshing gears carried by said transversely disposed shafts in the same plane as the longitudinal center line of the casing, meshing bevelled gears carried by the first mentioned drive shaft and the countershaft, said first mentioned meshing gears being driven by opposite disposed cranks carried by the transversely disposed drive shaft at opposite sides of the casing and by their position to the longitudinal center of the casing prevent tilting to one side of the device as a whole during a drilling operation.

1,570,182. CARD-DELIVERING DEVICE. RALPH E. PAGE, Binghamton, N. Y., assignor to The Tabulating Machine Company, Endicott, N. Y., a Corporation of New Jersey. Filed Mar. 11, 1924. Serial No. 698,474. 8 Claims. (Cl. 211—29.)



5. A dispensing apparatus for tabulating or other record cards comprising a U-shaped open ended and open-topped box having a pair of side walls adapted to

receive and enclose at the sides a stack of record cards, a united front plate and follower plate assembly supported upon the cards in said box and guided within said box by the walls thereof, said assembly having a withdrawal slot in the front thereof through which the uppermost card in the stack may be withdrawn, said assembly having notched openings in the follower and front plates for the purpose described.

1,570,183. DECORATIVE EXFOLIATED SHELL AND METHOD OF PRODUCING THE SAME. SIDNEY RAUSCHENBERG, San Diego, Calif. Filed May 17, 1924. Serial No. 714,148. 11 Claims. (Cl. 252—1.)

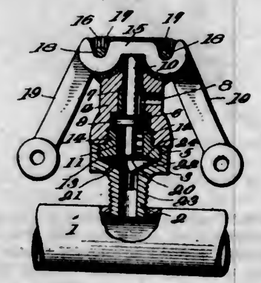
1. A product of manufacture, consisting of exfoliated pearl shell.

1,570,184. METHOD AND APPARATUS FOR CONDITIONING AIR. CHARLES J. RAMSBURG, Edgeworth, Pa. Filed July 30, 1923. Serial No. 654,541. 7 Claims. (Cl. 236—44.)

1. Apparatus for conditioning the air in a room, including a radiator for heating the air in the room, a water-containing vessel adjacent thereto adapted to take heat from the radiator for evaporating the water into the air, an electric heater for supplying additional heat to the water-containing vessel, a switch for controlling the current supplied to the heater, and a wet-bulb thermostat remote from the radiator and effective for operating the switch to maintain the wet-bulb temperature between predetermined limits substantially as described.

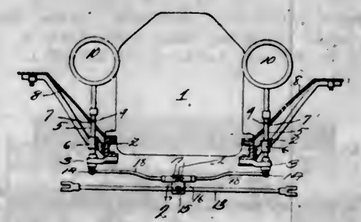
1,570,185. DISCUS. WILLIAM F. REACH, Chicopee, Mass., assignor to A. G. Spalding & Bros., New York, N. Y., a Corporation of New Jersey. Filed June 24, 1925. Serial No. 39,262. 4 Claims. (Cl. 272—59.)

1. A discus comprising an annular member having rebates in opposite faces thereof, spaced reversely dished circular plates having their peripheral edges seated in the rebates of and secured to said annular member, and means connecting the central portion of said dished plates.



1,570,186. SEALING STRIP. JOHN R. REPLOGLE, Detroit, Mich., assignor to The Security Trust Company, trustee, Detroit, Mich., a Corporation of Michigan. Filed Feb. 21, 1921. Serial No. 446,925. 3 Claims. (Cl. 20—69.)

1. A sealing strip for refrigerators, consisting of a sheet metal backing strip bent to form a plurality of longitudinally extending recesses opening in the same direction, and a fold of sealing material having each of its longitudinal edges in one of said recesses and secured therein by spaced compressed portions in said



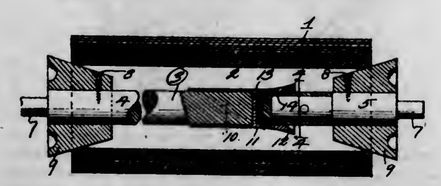
backing strip, said backing strip having outwardly projecting portions between said compressed portions constituting means for retaining it in a groove, substantially as shown and described.

1,570,187. AIR-BRAKE RELEASE VALVE. PHILIP B. ROHNER, Carroll, Iowa, assignor of one-half to Andrew A. Drees, Carroll, Iowa. Filed Oct. 23, 1925. Serial No. 64,331. 12 Claims. (Cl. 303—80.)

1. In a brake release valve, an upper port, a lower port, and a diaphragm disposed between the ports and normally closing the lower port, said diaphragm being operable under pressure from the brake cylinder to open the lower port and close the upper port and having a flexible central depending nipple disposed in the path of escaping pressure fluid to be closed thereby.

1,570,188. DIRIGIBLE HEADLIGHT. WILLIAM P. SHEETS, Glendale, Ariz. Filed Nov. 9, 1923. Serial No. 673,721. 1 Claim. (Cl. 240—62.)

The combination with the opposite side rails of an automobile, a transversely disposed and longitudinally movable connecting rod beneath said rails, of a dirigible headlight mechanism, said mechanism comprising vertically disposed lamp posts, said lamp posts being rotatably mounted in bearings of spaced brackets carried by the under sides of the rails and the outer sides of the rails, lamps carried by the upper ends of the posts, downwardly and rearwardly extending arms carried by the lower ends of the posts, balls carried by the ends of the downwardly and rearwardly extending arms and in the same vertical plane as the connecting rod, a clamp carried by the transversely disposed rod, an upwardly

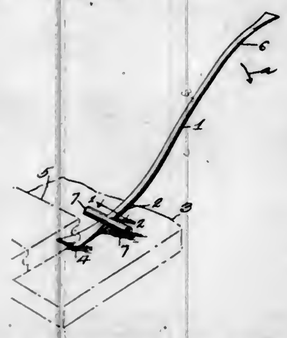


extending flange carried by said clamp, transversely disposed connecting rods pivoted to said flange in the same vertical plane as the connecting rod, the outer ends of said last named rods being provided with sockets for the reception of the balls carried by the downwardly and rearwardly extending arms and disposed below the lower ends of the posts, said flange, transversely disposed rod, connecting rods and balls being in the same vertical transverse plane.

1,570,189. ADJUSTABLE SHOVEL. JOHN SIMON STURM, Hayti, Mo. Filed Dec. 17, 1924. Serial No. 756,579. 1 Claim. (Cl. 294—51.)

An adjustable shovel comprising a handle member, said handle member at its lower end terminating in a U-shaped member pivoted to opposite sides of a blade, a rearwardly extending member carried by the blade below the U-shaped member and the arms thereof, a segment carried by the blade and disposed between the U-shaped member of the handle and having its rear end secured to the rearwardly extending member, internal recesses carried by the inner side of the segment, a toothed yoke surrounding the segment and through which the segment moves and cooperating with the recesses in the inner side of the segment, a rod slidably mounted on the handle member and connected to the yoke and spring means cooperating with said rod and forcing the same rearwardly and forming means for normally maintaining the toothed yoke in operative position.

1,570,190. PAPER-ROLL HOLDER. JAMES EDWARD WILLIAMS, Enterprise, Miss. Filed Oct. 8, 1924. Serial No. 742,393. 1 Claim. (Cl. 211—31.)

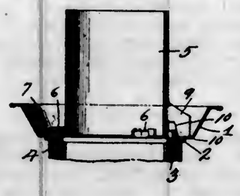


The combination with a paper roll spindle, said spindle comprising cones, axially alined shaft sections on which said cones are mounted, of a connection between the inner adjacent ends of said shaft sections, said connection comprising a flared internally threaded sleeve carried by one of said shaft sections, a partition within said sleeve spaced from its ends and engaging the end of one of the shaft sections, the inner end of the other shaft section being threaded and convexed.

1,570,191. RAILROAD-SWITCH CLEANER. THEODOR J. WYREMBEK, Oconomowoc, Wis. Filed Feb. 4, 1924. Serial No. 690,514. 2 Claims. (Cl. 37—36.)

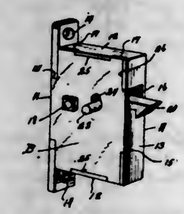
1. A railroad switch cleaner, comprising a handle member having its major portion substantially straight and one end portion curved, a plate member secured to the curved end portion of the handle member, and said plate member having its outer end portion curved rearwardly to space its free edge from the medial portion thereof to form a scoop member.

1,570,192. WRECKING BAR. MICHAEL YOUNICK, Delano, Minn. Filed Nov. 2, 1922. Serial No. 598,523. 1 Claim. (Cl. 254—131.)



A wrecking bar comprising a handle member, one end of said handle member being curved, one end of the curved portion of the handle being flattened and wedge shaped and axially alined outwardly extending lugs in the plane of the curved portion of the handle member and intermediate the ends of the curved portion of the handle member.

1,570,193. PROCESS OF TREATING BITUMINOUS SUBSTANCES. GEORGE W. ACHESON, Caldwell, N. J. Filed Aug. 14, 1924. Serial No. 732,112. 8 Claims. (Cl. 196—24.)



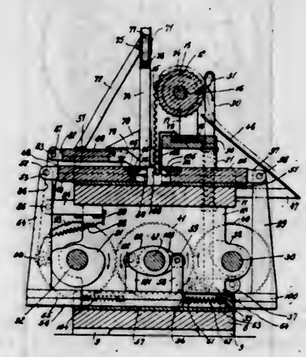
1. In a process of treating bituminous substances, the step comprising reacting thereon with a reflocculated solid adsorbent material.

1,570,194. WICK TRIMMER. SAMUEL T. ATKIN, Georgetown, Tex. Filed May 5, 1925. Serial No. 28,124. 3 Claims. (Cl. 67—68.)

1. A wick cleaner comprising a dished member adapted to rest on a burner around a wick, a cylindrical member extending into the dished member, integral horizontally and radially disposed scraper members carried by the cylindrical member and having their outer ends anchored to the dished member, said cylindrical member being provided with a vertically and radially disposed bevelled scraping member adapted to scrape the outer edge of the wick.

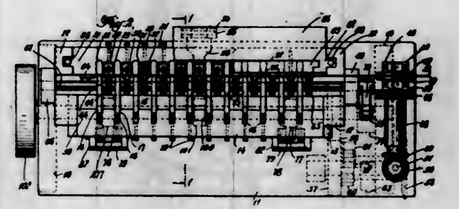
1,570,195. DOOR LATCH. GEORGE AUSDAL, Marshalltown, Iowa. Filed May 10, 1924. Serial No. 712,383. 1 Claim. (Cl. 292—136.)

A latch of the character described comprising a casing formed to provide a section having a face plate and side and end walls, the end and side walls being recessed on their edges and one of the side walls being extended beyond the end walls and being apertured for the passage of screws, the opposite side walls having an aperture for the passage of a latch, the other section comprising a plate adapted to rest against the side and end walls of the first section and being recessed complementarily to the recesses on the side and end walls, a single screw passing through said plate and through the opposite face plate and through the latch and acting to pivotally support the latch and hold the two sections of the casing together, and a pin extending through the latch and through the plates of the two sections, the plates having arcuate slots through which the pin passes.



1,570,196. FOLDING GARMENT HANGER. LOUIS BARRON, Port Chester, N. Y. Filed Mar. 14, 1925. Serial No. 15,519. 8 Claims. (Cl. 211—13.)

1. A garment hanger composed of an inverted substantially T-shaped body including a stem and a cross bar, a plurality of sections at each end of the cross bar hinged thereto and to each other to fold upon the bar into abutment with the stem, and a pair of loops pivoted to the stem to support the hanger and of a length to engage about the upper ends of the folded sections to hold them to the stem, the stem longitudinally slotted, an extensible hat rack normally within the slot, and a ring engaged with the loops, movable over the slot and held in such a position by the loops when they are engaged with the folded sections.

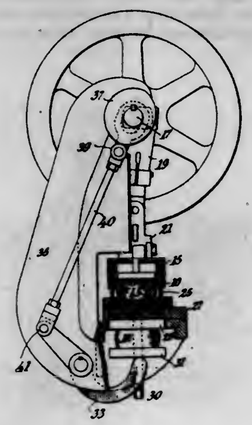


1,570,197. MACHINE FOR MAKING LINK MESH. RICHARD H. BERKLEY, Plainville, Mass., assignor to Whiting & Davis Company, a Corporation of Massachusetts. Filed July 13, 1923. Serial No. 651,271. 9 Claims. (Cl. 140—3.)

1. In a machine for making link mesh fabric, the combination of means for supporting the mesh and moving it as it is formed with a step by step movement, a free edge of the piece of mesh depending from the said supporting means, a plurality of staple magazines, link forming tools on one side of the depending edge of the piece of mesh normally engaging the end staples in the magazines, these tools being reciprocable toward and away from the piece of mesh to withdraw the end staples from the magazines, and to insert their ends through the

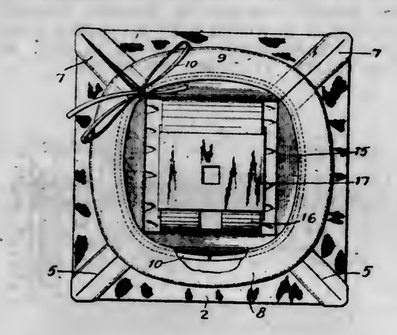
links at the free edge of the mesh, complementary link forming tools on the other side of the piece of mesh cooperating with the tools first mentioned to close the ends of the inserted staples to form links, and means operating in the periods of rest of the step by step movement of the piece of mesh for causing the tools to reciprocate toward and away from the piece of mesh to perform their functions.

1,570,198. MACHINE FOR MAKING STAPLES FOR MESH FABRIC. RICHARD H. BERKLEY, Plainville, Mass., assignor to Whiting & Davis Company, a Corporation of Massachusetts. Filed July 13, 1923. Serial No. 651,273. 17 Claims. (Cl. 59—75.)



2. A machine for making staples for use in the production of link mesh fabric, comprising means for intermittently feeding wire, a plurality of knives for cutting the wire fed into staple lengths, a co-acting plunger and die operable to form each severed length into a staple and means for ejecting the staple from the forming means.

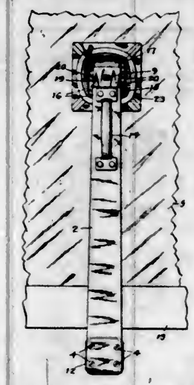
1,570,199. DRAWING PRESS. OTTO S. BEYER, Brooklyn, N. Y., assignor to E. W. Bliss Company, Brooklyn, N. Y., a Corporation of West Virginia. Filed Apr. 17, 1923. Serial No. 632,747. 6 Claims. (Cl. 113—46.)



1. A drawing press comprising a revolving crankshaft, a reciprocatory drawing tool driven therefrom, a

stationary die having a blank-holding ring, a resilient cushion for said ring, and means for varying the re-

silient stress thereof as the reciprocating tool descends, said means comprising a rotary cam connected to the crank-shaft and connections from said cam to said cushion.

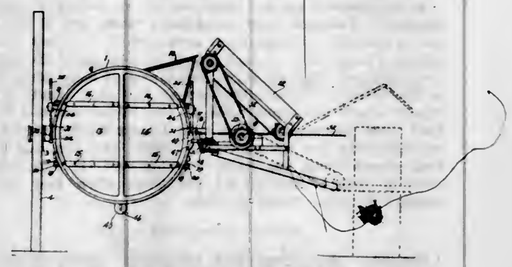


1,570,200. PAD FOR WINDOW-WASHING APPARATUS. JOHN C. G. BONNEY, Brooklyn, N. Y. Filed June 25, 1923. Serial No. 647,487. 3 Claims. (Cl. 15—232.)

1. A pad for window washers formed of a sheet of material provided with a pocket at one side and an angular flap at the opposite side, both the pocket and flap having a tubular binding adapted to carry a drawstring, and a string passed through said bindings for drawing and flap and pocket together.

1,570,201. WINDOW-WASHING APPARATUS. JOHN C. G. BONNEY, Brooklyn, N. Y. Filed June 25, 1923. Serial No. 647,488. 7 Claims. (Cl. 15—220.)

1. A window cleaning device comprising a pair of arms the free end of each of which is tapered; a pad-block mounted on each arm, each block having a member carrying a bridge tapered from end-to-end to correspond with the end of the arm, and each member, under the bridge, having a convexed surface cooperative with an arm, whereby the pad-blocks are prevented from having lateral movement but may have rocking movement on the arm to exert equal pressure over the faces of the blocks on both sides of the window-pane.



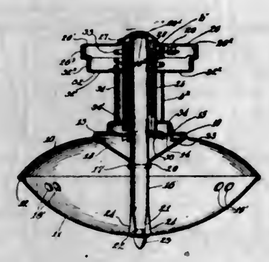
1,570,202. VITREOUS COMPOSITION AND ARTICLES MADE THEREFROM. EUGENE CHARLES BUCK, New York, N. Y. Filed Feb. 26, 1924. Serial No. 695,141. 15 Claims. (Cl. 106—36.1.)

1. An improved vitreous composition comprising a fused complex metaphosphate of aluminum and an alkali earth metal substantially free from silica.

1,570,203. PROCESS OF ETHYLATING AMINES. ARTHUR R. CADE, Pittsburgh, Pa., assignor to Carbide and Carbon Chemicals Corporation, a Corporation of New York. Filed July 17, 1923. Serial No. 652,191. 6 Claims. (Cl. 260—128.)

1. Process of ethylating amines which comprises treating the amine to be ethylated with an ethyl sulphate under ethylating conditions and in the presence of an alkaline compound of an alkaline-earth metal.

1,570,204. SHOCKING MACHINE. LEWIS JAMES CLEMENT, Dauphin, Manitoba, Canada. Filed Oct. 11, 1922. Serial No. 593,822. 10 Claims. (Cl. 56—422.)

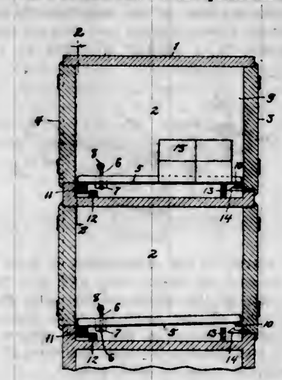


1. In a shocking machine, the combination with a normally horizontally disposed and pivoted sheaf receiving and shock forming basket and a pair of pivoted gates normally closing one end of the basket, of operating lever arms extending from the gates, a bar slidably attached to each side of the basket, links connecting the lever arms to the bars, said bar being slidable towards and away from the gate end of the basket, pairs of links pivotally connecting the sliding bars to the side of the basket, the links of the pairs being connected one to the other by a knuckle joint, the said knuckle joints normally locking the gates closed, and gravity operated means carried by the sides of the basket and engageable with the knuckle joints and adapted to break the joints and release the gates in the dumping of the basket.

10. The combination with a pivotally mounted normally horizontally disposed sheaf receiving and shock forming basket, of an inclined rod passing lengthwise of the basket and attached to the underside thereof and a weight slidably mounted on the rod and normally located at the forward end thereof.

1,570,205. METHOD OF RECOVERING OIL FROM OIL-BEARING SANDS. DAVID C. COLLIER, Santa Fe, N. Mex. Filed Apr. 8, 1921. Serial No. 459,762. 1 Claim. (Cl. 196—14.)

The method of separating oil from oil-bearing sands and the like which consists in mixing such material with water and subdivided carbonaceous material, and then subjecting the mixture to agitation, whereby the oil and carbonaceous material are agglomerated, and float on the water while the sand settles out.



1,570,206. SPINNING TOP. STANLEY L. CONNELL, Girard, Pa., assignor to The Girard Model Works, Inc., Girard, Pa., a Corporation of Pennsylvania. Filed Jan. 5, 1924. Serial No. 684,541. 17 Claims. (Cl. 46—32.)

1. The combination with a spinning top having an upwardly projecting stem, of a top-spinning device comprising a body section for receiving said stem, a spring element carried by said body section and having means for engaging the spinning top, a locking element surrounding and movably carried by the body section arranged to engage the said spinning top for locking the said body section thereon with the spring element energized, and means for moving the locking element relatively to the said body section and in disengagement from the spinning top whereby the spinning top may be released from the energized top-spinning device without any relative axial motion between the said top stem and the top-spinning body section.

1,570,207. SERVICE CABINET. GEORGE R. CRAW, Fort Wayne, Ind. Filed Sept. 17, 1923. Serial No. 663,068. 2 Claims. (Cl. 232—1.)

1. In a service cabinet for the reception of goods, a repository having a chamber therein; a delivery door for the repository; a receiving door for said repository independent of the delivery door; a swing positioned in the chamber; a platform supported on the swing and having longitudinal and tilting movement; a weight at one end of the platform for overbalancing the opposite end thereof; a stop operable to limit the longitudinal movement of the platform; a rest for limiting the downward movement of the end of the platform opposite the

weight; and means on the delivery door and the adjacent end of the platform operable to lock the delivery door when the platform is tilted by the weight of goods placed thereon.

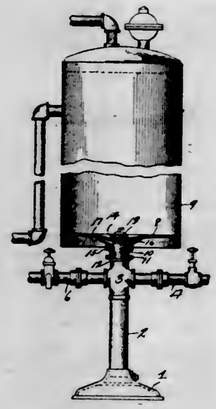
1,570,208. SHIRT. JOHN H. CRONIN, Louisville, Ky., assignor to The Enro Shirt Company, Louisville, Ky., a Corporation of Kentucky. Filed Sept. 4, 1924. Serial No. 735,810. 2 Claims. (Cl. 2—128.)

1. In a shirt of the class described, a multiply closing flap, the outer ply an integral portion of the shirt front, presenting a smooth uninterrupted continuation thereof, said ply having an inturned portion carrying the inner plies, forming the free edge of the closing flap, and lapping upon the rear of the remaining plies and secured thereto by stitching between the shirt front and the inturned portion.

1,570,209. PROCESS FOR SEPARATING THE PHASES OF EMULSIONS, PARTICULARLY OF PETROLEUM, BY MEANS OF AN ELECTRIC CURRENT. JAN HEINRICH CHRISTOPH DE BREY, The Hague, Netherlands, assignor to Naamlooze Vennootschap Batafsche Petroleum Maatschappij, The Hague, Netherlands. Filed Apr. 11, 1924. Serial No. 705,958. 3 Claims. (Cl. 204—24.)

1. A process for separating the phases of emulsions, and more particularly of petroleum emulsions, comprising, applying to the emulsion to be treated a pulsating alternating current having a peak voltage which is a multiple of the effective voltage.

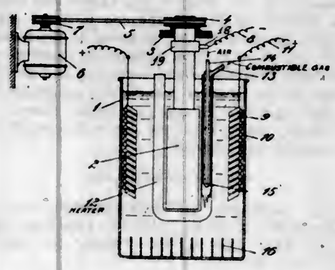
1,570,210. STABILIZING DEVICE FOR AUTOMOBILE UNDERFRAMES. ARTHUR DE CONINCK, Brussels, Belgium. Filed Dec. 3, 1924. Serial No. 753,711. 1 Claim. (Cl. 267—66.)



A stabilizing device assuring the stabilization of the underframe with respect to the axle in automobile vehicles and the like, which device comprises in combina-

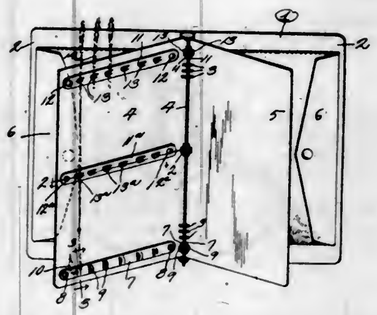
tion: two horizontal pivots symmetrically provided on both sides of the middle of the axle member, a lever with two opposite arms pivoted intermediate its ends to a support secured to one of the longitudinal bearers of the under frame, a lever having two parallel arms which lever is pivoted to a support attached to the other

longitudinal bearer of the underframe, a pivot provided to the end of each of these arms, two rods connecting respectively one of the pivots of the axle member to the pivot of one of the arms of each lever, a third rod connecting the pivots of the other arm of the two levers and an articulation between the ends of each rod and the pivots connected by said rods.



1,570,211. BOILER STAND. LAWRENCE DOERR, Silverton, Oreg. Filed Mar. 16, 1925. Serial No. 15,826. 1 Claim. (Cl. 126—363.)

The combination with a boiler stand, a boiler supported by said stand, of a connection between said stand and the bottom of the boiler, said connection comprising a vertically disposed fitting carried by the stand, a cylindrical portion carried by said fitting and threaded in the bottom of the boiler, a bushing loosely mounted on the cylindrical portion and rotatable thereon, the lower end of said bushing engaging an annular flange, a concaved member engaging the bottom of the boiler, said bushing being threaded into the concaved member and forming means whereby upon rotation of the bushing the concaved member will be forced upwardly into engagement with the boiler without axial movement of the bushing.

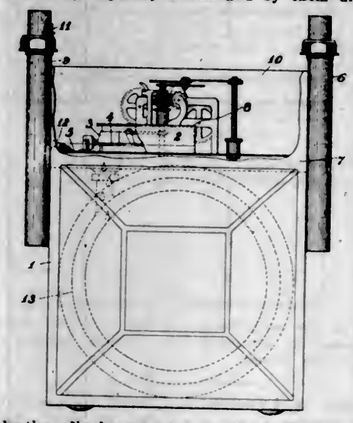


1,570,212. APPARATUS FOR THE PRODUCTION OF ELECTROLYTIC IRON. EMIL DUHME, Berlin-Charlottenburg, Germany, assignor to Siemens & Halske, Aktiengesellshaft, Siemensstadt, near Berlin, Germany, a Corporation of Germany. Filed June 17, 1924. Serial No. 720,609. 11 Claims. (Cl. 204—5.)

1. In an apparatus for producing electrolytic iron, the combination of a vessel containing the electrolyte, a cathode, an iron anode having a carbon content sufficient to leave a coherent graphite skeleton after the

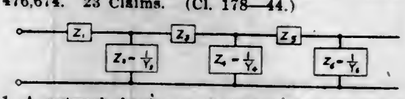
anode iron has been electrolytically consumed, and means for supplying current to both electrodes.

1,570,213. FISHHOOK BOOK. SAMUEL FOCHT, Watertown, N. Y. Filed Dec. 4, 1924. Serial No. 753,837. 1 Claim. (Cl. 43—32.)



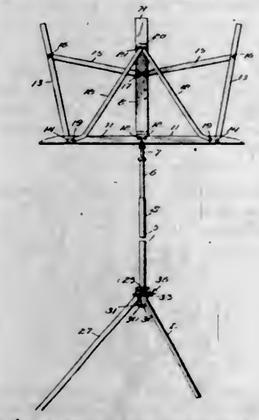
A fish hook book comprising a cover, a plurality of separable rings within said cover, a plurality of relatively stiff leaves carried by said rings, said leaves on opposite sides thereof having secured thereto adjacent one of the ends of the leaves registering metallic strips, struck out eyes carried by said strips for the reception of fish hook shanks and spaced between the sides of the strips, registering metallic strips adjacent the other end of the leaves and secured to opposite sides of the leaves, struck out spring fingers carried by said strips and spaced between the sides of the strips and adapted to receive and grip snells, metallic strips intermediate the first mentioned strips and struck out spring fingers carried by said last named metallic strips between their sides and adapted to grip snells intermediate their ends.

1,570,214. GAS METER. THOMAS FOX, Liverpool, England. Filed Nov. 2, 1921. Serial No. 512,293. 2 Claims. (Cl. 73—1.)



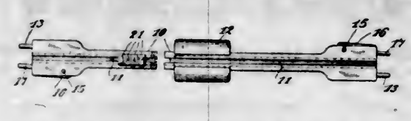
1. The method of protecting exposed parts of a dry type gas meter against the action of the gas, which consists in providing a shallow bath of protective liquid

around the valves, at a level below that of the valve seating, so that the liquid is delivered in small quantities to the valves by capillary action and by them directed



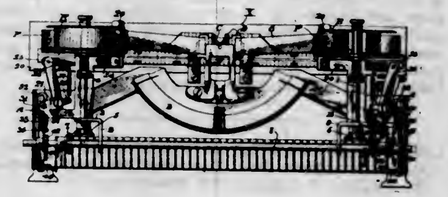
to the leather diaphragm as a result of the movement of said valves the oil also creeping over the surface of the valve chamber.

1,570,215. ELECTRICAL NETWORK. THORNTON C. FRY, Wyoming, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 11, 1921. Serial No. 476,674. 23 Claims. (Cl. 178—44.)



1. A network having a desired impedance characteristic comprising a plurality of sections, each having an impedance which varies from section to section in accordance with the terms of a continued fraction so that each section when taken in connection with the preceding sections more closely approximates the desired impedance.

1,570,216. MUSIC STAND. JOHN E. GARRETT and GEORGE M. ROGERS, Hamilton, Ohio. Filed Apr. 7, 1925. Serial No. 21,374. 2 Claims. (Cl. 45—121.)



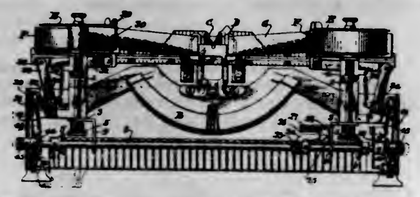
2. A rack for a music stand including a central strip, a pair of angle strips pivoted at their inner ends to the bottom end of the center strip, an eye member mounted on the center strip, a pair of braces pivoted to the angle strip and extending through the eye member, the free ends of said braces being provided with hooked terminals, rods pivoted to the angle strips, and links pivoted to the rods and to the center strip.

1,570,217. FORK FOR COMPOSING AND DISTRIBUTING TYPE. CHARLES FREDERICK GREEN, Romford, England, assignor to A. B. Dick Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 5, 1925. Serial No. 66,903. 5 Claims. (Cl. 276—37.)

1. A fork or stick for composing and distributing type of the character specified, said stick having a central groove to receive the type and prongs at each end, one of the prongs at each end being pivoted to the fork in such a manner that a slight lateral movement is permitted to the prong during the stages of composing or distributing.

1,570,218. AUTOMATIC RIBBON REVERSE. GEORGE F. HANDLEY, Glendale, N. Y., assignor to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 29, 1924. Serial No. 746,577. 24 Claims. (Cl. 197—165.)

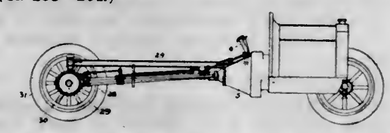
1. Ribbon reversing mechanism comprising a ribbon spool shaft, a driving shaft mounted for longitudinal movement to be connected to or disconnected from the ribbon spool shaft, normally disengaged devices for giving the driving shaft said longitudinal movement, and ribbon operated means for engaging said devices, said means including constant but yielding connections which permit the travel of the ribbon after the engagement of said devices.



1,570,219. COLOR-BLENDING PAVEMENT-CRACK FILLER. HERMAN C. HELMLE, Springfield, Ill., assignor of one-half to Wesley C. Pruitt, Springfield, Ill. Filed Aug. 2, 1923. Serial No. 655,329. 2 Claims. (Cl. 106—23.)

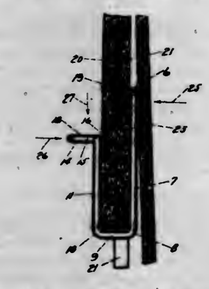
1. A color blending water proof composition for filling pavement cracks, comprising approximately one-half to —3— lbs. of crude rubber, —25— to —30— lbs. of rosin, —1— to —4— lbs. of 37 to 40° Bé. distillate oil, 0.05 to 0.5 lbs. titanium dioxide, 0.1 to 1.0 lbs. of barium sulphate and enough lamp black to tint to the desired shade of gray.

1,570,220. RIBBON-FEEDING MECHANISM FOR TYPEWRITING MACHINES. EDWARD B. HESS, New York, and LEWIS C. MYERS, Freeport, N. Y., assignors to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 30, 1925. Serial No. 26,878. 8 Claims. (Cl. 197—151.)



1. Ribbon feeding mechanism for typewriting machines having a guide comb for the key levers, said mechanism

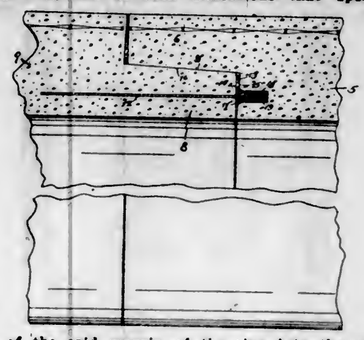
comprising a driving shaft, a ratchet wheel thereon, a universal bar frame having an upstanding arm and actuated by the rear ends of the key levers, a pawl



pivoted to said arm and engaging the ratchet wheel near the top thereof, and a guide slot in said comb for the pawl.

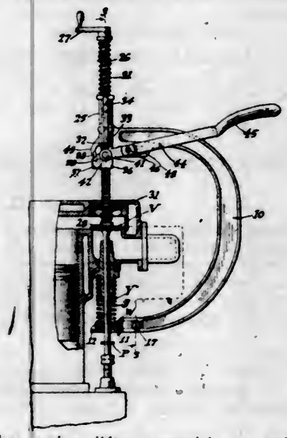
1,570,221. BRAKE EQUALIZING ATTACHMENT FOR AUTOMOBILES. FRANK J. ANDEL, Cleveland, Ohio. Filed Jan. 19, 1925. Serial No. 3,317. 8 Claims. (Cl. 188—204.)

1. In an automobile having rear wheel brakes and a drive shaft housing and radius rods, a brake equalizing attachment comprising a bracket adapted to be clamped to said housing, an equalizing lever movably mounted upon said bracket, a pedal connection for said lever, auxiliary levers affixed to said radius rods, operating connections extending between said equalizing lever and auxiliary levers, and additional operating connections extending from said auxiliary levers to said brakes.



1,570,222. STORM-TYPE SHINGLE CLAMP. JOSEPH C. BARLEY, York, Pa. Filed Oct. 20, 1925. Serial No. 63,700. 5 Claims. (Cl. 108—33.)

3. A shingle clamp comprising resilient front and rear prongs, said prongs being suitably arranged to embed in the shingle material through the inherent resiliency of said prongs.



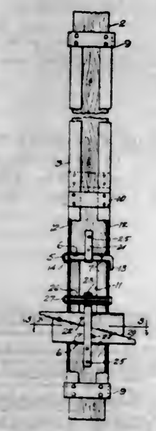
1,570,223. PIPE JOINT. GEORGE CORRIE BARTRAM, Freeport, N. Y., assignor to George C. Bartram, Inc., Buffalo, N. Y., a Corporation of New York. Filed Sept. 20, 1922. Serial No. 589,351. 10 Claims. (Cl. 72—53.)

1. A joint between concrete pipe sections, comprising a sealing ring embedded in one of said sections and having a crimped margin projecting beyond an end face thereof, an annular pocket formed in the opposed end of the other pipe section and adapted to receive the projecting margin of said sealing ring, in combination with packing means comprising tubular gasket elements seated in the annular channels of the projecting margin of the sealing ring, and of such dimensions that upon the

entry of the said margin of the ring into the pocket, the gasket is deformed into packing relation with a wall of the pocket.

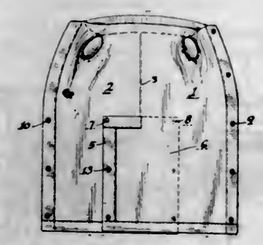
1,570,224. VALVE-SPRING LIFTER. LOUIS H. BAYLER, Los Angeles, Calif. Filed Jan. 23, 1925. Serial No. 4,225. 7 Claims. (Cl. 29—86.3.)

1. A valve spring lifter comprising a yoke, means carried by said yoke adapted to engage and life a valve spring, a sleeve carried by said yoke, a threaded spindle slidable in said sleeve, a spring actuated pawl engageable upon said spindle for preventing upward movement of said spindle with respect to said yoke, means for rotating said spindle, and means for disengaging said pawl from said spindle.



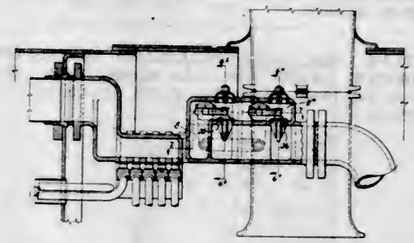
1,570,225. ALL-AROUND HALTER. EDWARD S. BECKWITH, Albion, Nebr. Filed July 18, 1925. Serial No. 44,614. 6 Claims. (Cl. 54—24.)

4. A halter including a throat latch having a ring loosely secured thereto at the throat portion thereof, a crown piece parallel and contiguous to the crown



portion of said throat latch, cheek pieces integral with said crown piece, said crown piece and cheek pieces having means for slidably adjusting them with relation to said throat latch, a nose piece integral with said cheek pieces, means for slidably adjusting said nose piece with relation to said cheek pieces, a clamp for securing said nose and cheek pieces in adjusted relation, and a tie rope integral with one of said cheek pieces and passing through said ring.

1,570,226. ADJUSTABLE SHORE. GEORGE B. BOSCO, Chicago, Ill. Filed Jan. 30, 1924. Serial No. 689,419. 1 Claim. (Cl. 248—2.)



An adjustable shore comprising a hollow upright frame having an opening extending transversely therethrough, a pin extending transversely through said frame above said opening, a post telescopically arranged in the lower end of said frame and having its upper end located adjacent said opening, a substantially U-shaped strap mounted on said post and extending around said pin for securing said post against withdrawal from said frame, a pair of coacting wedges extending into said opening from opposite sides of said frame and arranged to coact with said frame and post for expanding the shore, and shoulders on said wedges arranged to coact with said frame to secure said wedges against withdrawal from said frame.

1,570,227. TRANSFORMABLE COVER COAT AND TROUSERS. LAWRENCE M. BRAINIE, Fellows, Calif. Filed May 21, 1924. Serial No. 714,819. 1 Claim. (Cl. 2—86.)

A transformable cover coat and trousers comprising a cover coat construction formed of two principal body pieces which are connected together at the center of the back from a point below the waistline up and which are separated from the mentioned point down to the bottom, said body pieces having flaps extending a considerable distance across the center line of the back, the upper edges of the flaps being free or unsecured, fastening means for fastening the side edge of each flap to the opposite body piece in forming a cover coat, and fastening means arranged along the forward edge of each body piece so that the flap associated with it may be detached from the opposed body piece and secured to the forward edge of the body piece with which it is associated to form a pair of trouser legs.

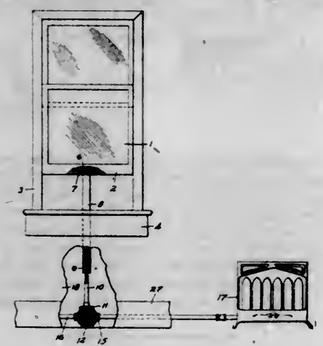
1,570,228. LOCOMOTIVE. RAY M. BROWN, Yonkers, N. Y. Filed July 11, 1923. Serial No. 650,850. 10 Claims. (Cl. 122—462.)

1. In apparatus of the class described, the combination of a superheater comprising an elongated chamber having a series of ports along its length through which superheated steam is delivered to the chamber, and having an outlet through which the steam is conveyed to the point of use; partitioning means separating the inlet ports from the outlet and provided with a series of relatively small openings distributed opposite said steam delivery ports; and a corresponding series of valves each controlling one of said openings.

1,570,229. METHOD OF MAKING MAGNETIC ALLOYS. VERE B. BROWNE, Brackenridge, Pa. Filed Mar. 19, 1925. Serial No. 16,838. 7 Claims. (Cl. 75—45.)

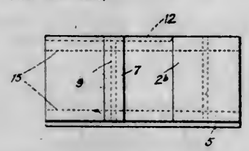
1. The method of making silicon iron having a silicon content sufficient to adapt it for use as a magnetic alloy and a carbon content of not over .03%, which consists in refining iron, in reducing the carbon in the refined iron by making additions of iron ore to the bath until no further reduction of carbon is obtained by such additions, then in causing air or other oxidizing gas to permeate the bath until substantially all of the remaining carbon is removed, then in removing metal from the bath and making the necessary silicon additions to the removed metal.

1,570,230. LAMP SHADE. ALBERT W. CHAMBERS, Sr., Hillside, N. J. Filed May 21, 1925. Serial No. 31,943. 2 Claims. (Cl. 240—108.)



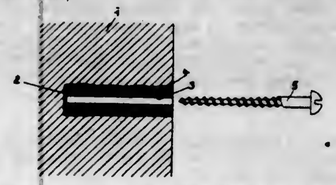
1. A lamp shade consisting of a frame having a circumferential upper member and a covering formed with stiff pleats having a series of circumferential notches engaging the upper member of the frame.

1,570,231. PADDING FOR IRONING ROLLS. AMMIEL F. DECKER, Pelham, N. Y. Filed Dec. 28, 1922. Serial No. 609,543. 4 Claims. (Cl. 68—9.)



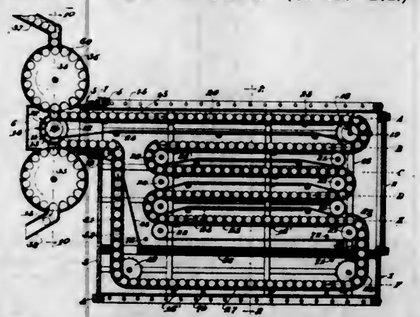
2. Padding for ironing rolls, comprising rows of relatively small blocks arranged side by side; and a metallic backing sheet on which said rows are mounted, and to which they are secured, said sheet conforming to the curvature of the ironing roll and adapted to completely encircle the same.

1,570,232. GAS-VALVE-CONTROLLED VENTILATING DEVICE. HARRY DYER, Los Angeles, Calif. Filed Feb. 28, 1925. Serial No. 12,348. 2 Claims. (Cl. 98—27.)



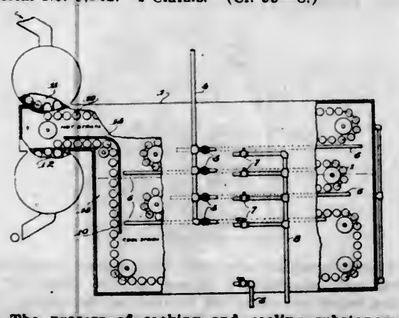
1. In combination with a window and a gas supply, a valve having a rotatable stem adapted to control the gas supply, a gear on said stem, a screw shaft and a second gear mounted on the shaft adapted to mesh with the first gear, a hollow threaded sleeve on the window adapted to engage the screw shaft, being adapted to raise the window when the valve stem is turned in one direction and to close the window when the valve stem is turned in the other direction.

1,570,233. REENFORCED-CONCRETE HOLLOW-TILE BUILDING BLOCK. JOSEPH FEIGENBAUM, Los Angeles, Calif. Filed Dec. 22, 1922. Serial No. 608,500. 6 Claims. (Cl. 72—40.)



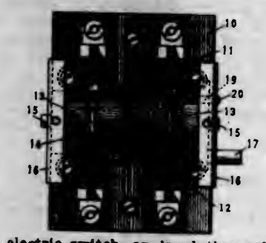
1. A monolithic, cement, facing block for hollow wall construction, said block having a facing panel from the back of which extend two spacing webs which are disposed inwardly from the ends of the block a distance of about one-quarter of the length of the block, so that when the blocks are superposed to form a wall with the joints formed between the contiguous side edges of the facing panels of one course spaced with respect to those of the next upper and lower courses, said webs will vertically register with the webs of the upper and lower courses, and reenforcing wires imbedded in said facing panel and extending into said webs.

1,570,234. PLUG OR SOCKET FOR MASONRY. ADELBERT BELA FELDMAR, Berlin-Schoneberg, Germany. Filed Jan. 23, 1925. Serial No. 4,336. 6 Claims. (Cl. 72—105.)



1. A plug, comprising, an outer sleeve, an inner sleeve received in the outer sleeve, the outer sleeve being composed of a resilient expansible fibrous material, the inner sleeve being continuous throughout and composed of a firm, impressible material.

1,570,235. APPARATUS FOR HEAT-TREATING SUBSTANCES PACKED IN SEALED RECEPTACLES. NELSON H. FOOKS, Preston, Md. Filed Dec. 8, 1924. Serial No. 754,603. 18 Claims. (Cl. 126—272.)



1. The combination of a tank, an endless conveyer arranged therein for progressing cans therethrough along a circuitous path part of which includes horizontal levels, means for supporting the cans while they are being progressed along said levels, means for moving said last named means whereby the cans may be progressed by said conveyer with or without rotary motion about their axes, and means for feeding cans to and discharging them from the conveyer.

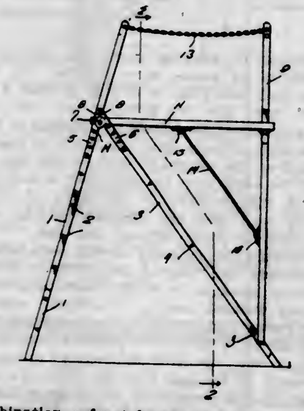
1,570,236. PROCESS OF COOKING AND COOLING. NELSON H. FOOKS, Preston, Md. Filed Feb. 12, 1925. Serial No. 8,842. 4 Claims. (Cl. 99—8.)

1. The process of cooking and cooling substances in sealed receptacles which consists in passing the receptacles through a fluid, said fluid having an upper heated strata and a lower relatively cooler strata, said receptacles being advanced from the heated strata into the cooler strata.

1,570,237. ELECTRIC SWITCH. BENJAMIN E. GETCHELL, Plainville, Conn., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn., a Corporation of Connecticut. Filed Sept. 9, 1922. Serial No. 587,051. 3 Claims. (Cl. 200—15.)

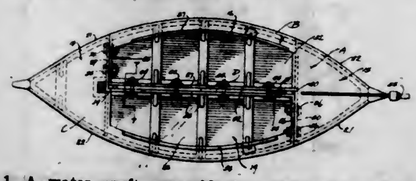
2. In an electric switch, an insulating cylinder having a transverse passage, a contact blade loosely mounted in said passage and having a projection serving as a stop to limit the endwise movement of the blade in one direction, and means outside of said cylinder for limiting the endwise movement of the blade in the opposite direction.

1,570,238. PASTE TUBE. JOSEPH R. GIBSON, Chicago, Ill. Filed Nov. 1, 1924. Serial No. 747,211. 3 Claims. (Cl. 221—60.)



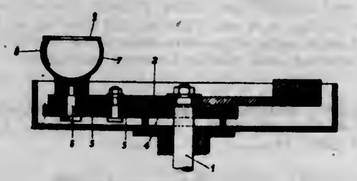
1. A tube of the character described having an extension with an opening in the side thereof, and a valve rotatably mounted in the extension, said valve including a cylindrical portion closed at each end, said cylindrical portion having openings therein, said openings being confined within the extension and out of registration with the opening of the extension when the valve is in one position and one of said openings being in registration with the opening in the extension and the other opening in communication with the tube, when the valve is in another position.

1,570,239. DRILLING MACHINE. GEORGE H. GILMAN, Boston, Mass. Filed Sept. 4, 1920. Serial No. 408,282. 10 Claims. (Cl. 121—29.)



1. A percussive tool having in combination, a cylinder, a hammer piston for actuating a work performing tool carried at the forward end of said cylinder, a valve cage closing the rearward end of said cylinder, a handle member having a socket receiving the end of said cylinder and clamping said valve cage to said cylinder, said valve cage having transverse sections with opposed peripheral annular faces in fluid tight contact, a chamber formed in said cage and surrounded by said annular faces, a passage leading from said handle member to said chamber, a vibratory reed removably clamped between said sections and extending transversely into said chamber, said reed at one end thereof having a projection entering a recess in one of said sections for positioning said reed and for preventing slippage thereof, and passages leading from said cylinder and entering said chamber through ports at opposite sides of the free end of said reed whereby said reed may control said ports.

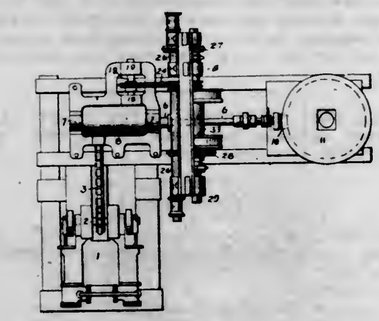
1,570,240. LADDER. BASSO GIUSTINO, Baltimore, Md. Filed Mar. 23, 1925. Serial No. 17,647. 1 Claim. (Cl. 228—17.)



In combination, a front frame, a prop frame, a rung for hinging the prop frame at its upper end to an intermediate portion of the front frame, means for limiting the swinging movement between the two frames, a rear frame having its lower end detachably engaged on a lower intermediate portion of the prop frame, a platform detachably engaged with the rear frame and restable on the rung, a brace pivotally mounted on an intermediate portion of the platform and detachably engaged with the rear frame, sockets carried by the rear frame, said brace including an intermediate portion pivoted to the platform, and side portions curved eccentrically so that their intermediate portions meet, and their ends extend in opposite directions in substantial alignment with each other for engagement with the sockets, whereby in order to engage the ends with the sockets it is necessary to distort the intermediate portions of the side portions in order that they may pass by each other.

1,570,241. SECTIONAL WATER CRAFT. JAMES GLEAVE, Galveston, Tex. Filed Jan. 29, 1925. Serial No. 5,558. 11 Claims. (Cl. 9—2.)

1. A water craft separable into sections along a division line extending only partly longitudinally at substantially the central line and partly transversely of the craft, said sections having bulk heads extending along said division line for each of said sections to provide independent compartments for the sections.

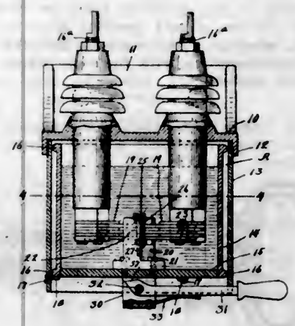


1,570,242. METHOD OF AND MEANS FOR WORKING CURVED SURFACES. PAUL GOERZ, Grunewald, near Berlin, and ERNST JACOBI, Friedenau, near Berlin, Germany, assignors to the Firm of Optische Anstalt C. P. Goerz Aktiengesellschaft, Friedenau, near Berlin, Germany. Filed Oct. 4, 1923. Serial No. 666,439. 6 Claims. (Cl. 51—7.)

1. A method of working lenses and like spherically curved articles by means of a grinding cup having a peripheral wall consisting in loosely putting a blank to be worked upon into the grinding cup and subjecting said cup with the blank loosely put therein to rotational motion of such velocity that the blank is centrifugally pressed against the peripheral wall of the cup, the wall having at the same time an advancing motion communicated to it with relation to the point of intersection of the cup wall and the direction of the centrifugal force pressing the blank against said wall.

4. A grinding or polishing device comprising a cup shaped grinding tool adapted to receive in its cavity a work piece or blank to be worked upon, said cup having a peripheral working surface of circular cross section, a carrier for said grinding cup mounted for rotational movement so as to guide the grinding cup along a recurrent path, the cup being so mounted on said carrier and otherwise so engaged that the axis of the working surface of the cup remains at all times at right angles to the rotational plane of the carrier and that the working surface of the cup at the point of intersection with the direction of centrifugal force produced by the rotational movement experiences displacement laterally to said direction of centrifugal force.

1,570,243. SHAFT-DRIVE DRAW WORKS AND ROTARY DRILLING MACHINE. EDWARD W. GOESER and WILLIAM D. DAVIDSON, Los Angeles, Calif., assignors to The National Supply Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 8, 1921. Serial No. 450,676. Renewed Mar. 3, 1922. Serial No. 540,915. 4 Claims. (Cl. 255—19.)

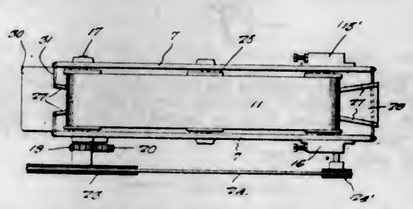


1. In combination, a rotary drill table, a drive-shaft geared to the same, a draw works having a line-shaft, a drum shaft adapted to be driven by the line-shaft, a prime mover, and clutch-means for placing the prime mover in driving connection with either the drive-shaft or the line-shaft.

1,570,244. INDICATOR AND SAFETY COUPLING FOR ROTARY DRILLS. GARY ALLEN GOLDSMITH, Long Beach, Calif. Filed Feb. 4, 1924. Serial No. 690,508. 2 Claims. (Cl. 255—28.)

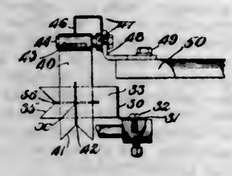
1. A drill stem comprising an upper assembly of couplings including a valve construction and a lower assembly of couplings having a lifting head with limited upward movement, a string of drill stem sections connecting the assemblies and a lifting rod connecting the valve to the lifting head through the string of drill stems and normally holding the valve open so that if the string of drill stems breaks between the assemblies and the upper part is raised slightly the valve will close and if the drill stem is removed from the well the broken off part will be raised by the lifting rod.

1,570,245. ELECTRIC SWITCH. AUSTIN EDWIN GREENE, Medford Hillside, Mass., assignor, by mesne assignments, to Condit Electrical Manufacturing Corporation, Boston, Mass., a Corporation of Massachusetts. Filed Sept. 1, 1922. Serial No. 585,669. 19 Claims. (Cl. 200—150.)



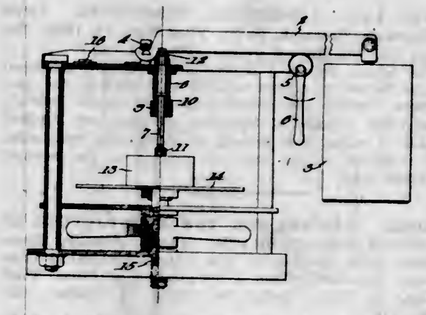
7. An electric switch comprising a switch frame, an oil receptacle enclosed therein and rotatably supported thereby, and stationary and movable switch members contained in said oil receptacle and operated by movements thereof.

1,570,246. PROCESS OF MAKING METAL ARTICLES. OWEN E. HACKER, Dayton, Ohio, assignor of one-third to Robert H. Angell and one-third to Benjamin F. Duer, both of Dayton, Ohio. Filed Mar. 8, 1921. Serial No. 450,706. 2 Claims. (Cl. 41—24.)



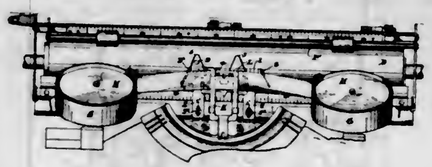
1. The herein described process of producing embossed metallic ornamental plates, comprising photographing the design to be reproduced, transferring the photographic production to a metallic plate without stripping and without reversal whereby the transferred design will be a positive of the design, etching the plate to produce the design in bas-relief, taking an impression therefrom, rendering the impression electro-conductive, employing the impression as the cathode in an electroplating bath to effect the deposit of metal within such impression and separating the deposited metallic body and impression material to expose the face of the deposited article.

1,570,247. CONFECTIONERY MACHINE. IRVIN J. HANDLEN, Green Bay, Wis. Filed Jan. 11, 1924. Serial No. 685,680. 1 Claim. (Cl. 107—9.)



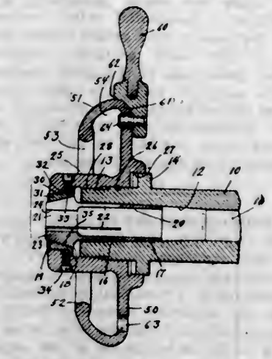
A candy rolling machine including a frame, a pair of belts trained longitudinally in the frame in parallel spaced relation and on an incline, means for moving the belts, and a guide structure disposed between adjacent runs of the belts and comprising a pair of parallel side bars disposed in parallelism with the runs of the belts, the upper ends of said guide bars being flared outwardly from each other, and a plate formed integrally with the under edges of said upper ends, said lower ends being flared outwardly from each other and bracket arms extending inwardly from the frame and attached to said lower ends.

1,570,248. CLEARER AND SLUB CATCHER FOR TEXTILE MACHINES. WALTER M. HASTINGS, Methuen, Mass. Filed Sept. 29, 1922. Serial No. 591,301. 12 Claims. (Cl. 28—64.)



1. A filament clearer and slub catcher having blades with slots therein, and means supporting the blades normally out of contact with each other and with the slots in crossing relation, the blades being adapted to contact with each other.

1,570,249. HARDNESS-TESTING MACHINE. EUGEN HENKEL, Frankfort-on-the-Main, Germany, assignor to Metallbank und Metallurgische Gesellschaft, Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Jan. 17, 1923. Serial No. 613,301. 4 Claims. (Cl. 265—12.)



1. In a hardness-testing machine, a die, means for guiding said die, a weight-operated lever, and a ball on the upper end of said die for engaging said lever.

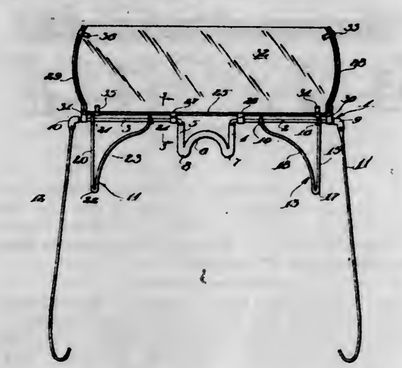
1,570,250. TYPEWRITING MACHINE. EDWARD B. HESS, New York, N. Y., assignor to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed June 11, 1925. Serial No. 36,370. 10 Claims. (Cl. 197—135.)

1. A card guide comprising a scale member having a central opening to permit the passage of the type bars to the printing point, an integral rigid finger immediately adjacent the type opening, and a movable finger at the extreme end of the scale.

1,570,251. COLLET AND COLLET MECHANISM. FRANK O. HOAGLAND, Bridgeport, Conn., assignor to Reed-Prentice Company, Worcester, Mass., a Corporation of Massachusetts. Filed Jan. 20, 1923. Serial No. 613,999. 7 Claims. (Cl. 74—33.)

1. Collet mechanism including a manually rotatable actuating member having a hub provided with an annular outstanding flange which has an inwardly-directed

manually-engageable rim-portion having an unobstructed finger-space between it and the body of the flange and terminating in an annular edge which has an unobstructed finger-space between it and said hub.

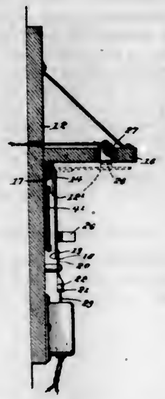


1,570,252. LINSEED-OIL SUBSTITUTE. JACOB HOROWITZ, Brooklyn, N. Y. Filed Sept. 18, 1924. Serial No. 738,533. 1 Claim. (Cl. 134—56.)

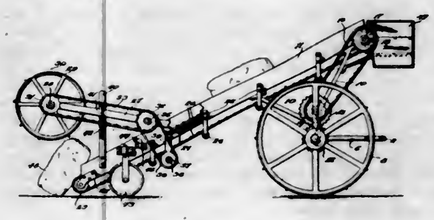
The herein described linseed oil substitute composed of the following components, in substantially the proportions stated: twenty-five pounds of crude rubber; seventy-five pounds of kerosene solvent; one hundred pounds of rosin, four pounds of phosphorus trichloride, and sufficient caustic soda to produce in the mixture an alkali test.

1,570,253. PROCESS FOR THE MANUFACTURE OF SODIUM THIOSULPHATE. HENRY HOWARD, Cleveland, Ohio, assignor to The Grasselli Chemical Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 13, 1925. Serial No. 2,169. 6 Claims. (Cl. 23—116.)

2. In processes for the manufacture of sodium thiosulphate involving the interaction of sodium sulphite with sulphur, the step which consists in supplying the sulphur for the reaction in gaseous form.



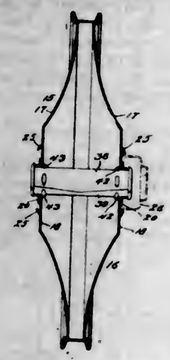
1,570,254. SUN-GLARE EYESHIELD. HARRY S. HUMES, Venice, Calif. Filed Apr. 24, 1924. Serial No. 708,661. 2 Claims. (Cl. 2—12.)



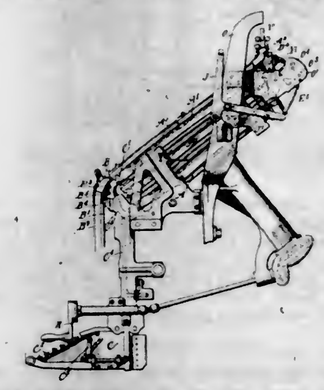
2. A sun glare eye shield comprising a principal frame formed of a substantial wire having straight alined shaft portions, a nose bridge formed between the inner ends of the shaft portions, supporting bows hinged to the outer ends of the shaft portions, adjustable supports mounted upon the shaft portions and adapted to be moved inwardly or outwardly and turned upwardly or downwardly and adapted to engage the side of a head above and back of the eyes, and a plate hingedly connected to the shaft portions.

1,570,255. FIRE ALARM APPARATUS. HUGO HUNKE, Taylor, Tex. Filed Oct. 16, 1923. Serial No. 668,885. 1 Claim. (Cl. 177—330.)

An indicator for electric circuits comprising a vertically disposed base, a horizontally disposed shelf carried thereby and extending forwardly therefrom, a stationary indicating member on the base, a rod carried by said shelf, a cover plate hinged at its upper edge to the rod and adapted for depression to cover said stationary indicating member and to be elevated for exposing said stationary indicating member, a spring carried by the rod and acting on said cover plate for elevating the same, a latch member engageable with the lower edge of the cover plate for holding the same in depressed position, means for retracting said latch member and thereby releasing the cover plate, stationary circuit closing contacts, projecting downwardly through the shelf, and coacting contacts carried by the cover plate for engagement with said stationary contacts when the cover plate is elevated.



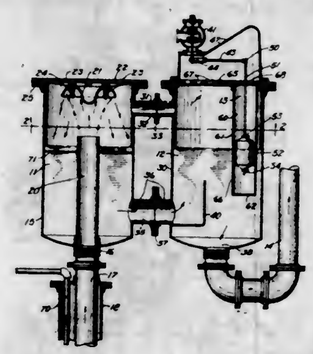
1,570,256. LOADER. GLEN M. HUNT, Saguache, Colo. Filed July 12, 1924. Serial No. 725,565. 1 Claim. (Cl. 214—41.)



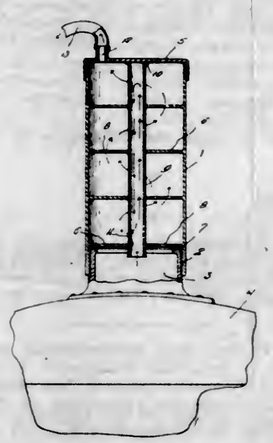
An apparatus for loading sacks of potatoes into a wagon consisting of an elevating conveyer inclined upwardly from front to rear, rolling supports for said conveyer, means for coupling the ends of said conveyer to the front and rear end portions respectively of a wagon whereby the conveyer will be caused to travel alongside the wagon, gearing connecting the rear rolling supports with the conveyer to actuate the conveyer, a chute extending laterally from the upper rear end of the conveyer over the side of the wagon to discharge the sacks into the wagon, arms projecting forwardly from the conveyer near and above the front end thereof, a reel carried by the front ends of said arms, means actuated by the conveyer for rotating the reel whereby to topple standing filled sacks onto the conveyer, posts rising from the conveyer, retainers on said posts engaged around said arms, and springs within the retainers below and bearing against the arms.

1,570,257. WHEEL. ALFRED KAUFMANN, Philadelphia, Pa. Filed July 29, 1924. Serial No. 728,885. 7 Claims. (Cl. 301—63.)

2. A wheel of the character described including a rim made of strip material having outwardly projecting side flanges providing a tire-receiving channel, one end portion of said strip material having a slot, the other end having a portion projecting beyond the ends of said flanges and forming a hook, said hook engaging through said slot.



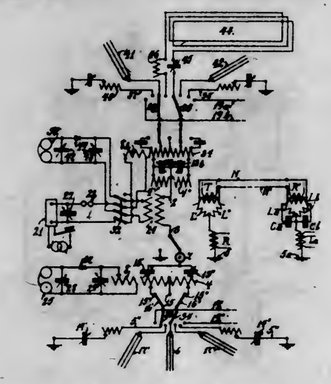
1,570,258. TYPOGRAPHICAL COMPOSING AND DISTRIBUTING MACHINE. DAVID S. KENNEDY, Brooklyn, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed June 20, 1924. Serial No. 721,182. 27 Claims. (Cl. 199—17.)



1. In a typographical composing and distributing machine adapted to be equipped with interchangeable magazines, one containing a set of matrices occupying certain channels according to character and the other containing a set of matrices occupying differently located channels according to character, the combination of two magazine entrances having their respective channels arranged to correspond with the magazine channels, means operable to bring either entrance into operative position for cooperation with the magazine in use, an assembler entrance provided with a series of adjustable matrix guide plates, and means for adjusting said plates sidewise at their upper ends to adapt the entrance to cooperate with the matrices of the magazine in use.

1,570,259. AIR BOOSTER PUMP. FRANK J. KIMBALL, Los Angeles, Calif., assignor to Frank J. Kimball Co., a Corporation of California. Filed Aug. 8, 1921. Serial No. 490,587. 12 Claims. (Cl. 103—231.)

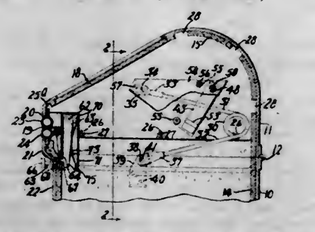
1. In an air booster pump; a shell forming a receiving chamber arranged to receive air and water from water lift tubing; a shell forming a quieting chamber; connections between said chambers whereby air and water may freely pass from the receiving chamber to the quieting chamber, there being a wall member for directing the water upwardly as it enters said quieting chamber so that air contained therein may be freed before the discharge thereof from said quieting chamber; means for restricting the flow of air from said chambers; and means for delivering water from the quieting chamber under pressure of the air in said chamber.



1,570,260. RADIATOR ATTACHMENT FOR TRACTORS. JOHN H. KLINKERMAN, Canton, Kans., assignor of one-half to John A. Frick, Canton, Kans. Filed Oct. 22, 1924. Serial No. 745,200. 1 Claim. (Cl. 257—25.)

A radiator attachment comprising a cylindrical open ended casing screw threaded at its opposite ends, the lower end being adapted to be secured to a radiator filler tube, a plurality of superposed vertically spaced partitions arranged horizontally within the casing, the end most partition being spaced inwardly from the ends of said casing, all of said partitions being provided with central alined holes and with auxiliary openings arranged in staggered relation, an open ended vertical tube extending through the central holes in said partition, a closing cap screwed on the upper threaded end of said casing and closing the adjacent end of said tube, said cover being provided with a discharge neck for attachment of a steam conducting conduit.

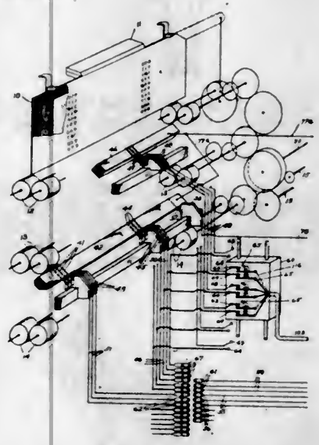
1,570,261. SIMULTANEOUS SENDING AND RECEIVING SYSTEM. AUGUST J. KLONECK, New York, N. Y. Filed May 12, 1921. Serial No. 468,935. 12 Claims. (Cl. 250—9.)



1. A means for simultaneously sending and receiving electrical signals, including an aerial to aerial circuit for transmitting and a directive aerial to aerial circuit for receiving, one of said aerial circuits forming a terminal for the other of said circuits and being common for both circuits, said second mentioned circuit consisting of two branches of equal reactance having a connection at the branching point for said first mentioned circuit.

1,570,262. PROCESS OF PREPARING PROPYLENE-THIOHYDRIN OR PROPYLENE-ETHYLENE-THIOHYDRIN AND PRODUCTS OBTAINED THEREBY. GEORG KRÄNZLEIN, Sindlingen, near Hochst-on-the-Main, and MARTIN CORELL, Hochst-on-the-Main, Germany, assignors to Farbwerke vorm. Meister Lucius & Bruning, Hochst-on-the-Main, Germany, a Corporation of Germany. Filed Aug. 7, 1922. Serial No. 580,287. 7 Claims. (Cl. 260—151.)

1. As new products, the thiohydrins of the general formula



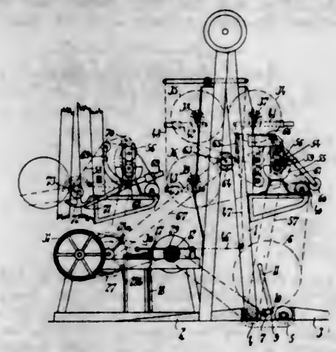
wherein R stands for the propyleneglycol-residue and R_1 for the propyleneglycol-or ethyleneglycol residue, which are readily soluble in water and possess a high dissolving ability for many organic dyestuffs.

1,570,263. CASING FOR TYPEWRITING MACHINES. ALFRED G. F. KUROWSKI, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed June 19, 1922. Serial No. 569,423. 17 Claims. (Cl. 220—35.)

1. A sound-deadening casing for a typewriting machine, comprising a body-part and a cover hinged thereto, and cover opening and controlling means, comprising a coil-spring, one leg of which, at a fixed point thereof, is pivotally connected to the cover, and the other leg of which, at a fixed point thereof, is pivotally connected to the casing-body, the coil being free to float as the legs spread in the cover-opening operation, and a leaf-spring laid crosswise of the leg of the coil-spring on the cover, to bear upon the coil-spring with progressively increasing pressure, as the cover opens, whereby to serve as a buffer.

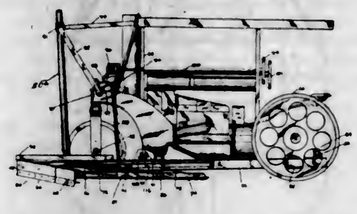
1,570,264. AUTOMATICALLY-CONTROLLED TABULATING MACHINE. CLAIR DENNISON LAKE, Binghamton, N. Y., assignor to The Tabulating Machine Company, Endicott, N. Y., a Corporation of New Jersey. Filed Dec. 30, 1921. Serial No. 525,954. 37 Claims. (Cl. 235—92.)

1. In an apparatus of the class described, in combination, tabulating devices controlled by index-points of record cards, means jointly controlled by index points of a plurality of cards passing through the machine for governing operation of the machine, and means whereby the index point columns to effect such control may be selected at will from a plurality of index point columns.



1,570,265. ELECTRODE FOR DISCHARGE TUBES. KAREL AUGUST LEBBINK, Eindhoven, Netherlands, assignor to Naamlooze Vennootschap Philips' Gloeilampenfabrieken, Eindhoven, Netherlands. Filed July 5, 1923. Serial No. 649,517. 3 Claims. (Cl. 250—27.)

2. An electrode for electric discharge tubes comprising a coiled wire wound on at least one support, the windings of said wire being embedded in slots and the teeth between said slots being bent over so as to lock the windings.

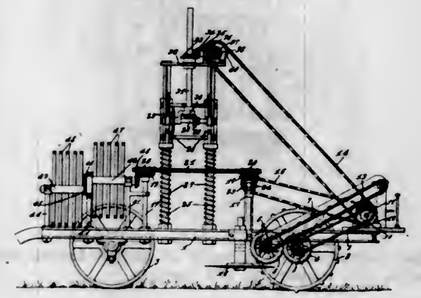


1,570,266. MACHINE FOR PACKING PAPER ROLLS. WALFRID LJUNGSTRÖM, Matfors, Sweden. Filed Mar. 26, 1924. Serial No. 702,960. 7 Claims. (Cl. 93—5.)

1. Machine for packing paper rolls, comprising a frame, rollers journalled in said frame in such position that the roll to be packed can be freely placed thereon, means for rotating one of said rollers, shafts journalled in the frame and adapted to support packing material, brakes at said shafts, and a device adapted to stop the machine

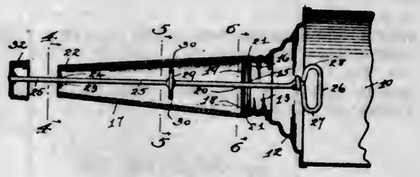
when the desired number of windings of the packing material has been wound onto the paper roll and simultaneously to release said brakes.

1,570,267. ROAD-GRADING MACHINE. DONALD GORDON MACKENZIE and MARIUS HONAKER NECKER, Montreal Quebec, Canada. Filed Mar. 14, 1925. Serial No. 15,704. 47 Claims. (Cl. 37—146.)



1. In a road grader, a frame adapted to be secured to the vehicle, a grading mechanism carried by said frame including ground trailers and pressure devices distributing the weight from the front rearwardly on said ground members.

1,570,268. FIGURE TOY. LOUIS MARX, New York, N. Y. Filed Mar. 21, 1923. Serial No. 626,535. 19 Claims. (Cl. 46—40.)

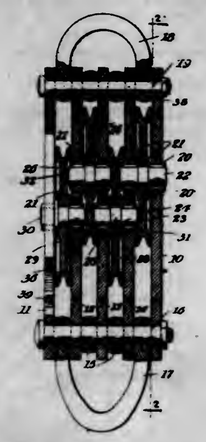


1. In a toy amusement device simulating a drummer in action, a support, a representation of a bass drum on the support, a figure representing a drummer arranged in sitting position on the drum, means independent of said figure for beating said drum, a simulated snare drum associated with the figure, means for beating the snare drum operated by movement of the figure, and mechanism for setting the figure in motion and for operating the first mentioned means in synchronization therewith to produce a simulated beating of the drums.

1,570,269. CANE HARVESTER. JOSEPH A. MELANCON, Donaldsville, La. Filed Sept. 29, 1923. Serial No. 665,667. 1 Claim. (Cl. 56—13.)

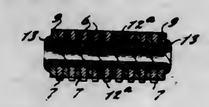
The combination with a portable frame and top severing means carried thereby, of oppositely rotatable shafts adjacent each side of the frame and in front of the top severing means, means for actuating all of the shafts simultaneously, and means on one shaft at each side of the frame for stripping standing canes and upon the other shaft at each side of the frame for laterally delivering severed cane tops.

1,570,270. DISPENSING CAN. JOSEPH H. MILLER, Harrisburg, Tex. Filed Apr. 9, 1925. Serial No. 21,745. 5 Claims. (Cl. 221—56.)



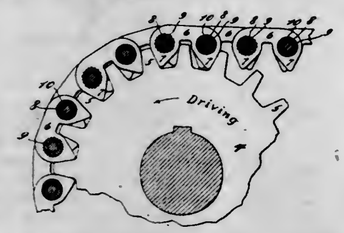
1. In a dispensing can the combination with a cylindric body having a projection at one end thereof, of a tapered nozzle to connect with said body-projection at its larger end, a stem extending all the way through the nozzle and passing through the projection on the body, means in the nozzle for guiding the stem therein and a cap attached to the outer end of the stem and shaped to cover the smaller and of the nozzle.

1,570,271. SHEAVE BLOCK. BURT S. MINOR, Los Angeles, Calif., assignor to Regan Forge and Engineering Company, Inc., San Pedro, Calif., a Corporation of California. Filed July 3, 1923. Serial No. 649,244. 5 Claims. (Cl. 254—192.)



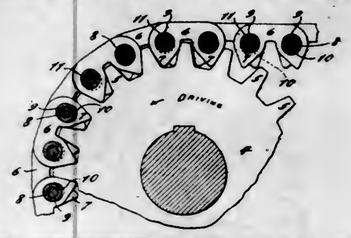
1. A sheave block construction, comprising a plurality of straps spaced apart and provided at each end with a

swinging clevis, a plurality of pairs of anti-friction bearings mounted in said plates and arranged in stag-



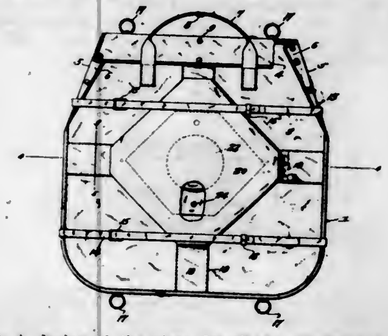
gered relation, and a plurality of sheaves having rigid bearing pins mounted in said bearings.

1,570,272. POWER-TRANSMISSION CHAIN. FRIEDRICH MÜLLER, Hartford, Conn., assignor to The Whitney Mfg. Co., Hartford, Conn., a Corporation of Connecticut. Filed Aug. 9, 1922. Serial No. 580,709. 4 Claims. (Cl. 74—32.)



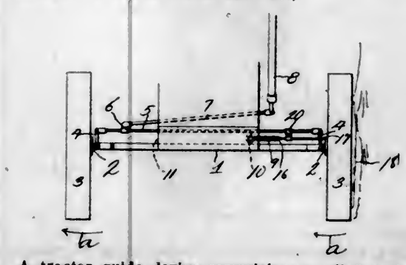
1. A power transmission chain comprising links arranged in overlapping relation and a flexible member in the form of a single flat helix on which said links are mounted.

1,570,273. POWER-TRANSMISSION CHAIN. FRIEDRICH MÜLLER, Hartford, Conn., assignor to The Whitney Mfg. Co., Hartford, Conn., a Corporation of Connecticut. Filed Nov. 4, 1922. Serial No. 598,979. 4 Claims. (Cl. 74—32.)



1. In a power transmission chain comprising links arranged in overlapping relation, pivot members on which said links are mounted, each link being provided with an aperture at one end and a larger aperture at the opposite end, affording a clearance space between it and the pivot member, to permit that end of the link to move laterally with resepte to the pivot member towards or away from the sprocket around which it passes.

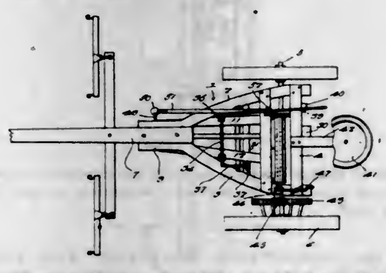
1,570,274. POWER-TRANSMISSION CHAIN. FRIEDRICH MÜLLER, Hartford, Conn., assignor to The Whitney Mfg. Co., Hartford, Conn., a Corporation of Connecticut. Filed Apr. 19, 1923, Serial No. 633,116. Renewed Oct. 19, 1925. 1 Claim. (Cl. 74—32.)



In a power-transmitting chain comprising links arranged in overlapping relation, each link being provided with an aperture affording a turning fit on its pivot members and at the opposite end with an aperture elongated with respect to its pivot member and inclined with respect to the length of the link.

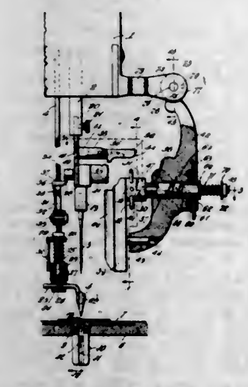
1,570,275. HAT BAG. ELLA A. NALLE, Baltimore, Md. Filed Apr. 15, 1922. Serial No. 553,050. 2 Claims. (Cl. 206—8.)

2. A device of the class described comprising a substantially rectangular bag having two rounded corners and open along the edge opposite the edge having the rounded corners, one wall of said bag being flat and the other bulged, the corners of the open side being inclined along one edge and the opposed edge having flaps overlapping said inclined edge and equipped with fastening elements, a closing flap for said open end, and handles carried by said open ends.



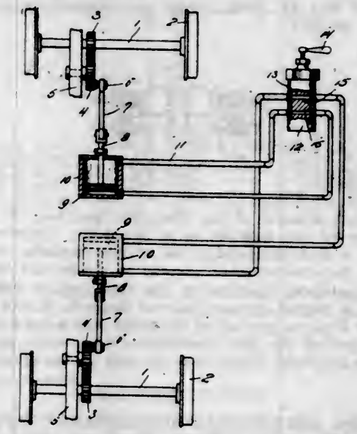
1,570,276. TRACTOR GUIDE. FRANCIS HAROLD NORMAN, Roann, Ind. Filed July 23, 1925. Serial No. 45,542. 1 Claim. (Cl. 280—87.)

A tractor guide device comprising a coiled spring anchored to a support above an axle, a sleeve secured in the other end of the coiled spring, a guide rod threaded



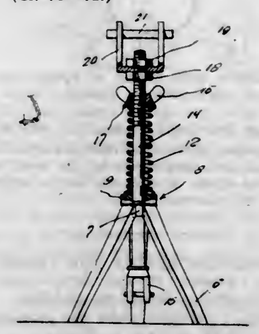
in said sleeve and extending towards a knuckle arm, a lock nut carried by said rod, a bracket carried by a drag link and in which the guide rod is slidably mounted, the outer end of said guide rod being provided with a hook extending over the outer side of the knuckle arm.

1,570,277. COTTON CHOPPER. JOSEPH L. PARKS, Henderson, N. C. Filed Aug. 3, 1925. Serial No. 47,799. 3 Claims. (Cl. 97—18.)



1. A cotton chopper comprising a main wheel frame, a supplemental frame pivotally supported below the main frame and adapted for vertical movement, ground engaging guide shoes carried by the supplemental frame, an elongated arm, a chopping blade carried by the rear end thereof, a socket member arranged on the forward end of the main frame, a ball shaped head carried by the forward end of said arm, and disposed within said socket, an arm extending laterally from the ball shaped head through the opposite side of the socket, and means for actuating said last mentioned arm to effect the oscillatory movement of the arm and the chopping blade thereby.

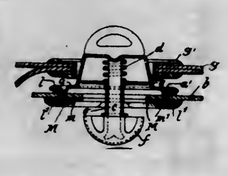
1,570,278. HEMSTITCH MACHINE. MANUEL HUMBERTO PÉREZ, San Pedro Sula, Honduras. Filed Oct. 11, 1923. Serial No. 667,903. 41 Claims. (Cl. 112—81.)



1. In a sewing machine, needle mechanism including reciprocatory and oscillatory needles, a piercer actuated by said needle mechanism, a needle spreader, mechanism for advancing and retracting the spreader between fixed normal advanced and retracted positions, and means for adjusting the spreader to vary its fixed advanced and retracted positions, said spreader advancing and retracting mechanism operating in each cycle of action on the initial downward movement of the piercer and needles to leave the spreader in set normal retracted position, on the ensuing upward motion of the needles to move the spreader to fixed advanced needle spreading position, on a second downward movement of the needles to maintain the spreader in needle spreading position, on the ensuing upward movement of the needles to retract the spreader on the third downward movement of the needles to maintain the spreader in retracted position, and on the final upward movement of the needles to still maintain the spreader in retracted position while re-setting the spreader advancing and retracting mechanism for a repetition of the above-described operation.

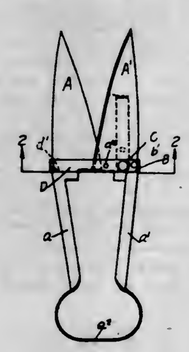
1,570,279. AIR BRAKE. CARLOS ABATES PICÓ, San Juan, P. R. Filed Nov. 6, 1924. Serial No. 748,220. 1 Claim. (Cl. 188—99.)

In combination, a wheel vehicle, wheel supported axles therefor, gear wheels mounted upon the axles, gear wheels journaled upon the vehicle and meshing with the first mentioned gear wheels and having eccentrically positioned wrist pins, cylinders on the vehicle having pistons slidably mounted therein, means operatively connectig the pistons with the wrist pins whereby the pistons reciprocate within the cylinders along paths which are shorter than the length of the cylinders, a pair of pipe sections connected with each cylinder and communicating with the interior thereof at points beyond the path of movement of the piston therein, a valve casing connected with the pairs of pipe sections, and a valve turnably mounted in the valve casing and having passageways adapted to be moved into registry with the pipe sections simultaneously.



1,570,280. PUMP JACK. EDWARD R. PURVIS, Shreveport, La. Filed Sept. 22, 1925. Serial No. 57,882. 2 Claims. (Cl. 74—71.)

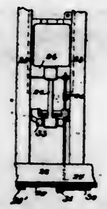
1. In a structure of the class described, a tripod, a guide bushing detachably connected with the upper portion of the tripod, a rod having a smooth surface por-



tion slidable through said bushing, a coupling on the lower end of the rod, the upper end of the rod being screw threaded, a coil spring surrounding said rod and bearing at one end against the bushing, an adjustable stop on the threaded portion against which the opposite end of the coil spring bears, and an adjustably mounted yoke on the upper end of said rod to adapt it for connection with the rocking beam of a pump jack.

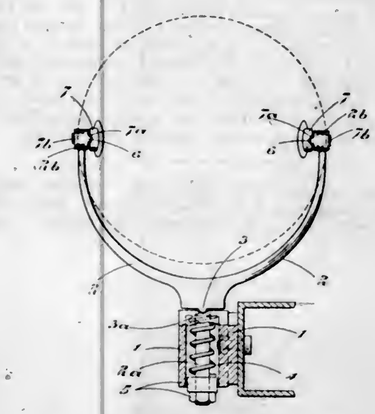
1,570,281. TWO-HEAD ROTATABLE FASTENING DEVICE. ACHILLE FRANÇOIS RAYMOND, Grenoble, France. Filed May 28, 1923. Serial No. 642,010. 8 Claims. (Cl. 24—221.)

7. In a fastener of the character described, the combination of two members to be detachably connected together, a stud connected to one of said members, an eyelet in the other member adapted to receive the stud, a shank rotatably mounted in the stud and of sufficient length to project through the stud and both of said members, a head on one end of the shank, and a head on the other end of the shank consisting of a hollow member having its walls swaged onto the end of the shank.



1,570,282. EXTENSION-LIMITING MEANS FOR GRASS SHEARS. GEORGE REITER, Cincinnati, Ohio. Filed Aug. 5, 1925. Serial No. 48,260. 5 Claims. (Cl. 30—13.)

1. In combination with a pair of shears whose blades have a resilient connection, a resilient band having a hooked clasp on its free end to contact with the outside edge of one of the shear blades, so pivoted in fixed relation to the other blade as to extend across both blades in using position and lengthwise of one blade only when in out of use position, and means for normally holding said band in using position.

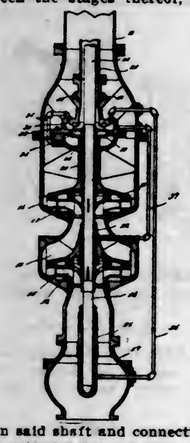


1,570,283. STOPPING DEVICE FOR LOOMS. PIERRE RENARD and ALBERT RENARD, Nonancourt, France. Filed July 2, 1920. Serial No. 393,766. 3 Claims. (Cl. 139—336.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A device for automatically stopping a power loom for the manufacture of oriental and other knotted carpets each time a knot has not been formed, said device comprising a knotting carriage, a rod secured thereto, a plate having a reciprocating motion, a transmission mechanism operable by said plate to uncouple the loom, said rod ar-

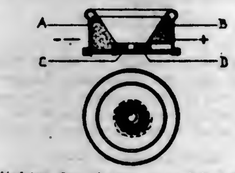
ranged to engage the plate to limit the movement thereof upon the failure of the knotting mechanism to seize the pile thread.

1,570,284. ORIENTABLE HEADLIGHT FOR AUTOMOBILES. BENOIT SCHERER, Courbevoie, France. Filed Sept. 8, 1924. Serial No. 736,613. 1 Claim. (Cl. 240—61.)



A headlight casing having oppositely extending pivot arms and also having diametrically enlarged bases at the inner ends of said pivot arms each provided with a V-shaped notch, in combination with a supporting fork having spring arms each provided with a bearing for one of the pivot arms and also provided with a tooth for engagement with said notch, said fork also having a vertical pivot stem at its base and being further provided at one side of the upper end of said stem with a tooth, and a supporting socket for said fork having a bore of greater diameter than and through which said stem extends, said socket having a V-shaped notch for engagement by the last named tooth and a spring on said stem and normally holding said tooth in engagement with said notch.

1,570,285. CLEANING LUBRICATION OF DEEP-WELL PUMPS. VICTOR SCHLEYER, Anderson, Ind., assignor, by mesne assignments, to Dean Hill Pump Company, Anderson, Ind., a Corporation of Indiana. Filed Feb. 10, 1923. Serial No. 619,348. 14 Claims. (Cl. 103—102.)

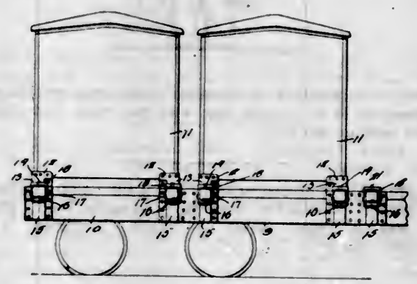


1. In a deep-well pump, the combination of a shaft extending down into the well, a multi-stage rotary pump

located in the well and having runners on said shaft, bearings for said shaft above and below said multi-stage pump and between the stages thereof, a lubricant-water

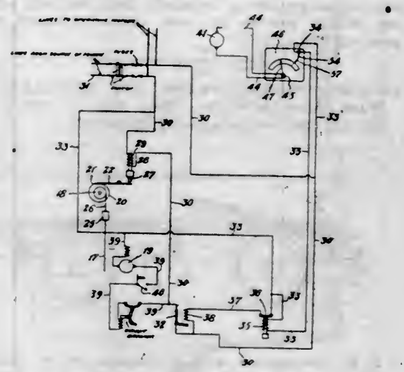
pump mounted on said shaft and connections from the discharge side of said lubricant-water pump to all the aforesaid bearings.

1,570,286. ELECTRIC CIGAR LIGHTER. ALFRED SCHOELLER, Frankfort-on-the-Main, Germany. Filed Mar. 13, 1924. Serial No. 698,911. 1 Claim. (Cl. 219—32.)



Electric lighter for cigars comprising in combination a heating spiral carrier in the form of a flat box, a contact casing, a guiding frame on said contact casing for holding said heating spiral carrier so that the heating spiral is visible from the outside, a pressure contact in the upper part of said casing, a press button in the lower part of said casing, a contact plug in the lower part of said casing opposite said push button and a blade spring fixed in said casing so that its upper end presses from behind against said pressure contact and its lower end against said push button, said blade spring serving as contact between said contact plug and said pressure contact when said push button is pushed in.

1,570,287. TELEPHONE. HELMUT SELL, Siemensstadt, near Berlin, Germany, assignor to Siemens & Halske, Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a Corporation of Germany. Filed Jan. 25, 1924. Serial No. 688,471. 9 Claims. (Cl. 179—115.)

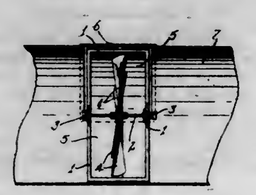


1. A diaphragm unit for telephones of the character described, said unit comprising a diaphragm proper consisting of very thin metal foil radially tensioned, an iron plate armature fixed throughout its entire surface to said diaphragm, and means fixed to the periphery of said diaphragm for maintaining it in permanently tensioned condition.

1,570,288. INTERCHANGEABLE CAR UNIT. ALFRED H. SMITH, New York, N. Y; Maude Emery Smith and Emery Holland Smith, executors of said Alfred H. Smith, deceased. Filed Nov. 5, 1920. Serial No. 422,084. 5 Claims. (Cl. 105—366.)

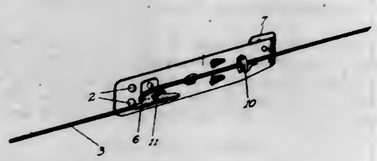
1. The combination with a flat car, of a series of freight compartments removably mounted mounted thereon, legs depending from said compartment, a series of pockets, secured to the side wall of the car and adapted to receive said legs and means locking said legs in said pockets.

1,570,289. MEANS FOR LOCKING AN ORE BRIDGE OR THE LIKE AGAINST MOVEMENT RESULTING FROM WIND PRESSURE. MICHAEL C. THOMAS, Detroit, Mich. Filed Mar. 5, 1923. Serial No. 623,071. 9 Claims. (Cl. 188—155.)



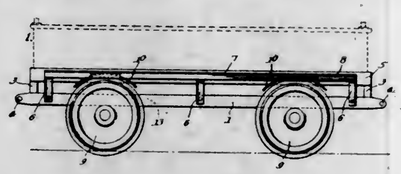
1. In a device of the character described, the combination with normally inoperative means for resisting translative movement of a translatable structure; of means for controlling the actuation of such resisting means including an electrical circuit together with a movable member adapted to control said circuit and itself adapted to be actuated by an electrical current; and an air-current-operated device for producing such current.

1,570,290. HOT-AIR-REGULATING DEVICE. ADOLPH UNGER, Chicago, Ill. Filed Feb. 29, 1924. Serial No. 695,982. 1 Claim. (Cl. 126—99.)



The combination with a hot air pipe having a hinged door, of a cylindrical frame, a rectangular frame carried within said cylindrical frame, and a wheel having

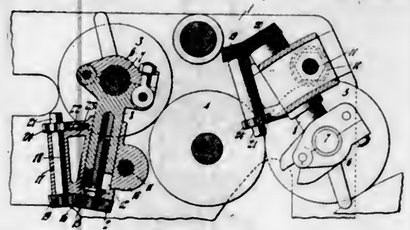
vanes inclined with respect to a plane at right angles to the axis of the cylindrical frame, said cylindrical frame being arranged to enter through the door of the pipe



and to be retained frictionally in the pipe, by the engagement of the hinged door with the frame, and means for latching the door.

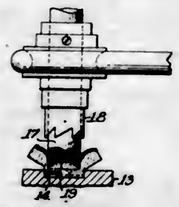
1,570,291. CLOTHESLINE SPLICER AND TIGHTENER. FRANK VAN ALSTINE, Sacramento, Calif. Filed Mar. 3, 1925. Serial No. 12,815. 2 Claims. (Cl. 24—71.2.)

1. A clothes line splicer and tightener comprising a body member, means on said body for securing the ends of a line thereto, the body having orifices through which the line sections pass to reach the end-securing means, and a cleat projecting outwardly from the body adjacent the orifices and on the side thereof opposite to the securing means.



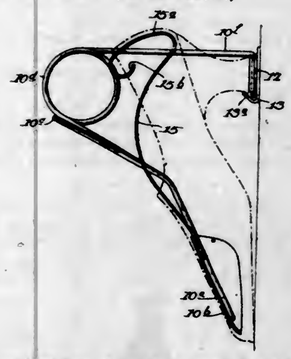
1,570,292. WHEEL GUARD FOR VEHICLES. ROY WADE, Pocatello, Idaho. Filed Aug. 18, 1924. Serial No. 732,827. 3 Claims. (Cl. 105—457.)

2. In combination with a wheeled car or vehicle, a combined wheel guard and foot rest, comprising brackets secured to the body of the car and projecting from the side thereof; and a plurality of narrow bars extending over and secured to said brackets with spaces between them through which the wheels and roadway may be observed.



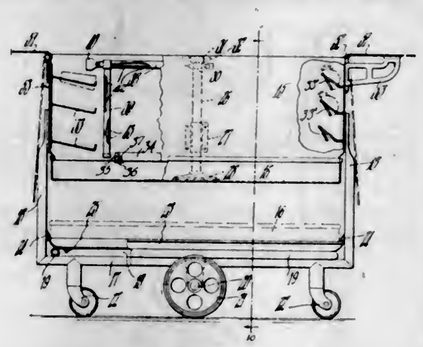
1,570,293. INKING MECHANISM FOR PRINTING PRESSES. HOWARD M. BARBER, Stonington, Conn., assignor to C. B. Cottrell & Sons Company, New York, N. Y., a Corporation of Delaware. Filed May 26, 1923. Serial No. 641,771. 9 Claims. (Cl. 308—59.)

1. An ink transfer roller, and means for adjusting the position of the roller comprising, a bearing member for each end of the roller, a radially disposed stud having a screw-threaded engagement with the bearing member, and a manually operated adjusting shaft located along the side of said stud and geared at its outer end to the outer end of said stud, the inner end of said adjusting



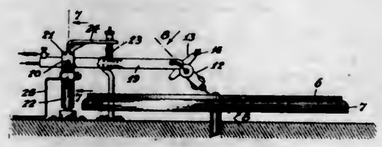
shaft being arranged to be engaged by a tool for turning the shaft to move the bearing member to its desired position.

1,570,294. CUE TIP AND METHOD OF MAKING THE SAME. WILLIAM SILAS BORDEN, Worcester, Mass. Filed Aug. 17, 1922. Serial No. 582,525. 7 Claims. (Cl. 273—70.)



1. The method of producing a cue tip which consists in partially forming a tip of greater thickness than the finished article and having a substantially semi-spherical portion at one side thereof, and thereafter compressing the tip to the desired thickness of the finished article.

1,570,295. SHOE SUPPORT AND FORM. EUGENE L. CAVANNA, Chicago, Ill. Filed Oct. 9, 1924. Serial No. 742,531. 4 Claims. (Cl. 12—128.1.)



1. In combination, a shoe support formed of wire, comprising spaced toe engaging portions, and a transverse supporting strip attachable to a wall or the like, said shoe support comprising portions attached to said supporting strips, said toe engaging portions being extended toward said supporting portions and the wire coiled at the juncture therewith, said strip being provided with means to engage the heels of supported shoes or the like, said toe engaging portions and said heel engaging means being so constructed and arranged as to support shoes under yielding tension.

1,570,296. DISHWASHING MACHINE. HENRY CAVE, Hartford, Conn., assignor to G. R. S. Products, Inc., New York, N. Y., a Corporation. Filed Feb. 4, 1920. Serial No. 356,308. 8 Claims. (Cl. 141—9.)

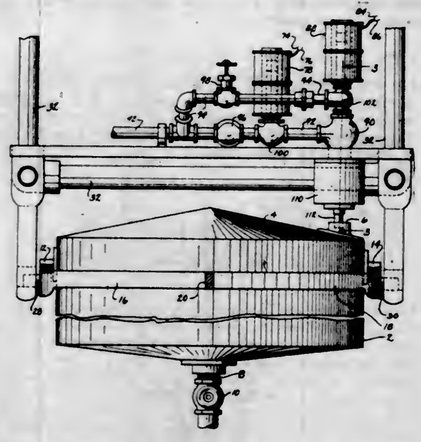
2. A portable washing machine, comprising, a base frame, uprights thereon, a washing tank open at its upper end and supported by said uprights above and spaced from said frame, said tank including a separable bottom section, means normally holding the latter in position to close the bottom of the tank, said section being movable away from the latter toward said base frame, and means in the tank for supporting the articles to be washed independently of said section.

1,570,297. ART OF RECORDING AND REPRODUCING SOUNDS. FRANK L. DYER, Montclair, N. J. Filed May 7, 1923. Serial No. 637,198. 12 Claims. (Cl. 179—100.1.)

4. In the art of reproducing sounds, a talking machine record having a microscopic groove in width, length and amplitude as compared with existing practice, the values of width and length being so chosen as to permit the recording on a ten inch disc of sounds extending over a period of ten minutes or more, a needle engaging the record groove with a pressure sufficiently light as not to result in substantially greater wear than with existing practice, and means for securing an amplified response from said needle, substantially as set forth.

1,570,298. METHOD AND MEANS FOR REPAIRING TIRE CASINGS. ALBERT H. FISHER, East Cleveland, Ohio, assignor of one-half to Milan R. Forkapa. Filed Jan. 28, 1925. Serial No. 5,259. 4 Claims. (Cl. 152—26.)

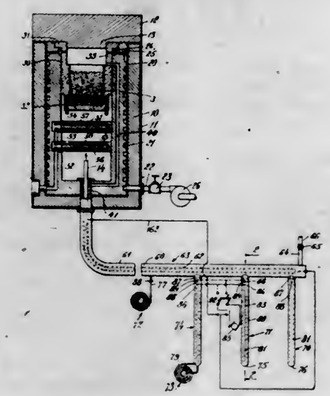
2. An apparatus for repairing punctures of undefined size in the casing of an automobile pneumatic tire, which comprises an elongated shaft circular in cross section having a tapered outer surface adapted to progressively compress the torn edges of the puncture walls, and acting expansively to enlarge the puncture opening to the maximum shaft diameter, a socket formed in the base of said shaft and having slitted resilient side walls, a flexible stem adapted to be telescopically engaged within said socket and compressible therein, and an enlarged head carried by said stem and adapted to form a pad for



forcing said shaft through the puncture hole of said casing and cooperating as a puncture closure when said head is seated against the inner wall of said casing.

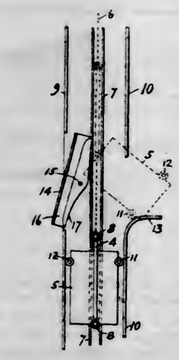
1,570,299. AMMONIA SODA PROCESS. HUGH A. GALT, Akron, Ohio, assignor to The Pittsburgh Plate Glass Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 1, 1922. Serial No. 557,801. 3 Claims. (Cl. 23—65.)

1. An ammonia soda process, consisting in bringing into contact with each other, crude ammonia, concentrated brine, and a low test carbonic acid gas to thereby carbonate the ammonia without material precipitation of sodium bicarbonate, passing high test carbonic acid gas into the mixture and thereby precipitating sodium bicarbonate, and calcining the bicarbonate to form soda ash and supply said high test carbonic acid gas, thereby in effect concentrating the low test carbonic acid gas.



1,570,300. WEIGHING MACHINE FOR LIQUIDS. EUGENE GASE, Saginaw, Mich., assignor to Baker-Perkins Company, Incorporated, White Plains, N. Y. Filed Jan. 28, 1924. Serial No. 688,912. 13 Claims. (Cl. 249—65.)

1. In a machine for weighing liquids, a balance, a weighing tank suspended from said balance for receiving liquid to be weighed, a main supply pipe and an auxiliary supply pipe for leading liquid to said weighing tank, a valve in said main pipe, a solenoid operatively connected to said valve to maintain said valve in open position when said solenoid is energized, a valve in said auxiliary pipe, a solenoid operatively connected to the last named valve to maintain the valve in open position when the last named solenoid is energized, electrical circuits connected to the said solenoids, and means actuated by movements of said balance to successively open the said circuits to de-energize the said solenoids, the said means



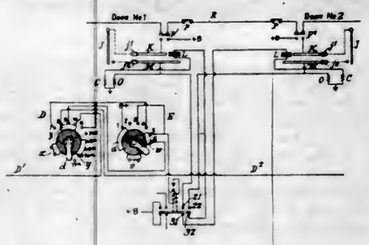
causing the valve of the main pipe to first close and thereafter, when the required quantity of liquid has entered the said weighing tank, causing the valve in the said auxiliary pipe to close.

1,570,301. ELECTRIC HEATING SYSTEM. WILLIAM S. HADAWAY, Jr., New Rochelle, N. Y. Filed July 1, 1921, Serial No. 481,772. Renewed May 5, 1925. 72 Claims. (Cl. 219—19.)

1. In a heat distributing system, the combination with a vapor heater and a plurality of working tools, of a vapor conductor for transferring vapor from said heater to the tools comprising an elongated casing, a porous mass therein offering a resistance to the flow of vapor, and a valve associated with each of said tools adapted to discontinue the flow of vapor to the associated tool independent of the other tools.

1,570,302. DOUBLE-DUMP SKIP HOIST. WILLIAM E. HALE, Fort Washington, Pa., assignor to R. H. Beaumont Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 5, 1923. Serial No. 622,836. 5 Claims. (Cl. 214—120.)

1. A skip hoist adapted to dump at different levels and in different directions and comprising the combination of a tower, a bail guide, an interrupted bucket guide, dumping extensions at different sides of the interruptions and at different levels, and switches arranged at the interruptions and disposed opposite the adjacent extensions.

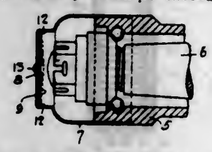


1,570,303. SKIP-BUCKET CAR-LOADING APPARATUS. WILLIAM E. HALE, Fort Washington, Pa., assignor to R. H. Beaumont Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 15, 1925. Serial No. 30,455. 3 Claims. (Cl. 214—40.)

1. Skip bucket car loading apparatus including a skip bucket, a car, a winding machine having a skip bucket cable and a car cable attached at its ends to the car, means for arresting the movement of the car in loading position, and take-up devices cooperating with the car cable and of which one is operative between one end of the car and the winding machine and of which the other is operative between the other end of the car and the winding machine whereby the latter may operate both the bucket cable and the car cable while the car is at rest in loading position.

3. In skip bucket car loading apparatus a tram car, a winding machine, a car cable wound and unwound by the machine and having its ends attached to the car, and a take-up device in each reach of the cable between the car and winding machine.

1,570,304. TRAIN DOOR-CONTROL SYSTEM. LEE P. HYNES, Albany, N. Y., assignor to Consolidated Car-Heating Company, Albany, N. Y., a Corporation of West Virginia. Filed Apr. 9, 1921. Serial No. 460,087. 33 Claims. (Cl. 105—341.)

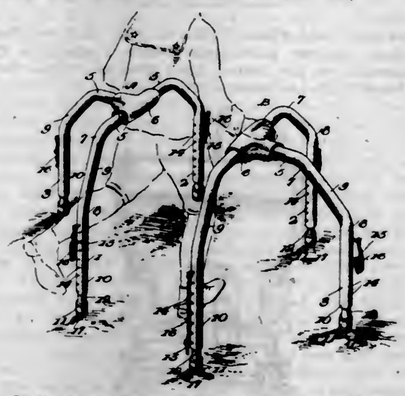


1. In a train door-control system the combination with a train line and door-operating means controlled thereby on the several cars of a train, of local switch-contacts for energizing said train-line, associated switch-contacts for separately operating doors on one car of the train, and a common operating means for the two sets of contacts.

1,570,305. LUBRICATING APPARATUS. JAMES J. JACOBS and ROLLA B. BOSTWICK, Duquesne, Pa. Filed Nov. 10, 1924. Serial No. 748,994. 5 Claims. (Cl. 308—96.)

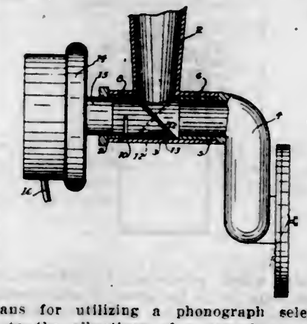
1. The combination with a wheel hub having a lubricant recess therein and provided with a cap which has

an opening disposed centrally thereof, of a flat spring seated in the end of said cap, and a closure element carried by said spring in position to extend into said open-



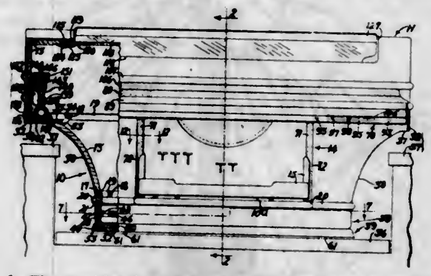
ing, the ends of the spring being held against movement axially of the hub by indentations arranged circumferentially in said cap.

1,570,306. COMBINATION BOTTLE-OPENING TOOL. WILLIAM JOHNSON, Chicago, Ill. Filed July 20, 1925. Serial No. 44,707. 4 Claims. (Cl. 65—47.)



1. In a combination tool, a shank provided with a barbed point, the upper end of the shank being laterally extended to afford a flat head provided with oppositely disposed tongues, and a handle having opposite laterally extending feet registering with said tongues and united thereto, substantially as described.

1,570,307. KINESITHERAPY APPARATUS. CLARENCE E. KIRBY, Chestertown, Md., assignor of one-half to Charles J. Butler, Easton, Md. Filed July 3, 1924. Serial No. 724,097. 8 Claims. (Cl. 272—63.)

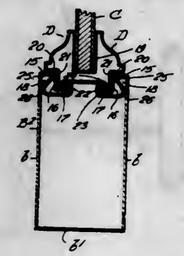


1. In an apparatus of the character described a pair of three-legged portable supports, two of the legs of each support defining a plane substantially perpendicular to the ground and parallel to each other, the third leg of each support extending transversely of the plane of the two other legs and engaging the ground at a point displaced laterally therefrom, all of said legs being bent at a plurality of points to form vertically disposed ground engaging extremities and horizontally disposed upper extremities connected by inclined intermediate section, a fitting connecting the adjacent upper ends of the legs of each support, a hand-grip carried by each support and means carried by the legs to adjust the supports and hand-grips vertically to a height coinciding substantially with the hands of the user.

1,570,308. REGULABLE TONE-ARM CONNECTER. JOHN KORANEK, Chicago, Ill., assignor to E. Toman & Co., Chicago, Ill., a Corporation of Illinois. Filed Jan. 28, 1924. Serial No. 689,193. 5 Claims. (Cl. 179—100.1.)

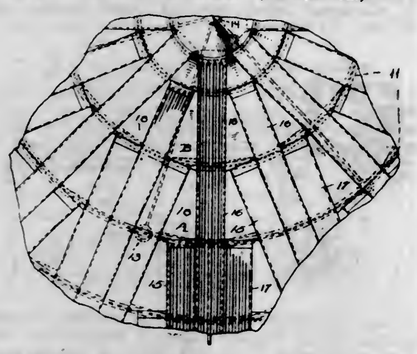
1. Means for utilizing a phonograph selectively to respond to the vibrations of a reproducer or a radio receiver said means comprising the combination with a tone arm on said phonograph, of a T connection on said tone arm, a reproducer connected to one arm of said T connection, a radio receiver connected to the other arm of said T connection and a baffle member rotatably mounted in the T connection for selectively connecting the tone arm with either the reproducer or the receiver.

1,570,309. TYPEWRITING MACHINE. ALFRED G. F. KUROWSKI, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 27, 1922. Serial No. 590,756. 15 Claims. (Cl. 197—186.)



1. The combination of a typewriting machine, a sound-deadening casing therefor having a body-portion with lateral overhangings at the top thereof to provide space for movement of the carriage, means supporting said machine and casing upon a desk having a platform depressed below the top of the desk, said casing having a removable base-piece and a bolster insertable between the base-piece and the casing-body to elevate the latter to cause the lateral extensions to clear the corners of the desk at the top of the depression, and means to elevate the machine according to the elevation of the casing-body.

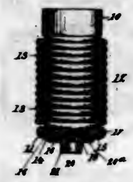
1,570,310. SHEET-METAL DOOR AND ANALOGOUS STRUCTURE. LAWRENCE R. LJUNGBERG and WILLIAM A. ANDERBERG, Jamestown, N. Y., assignors to Art Metal Construction Company, Jamestown, N. Y. Filed Oct. 10, 1922. Serial No. 593,604. 6 Claims. (Cl. 189—53.)



1. The combination of parts of a sheet metal structure to be connected, one of said parts comprising oppo-

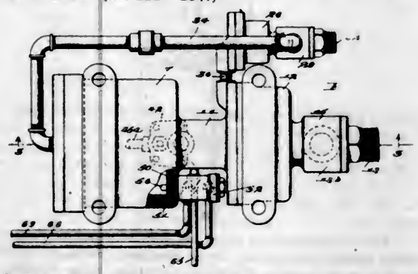
site side walls having edge portions bent towards each other and then substantially parallel with said walls forming relatively wide internal channels, said other structure part comprising opposite walls which extend between and contact with the inside faces of the inner walls of said channels, and have inwardly extending lateral flanges, portions on said structure parts which abut to prevent inward displacement of the parts, said parts being adapted to be placed together edgewise and

a key member which locks said structure parts together and extends from one to the other of said opposite walls for bracing the same, said key member having outwardly directed portions between its side edges which engage the inner faces of said lateral flanges and also having side flanges which enter said channels and extend diagonally in said channels from one to the other of the opposite walls thereof and bear against the ends of said channels, said key member acting to draw the abutting portions of said structure parts together.



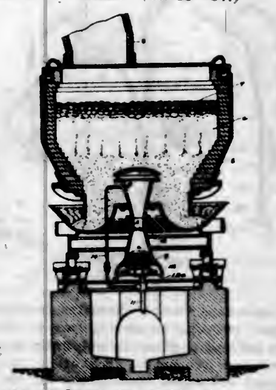
1,570,311. METALLIC ROOF FOR TANKS. JOSEPH T. MAGUIRE, Chevy Chase, Md. Filed May 19, 1924. Serial No. 714,251. 6 Claims. (Cl. 108—32.)

1. In a roofing of the character described, in combination, main sections composed of a plurality of parts, each part being provided with a plurality of longitudinally disposed parallel corrugations, said sections being radially disposed about the roof and intervening plates adapted to close the openings between adjacent sections and means for draining the water to the corrugations of the next lower main section.



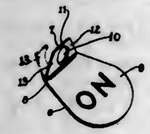
1,570,312. METHOD OF PRODUCING EXPANSIBLE-COLLAPSIBLE ELEMENTS. HARRY C. MALLORY, Bellport, N. Y., assignor, by mesne assignments, to American Radiator Company, Chicago, Ill., a Corporation of New Jersey. Filed Aug. 31, 1920. Serial No. 407,207. 5 Claims. (Cl. 153—73.)

1. The process of making an expansible-collapsible element which consists in forming a shell having a body portion and a closed end, circumferentially corrugating said body portion, disposing reinforcing members within



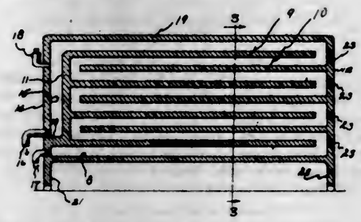
and without said closed end, and then securing said closed end and reinforcing members together, substantially as specified.

1,570,313. LOCOMOTIVE. CLINTON O. MIKLE, Portland, Oreg. Filed Aug. 4, 1925. Serial No. 48,048. 15 Claims. (Cl. 121—137.)



2. In a locomotive, means for admitting steam to the engine cylinders when the throttle is closed, said means shutting off the steam after a predetermined period of time, a valve for controlling the admission of air to the engine cylinders after the steam has been cut off, means for actuating said valve, means for controlling the actuating means, and means cooperating with the means for admitting steam to operate the controlling means.

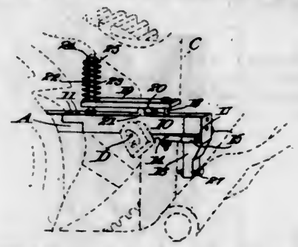
1,570,314. GAS PRODUCER. SANFORD A. MOSS, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Feb. 27, 1923. Serial No. 621,656. 6 Claims. (Cl. 48—87.)



1. In a gas producer, in combination, a fuel chamber, air and steam admission means comprising a steam-actuated jet blower for blowing air and steam into the fuel charge, said jet blower having a discharge tube and steam nozzle means, and the area of the throat of the discharge tube being not more than one hundred times greater than the total steam nozzle throat area.

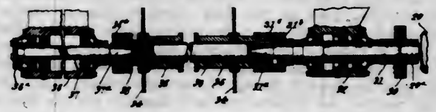
1,570,315. SWITCH INDICATOR. HENRY B. NEWHALL, Plainfield, N. J. Filed Jan. 9, 1925. Serial No. 1,453. 8 Claims. (Cl. 200—167.)

1. A new article of manufacture comprising a switch indicator formed of flat material having a portion bent up at an angle to loosely engage with the shaft of a push button switch and be actuated thereby.



1,570,316. RADIATOR. JOSEPH PALERMITI, Detroit, Mich. Filed Feb. 26, 1925. Serial No. 11,632. 2 Claims. (Cl. 257—149.)

2. A radiator of the class described formed from a single casting and comprising a housing forming structure; a plurality of partition forming members projecting longitudinally of said structure in spaced relation to each other; a transversely extending partition forming member connected to one end of each of said longitudinally extending partition forming members and spaced slightly from one of the end walls of said structure; a connecting portion projecting from the lower end of said transversely extending partition forming member and connecting the same to said end wall adjacent its lower end, said connecting portion extending parallel to said longitudinally extending partition members and being spaced slightly from the base of said structure; a plurality of partition forming members extending longitudinally of said structure and projecting from the opposite end wall of said structure in overlapping spaced relation to said first-mentioned longitudinally extending partition forming members and terminating at their ends a slight distance from said transversely extending partition forming member, said first mentioned longitudinally extending partition forming members terminating a slight distance from said opposite end wall; an inlet pipe mounted in the first mentioned end wall of said structure in communication with the interior thereof below said connecting portion and angularly turned downwardly exteriorly of said structure in parallel relation to the end wall thereof; and an outlet pipe mounted in said end wall of said structure above said connecting portion in communication with the space separating said end wall and said transversely extending partition forming member, said outlet pipe being downwardly turned exterior of said housing in parallel relation to said first-mentioned end wall in close proximity to the downwardly turned portion of said inlet pipe.



1,570,317. EJECTOR PAWL. WILLIAM PETERSON, Brooklyn, N. Y., assignor of one-fourth to Charles E. Stewart, St. Paul, Minn. Filed Nov. 15, 1924. Serial No. 750,129. 3 Claims. (Cl. 199—60.)

1. A link of the class described, in combination with an operating means therefor, a bearing arm on said link and pivoted thereto, a connecting element slidably mounted on the link operatively connected to said arm, a lever connected to said element, a stem on the link, a spring on said stem engaging said lever to normally

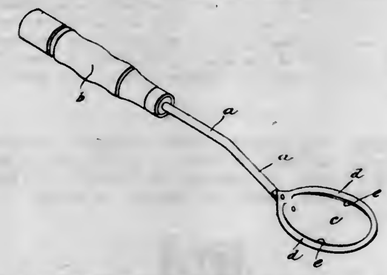
maintain the arm engaged with said operating means, said arm being automatically displaceable against the tension of said spring to release the driving connection upon failure of the link to operate.

1,570,318. STONE-CUTTING MACHINE. EDSON T. POLLARD, Niagara Falls, N. Y. Filed Apr. 30, 1924. Serial No. 710,082. 5 Claims. (Cl. 125—13.)

1. In a stone cutting machine, the combination with head-stock and tail-stock blocks, of an arbor or shaft of lesser length than the distance between said blocks, a plurality of spaced-apart cutting wheels mounted on said arbor or shaft and rotating therewith, a rotary spindle mounted in each of said blocks, said spindles both having live connections with said arbor or shaft, and means for adjusting one of said blocks and its spindle in the direction of the axis of said arbor or shaft for convenient mounting and dismounting of said arbor or shaft.

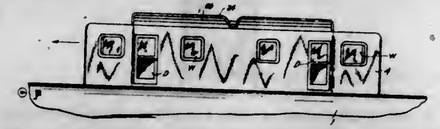
1,570,319. LOCK-GEAR DISK WHEEL. CHARLES TELFORD REYNOLDS, Columbia, S. C., assignor of one-sixth to Carrie B. Reynolds, Columbia, S. C. Filed Dec. 28, 1923. Serial No. 683,154. 5 Claims. (Cl. 152—21.)

1. In combination, a wheel divided circumferentially into two sections, each of which sections is provided with a groove opening into the other, an expansible ring inserted into said grooves, and means whereby the ring may be contracted into one of the grooves so that the other section may be removed therefrom.



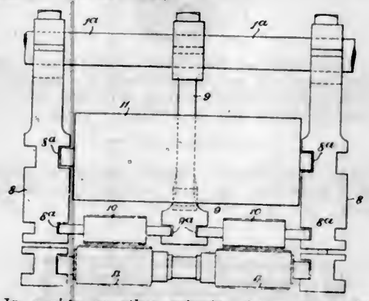
1,570,320. SPARK PLUG AND METHOD OF MAKING SAME. ALBERT E. SERWICZ, Chicago, Ill. Filed Oct. 27, 1919. Serial No. 333,751. 7 Claims. (Cl. 29—155.5.)

1. A spark plug comprising longitudinally apertured body and flanged portions, an insulator therein and having a flange, said body portion having a shoulder for the flange of the insulator, said body and flange portions being connected by a part which is thinner than the flange, said part being adapted when the body and flange portions are forced toward each other to flex to form a shoulder for the flange of the insulator.



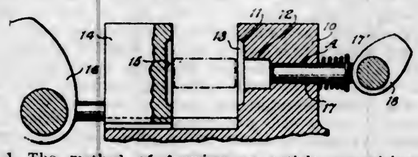
5. The method of making a spark plug comprising forming an apertured shell with a flexible portion intermediate the ends of the shell which portion is thinner than the flange, placing a flanged insulator in said shell with the flange of the insulator seated upon a shoulder formed in the shell, longitudinally compressing the shell to cause an inward flexing of the intermediate relatively thin portion for forming a second shoulder for the flange of the insulator.

1,570,321. SKIMMING SPOON. JOHN T. SWEENEY, Kingston, N. Y. Filed Aug. 4, 1922. Serial No. 579,589. 3 Claims. (Cl. 30—22.)



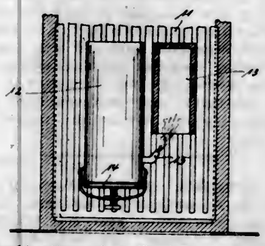
1. A skimming spoon embodying therein a handle and a bowl having a slot toward the top thereof and a substantially straight part deflected outwardly of the bowl from substantially the top of said slot, whereby grease or scum will be directed through said slot to within the bowl.

1,570,322. AIRSHIP. EBER H. VAN VALKENBERG, Monroe, Wash., assignor of one-half to Oscar Silverstein, Spokane, Wash. Filed Apr. 27, 1925. Serial No. 26,081. 4 Claims. (Cl. 244—30.)



4. The combination with a cabin structure of a series of longitudinally disposed, tubular, exterior braces having their open ends located in the interior of the cabin, said braces adapted for support of radio equipment, electrical heating elements in said braces, and means for controlling the admission of electric currents to said heating elements.

1,570,323. RING-SPINNING FRAME AND OTHER SPINNING MACHINE. ROBERT TAYLOR, Oldham, England. Filed Dec. 26, 1924. Serial No. 758,296. 2 Claims. (Cl. 19—134.)



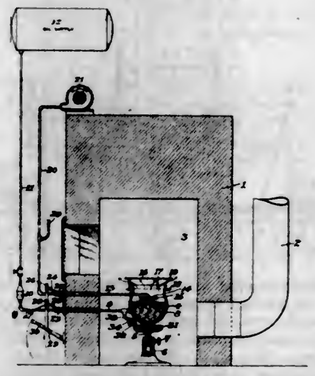
2. In a ring or other spinning frame or machine, a pair of end rollers supporting fingers, top middle rollers in two parts and axially aligned, a finger mounted on the bar intermediate the usual roller supporting fingers, bearings in said finger to support said top middle rollers at their inner ends, said fingers being cranked to pass below the top and bottom back rollers.

1,570,324. METHOD OF MAKING ONE-PIECE METAL BUTTONS. WALTER T. ABEL, Waterbury, Conn., assignor to The Patent Button Company, Waterbury, Conn., a Corporation of Connecticut. Filed Oct. 23, 1924. Serial No. 745,329. 2 Claims. (Cl. 79—2.)

1. The method of forming an article comprising a head and a hollow shank consisting in subjecting a rod-like blank to the action of heading dies and only partially forming the head and subjecting the shank portion of the blank to the action of a plunger while the heading dies are closed and displacing the metal from the center of the shank and causing it to flow into the head to thereby complete the head.

1,570,325. FUEL GASIFIER FOR KITCHEN RANGES AND THE LIKE. FRIEDRICH ALLENDORF, Frankfort-on-the-Main, Germany, assignor to Jacob Rosenberg, New York, N. Y. Filed Aug. 18, 1923. Serial No. 658,111. 2 Claims. (Cl. 110—24.)

1. The combination of a fire-box, a retort mounted therein comprising a closed chamber having a lateral discharge orifice near one end, a nozzle in said orifice

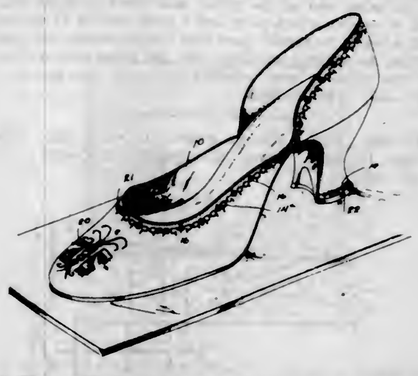


for directing gases generated in the chamber towards the opposite end of said retort, and an auxiliary retort in said fire box mounted in the path of the gases issuing from said nozzle.

1,570,326. COMBINED HAND-BAG FRAME AND VANITY CASE. RALPH C. BANGS, Providence, R. I. Filed Dec. 12, 1923. Serial No. 680,119. 1 Claim. (Cl. 150—29.)

A combined hand bag frame and casing comprising a pair of hingedly related jaws, each formed of two spaced apart sections, a casing interposed between the spaced apart ends of the sections of one of the jaws, a bridge band interposed between the spaced apart ends of the sections of the other of the jaws and a shoulder carried by the casing and adapted to cooperate with the bridge band to support the casing when the jaws are in closed position.

1,570,327. OIL-BURNING APPARATUS. JAMES J. BARRETT, White Plains, N. Y., assignor to Barrett Blue Blaze Burner Co., Inc., a Corporation of New York. Filed Jan. 9, 1924. Serial No. 685,165. 6 Claims. (Cl. 158—92.)

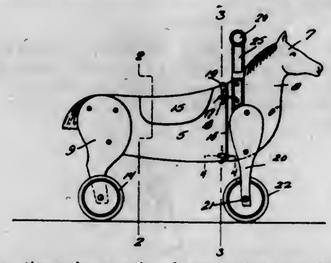


1. A burner of the class described, comprising in combination, a receptacle adapted to hold a quantity of liquid fuel, means located beneath said receptacle for maintaining a quantity of liquid fuel, which when ignited is employed to heat the body of liquid fuel within said receptacle, a baffle plate surmounting said receptacle, and spaced from the upper open end thereof, means for discharging air, steam or other fluid against the surface of the liquid fuel within said receptacle, said means for discharging said fluid, being partially located within said burner, so that the fluid will be preheated before it is discharged into the burner, and means for simultaneously controlling the flow of liquid fuel and fluid into said burner.

1,570,328. METHOD FOR STERILE PRESERVATION OF DOSED MEDICAMENTS AND OF THEIR SOLVENTS. EMIL BAUMGART, Falkenberg, Germany. Filed Jan. 29, 1925. Serial No. 5,670. 3 Claims. (Cl. 128—272.)

1. A method for the separate sterile preserving of dosed medicaments and dosed liquids in ampullæ or similar receptacles for the production of sterile solutions or sterile mixtures to be injected into the human or animal body or for other purposes, consisting in carrying out the inspissation of the medicament in special receptacles of convenient shape, and in storing there receptacles in a sealed ampulla from which they can be readily removed.

1,570,329. ORNAMENTATION OF LEATHER. MARY E. BENDELARI, Paris, France. Filed Aug. 10, 1925. Serial No. 49,393. 8 Claims. (Cl. 41—26.)

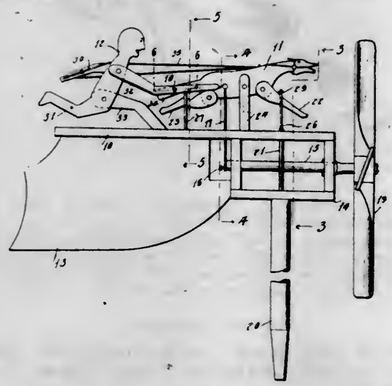


1. The method of ornamenting a leather shoe or slipper which comprises outlining a design on and thru the skin surface of the leather and applying a coating of enamel paint to the surface of the leather which adheres thereto and overlaps into the design, whereby the enamel coating is anchored to the leather.

1,570,330. TOY. LOUIS L. BOYED, Toledo, Oreg. Filed Mar. 24, 1925. Serial No. 17,991. 1 Claim. (Cl. 208—165.)

In a toy of the class described, an elongated body formed in sections, the rear section being much larger than the front section, said rear section being provided at the forward edge with a pair of recesses, a pair of eye fasteners engaged with the rear edge of the front section, and adapted to extend into the recesses, fastening elements passing through the recesses and through

the eyes located therein, a pair of legs depending downwardly from the forward section, an axle bar extending between the lower ends of the two legs, a wheel jour-

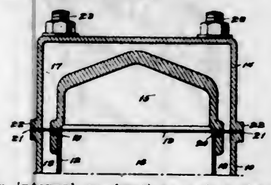


naled on the axle, a pair of supporting legs depending from the rear end of the rear section, a cross beam connecting the lower ends of the rear legs, and wheels journaled on the ends of the beams.

1,570,331. LOCK CASING. KARL A. BRAUNING, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed July 29, 1924. Serial No. 728,916. 2 Claims. (Cl. 70—16.)

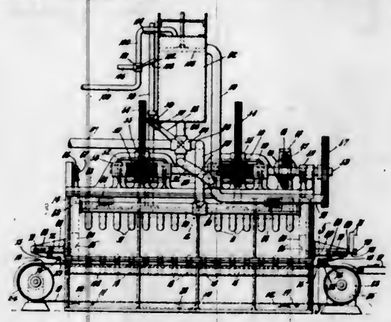
1. The combination with the body portion of a lock casing having a cover plate receiving portion at one end and a groove and a seat at the other end, of a cover plate adapted at one end to engage said receiving portion at one end of the casing and rest upon the shoulder at the other end of the latter, said cover plate having a seat to receive a lock part, and a lever pivoted at one end and adapted to extend past said last-mentioned seat and having an opening normally over the latter, the free end of the pivoted lever adapted to enter the groove in one end of the casing.

1,570,332. TOY. KINSEY BROWN, Crisfield, Md. Filed Apr. 12, 1924. Serial No. 706,132. 3 Claims. (Cl. 46—40.)



1. A figure toy comprising a base, a figure in simulation of an animal having its body pivotally supported above the base, legs pivotally secured to the body and extending forwardly and rearwardly therefrom respectively, means to support said legs to hold them extended, a shaft suitably journaled, and a pitman connecting said shaft and body to rock the latter.

1,570,333. PROCESS FOR THE PRODUCTION OF CATALYZERS FOR THE SYNTHESIS OF AMMONIA. IVAR WALFRID CEDERBERG, Berlin-Steglitz, Germany, assignor to Norsk Hydro-Elektrisk Kvaelstofaktieselskab, Christiania, Norway. Filed July 14, 1924. Serial No. 725,896. 2 Claims. (Cl. 23—237.)

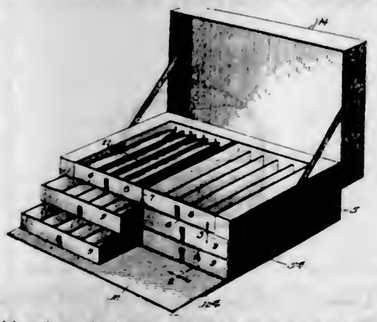


1. Process for the production of catalyzers for the synthesis of ammonia consisting in mixing compounds of metals of the iron group with cyanides in a medium of liquid, anhydrous ammonia, freeing the mixture from a surplus of ammonia and heating it in a non-oxydising atmosphere.

1,570,334. GASKET FOR PRESSURE CONTAINERS. ROLAND CHILTON, Keyport, N. J., assignor to Aeromarine Plane & Motor Company, a Corporation of New York. Filed Sept. 15, 1921. Serial No. 500,806. 11 Claims. (Cl. 123—173.)

7. In an internal combustion engine, the combination of a cylinder and a bolted-on head, a ductile explosion sealing ring disposed between the cylinder and head adapted to distort under and when in distorted condition to sustain the bolting up pressure and a compressible gasket disposed between the cylinder and head offset from the first named ring and adapted to be compressed therebetween without intentionally resisting the bolting-up pressure.

1,570,335. MACHINE FOR MAKING WALL BOARD, ETC. HENRY B. COBB and HARRY W. COBB, Malden, Mass. Filed Nov. 19, 1924. Serial No. 750,834. 18 Claims. (Cl. 25—42.)

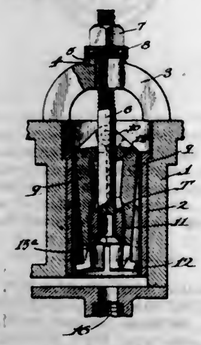


1. A sheet-forming machine comprising a bed having passages for upward drainage, extending through said face and from the bed and having a rigid pressing face and passage for upward drainage, extending through said face to the upper face of the platen, and a porous conveyor belt, one stretch of which is interposed between the bed and the platen, means being provided for conducting the upward drainage from the upper face of the platen.

1,570,336. DISPLAY CONTAINER. GARDNER L. CONLEY, Chicago, Ill., assignor to Standard Oil Company, Whiting, Ind., a Corporation of Indiana. Filed Dec. 10, 1924. Serial No. 754,966. 1 Claim. (Cl. 206—44.)

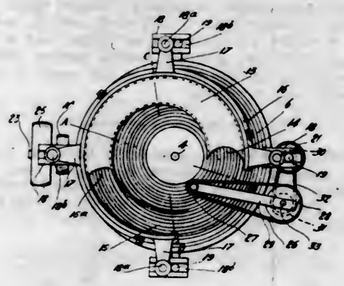
A display container for candles of box-like form with an open top, reinforcing strips extending partly up the sides of the container, partitions extending horizontally

and vertically of the container and forming compartments therein, drawers slidable in said compartments, the top tier of said drawers being partitioned to form compartments for the individual articles to be displayed, a cover hingedly secured to the box and having depending sides adapted to rest on the reinforcing strips on the sides of the box when the cover is closed, a front-forming mem-



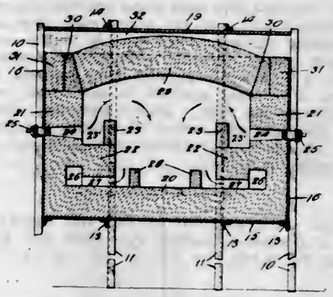
ber hinged to the bottom of the box and adapted to be turned up to close the front of the box with its outer free edge extending within the cover when the latter is closed, those portions of the upper side edges and the rear of the box being of relatively greater thickness than the remainder of the body of the box whereby to give increased strength to the structure and to enhance the attractiveness of the display.

1,570,337. DIAPHRAGM FOR TELEPHONE RECEIVERS. PALMER J. COOK, Southfield, Mass. Filed Mar. 23, 1925. Serial No. 17,667. 3 Claims. (Cl. 179—181.)



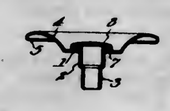
2. A diaphragm for a telephone receiver or amplifier unit consisting of a disc of thin sheet rawhide in combination with iron.

1,570,338. DEVICE FOR REMOVING PUMP LINERS AND VALVE SEATS. BERNARD H. DAVIS, Fullerton, Calif., Filed Apr. 12, 1923. Serial No. 631,739. 5 Claims. (Cl. 29—88.2.)



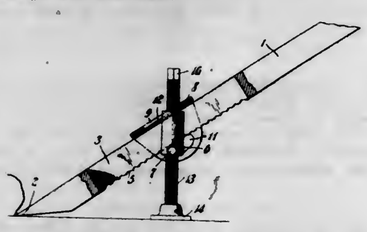
1. A puller comprising a drawbar, a grapple formed of swinging elements disposed about the drawbar, a head formed upon the drawbar, there being tapered and straight surfaces formed upon the interior of said elements, and means for pulling the drawbar causing said head to engage said tapered surfaces to expand said swinging elements and then to engage the straight surfaces, whereby the grapple may be pulled by the drawbar without further expanding said elements.

1,570,339. DOUGH-MOLDING MACHINE. CHARLES DAWSON DILLEY, Plymouth, England. Filed Sept. 19, 1925. Serial No. 57,400. 23 Claims. (Cl. 107—9.)



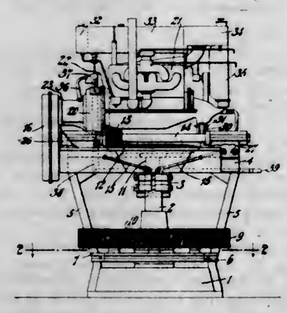
1. In a dough molding machine, a rotatable table, a substantially annular former supported over the table and means for moving the former transversely to the axis of the table so that the rotation of the table and movements of the former will cause the dough to travel along the former and to be molded and delivered therefrom.

1,570,340. FURNACE. HARRY H. DODGE, Buffalo, N. Y. Filed Oct. 30, 1923. Serial No. 671,786. 2 Claims. (Cl. 263—43.)



2. A furnace as characterized, comprising oppositely disposed parallel side walls, a lower flat hearth wall, and an upwardly arched top wall, continuous inwardly thickened lateral portions formed on the lower sides of each said wall full length thereof, continuous vertical baffle members disposed longitudinally of the furnace along the inner edges of said inwardly thickened portions whereby to form with the inner faces of said side walls combustion chambers said side walls being provided with burner openings extending transversely therethrough and in communication with said combustion chambers, an outlet flue disposed longitudinally through the side walls in the bottom portions thereof, said bottom portions of said side walls being provided with lateral flues communicating from the interior of the furnace to said outlet flue on the hearth, and vertical baffle members arranged longitudinally in the furnace in front of said lateral flues and on the hearth wall to provide work supporting members.

1,570,341. EYELET BUTTON. LEWIS M. DOWD, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Sept. 18, 1925. Serial No. 57,173. 2 Claims. (Cl. 24—95.)

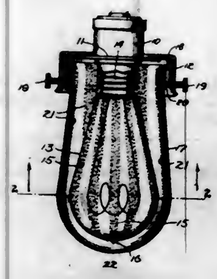


1. An eyelet button, comprising a flanged eyelet, having a shank to engage with a buttonhole and an end to be upset to attach the button to an article, and a buttonhead provided with a closed central portion underlying and overlying the flanged end of the eyelet to connect the eyelet and buttonhead.

1,570,342. CROWBAR. ROBERT A. DRESSER, Bradford, Pa., assignor of one-fourth to Leland Jones, Miles, Ohio, and one-fourth to John Martin Kelly, Pittsburgh, Pa. Filed Apr. 24, 1925. Serial No. 25,494. 6 Claims. (Cl. 254—130.)

4. The combination with a crowbar, of a fulcrum comprising a block, adjustable longitudinally with respect to the bar, said bar and block being provided the one with a corrugated face and the other with pivot portions for engaging said corrugated face, to provide a pivotal connection and to hold said parts against relative movement in a direction longitudinally of the bar, a screw engaging a threaded aperture in said block, and provided at one end with a ground engaging portion and at the other end with means for rotating the screw and means for retaining the block in its adjusted position with respect to the bar.

1,570,343. PUMPING POWER FOR OIL WELLS. ROBERT A. DRESSER, Bradford, Pa. Filed Aug. 21, 1925. Serial No. 51,721. 12 Claims. (Cl. 74—14.)



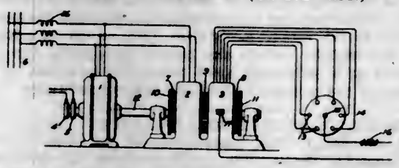
1. In a pumping power mechanism, the combination with an eccentric and an eccentric strap, provided with means for attaching pumping rods or cables thereto, a prime motor for driving the eccentric mounted above the same, and gearing connecting the prime motor with the eccentric.

1,570,344. SANITARY RECEPTACLE. ALBERT EDWARDS, Bridgeport, Conn. Filed Mar. 29, 1924. Serial No. 702,762. 7 Claims. (Cl. 215—63.)

1. A sanitary receptacle comprising a bowl having an opening, a pivotally mounted cover having its inner surface contiguous to the edge of said opening and describing an arc about the pivotal axis of said cover, whereby it is adapted to be moved in one or the other directions from its medial closing position to a position to expose said opening, and being freely movable in its open position with respect to the edge of said opening to its medial closing position, and means adapted to automatically return the same from its moved open position to its normal medial closing position upon release.

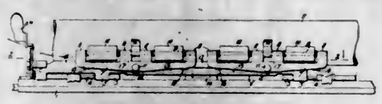
1,570,345. ELECTRIC-LIGHT GLOBE. ABRAHAM L. ELIASOFF and CHARLES BIRNBAUM, New York, N. Y. Filed Jan. 6, 1923. Serial No. 610,992. 1 Claim. (Cl. 240—100.)

An electric light bulb comprising alternate longitudinal transparent and translucent portions; and a globe fitting over said bulb comprising alternate longitudinal transparent and translucent portions, said globe being supported for movement around said bulb so that the translucent or transparent portions of said globe will overlie the transparent or translucent portions of said bulb.



1,570,346. STORAGE RECEPTACLE FOR SUBSTANCES EASILY DECOMPOSABLE IN SOLUTIONS. MARTIN HAHN, Berlin, Germany, assignor to M. Woelm A. G., Spangenberg, Germany. Filed Mar. 28, 1923. Serial No. 628,391. 2 Claims. (Cl. 128—272.)

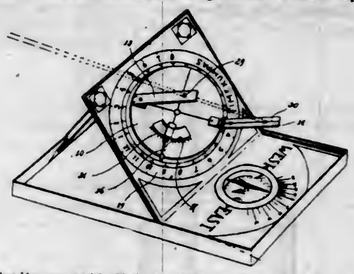
1. A sealed glass container comprising two individual ampules, containing respectively two substances of which the mixture is unstable in composition, a capillary glass tube connecting said two individual ampules with each



other, and a closing medium made of a material fusible at a temperature between 45 and 100 degrees centigrade, arranged within said capillary glass tube.

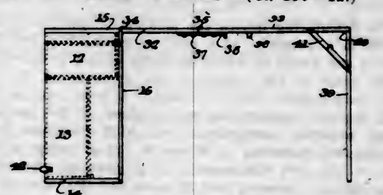
1,570,347. CONVERTER SYSTEM. HENRY M. HOBART, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 17, 1922. Serial No. 544,553. 7 Claims. (Cl. 172—281.)

5. The method of converting commercial alternating current into direct current which consists in simultaneously transforming the phase, frequency and voltage of said alternating current to an alternating current of a higher frequency and phase and a voltage suitable for rectification, by means of rotating apparatus, symmetrically supplying said transformed alternating current to the anodes of a polyphase vapor rectifier, and drawing off direct current from a common cathode of said rectifier and a neutral voltage point in the transformed alternating current system.



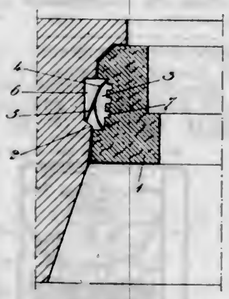
1,570,348. TYPEWRITING MACHINE. JOSEPH B. HOLDEN, Syracuse, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed July 1, 1924. Serial No. 723,489. 7 Claims. (Cl. 197—138.)

1. In a typewriting or like machine, the combination of a feed roller, a carrier on which the feed roller is mounted, a support on which the carrier is mounted and which is connected to said carrier intermediate the ends thereof, and guide fingers which co-act with said carrier on opposite sides of its points of connection with said support to guide the carrier in its relative movement in one direction but prevent a canting movement thereof into a skewed position.



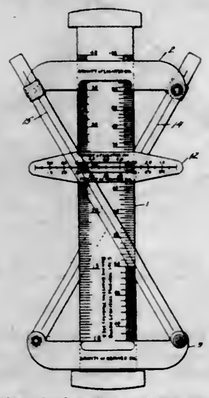
1,570,349. COMBINATION TIME INDICATOR AND SIGHTING COMPASS. GEORGE HOLLINWOOD, Cranford, N. J. Filed Jan. 20, 1923. Serial No. 613,804. 14 Claims. (Cl. 33—62.)

1. A device of the class described, comprising in combination, a compass, a dial rotatably supported adjacent thereto and having its axis of rotation in the north-south line of said compass, a pair of arms disposed



diametrically on said dial, a plate having a scale located adjacent said dial, and a pointer on said dial adapted to read on said scale.

1,570,350. COMBINED BOX AND TABLE. EDWARD N. HOWELL, Asheville, N. C. Filed Oct. 13, 1924. Serial No. 743,266. 6 Claims. (Cl. 190—12.)

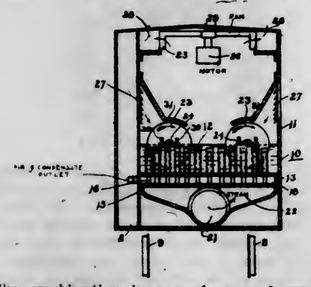


5. A device of the character described comprising, a box having one side open, an intermediate top section hinged to the upper portion of the box and adapted to be folded over the top of the same toward the open side thereof, an outer top section hinged to the intermediate top section in the manner to permit the same to swing downwardly from the folded top section to cover the open side of the box, and means for substantially rigidly supporting the top sections when in the open position extending from said box.

1,570,351. METHOD AND ARRANGEMENT FOR FASTENING WINDOW AND DOOR FRAMES. VALTER KONSTANTIN HULTIN, Stockholm, Sweden. Filed Sept. 16, 1924. Serial No. 737,964. 3 Claims. (Cl. 20—11.)

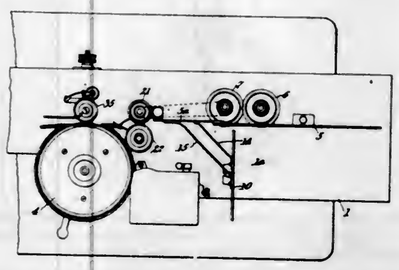
1. A device of the character described, comprising in combination, a wall having an opening therein, a frame adapted to fit in said opening, said frame and wall having depressions adapted to be brought into alinement when the frame is in position in the opening, and a resilient member distortable into engagement with the two end walls of one of said depressions thereby to retain it in the depression and having a portion extending into the other depression thereby to lock the frame in said wall.

1,570,352. CALCULATOR. ELBERT C. ISOM, Garden City, N. Y. Filed Oct. 19, 1925. Serial No. 63,353. 2 Claims. (Cl. 235—61.)



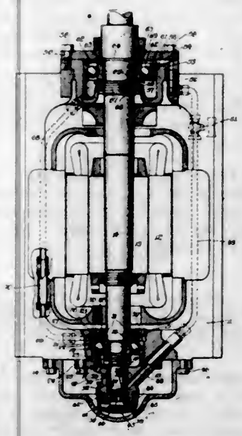
1. A calculating device for making computations with respect to a property of a mixture containing two components the value of which property is not proportional to the mean of the values of the property of the separate components, which comprises a body portion carrying a scale terminating with values of the property of two separate components and with divisions therebetween corresponding to values of the property of mixtures of the two components in proportions equivalent to the distance between each division and the terminals of the scale, a pair of slides movable on the body portion each carrying an indicator moving over the scale and a pivot, another slide movable on the body portion carrying a scale with uniform divisions transverse to the scale on the body portion and an indicator moving over the scale on the body portion, and an indicator moving over the scale on the last mentioned slide and carried by the pivots on the first mentioned slides.

1,570,353. METHOD OF PRODUCING ALUMINA. RUDOLF JACOBSSON, Kagerod, Sweden. Filed Aug. 25, 1924. Serial No. 734,119. 5 Claims. (Cl. 23—142.)



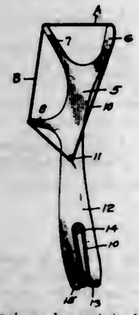
1. Method of producing alumina, comprising vaporizing the water of crystallization from hydrous aluminum sulphate without fusing the salt, and then heating the anhydrous sulphate to such temperature that the sulphuric acid is driven off, the remaining product being alumina of high porosity.

1,570,354. LOCOMOTIVE SURFACE CONDENSER. ALEXANDER T. KASLEY, Essington, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 31, 1920. Serial No. 434,364. 5 Claims. (Cl. 257—39.)



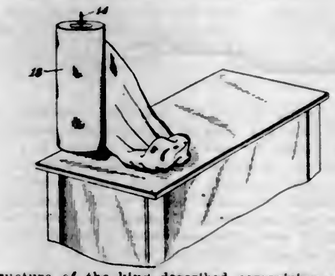
1. The combination in a surface condenser having a plurality of tubes arranged in rows and adapted to receive a fluid to be condensed, of a chamber for containing a pool of cooling water in which said tubes are immersed and a plurality of rotatable discs extending between the adjacent rows of tubes, their lower portions being immersed in the pool of water.

1,570,355. STAMP-CANCELING MACHINE. JOSEPH OMER LAMOUREUX, Montreal, Quebec, Canada. Filed May 23, 1922. Serial No. 563,147. 4 Claims. (Cl. 101—232.)



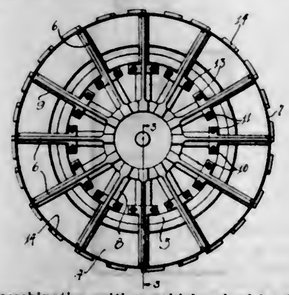
1. A stamp-canceling machine, comprising a rotary stamp-canceling mechanism, means for driving the rotary mechanism at a definite peripheral speed, transfer rollers in advance of the rotary mechanism, means for driving the transfer rollers at substantially the same peripheral speed as the rotary mechanism, feed rollers in advance of the transfer rollers and means for driving the feed rollers at a peripheral speed materially in excess of the speed of the transfer rollers and rotary mechanism.

1,570,356. LUBRICATING APPLIANCE. FRANKLIN L. LANE, Beloit, Wis., assignor to P. B. Yates Machine Company, Beloit, Wis., a Corporation of Wisconsin. Filed June 3, 1922. Serial No. 565,771. 4 Claims. (Cl. 308—168.)



1. In a lubricating system of the character described, the combination of a shaft having an open-ended passage extended outwardly from an end of the shaft through a side thereof, whereby to discharge its contents under the action of centrifugal force, a bearing for said shaft, a stationary member bearing on the end of said shaft and having a channel therethrough communicating with said shaft passage, means to supply lubricant to said channel, a spring pressing said member against the end of said shaft, and mean to conduct the lubricant expelled from said shaft passage to said shaft bearing.

1,570,357. DENTAL TOOTHPICK. WILLIAM F. LAWRENZ, Long Beach, Calif. Filed July 12, 1924. Serial No. 725,740. 3 Claims. (Cl. 132—92.)

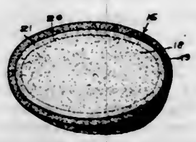


1. A tooth cleansing element to be passed between the teeth, comprising a strip of flexible rubber carrying abrasive material and a relatively stiff element attached to one end of the strip and adapted to be passed between the teeth to lead the strip between the same.

1,570,358. HOLDER FOR ROLLED MATERIAL. PHILIP LEVINE, Brooklyn, N. Y. Filed Mar. 31, 1925. Serial No. 19,718. 1 Claim. (Cl. 242—61.)

A structure of the kind described comprising a generally U shaped bracket adapted for horizontal attachment to a support, and a detachable vertical spindle extending through both arms of the bracket, said spindle having a transverse roll supporting guard at its lower portion.

1,570,359. ANTISKID ATTACHMENT FOR AUTOMOBILE WHEELS. HENRY BENNARD LINDHORST, Springfield, Mo. Filed June 29, 1925. Serial No. 40,315. 2 Claims. (Cl. 301—44.)



1. The combination with a vehicle wheel having spokes, a felly, and a tire mounted thereupon, of a substantially broad annular tread member arranged for disposal about and concentric with the tire on said wheel, and means including members conforming in contour to the spokes of the wheel for partially encompassing the spokes of the wheel, and clamping members associated with the spoke engaging members for securing the rim against unintentional removal from the wheel.

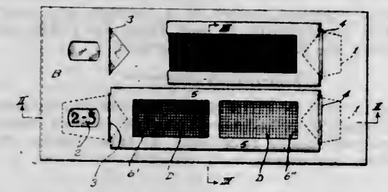
1,570,360. PORTABLE LOADER. GEORGE E. LIPPOLDT, Kinsley, Kans. Filed Jan. 10, 1925. Serial No. 1,669. 7 Claims. (Cl. 198—79.)

1. A portable loader comprising a wheeled frame adapted to be positioned over a stack of grain, an inclined conveyor at the forward end of the frame for delivering the grain deposited thereon to a thresher, and means extending longitudinally on said frame for feeding the grain from the stack onto said conveyor.

1,570,361. VIOLIN CHIN REST. STEPHEN J. WALLACE, Logansport, Ind., assignor of one-half to Jerry Lynch, Logansport, Ind. Filed July 2, 1924. Serial No. 723,799. 10 Claims. (Cl. 84—279.)

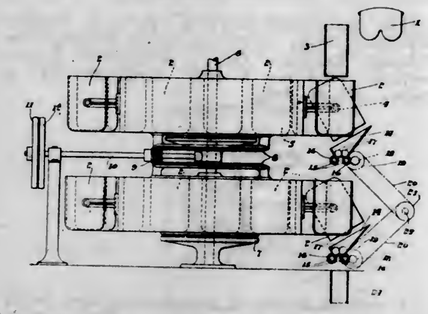
1. A chin rest for a violin or the like, comprising a supporting frame formed with an inwardly opening encompasing groove and spaced encompassing flanges, a pad of yieldable material having a reduced portion to enter the inwardly opening groove of the supporting frame and an encompassing groove to receive one of the flanges of the same.

1,570,362. BACHELOR BUTTON. FRANK E. WARNER, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Jan. 5, 1925. Serial No. 632. 4 Claims. (Cl. 24—110.)



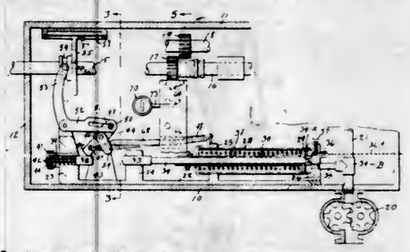
1. A bachelor button, of the separable type, having a button-head provided with a single central aperture, and an axially movable clutch arranged in said head and provided with resilient tack-engaging fingers, and also provided with other fingers engaging the head next to said aperture to permit longitudinal movement of the clutch and prevent its escape from the button-head.

1,570,363. FASTENER. FRANKLIN R. WHITE, Waterbury, Conn., assignor to The Patent Button Company, WaterBury, Conn., a Corporation of Connecticut. Filed Oct. 27, 1925. Serial No. 65,164. 2 Claims. (Cl. 24—99.)



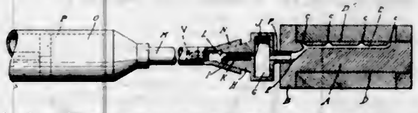
1. A fastener comprising a rivet and burr, the said burr having a hollow hub and a rim at its one end, the length of the rivet being greater than the depth of the hub, and the said rivet and burr headed to stunt the rivet and to contact the burr just above the rim and to cause the rivet to be contracted near its lower end and force the displaced metal of the rivet into a solid bulbous end completely filling the former space within the hollow hub.

1,570,364. SAMPLE TAB. JOE WIENER, New York, N. Y. Filed Jan. 22, 1925. Serial No. 3,964. 2 Claims. (Cl. 211—34.)



1. A sample tab, comprising an ear-ended mount of flexible material, the body-portion of which has a window; an underlying inturned flap at the edge of said body portion; an inner stretcher of flat material; in combination with a textile sample adapted to be folded about the said stretcher and to lie between said stretcher and said body-portion having said window, with said flap clamping the said sample against said stretcher and said pody-portion, whereby a smooth partially protected display of said sample through said window is made.

1,570,365. PREPARATION OF DOUGH FOR THE MAKING OF BREAD. JAMES ELLIOTT WILSON, SAMUEL MCCONNELL, and CAMPBELL BROWN, Belfast, Ireland. Filed Mar. 20, 1925. Serial No. 17,034. 5 Claims. (Cl. 107—7.)

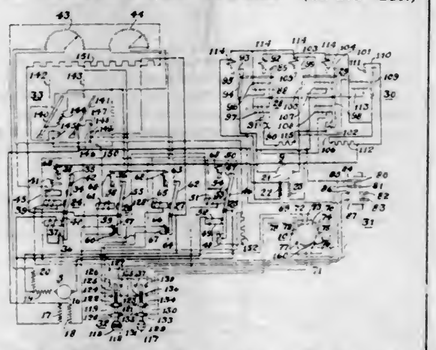


1. Means for handling dough comprising a plurality of sets of troughs for the dough; means for discharging the dough from a trough of one set into a receptacle of the other set, and means intermediate the sets of troughs for effecting braking of the dough.

1,570,366. AUTOMOBILE LOCK. ARTHUR M. WISWELL, Portland, Oreg. Filed Oct. 23, 1924. Serial No. 745,338. 2 Claims. (Cl. 70—90.)

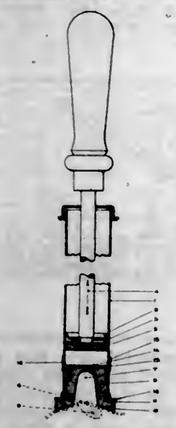
2. An automobile lock having in combination a transmission lock, and a lock actuating device adapted to lock said lock when the engine is stopped, said actuating device consisting of a cylinder; a piston in said cylinder; pipes for supplying oil to said cylinder from the oil pump of the motor, said piston having connections to said lock adapted to lock the transmission gears when said oil pump ceases to function.

1,570,367. SHACKLE-BOLT-OILING DEVICE. CARL FRED WOLF, Chicago, Ill. Filed July 26, 1923. Serial No. 653,979. 3 Claims. (Cl. 308—120.)



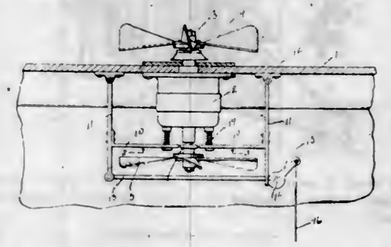
1. An oiling device for bearings comprising an oil reservoir having a reduced threaded pipe connection on one side thereof for securing said reservoir to a bearing, said reservoir having a conical shaped extension on the opposite side from said threaded pipe connection, said conical shaped extension having a bore extending from the outer end thereof and communicating with the reservoir, and a spring pressed valve disposed within said bore for normally closing the bore.

1,570,368. DECORATING GLASS SURFACES. CHARLES C. ZEH, North Hackensack, N. J., assignor to Zeh Incorporated, a Corporation of New Jersey. Filed Nov. 3, 1922. Serial No. 598,758. 8 Claims. (Cl. 49—82.)



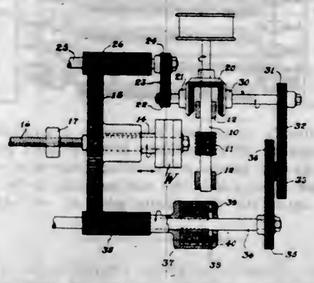
1. In the art of fixing designs to a transparent glass object, the process which consists in placing a decalcomania of the design on the front side of a sheet of opal glass, causing the rear side of the opal glass to adhere temporarily to the transparent glass object and subjecting the two glasses to a heat treatment to cause the opal glass to adhere by fusion to the glass object.

1,570,369. CONTROL SYSTEM. HAROLD L. BLOOD, North Plainfield, and ROBERT C. DEALE, Plainfield, N. J., assignors to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 25, 1923. Serial No. 659,364. 14 Claims. (Cl. 172—240.)



1. In a control system for a machine tool, the combination with a reciprocating member, a main motor for operating said reciprocating member, a cutting tool, and a feed motor for operating the cutting tool with respect to the reciprocating member, of means comprising a portable switch mechanism having one switch member for controlling the operation of the main motor at will and having a second switch member for controlling the operation of the feed motor at will.

1,570,370. SUCTION APPARATUS. LAUST BRODERSEN, Jutland, and MAX EDLEF STEPPINGE, Copenhagen, Denmark. Filed Aug. 22, 1922. Serial No. 583,673. 1 Claim. (Cl. 128—297.)

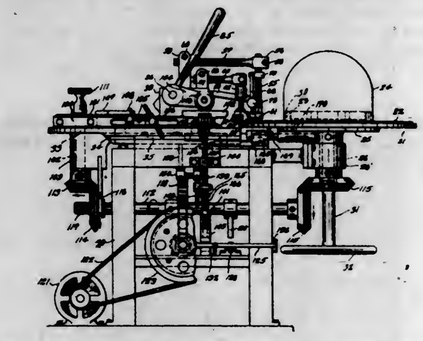


An apparatus for removing hypodermal larvæ from boils on cattle, comprising a cylinder, a piston in said cylinder, an applicator including a cylindrical body of soft rubber fitted tightly within the suction end of the cylinder and having an inwardly extending and tapering recess of relatively narrow diameter, a relatively wide conical mouth continuing from the recess and adapted to tightly encircle the boil in such manner that the opening of the boil is disposed within the recess, the body being also provided with an opening establishing communication with the cylinder, a pressure valve coacting with said opening and adapted to be opened on the outward stroke of the piston, the end of the piston being in contact with the inner end of the applicator when the piston is in its inner position, and valves in the cylinder opening on the inward stroke of the piston.

1,570,371. VENTILATING FAN. WILLIAM BUCCUTO, Salem, N. J. Filed May 19, 1924. Serial No. 714,369. 2 Claims. (Cl. 98—18.)

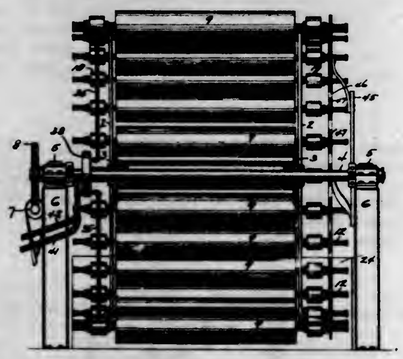
1. In ventilating apparatus for motor vehicles, a vertical shaft extedning through the top of the vehicle, fan blades on the inner ends of said shaft, propeller blades on the outer end of said shaft, rotatable by the action of the air in the travel of the vehicle to rotate the fan blades within the vehicle, a housing fastened to the under side of the top of the vehicle and encasing the major portion of said shaft and a motor within said housing connected to said shaft to drive the latter independently of said propeller blades.

1,570,372. LOST-MOTION-COMPENSATING MEANS FOR GEAR-HOBBING MACHINES. EARLE BUCKINGHAM, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 12, 1922. Serial No. 594,150. 11 Claims. (Cl. 90—4.)



1. A gear hobbing machine having cooperating mechanism comprising, a work supporting and rotating spindle, a rotatable hob supporting means, a hob thereon, driving means for said hob and spindle, two driving connections between said hob and spindle, and means to axially advance the work spindle during operation.

1,570,373. SOFT-HAT-ROUNDING MACHINE. FRANK C. CRAW, South Norwalk, Conn., assignor to Turner Machine Company, Incorporated, Danbury, Conn., a Corporation of New Jersey. Filed June 30, 1924. Serial No. 723,329. 15 Claims. (Cl. 223—24.)

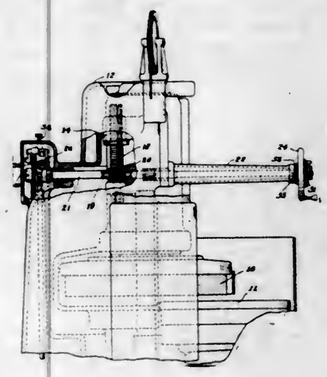


1. In a hat trimming machine, a rotary holder for the hat to be trimmed, means for rotating the holder, guid-

ing means for the hat brim, a trimming knife associated with said guiding means, a rotatable feed wheel adjacent said guiding means arranged to engage the brim

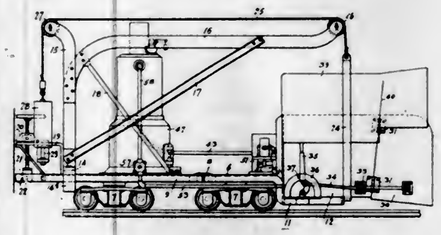
and feed it past the guiding means, and means carried by said wheel engaging the rotary holder to rotate said wheel.

1,570,374. FILTERING APPARATUS. PAUL H. CRAWFORD, Palo Alto, and JOHN F. ABBEMA, Oakland, Calif. Filed Mar. 31, 1921. Serial No. 457,249. 18 Claims. (Cl. 210—201.)



2. A filtering apparatus, comprising a rotatable carrier, a plurality of independent filtering units journaled on said carrier, means for rotating said units on said carrier and a receptacle for the material to be filtered through which the filter units pass as the carrier is rotated.

1,570,375. PROCESS FOR PRODUCING PHOTOGRAPHS IN NATURAL COLORS ON PAPER. HERMANN DIERNHOFER, Grossschoenau, Germany. Filed Jan. 14, 1925. Serial No. 2,459. 9 Claims. (Cl. 41—21.)



1. The process for producing colored photographs on a sheet by transferring dissolved colors one after the other from several printing plates each provided with a gelatinous layer to a sheet provided with a receiving gelatinous layer by placing the sheet on the printing plate layer on layer after protecting the color of the print already applied to the sheet against being impaired, by then shifting the sheet on the plate until exact register of the outlines of the sheet and plate is reached, before there is any chance of the color being transferred to said sheet, and by printing afterwards in the usual manner.

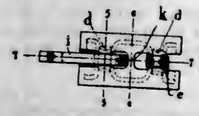
1,570,376. WHEEL FEEDING AND ADJUSTING MEANS FOR GRINDING MACHINES. JOHN A. DOANE, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Original application filed May 31, 1923, Serial No. 642,613. Divided and this application filed June 22, 1923. Serial No. 647,118. 9 Claims. (Cl. 51—165.)

1. A feeding mechanism for the wheel head of a grinding machine comprising in combination, a rotatably mounted screw engaging the wheel head so that rotation of the screw is adapted to vary the position of the wheel head, a shaft, means connected to said shaft whereby it may rotate the screw, a reciprocatory actuating rod for said feeding mechanism, means connecting said actuating rod with said shaft, electro-magnetic means rendering said connecting means operative, and means for de-energizing said electro-magnet to render said connecting means inoperative.

1,570,377. SNOW-REMOVING APPARATUS. EDWARD L. DUNKLE, East Brady, Pa. Filed Aug. 28, 1925. Serial No. 53,058. 5 Claims. (Cl. 37—14.)

1. Snow-removing apparatus, comprising a vehicle, a frame pivotally supported upon said vehicle, a scoop carried at the forward end of said frame and having a rear wall, means for adjusting said frame about said pivot, a boiler mounted upon said vehicle, heating pipes mounted within said scoop, a steam line connecting said boiler and said heating pipes, a combustion heater mounted in said scoop and adjacent to the rear wall thereof, means for supplying fuel to said heater from a point rearwardly of said wall, a second series of heating pipes in the scoop, a pipe connection between said boiler and said combustion heater, and a connection between said combustion heater and said second series of heating pipes.

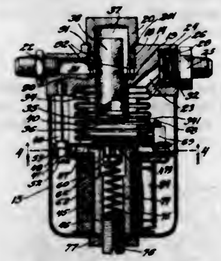
1,570,378. VEHICLE BRAKE APPARATUS. GEORGE A. EVANS, Glendale, Calif. Filed July 26, 1922. Serial No. 577,543. 6 Claims. (Cl. 188—154.)



1. In a brake apparatus for motor vehicles, the combination of a spring-returned brake mechanism, brake operating mechanism including a cylinder having a piston, means for varying the pressure in the cylinder including a control device having a valve to establish communication between the control device and the cylinder to apply the brake, and another valve operating to effect the release of the brake, a spring corresponding to each valve and engaging each valve, and a manually operated member with means for imparting movement through each spring to operate its corresponding valve.

1,570,379. PRESSURE-FLUID MOTOR. GEORGE H. GILMAN, Belmont, Mass., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Mar. 28, 1916, Serial No. 87,349. Renewed Mar. 11, 1924. 39 Claims. (Cl. 121—17.)

1. A fluid motor comprising a cylinder, a piston reciprocable therein, and operating means therefor including coaxially disposed supply and exhaust passage forming means within said cylinder for the fluid acting therein and between which and said piston relative movement occurs, said exhaust passage means discharging directly to the atmosphere.



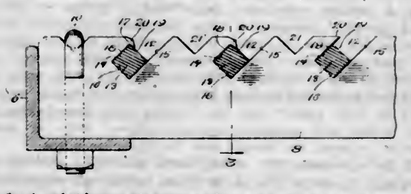
1,570,380. CHAIN BELT. ARTHUR RICHIE KEARNEY, Golders Green, and CHARLES WILLIAM TAYLOR, London, England, and THOMAS GEOFFREY LEITH, Oyne, Scotland. Filed Feb. 27, 1923. Serial No. 621,639. 8 Claims. (Cl. 74—64.)

1. A driving link for a chain-belt comprising in combination a substantially U-shaped metal frame having two side walls and a mass of resilient material integrally attached between and outside said walls, as set forth.

1,570,381. PUMP MECHANISM. JOHN M. LEA, Detroit, Mich. Filed Jan. 27, 1923. Serial No. 615,411. 20 Claims. (Cl. 103—53.)

1. In liquid pumping mechanism, the combination of an expansible chamber having a movable member, a valve controlling flow into said chamber, a supply chamber positioned to discharge liquid through said valve into said expansible chamber, and a supply conduit communicating with said supply chamber, said supply chamber arranged to contain a body of gas under sub-atmospheric pressure whereby suction is exerted upon said supply conduit during and after the closure of said valve.

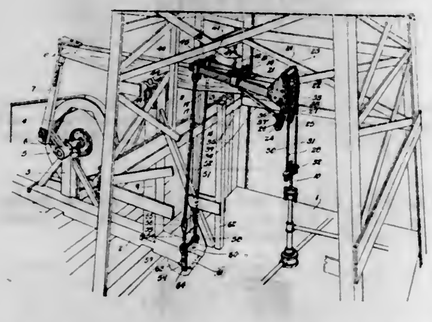
1,570,382. VANITY BOX. ANKER S. LYHNE, Bridgeport, Conn. Filed July 19, 1922. Serial No. 576,099. 12 Claims. (Cl. 132—83.)



1. A vanity box comprising cover and body sections adapted for telescoping engagement, one of said sections adapted to carry a powder compact and puff, a cupped lining for the other section spaced from the inner wall of the same at its free edge to allow entrance of the free edge of the other section therebetween, said cupped lining adapted to carry a powder compact and puff, and a cover for closing said cuped lining.

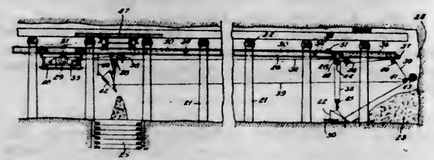
1,570,383. TREATMENT OF HIDES AND SKINS FOR MANUFACTURE INTO LEATHER. DOUGLAS MCCANDLISH, Leeds, and WILLIAM REARDEN ATKIN, Heckmondwike, England. Filed July 22, 1925. Serial No. 45,377. 8 Claims. (Cl. 149—3.)

1. The treatment of hides, kips and skins for the manufacture of leather consisting in subjecting them to the action of a solution of water and an auto-digested yeast.



1,570,384. PLATFORM STRUCTURE. EDWARD MCCLURE, Chicago, Ill., assignor of one-half to Franklin P. Smith, Chicago, Ill. Filed Mar. 20, 1925. Serial No. 16,973. 2 Claims. (Cl. 227—5.)

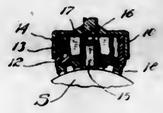
1. A platform structure formed of metal bars and rods, and comprising a supporting frame, cross bars secured thereon and formed in their upper edges with spaced notches extending at an angle of approximately forty-five degrees to the upper edges of the cross bars and providing portions overhanging the notches, the sides and ends of said notches being straight and at right angles to each other, and square rods exending from bar to bar and non-rotatively seated in the lower



angles of said notches with one of their sharp edges uppermost and located below the upper edges of the bars, with two sides of each rod sloping down from said edge, the edge portions of the bars which overhang the rods being bent down upon the rods to fixedly secure them in place.

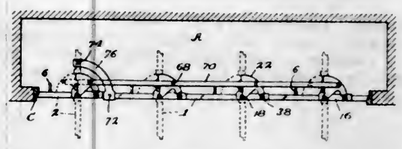
1,570,385. LONG-STROKE AMPLIFYING DEVICE. BENJAMIN M. MCFARLAND and MAX A. DIMMICK, Eldorado, Kans. Filed June 13, 1925. Serial No. 36,835. 11 Claims. (Cl. 74—5.)

1. In combination with the walking beam of an oil well rig, of a stroke amplifying lever pivoted intermediate its ends to the walking beam, a "mule-head" on one end of the lever, means associated with the "mule-head" for connection with the polish rod clamp of an oil well pump, and means for anchoring the rear end of the lever in fixed relation with respect to the floor of the rig.



1,570,386. METHOD AND APPARATUS FOR CONDUCTING MINING OPERATIONS. JOHN D. MACCARTHY and HENRY O. MOULTON, Ishpeming, Mich. Filed July 2, 1921. Serial No. 482,162. 14 Claims. (Cl. 214—86.)

1. A mining apparatus comprising a system of overhead trackage suspended from the roof supporting timbers of the mine, a power unit supported by said trackage and adapted to travel thereon, a carrier adapted to travel on said trackage independently of said unit, a shovel-skip suspended from said carrier, and means actuated by said power unit for loading said shovel-skip at the breast and transporting said shovel skip on said carrier between the breast and the dumping point.

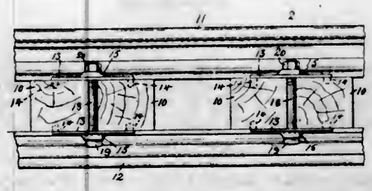


2. In apparatus for underground mining, a system of overhead trackage suspended from horizontal supporting timbers in the mine, a carrier adapted to travel on said trackage, a hoisting and traversing cable, a shovel-skip suspended from said carrier by said cable, a loading and traversing cable having a divided end connected to said carrier and said shovel-skip to cause said carrier and said shovel-skip to advance in substantially vertical alignment during the loading operation, and operating drums for each of said cables, said drums being mounted independently of said carrier.

1,570,387. HAND STAMP FOR CONVEX SURFACES. DANIEL F. MEYER, Chicago, Ill., assignor to R. D. Swischer Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Jan. 12, 1925. Serial No. 1,736. 2 Claims. (Cl. 101—379.)

1. A cushion for a hand stamp consisting of a plate having a recess in its face for the reception of movable type, and the back of said plate being provided with inner and outer legs, the inner leg being more yielding than the outer one.

1,750,388. CLASSROOM WARDROBE AND BLACKBOARD. FRANK B. MILLER, Kansas City, Mo. Filed Mar. 31, 1924. Serial No. 703,298. 12 Claims. (Cl. 45—37.)

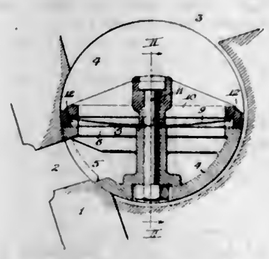


1. A wardrobe having an opening, a plurality of doors including a master door for closing said opening, levers for opening and closing said doors, a connecting-bar operably-connecting all of said levers so that the doors may be simultaneously swung to open or closed position, and mechanism associated with said levers and doors, whereby any door excepting said master door may be opened independently of the others.

1,570,389. PROCESS OF TREATING SEED HULLS AND PRODUCT. ROBERT MORGENIER, Oakland, Calif., assignor of one-sixth to Gregg A. Russell and one-half to Hugh C. Russell, both of Oakland, Calif. Filed Dec. 7, 1920. Serial No. 428,870. 2 Claims. (Cl. 92—14.)

1. The process of making paper pulp from rice hulls, which comprises cooking the hulls in a 10° Baumé solution of sodium hydroxide for about two hours, removing the liquor from the mass and beating the mass to a pulp.

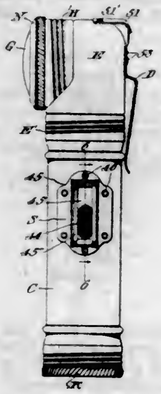
1,570,390. RAILWAY RAIL AND TIE SECURING DEVICE. GEORGE W. MULLER, Washington, D. C. Filed July 9, 1925. Serial No. 42,542. Renewed Oct. 9, 1925. 15 Claims. (Cl. 238—26.)



15. A bridging plate for the purpose described having a bolt aperture, rail holding means, and tie penetrating means arranged substantially in longitudinal alignment on the front portion thereof.

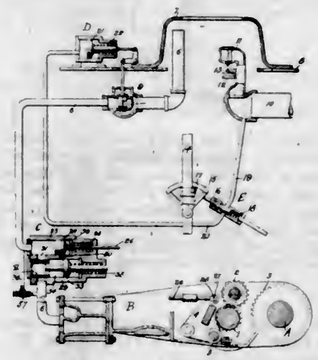
1,570,391. NECKTIE PRESSER. SAMUEL NEWMAN, Cincinnati, Ohio. Filed Sept. 29, 1924. Serial No. 740,562. 4 Claims. (Cl. 100—57.)

1. In a necktie presser, a curved channeled body, the channel opening radially outward of the curvature, and a flexible pressing plate hinged between the sides of the channel near one end and adapted to be bent around said curvature to the opposite end.



1,570,392. VALVE FOR AIR COMPRESSORS AND THE LIKE. BRUNO V. NORDBERG, Milwaukee, Wis.; Helena C. Nordberg executrix of said Bruno V. Nordberg, deceased. Filed Aug. 21, 1917. Serial No. 187,487. 6 Claims. (Cl. 251—119.)

2. A valve for air compressors and the like comprising in combination a valve seat having an elongated port; a spring plate valve resting thereon and normally covering the port; a bow shaped spring having its bowed portion contacting with the valve; and means for positioning the valve and spring in proper working position with each other and to the seat.

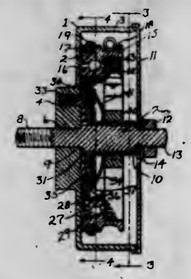


1,570,393. FLASH LIGHT. CHARLES OSEAN, Woodcliff, N. J., assignor to National Carbon Company, Inc., a Corporation of New York. Filed Dec. 26, 1923. Serial No. 682,808. 24 Claims. (Cl. 240—10.5.)

1. In a flashlight, the combination of a case having a part of its side wall indented longitudinally, current generating means in said case, a lamp in circuit with said means, a reflector cooperating with said lamp, and

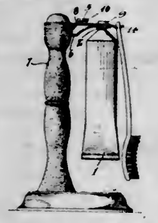
mounting means for said reflector bearing against said indented part.

1,570,394. CONTROLLING MECHANISM FOR LOCOMOTIVE BOOSTER MOTORS. FRANK RICHARD PETERS, New York, N. Y., assignor to Franklin Railway Supply Company, a Corporation of Delaware. Filed Nov. 20, 1922. Serial No. 602,254. 21 Claims. (Cl. 105—48.)



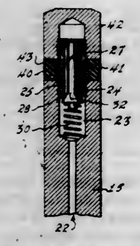
3. In a booster motor controlling mechanism, the combination of a booster motor, steam actuated booster entraining means, and means for supplying full operating steam pressure to the motor, said last two means being so constructed and arranged as to insure complete entrainment of the booster motor prior to the time that any operating steam pressure reaches the booster through said supply means.

1,570,395. SHOCK ABSORBER. BERTRAM T. PHILLIPS, Cleveland, Ohio, assignor to William H. Hughes, Cleveland, Ohio. Filed Jan. 26, 1925. Serial No. 4,702. 18 Claims. (Cl. 267—10.)



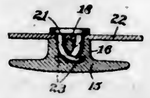
1. A shock absorber comprising in combination an annular member, two relatively movable members, the said annular member and the second of the said two relatively movable members being rotatable in either direction, the first of said two relatively movable members being rotatable in one direction only, interengaging means on the said annular member and the second

of the said relatively movable members to permit limited movement of the said members with respect to each other and to cause simultaneous movement of the two members beyond the limited amount of movement per-



mitted by the interengaging parts, and means cooperating with the said two relatively movable members for frictionally resisting rotation of the said annular member beyond the said limited amount.

1,570,396. BRACKET. GORDON B. POLLOCK, Hollywood, Calif. Filed Sept. 11, 1923. Serial No. 662,058. 4 Claims. (Cl. 248—20.)



1. A bracket of the class described comprising an arm providing a cap-shaped closure provided with packing means, a resilient gripper arm extending below the closure, and gripping edges provided by the first mentioned arm and resilient gripper respectively, said gripping edges being normally yieldingly held out of alignment and adapted, by pressure upon said first mentioned arm, to be brought into alignment.

1,570,397. TIRE VALVE. CLARENCE S. PRESTON, San Diego, Calif. Filed Nov. 1, 1924. Serial No. 747,198. 3 Claims. (Cl. 152—12.)

1. In a device of the class described, a valve body provided with a small central bore, a deep counter-bore at the upper end of the body providing a spring seat at its intersection with the smaller bore, threads in said counter-bore terminating at a point appreciably above the said seat, an externally threaded nipple screwed into the bore as far as the threads permit; said body terminating at its upper end in a gasket surface, a soft gasket reposing on said surface and encompassing the nipple; the nipple extending beyond the gasket, means associated with the nipple to facilitate tightening in, or removal from, the body; the nipple providing a central bore and a valve seat at the lower end of the bore, a metallic valve stem extended through said bore and protruding from the upper end, a metallic integral enlargement to the lower end of the stem capable of seating on said valve seat, a spring compressed between said enlargement and the spring seat for holding the said enlargement up against the valve seat; the nipple and stem being devoid of means for centering the stem, and a cap having an internally threaded bore of such depth as to permit of being screwed down over the nipple to compress the gasket; the threads in the cap and bore, and the threads on the nipple, all coacting in conformance with the character of the gasket to provide for the nipple being secured to the body more firmly than it is normally possible to secure the cap to the nipple with the gasket in place.

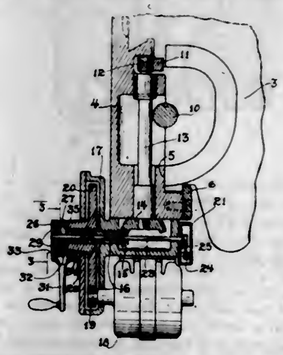
1,570,398. BUTTON. FORREST G. PURINTON, Waterbury, Conn., assignor to The Patent Button Company, Waterbury, Conn., a Corporation of Connecticut. Filed Dec. 9, 1924. Serial No. 754,772. 9 Claims. (Cl. 24—94.)

1. A one piece button head formed of relatively soft metal, a staple adapted to be forced bodily within the rear of the button head, and the prongs of said staple anchored and distorted throughout their length within the head of said button to thereby lock the head with respect to the staple.

1,570,399. SEAL OR TAG FOR MEATS. FORREST G. PURINTON, Waterbury, Conn., assignor to The Patent Button Company, Waterbury, Conn., a Corporation of Connecticut. Filed July 13, 1925. Serial No. 43,236. 7 Claims. (Cl. 40—20.)

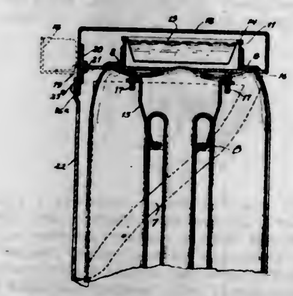
1. A tag or seal for meats comprising a spindle formed of metal of limited ductility, the said spindle being headed at its upper end, a small metal plate provided with an aperture for the reception of said spindle, the lower end of the spindle being curled after the seal is applied to pull the metal plate tightly against the article sealed, and the ductility of the metal being such that if the curl is subsequently bent, it will break from the spindle.

1,570,400. SEAL OR TAG FOR MEATS. FORREST G. PURINTON, Waterbury, Conn., assignor to The Patent Button Company, Waterbury, Conn., a Corporation of Connecticut. Filed July 13, 1925. Serial No. 43,237. 6 Claims. (Cl. 40—20.)



1. A seal or tag comprising a spindle formed of metal of limited ductility, and the shank of the spindle being normally straight throughout its length and

adapted to fit within an awl, the upper end of the spindle being bent at right angles to the spindle and then formed in a loop, a cap supported by said loop and the

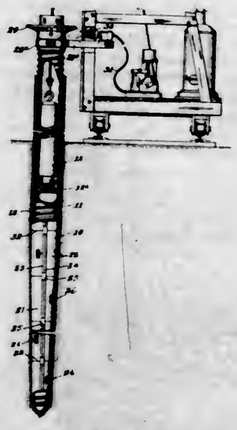


bent of the spindle being the weakest point of the tag, and the lower end of the spindle adapted to be curled after the tag is applied.

1,570,401. SADDLE-TRAVERSING MECHANISM. ROSWELL H. RAUSCH, Plainfield, N. J., assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 20, 1923. Serial No. 681,784. 11 Claims. (Cl. 74—7.)

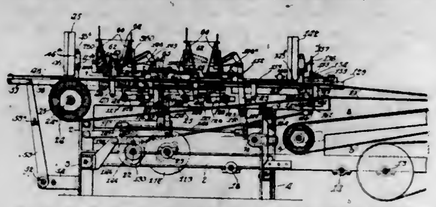
1. In a machine tool, the combination of a support having a guideway thereon, a saddle slidably mounted on the guideway, a driving connection including a rotary element for moving the saddle on the support, a power element, a manually operable member, means adapted to be operated by the member for optionally rotating the rotary element manually or making connections to power rotate the rotary element from the power element, and means normally retaining the member in its inoperative position.

1,570,402. COMBINED RADIATOR SHIELD AND HUMIDIFIER. HARRY W. REUTER, Kankakee, Ill., assignor of one-half to John S. Burton, Chicago, Ill. Filed Sept. 16, 1922. Serial No. 588,563. 3 Claims. (Cl. 237—78.)



2. A radiator attachment comprising, in combination, two parallel bars adapted to rest on the top of a radiator, a pair of brackets connecting the ends of said bars, cross pieces secured to said bars, means for clamping said bars rigidly to a radiator, a plurality of upright members carried by said parallel bars, a water pan removably supported above the radiator on said upright members, and a removable hood or cover supported by said cross pieces and adapted to provide for free circulation above said pan.

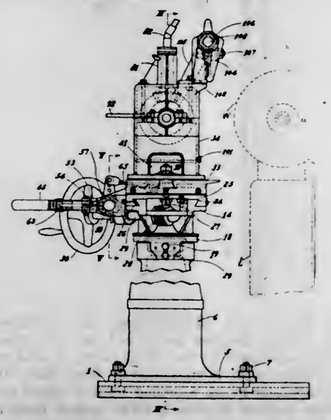
1,570,403. CHRISTMAS-TREE SUPPORT AND WATER CONTAINER. LAMBERT L. RIPCZINSKE, by change of name, Lambert L. Raymond, Robbinsdale, Minn. Filed Jan. 25, 1922. Serial No. 531,575. 2 Claims. (Cl. 248—38.)



2. A device for supporting and watering a Christmas tree comprising a conical vessel having a comparatively wide base forming a stable support, said vessel having its interior substantially unobstructed, means centrally disposed at the bottom of said vessel for holding the bottom of a tree trunk irrespective of the size of said trunk, spaced means at the top of said vessel extending upwardly therefrom, said last mentioned means being adjustable to the size of said tree trunk, and means for holding said last mentioned means in position whereby a substantially closed vessel is formed adapted to hold tree trunks of different diameters.

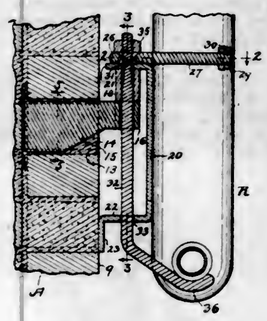
1,570,404. PILE AND PILE DRIVING. ALEXANDER GEORGIEVITCH ROTINOFF, London, England. Filed Feb. 27, 1924. Serial No. 695,547. 16 Claims. (Cl. 61—78.)

1. Means for forming piles or the like including in combination a shell member and a rod like tool member adapted to be embraced by the shell member, said members having their main bodies spaced from each other, one of said members being provided with a spiral groove and the other member having a single screw thread engaging said groove and forming the only contact between the two members, and means for simultaneously forcing the members into soil or the like without rotating either member.



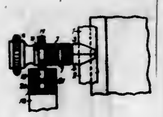
1,570,405. MACHINE FOR COATING WAFERS. FERDINANDO G. SALERNO, Chicago, Ill. Filed Jan. 20, 1921. Serial No. 438,561. 40 Claims. (Cl. 107—1.)

2. In a machine for coating cakes, a cake supporting table having a transverse gap, an endless intermittently movable fabric carrier belt arranged to travel over said table, means for imposing cross rows of cakes on said belt in position to stop in vertical alignment with said gap, coating mechanism including a stencil plate having a row of openings in vertical alignment with said gap, and a lifting member having separated front and rear lifting edges adjacent the opposite edges of said gap and arranged to reciprocate vertically to lift said belt and bring the cakes thereon into cushioned contact with said stencil plate around the margins of the stencil openings therein.



5. In a machine for coating cakes, an intermittently movable carrier belt arranged to support the cakes, a stationary stencil plate above said belt having a series of stencil openings, a reciprocating confection hopper having an opened bottom arranged to slide on said plate across said openings to coat the cakes during intervals of rest of the carrier belt, a vertically reciprocable stripper member connected to said hopper to reciprocate horizontally therewith and arranged to occupy a position of vertical alignment with said opening at the end of a coating movement of the hopper, lifting means arranged to raise and lower said belt and bring the cakes on the belt against said stencil plate and lower them therefrom, and means independent of said lifting means for imparting a vertical stripping movement to said stripper member while in such aligned position.

1,570,406. POLISHING MACHINE. ROBERT FLOYD SALISBURY, New Kensington, Pa., assignor to Aluminum Company of America, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 4, 1922. Serial No. 558,345. 7 Claims. (Cl. 51—105.)

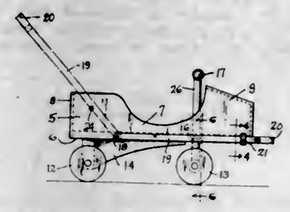


1. A polishing machine comprising a pedestal, a turn table journalled in said pedestal, a carriage or slide mounted for reciprocating movement on the turn table, a saddle on the slide adapted to reciprocate in a plane at an angle to that in which the slide reciprocates, a housing carried by the saddle and angularly adjustable thereon, and a work holding spindle journalled in said housing.

1,570,407. WALL-RADIATOR SUPPORT. ALBIN SEIDEL, Cleveland, Ohio, assignor to the Becker-Seidel Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 28, 1925. Serial No. 58,973. 4 Claims. (Cl. 248—17.)

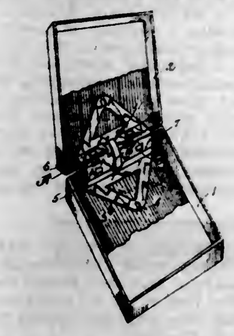
1. A wall-radiator support comprising a bracket adapted to extend from within a wall to and beyond the face of said wall, a rigid upright spacing tube supported on the free end of said bracket, an upright abutment-member which is adapted to form an abutment for the back of a wall-radiator and arranged opposite the free extremity of and extends above and below said bracket and has an upper flange supported on the spacing tube and a lower flange extending under and spaced from said bracket and adapted to abut against the aforesaid wall, an eye-bolt adapted to participate in holding the radiator against said abutment-member and having its eye supported on the aforesaid upper flange, an endwise adjustable rod which extends substantially vertically between and through said flanges and through the spacing tube and through and above said eye and has a screw-threaded upper end portion, and a nut screwed onto said rod above said eye, said rod being provided, below the aforesaid lower flange, with a member arranged to form a seat for the radiator, and said eye and the spacing tube being alined substantially vertically.

1,570,408. DEVICE FOR DISPLAYING PRINTED OR OTHER MATTER EMPLOYED IN SIGHT TESTING AND WHICH CAN ALSO BE USED AS A MIRROR. PETER STEVENSON, Jr., Edinburgh, Scotland. Filed Mar. 25, 1924. Serial No. 701,852. 1 Claim. (Cl. 45—97.)



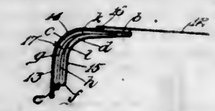
The herein described device comprising a frame, upright members adjacent said frame, heads detachably mounted on said upright member, bearings carried by said heads, projections on said frame, screwed sleeves receiving said projections, means for supporting said projections consisting of a member connected to each sleeve and having a plain shoulder adapted to project into one of said bearings in the head of each upright member, whereby the uprights may turn independently of said heads.

1,570,409. ASPARAGUS-ASSORTING MACHINE. LOUIS D. STOPPEL, Isleton, Calif. Filed June 23, 1925. Serial No. 39,146. 9 Claims. (Cl. 209—102.)



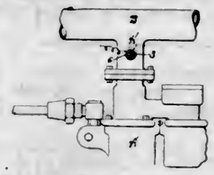
1. An asparagus assorting machine, comprising a frame, a plurality of rollers revolvably secured to the frame, a plurality of separated belts extending over the rollers for carrying asparagus stems, a plurality of belts extending entirely transversely underneath the first named belts and over a plurality of rollers revolvably secured to the frame, for carrying some of the larger asparagus stems along and for preventing them from falling between the separated belts at certain intervals, and a plurality of receptacles located beneath the first mentioned belts at points between the second mentioned belts.

1,570,410. CHILD'S VEHICLE. FERDINAND STRAUBS, New York, N. Y. Filed Feb. 12, 1925. Serial No. 8,610. 11 Claims. (Cl. 208—165.)



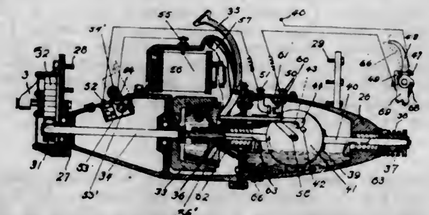
1. A child's vehicle comprising a body portion, and a handle pivoted on said body portion for propelling the vehicle, said handle being also arranged to serve as a bumper for the vehicle.

1,570,411. JEWELRY-BOX HINGE. RUSSELL I. RHODES, North Attleboro, Mass. Filed Nov. 25, 1924. Serial No. 752,173. 2 Claims. (Cl. 16—128.)



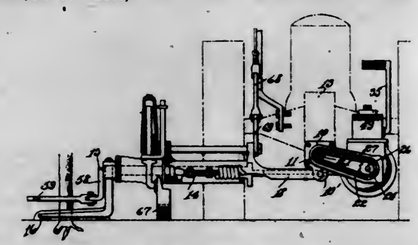
1. A hinge for jewelry boxes and the like comprising a pair of pivoted hinge members, each member having a metal leaf portion fixed to the inner surface of the adjoining box ends, a hinge strap detachably connected to each of said leaf portions, means for pivotally connecting said hinge straps together, an outwardly projecting lip on the free edge of each of said straps and a unitary spring having hooked end portions engaging between said outwardly projecting portions and said leaf portions.

1,570,412. QUARTER PAD FOR VEHICLE TOPS. VINCENT P. RUMELY, Detroit, Mich., assignor to Essex Motors, Detroit, Mich., a Corporation of Michigan. Filed Jan. 30, 1922. Serial No. 532,619. 4 Claims. (Cl. 296—118.)



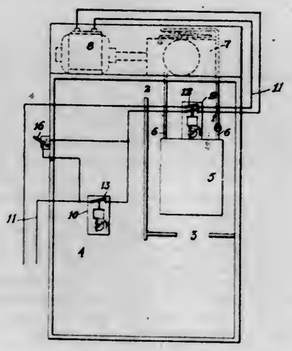
1. In combination with an automobile top having a deck and quarter, a quarter pad positioned at the juncture of said deck and quarter and comprising a strip of padding material folded longitudinally upon itself along a line at one side of the longitudinal center thereof to form superposed layers of different widths, at least one of said layers being further folded upon itself to form an additional layer at the edge of the pad opposite said first named fold.

1,570,413. CHARGE-HEATING DEVICE FOR INTERNAL-COMBUSTION ENGINES. CHARLES SMITH, St. Louis, Mo. Filed Nov. 18, 1922. Serial No. 601,775. 1 Claim. (Cl. 219—38.)



A charge heating device for an internal combustion engine comprising a body portion, a portion of which is adapted to be introduced into the intake conductor of said internal combustion engine, an electrically energized, heat-generating element within said portion of said body portion, packing means whereby air is prevented from being drawn into contact with said heat generating element, a plug at the opposite end of said body portion, said plug being provided with a central longitudinal opening, a conductor arranged in said longitudinal opening, said conductor being provided with a head at one end having an opening adapted to receive an end of said heat-generating element and a threaded portion at its other end, a nut on said threaded portion, and insulating members within said longitudinal opening and adjacent to the ends of said conductor whereby said conductor is insulated from said plug.

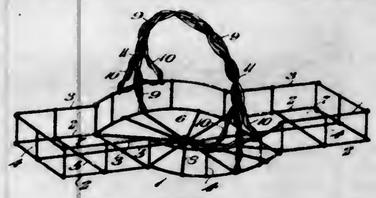
1,570,414. AUTOMATIC CLUTCH. SARKIS H. SUMBULIAN, by change of name, Sarkis Haig Beulan, San Francisco, Calif. Filed Aug. 29, 1922. Serial No. 585,103. 6 Claims. (Cl. 192—84.)



1. An automatic clutch mechanism including alined shafts, means for coupling the shafts, means for constantly driving one of the shafts, means for actuating the coupling means, and means operable by the first shaft for simultaneously releasing the coupling means and releasing the coupling actuating means.

1,570,415. CULTIVATOR. SARKIS H. SUMBULIAN, by change of name, Sarkis Haig Beulan, Fresno, Calif. Filed July 3, 1924. Serial No. 724,118. 5 Claims. (Cl. 97—137.)

1. An orchard cultivator including a ground treating implement, yieldable means for maintaining the implement projected into a row of spaced plants, a motor operated shaft having operative connections with the implements for withdrawing the latter from the row, an electric circuit including the motor, and a circuit closer on the implement and in said circuit, said circuit closer including an extension projecting forwardly of the implement for movement by contact with a plant.

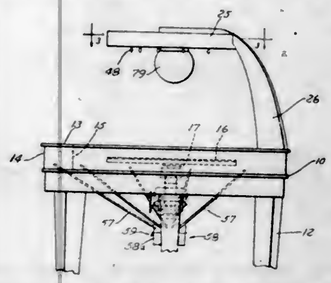


1,570,416. REFRIGERATION. HERVEY S. VASSAR, Bloomfield, N. J. Filed Dec. 18, 1924. Serial No. 756,651. 9 Claims. (Cl. 62—4.)

1. In refrigerating apparatus of the character disclosed, the combination with a refrigerator structure having communicating cooling and storage compartments, a cooling unit within the cooling compartment, means for circulating a refrigerant through said cooling unit, of a thermostatic controller located in the cooling compartment, a thermostatic controller located in the storage compartment and connections establishing said thermostatic controllers in series relation with each other and with said circulating means, enabling either of said controllers to stop the circulating means, independently of the other and requiring their joint cooperation to start the circulating means.

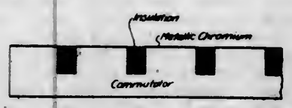
1,570,417. SPRAY BASKET. JOHN W. WALSH, Philadelphia, Pa., assignor to Harry Bayersdorfer and Sydney H. Bayersdorfer, a Copartnership trading as H. Bayersdorfer & Co., Philadelphia, Pa. Filed May 1, 1925. Serial No. 27,178. 9 Claims. (Cl. 40—12.)

1. In a device of the character stated, a skeleton wire frame, a skeleton wire handle extending from one side of the frame to the other and secured thereto, said handle being composed of a plurality of members, whose terminals are secured to opposite upper and lower portions of said frame, and strands of reed interwoven about said skeleton wire handle members and continued



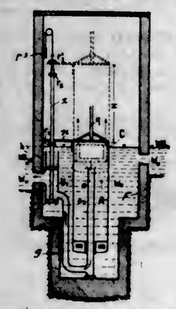
to the bottom of said frame so as to substantially conceal the same and to produce a handle of substantial thickness.

1,570,418. PRESERVED YEAST AND PROCESS OF MAKING IT. ULRICH WEGNER, Berlin-Steglitz, Germany. Filed Mar. 21, 1925. Serial No. 17,430. 7 Claims. (Cl. 99—8.)



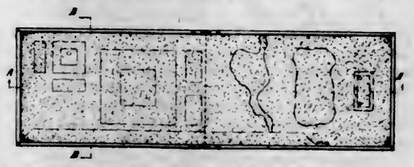
2. The process of preserving yeast, which consists in embedding it in a finely crystalline mass of invert sugar.

1,570,419. GAME OF SKILL. GUSTAV WOLKENHAUER, Chicago, Ill., assignor to Riverview Park Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 30, 1925. Serial No. 19,191. 7 Claims. (Cl. 273—101.)



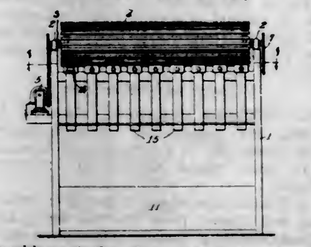
1. A game apparatus comprising a rotative target bearing a radial mark and a plurality of radially spaced annular marks, a player's board concentric with said target and providing a plurality of players' stations, one for each of said annular marks, and an intermediate look-out station, a head fixed above said target, a plurality of electrically controlled bombarding elements carried by said head, there being a bombarding element associated with each player's station and located above the corresponding annular mark on the target, a main control device located at the look-out station, and a plurality of auxiliary controls, one for each player's station, operable under the control of the main control device.

1,570,420. ELECTRICAL CONTACT MAKER AND BREAKER. VICTOR YNGVE, South Orange, N. J., assignor to Manhattan Electrical Supply Company, Incorporated, New York, N. Y., a Corporation of Massachusetts. Filed June 20, 1924. Serial No. 721,353. 4 Claims. (Cl. 171—321.)



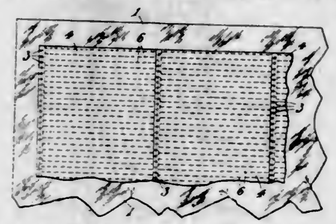
2. An electrical circuit maker and breaker, electroplated with a coating of metallic chromium.

1,570,421. WATER-POWER ENGINE FOR UTILIZING LOW-GRADE WATER POWERS. ADOLF ABRAHAM, Charlottenburg, Germany. Filed Aug. 29, 1921. Serial No. 496,551. 8 Claims. (Cl. 253—18.)



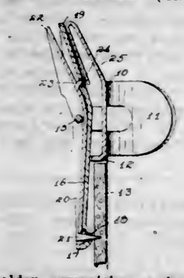
1. A water power engine, comprising, in combination, two basins containing water, the levels of these two bodies of water being different; a water-shaft communicating with said basin; a hollow float open at its top and arranged in said hollow shaft; control members so arranged as to permit the outer upper water to enter into the float and to rise to the level thereof, whereby the said float is caused to sink; said control members being also adapted to cause the upper water to flow continually into the float while this latter is sinking, and to permit the water present in the float to flow out until its level has reached that of the outer lower water whereby the float is caused to rise, the said control members permitting also the water present in the float to flow out continuously into the lower water while the float is rising, substantially as described.

1,570,422. INDOOR GOLF GAME. ARTHUR H. ADAMS, Lakeville, Conn. Filed Jan. 6, 1922. Serial No. 527,375. 26 Claims. (Cl. 273—87.)



1. In a miniature golf game, a ball of little mass and of relatively high air resistance, a club, a manually rotatable handle operating said club to strike said ball, and having a diameter tending to limit the kinetic energy imparted to said ball.

1,570,423. WASHING MACHINE. JOHN H. ANDERSEN, Glen Rock, N. J. Filed Sept. 15, 1925. Serial No. 56,430. 5 Claims. (Cl. 8—19.)

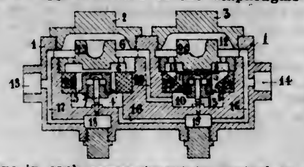


2. A machine of the class described, comprising, in combination, a frame, a plurality of vertically disposed tubes at each side of said frame, means carried by said tubes for guiding a fabric in tubular form therethrough and out of contact with the tubes, means below the tubes for receiving the fabric after it has emerged from the lower end of a tube at one side of the frame and directing it toward a tube disposed in staggered relation to said first tube at the opposite side of the frame, rotatable means carried by said frame for carrying said fabric from the upper end of a tube at one side to a tube at the opposite side, and means for supplying a treating liquid to said fabric as it passes through said tubes.

1,570,424. MEANS FOR USE IN THE PHOTOGRAPHIC PRODUCTION OF TYPOGRAPHICAL PRINTING SURFACES. JOHN NELSON BANKS, London, England, assignor to Linotype and Machinery Limited, London, England, a British Company. Filed Jan. 8, 1924. Serial No. 684,113. 5 Claims. (Cl. 95—5.)

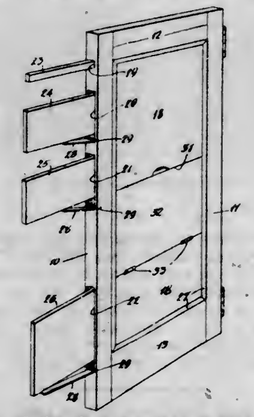
1. In a method of photographically producing typographical printing surfaces from film strips bearing representations of the type matter to be photographed, the steps which consist in attaching the film strips to a glass plate in parallel columns, by the engagement of perforations in their edges with pins or studs fast to the plate and photographing on to a sensitized printing plate the matter showing through the glass plate.

1,570,425. PEN AND PENCIL HOLDER. STEPHEN A. BAKALYAR, Des Moines, Iowa. Filed Apr. 14, 1924. Serial No. 706,554. 4 Claims. (Cl. 24—11.)



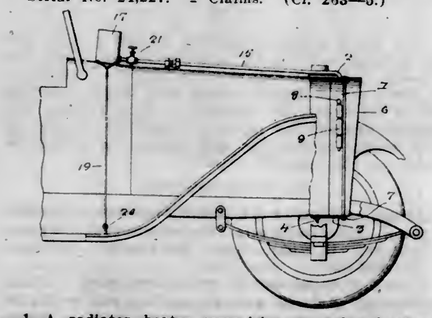
1. A pencil holder comprising a body portion having clamping members for securing the body portion to a pencil, a pivoted stripper lever having a stripper on its lower end, a pivoted locking lever having a locking pin on its lower end designed to work through said stripper member, and means for yieldably moving the said stripper member and said locking pin toward the pencil, for the purposes stated.

1,470,426. RAILWAY AIR-BRAKE-CONTROL VALVE. LOUIS ANTOINE MARIE BARASCUD, Paris, France. Filed Dec. 15, 1924. Serial No. 756,091. 4 Claims. (Cl. 303—85.)



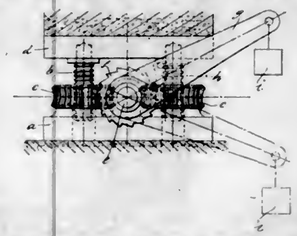
1. An air brake control valve, comprising a casing provided at each end with an aperture and having its interior divided into two main compartments; a flexible diaphragm in each compartment; a system of internal ducts in said casing extending from one aperture to

the other and including ducts which open into the compartments at opposite sides of the diaphragms therein;



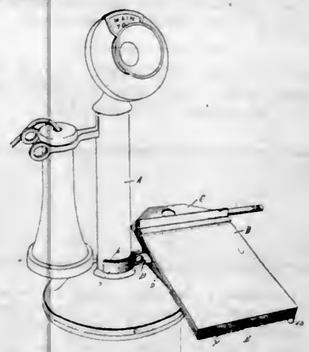
and a valve in each compartment to control an associated duct of the system and itself operatively connected with the adjacent diaphragm.

1,570,427. DOOR CONSTRUCTION. CHRISTIAN BIE, Brooklyn, N. Y. Filed Feb. 7, 1925. Serial No. 7,659. 3 Claims. (Cl. 20—35.)



1. A door of the class described fashioned from two vertical rails joined by top and bottom horizontal rails said rails being of substantially the same thickness throughout, frame members mounted in connection with and extending from one vertical rail to the other in spaced relation, said frame members being of less thickness than said rails to form recesses on the opposite side faces of the door, and panels mounted in said recesses and secured to said rails and frame members to form a door having spaced compartments therein, said compartments being formed between the rails, frame members and panels.

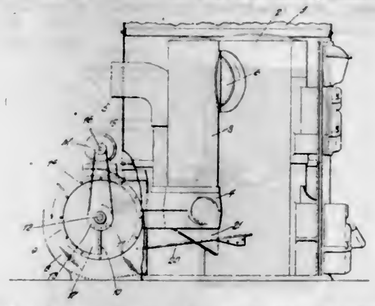
1,570,428. RADIATOR PROTECTOR. VICTOR E. BLACKBURN, Bellview, N. Mex. Filed Apr. 18, 1925. Serial No. 24,227. 2 Claims. (Cl. 263—5.)



1. A radiator heater comprising a casing having a hinged front part, means for fastening the casing to a radiator, wicks of asbestos supported by the casing, nozzles in the casing above the wicks, a fuel supply connected with the nozzles and means for preventing the fuel dropping from the wicks from passing from the casing.

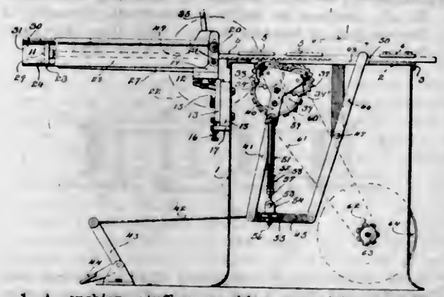
1,570,429. AUTOMATICALLY-OPERATED JACK FOR SUPPORTING WALLS OF BUILDINGS. JEAN BONNET, St. Etienne, France. Filed June 18, 1923. Serial No. 646,238. 3 Claims. (Cl. 254—103.)

1. For supporting the wall of a building, a jack having a socket, a vertically arranged screw supported in said socket, a gear wheel engaging with said screw, a lever and a counterpoise weight on said lever and means actuated by said lever to rotate said gear wheel and automatically raise said screw in case of subsidence of the ground on which the jack rests.



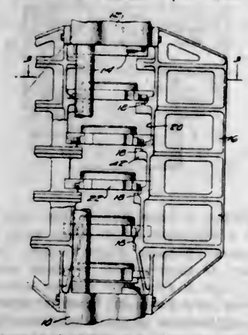
1,570,430. MEMORANDUM-PAD EQUIPMENT FOR TELEPHONES. CLYDE L. BOWERS, Washington, D. C. Filed Mar. 7, 1922. Serial No. 541,785. 10 Claims. (Cl. 45—82.)

1. In a device of the class described, the combination with a supporting arm attachable to a telephone standard, of a supporting plate attachable to and detachable from the supporting arm without effecting the attachment of the supporting arm relatively to the standard, a pad, and a clip carried by the pad and detachably clamping it against the said plate, whereby the clip and pad may be removed relatively to the arm either alone as a unit, or in combination with the supporting plate.



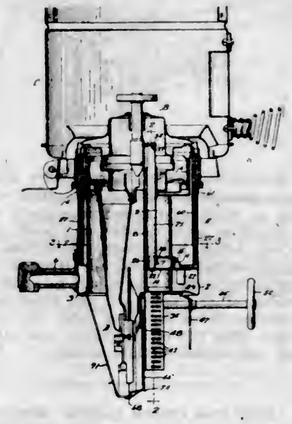
1,570,431. HOT-AIR FURNACE. CHARLES G. BUDER, St. Louis, Mo., assignor to Haynes-Langenberg Mfg. Co., St. Louis, Mo., a Corporation of Missouri. Filed Apr. 11, 1924. Serial No. 705,791. 7 Claims. (Cl. 126—110.)

1. In a furnace comprising a fire drum and a casing enclosing and spaced from the fire drum and having an air inlet opening through one side and near the lower end thereof, a pair of baffle plates extending inwardly and upwardly from said opening and having their inner edges spaced from the fire drum and their outer edges contacting with said casing, and a pair of approximately vertical baffle plates having their inner



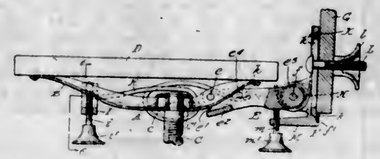
edges adjacent to the fire drum above the planes of said first baffle plates, said second pair of baffle plates diverging outwardly in planes intersecting said casing laterally from said opening.

1,570,432. CUSHION-STUFFING MACHINE. REGINALD W. BUSSE, Sheboygan, Wis. Filed June 16, 1924. Serial No. 720,348. 2 Claims. (Cl. 226—46.)



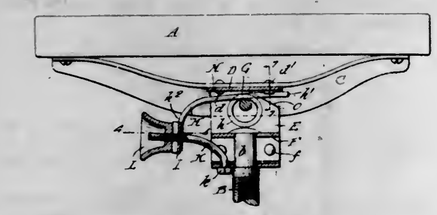
1. A cushion stuffing machine comprising a filling receiving box, a plunger mounted therein, a rack bar attached to said plunger, a pair of reversely rotating pinions adapted to selectively engage said rack bar, manual means for causing one of said pinions to engage said rack bar to advance said plunger, and automatic means for causing the other of said pinions to engage said rack bar for retracting said plunger.

1,570,433. PLATEN FOR POT PRESSES. FRED S. CARVER, East Orange, N. J. Filed Mar. 23, 1925. Serial No. 17,602. 8 Claims. (Cl. 100—50.)



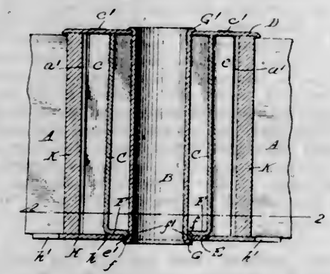
1. In a pot press having stops for stopping the platens at their individual stations, a series of platens provided with separable stop lugs of length to adapt the platens to be stopped by their respective steps.

1,570,434. OIL-BURNER CONSTRUCTION. LEE S. CHADWICK, Shaker Heights Village, and MARC REBEK, Cleveland Heights, Ohio, assignors to The Cleveland Metal Products Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 26, 1922. Serial No. 596,970. 28 Claims. (Cl. 67—60.)



1. In a burner of the character set forth, the combination of a structure enclosing a wick space and having a lateral offset portion extending upwardly along one side of the structure and opening throughout substantially its height into the wick space, a wick within the wick space, a member guided for vertical movement by and within the lateral offset portion of the structure, connections between said member and the wick, a member slidable upon the exterior of and thus guided by the lateral offset portion and having its upper end attached to the corresponding end of the aforesaid member, and means exterior of the burner structure for adjusting the wick through the intervention of said members.

1,570,435. FITTING FOR CHAIRS OR THE LIKE. ROBERT K. DAWSON, Akron, N. Y. Filed Apr. 7, 1924. Serial No. 704,624. 12 Claims. (Cl. 155—157.)

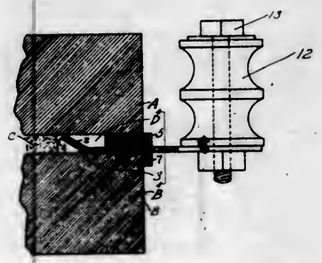


1. A spider for chair seats including a pair of crossed members each of which has a substantially horizontal flange and a substantially vertically extending reinforcing flange, one of said members being arranged with its reinforcing flange extending upwardly and the other member being arranged with its reinforcing flange extending downwardly, said downwardly extending flange being slotted to receive said upwardly extending flange, whereby the slot in said downwardly extending flange is closed by said upwardly extending flange and leaves the strength of said downwardly extending flange unimpaired when subjected to compression.

1,570,436. CHAIR BASE. ROBERT K. DAWSON, Akron, N. Y. Filed Apr. 7, 1924. Serial No. 704,625. 11 Claims. (Cl. 155—77.)

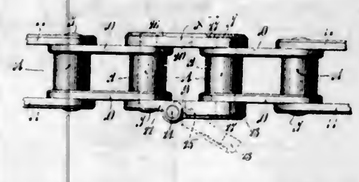
1. The combination with a chair spider and a chair spindle, of a member mounted on the upper end of said spindle and on which said spider is pivotally supported, a spring engaging said member and said spider and having a coil which is subjected to torsion, one end of said spring extending rearwardly from said coil and bearing upwardly against said spider to resist the rearward swinging of the same and the other end of the spring extending forwardly from said coil, and means engaging said other end of said spring and said member for varying the tension of said spring.

1,570,437. HUB FOR CHAIR BASES. ROBERT K. DAWSON, Akron, N. Y. Filed Apr. 12, 1924. Serial No. 706,207. 8 Claims. (Cl. 155—138.)



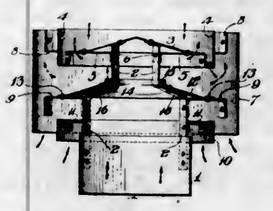
1. A hub for a chair base including a plurality of leg gripping bars of angle shaped cross section spaced apart to form between them recesses to receive the chair legs, a plate to which one end of each of said bars is rigidly secured, another plate having recesses adapted to receive portions extending from the other ends of said bars, and a central member secured to said plates and holding said other plate in a position in which said portions of said bars are retained in said recesses.

1,570,438. METHOD OF PRODUCING LEAD OXIDE. SAMUEL MARSHALL EVANS, Essex Fells, N. J. Filed Mar. 5, 1923. Serial No. 623,022. 3 Claims. (Cl. 23—146.)



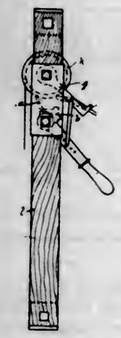
2. The method of treating storage battery plates for the economic recovery of their component parts which consists in separating the lead grids and a large proportion of the sponge lead from the lead sulphate and lead peroxide components of the plates, treating the separated lead sulphate, lead peroxide and sponge lead, all in a state of fine division, with a hot solution of an alkali-metal base until an exchange of bases is effected, washing the treated material to remove soluble salts and heating the residue in an oxidizing furnace to convert its components into lead oxide.

1,570,439. SEAM ANCHOR. PHILIP HOGAN, St. Louis, Mo. Filed May 23, 1924. Serial No. 715,290. 8 Claims. (Cl. 72—101.)



1. A seam anchor comprising a bar having a portion extending at an angle to the body of the bar, and a block approximating in thickness the width of the seam less the thickness of the bar.

1,570,440. CHAIN. MORRIS P. HOLMES, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed June 13, 1921. Serial No. 477,044. 16 Claims. (Cl. 74—32.)

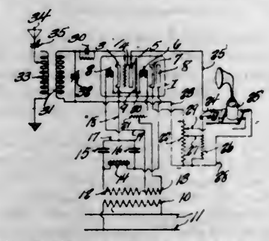


1. In a drive chain comprising links and hinge pins connecting said links, a link having permanent connection with one of said hinge pins and laterally movable with respect to said pin into and out of engagement with the next adjacent pin.

1,570,441. VENTILATOR. WILLIAM H. JARDINE, Philadelphia, Pa. Filed Nov. 10, 1923. Serial No. 673,877. 1 Claim. (Cl. 98—4.)

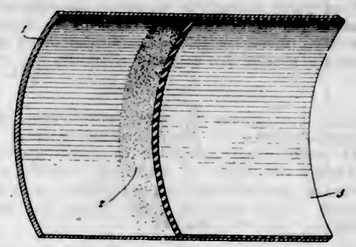
In a ventilator, a base flue, a top cap, an intermediate cap of a diameter larger than said top cap and having a central passage therethrough, standards inwardly inclined at their middle portions connecting said base flue and caps, a relatively narrow annular band arranged between said base flue and intermediate cap, a second relatively narrow annular band arranged adjacent said upper cap, a relatively wide band surrounding said first mentioned bands and spaced therefrom, and braces extended from said standards and connected with all of said bands for supporting the latter.

1,570,442. DEVICE FOR HOISTING AND LOWERING LOADS. HERMANN KEIL, Ettingshausen, Germany, assignor to William Keil, New York, N. Y. Filed Aug. 29, 1921. Serial No. 496,622. 4 Claims. (Cl. 254—146.)



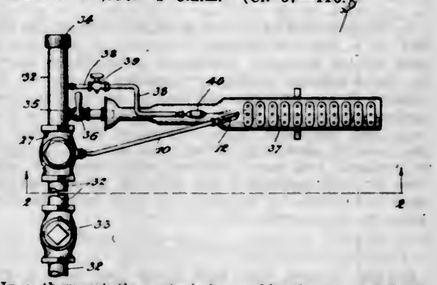
1. A device for hoisting and lowering loads embodying a drum mounted for rotation, a ratchet associated with the drum, a carrier pivoted coaxially of the drum and ratchet, a pawl mounted on the carrier and adapted to cooperate with the ratchet, an operating lever pivoted on an axis, other than the axis of the drum, a link pivoted to the carrier and adapted to be pivotally secured to the operating lever at different distances from the fulcrum of said lever, whereby power exerted through the link upon the carrier by the lever can be varied, a second pawl pivoted on the axis of the fulcrum of the operating lever and weighted to normally engage with the ratchet of the drum for the purpose of precluding inadvertent rotation of the drum, a retainer for supporting the weight of the pawl while the operating lever is being oscillated in one direction to lower a load, and means associated with the weight for automatically disengaging it from its retainer for the purpose of permitting the pawl to re-engage the ratchet of the drum when the operating lever has reached the end of its weight lowering stroke.

1,570,443. FOOD PRODUCT. EMMA ROSE MCSORLEY, Woodhaven, N. Y. Filed Mar. 6, 1925. Serial No. 13,457. 2 Claims. (Cl. 99—10.)



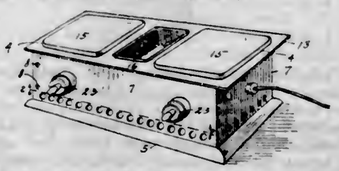
1. A food composition for macaroni and noodles comprising soy bean flour, wheat flour, eggs, sulphur, and an alkali.

1,570,444. WIRELESS APPARATUS. ARISTOTE MAVROGENIS, Milwaukee, Wis. Filed Dec. 26, 1923. Serial No. 682,666. 6 Claims. (Cl. 250—27.)



1. A unitary electron discharge device including an equipotential cathode, a plate cooperating with said cathode, a grid interposed between said cathode and said plate, a thermionic rectifier for supplying said plate, and a thermionic current limiting device controlling the current supplied said plate.

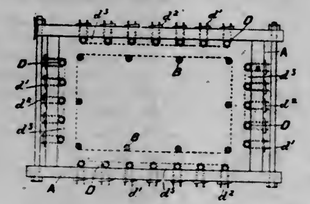
1,570,445. METHOD OF ATTACHING RUBBER TO METAL AND ARTICLE PRODUCED THEREBY. ALLAN B. MERRILL, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed July 14, 1924. Serial No. 725,875. 6 Claims. (Cl. 18—59.)



1. The method of uniting metal and soft rubber which comprises applying to the metal a thin bonding film of a relatively rapid-curing hard-rubber composition, superposing thereon a layer of relatively slow-curing soft-rubber composition and vulcanizing the hard-rubber and the soft-rubber together on the metal.

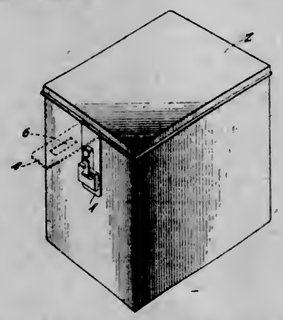
1,570,446. THERMOSTATIC CONTROL. LUIGI MOMBARUZZO, New York, N. Y. Filed Aug. 4, 1924. Serial No. 729,936. 1 Claim. (Cl. 67—116.)

In a thermostatic control, in combination, a container, a plurality of movable thermostatic plates within the container so positioned that they will expand in arc formation against each other when heated, a tube connecting valve with the container, a ball valve, a rod longitudinally movable within the tube, means carried by the rod abutable upon a thermostatic plate, a conical member carried by the rod and insertable beneath a ball closure of the valve, means whereby the expansion of the thermostatic plates will cause the conical member to move beneath the ball raising it from its seat, and means whereby the return of the plates to normal temperature will cause the removal of the conical member from beneath the ball allowing the ball to be positioned upon its seat.



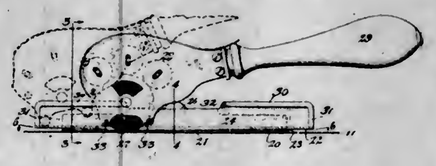
1,570,447. ELECTRIC TOASTER. MORTON MURPHY, Rushville, Ind. Filed June 16, 1925. Serial No. 37,453. 4 Claims. (Cl. 219—37.)

1. In a toaster, a base having a shoulder near its edge, a sheet metal body secured to the base against the shoulder, a top removably secured to the body and



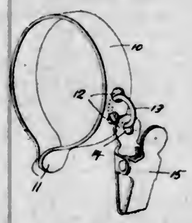
having an opening, a hot-plate with a depending marginal flange said flange making a close fit in the opening of the top, means for removably fastening the flange to the body with the plate above the upper surface of the top, a sheet of electrical insulation assembled in the flange enclosure of the plate at a suitable distance below the plate, means for removably securing the insulation to the flange in bowed condition to hold it in fixed relation therewith and means supported by the insulation for heating the plate by electricity.

1,570,448. APPARATUS FOR CONSTRUCTING REENFORCED-CONCRETE STRUCTURES WHICH CONTAIN IMBEDDED MEANS FOR CIRCULATING A HEATING OR COOLING MEDIUM. JOSEPH LESLIE MUSGRAVE and RICHARD GODFREY CRITTALL, London, England. Filed Sept. 20, 1923. Serial No. 663,862. 2 Claims. (Cl. 25—154.)



1. The combination with a mold for defining the surface of a concrete building structure, of pipes to be used for the flow of a heating or cooling fluid therein in the completed building, for heating or cooling the interior of the building, and bearing against the inner surface of the mold so as to be embedded in the concrete and leave said pipes exposed at the surface of the concrete when the concrete has set and the mold is removed, and means securing said pipes and mold together and supporting the pipes in place from the mold and capable of releasing the mold from the pipes when the concrete has set.

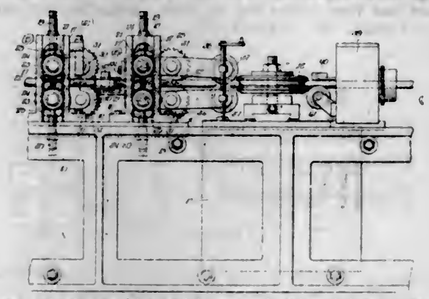
1,570,449. LOCK FOR BOX LIDS AND THE LIKE. AUGUST PITTELKOW, Chicago, Ill., assignor to Erie Can Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 17, 1923. Serial No. 669,043. 4 Claims. (Cl. 292—285.)



1. A hasp lock having a hasp with a slot arranged longitudinally and having uninterrupted parallel sides and two locking elements, one of which constitutes an arch projectable through the slot in the hasp and the other constitutes a locking block having an aperture through which the arch passes, one of said locking elements having a plurality of oppositely disposed indentations of sufficient depth to enable the locking block to be rotated about an axis perpendicular to the plane of the hasp to a position substantially in line with the arch to enable the locking block to occupy either of two positions, viz crosswise of the slot for locking the hasp or lengthwise of the slot for releasing the hasp.

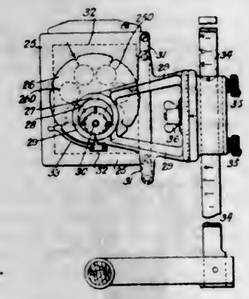
1,570,450. PRINTING APPARATUS. GEORGE FRANCIS POND, East Aurora, N. Y., assignor to Guy J. Evans, Buffalo, N. Y. Filed Dec. 15, 1921. Serial No. 522,593. 7 Claims. (Cl. 101—126.)

1. A printing apparatus comprising a stencil holder having a frame, means for attaching a stencil to said frame, and means for engaging the top of the stencil and producing an impression of said stencil from the underside thereof on a surface comprising an inking member adapted to engage the stencil and a carrier upon which said inking member is mounted and which is coupled with said frame so as to permit said carrier to move lengthwise of said frame but compel the same to move vertically with said carrier.



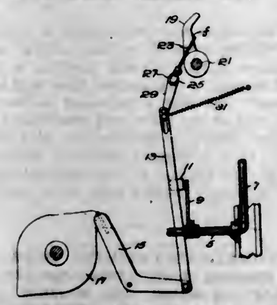
1,570,451. HAT HOLDER. SIMON SIMONEAU, Chicopee Falls, Mass. Filed Oct. 5, 1925. Serial No. 60,607. 1 Claim. (Cl. 24—81.)

A hat holder of the character described comprising a spring clip arranged in the formation of a circle and terminating in like abutting end portions and providing a pair of aligned openings in one side thereof, a ring extending to the openings in the strap, and a spring clip having an opening provided in one of the companion handle members therefor and receiving the ring therein in the supporting of the latter thereon.



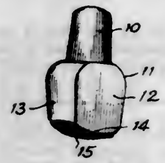
1,570,452. ADJUSTING MEANS FOR ROLLERS. NELS P. SJOBRING and MARTIN SWANSON, Milwaukee, Wis., assignors to Globe Steel Tubes Company, Milwaukee, Wis., a Corporation of Delaware. Filed Feb. 18, 1924. Serial No. 693,448. 5 Claims. (Cl. 219—6.)

1. In wielding mechanism, in combination, an elongated frame, transversely extending supporting means mounted in said frame, longitudinally extending supporting members carried by said transverse supporting means and adjustable transversely of said frame, a vertical supporting member mounted upon each of said longitudinally extending supporting members, a pair of bearing blocks carried by each of said vertical supporting members and a shaft rotatably supported by one block of said vertical supporting members and one block of the other of said vertical supporting members and a second shaft rotatably carried by the other blocks of said vertical supporting members, a pinion mounted upon each of said shafts for communicating motion thereto, a pair of gear wheels meshing with one another, each of said



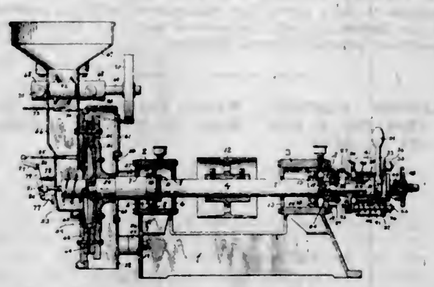
gear wheels meshing with one of said pinions, means for communicating motion to said gear wheels and means for adjusting the vertical positions of said shafts.

1,570,453. CAMERA. CHARLES FREDERICK SMITH, London, England, assignor to Adam Hilger, Limited, London, England. Original application filed June 4, 1924, Serial No. 717,706. Divided and this application filed Feb. 16, 1925. Serial No. 9,494. 7 Claims. (Cl. 95—38.)



1. A camera comprising a plate holder, a pivot on the plate holder, a disk rotatably mounted on the pivot, an eccentric boss on the disk, a lens in the boss and means for causing the pivot of the disk to move in a circle.

1,570,454. AUTOMATIC STOP FOR LOOMS. GEORGE B. AMBLER, Leominster, Mass., assignor to F. A. Whitney Carriage Company, Leominster, Mass., a Corporation of Massachusetts. Filed Feb. 10, 1922. Serial No. 535,474. 5 Claims. (Cl. 139—372.)

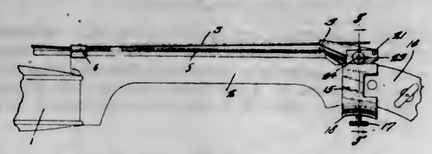


1. In a loom in combination with a lever controlling the application of power to the loom, a rod having a shoulder to engage the lever, means for reciprocating the rod and means to swing the rod thereby to move the shoulder away from the lever comprising an element in the path of the beaten up filling.

1,570,455. METHOD OF MANUFACTURING HORSESHOE CALKS. THOMAS F. BOYLAN, Sr., New Brunswick, N. J., assignor to Eversharp Manufacturing Co., New Brunswick, N. J., a Corporation of New Jersey. Filed Jan. 21, 1925. Serial No. 3,877. 3 Claims. (Cl. 59—68.)

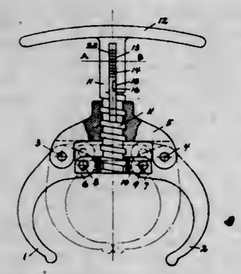
1. The herein described method of manufacturing blunt drive pattern horseshoe calks by the cold process consisting in entering one end of an elongated cylindrical high carbon wire section into a tapered die, subjecting the same to an initial impact for forming a tapered shank at one end of the section and simultaneously upsetting the remaining head defining portion projecting from the die to produce a bulge at the juncture of the head and shank, subjecting said head portion to further impact whereby to further upset the head to effect shaping of the same into a substantially frusto conical form with a rounded shoulder at its juncture at the inner end of the shank and simultaneously producing at the outer end a reduced outwardly projecting circular boss and then entering the shank into a die exerting a pressure on the head to simultaneously flatten the opposite sides of the head for producing opposite outwardly converging faces, rounded opposite end walls, an arcuate end face while similarly shaping the boss and at the same time finishing the shank to its proper size and taper.

1,570,456. GRINDING MILL. JAMES G. BRYANT, Port Huron, Mich. Filed July 21, 1922. Serial No. 576,415. 15 Claims. (Cl. 83—8.)



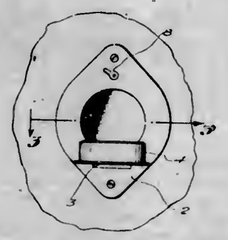
1. In combination, a main shaft and a stub shaft in alinement therewith, a thrust bearing mounted on and supported by one end of the main shaft and adapted to receive one end of the stub shaft, an additional bearing in which the main shaft is rotatable and slidable, and an additional bearing in which the stub shaft is mounted.

1,570,457. VIOLIN-POSITION GUIDE. FRANK A. BUA, Lodi, N. J. Filed Mar. 19, 1924. Serial No. 700,340. 5 Claims. (Cl. 84—281.)



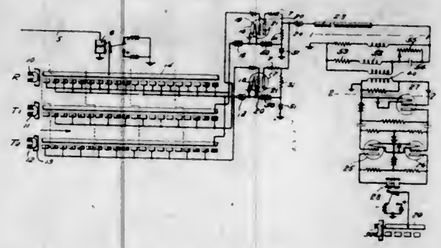
1. The combination with the neck, head and strings of a violin, of a graduated bar arranged at the opposite side of the strings with reference to the face of the

neck and extending longitudinally with respect to said neck, a guide adjustable longitudinally with respect to the neck and securely receiving one end of the graduated



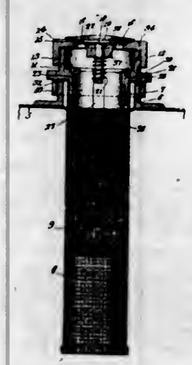
bar, an apertured keeper for slidably receiving the opposite end of the graduated bar and a clamping means for adjustably associating the keeper and retain the same on the head.

1,570,458. MANACLES, HANDCUFFS, AND THE LIKE. BÖRGE CEDERLÖF, Stavanger, Norway. Filed Feb. 24, 1925. Serial No. 11,247. 3 Claims. (Cl. 70—24.)



1. The improved manacles comprising a holder, pivoted jaws adapted to be adjusted and locked in different positions in said holder and having short arms or extensions pivotally connected with a nut, a screw spindle with threads of opposite pitch engaging the nut and holder, said holder having notches, a spring-pressed pawl guided in a slot in the screw spindle and arranged to co-operate with notches in the holder to lock the screw and jaws against movement in one direction and an auxiliary locking catch guided in the pawl and capable of being moved into engagement with the notches in the holder to lock the jaws of any of a plurality of positions, substantially as described.

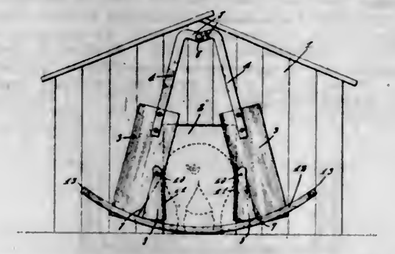
1,570,459. COMPASS. WARREN CHAMPION, Pekin, Ill. Filed Feb. 4, 1924. Serial No. 690,574. 1 Claim. (Cl. 33—222.)



In combination, a casing having a flange projecting therefrom and a slot arranged at the juncture of the flange with the casing, a compass structure, a flange projecting from the compass structure and hinged to the casing flange, a lip formed on the end of the flange of the compass structure and movable through said slot whereby to engage one side of the casing to limit the movement of the compass structure to a horizontal position.

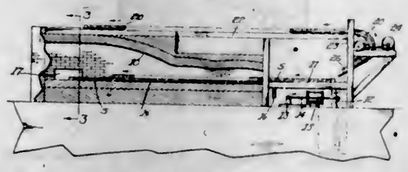
1,570,460. TELEGRAPH SYSTEM. ALLISON A. CLOKEY, Rutherford, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 15, 1920. Serial No. 417,198. 7 Claims. (Cl. 178—63.)

1. In a repeater system, the combination with a plurality of line sections, repeating means connected intermediate said line sections comprising an electric discharge device having an anode, a cathode and a control electrode, a condenser arranged to be charged in accordance with the signal current impulse transmitted over one of said line sections, and means for subsequently connecting said condenser in circuit with the control electrode of said device for permitting said condenser to discharge and cause a corresponding signal to be repeated to the other line section.



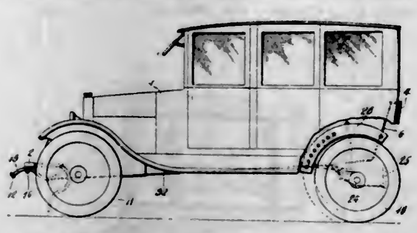
1,570,461. SAFETY ATTACHMENT FOR TANKS. JACOB COHN, New York, N. Y., assignor to Non-Explosive Corporation of America, New York, N. Y., a Corporation of Delaware. Filed July 26, 1924. Serial No. 728,336. 3 Claims. (Cl. 220—88.)

1. A safety attachment for tanks having a filling neck comprising a bushing secured to said filling neck, a foraminous cylinder carried by said bushing, a cap secured upon said bushing, a cap secured upon said bushing and having a valve seat with a depressed portion below the inner lower edge of the valve seat providing a chamber, said chamber having communication through said depressed portion by a passage of relatively limited area, a valve having an edge adapted to close against said seat, and means for yieldingly holding said valve against its seat.



1,570,462. AUTOMATICALLY-CLOSING DOOR. MAURICE COPE, Kingsley, Iowa. Filed Apr. 20, 1925. Serial No. 24,587. 6 Claims. (Cl. 20—16.)

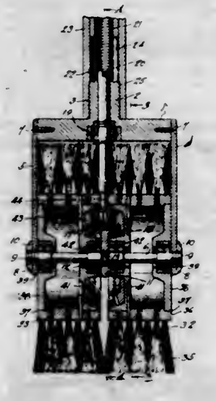
1. In a device of the character set forth, a closure comprising a pair of panels, means for pivotally supporting said panels in a manner to cause them to gravitate towards each other to close an entrance, and means whereby an animal may cause said panels to swing apart for passage through said entrance, said last mentioned



means further constituting a means whereby a small animal may pass through said entrance without moving said panels.

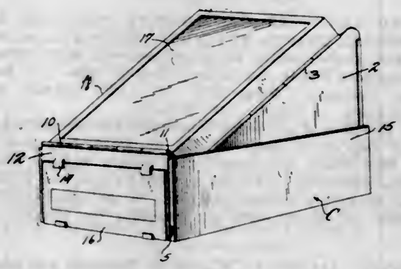
1,570,463. UNLOADING DEVICE FOR FURNACES. MARK H. DAMERELL, Worcester, Mass., assignor to Wyman-Gordon Company, Worcester, Mass., a Corporation of Massachusetts. Filed June 16, 1924. Serial No. 720,154. 6 Claims. (Cl. 214—18.)

1. A furnace unloading device comprising a sectional stock engaging member, and means to advance said member lengthwise of the furnace and within the same to clear the furnace of stock, said means comprising a reciprocating element effective to separately engage successive sections of said stock-engaging member and to give each section thus engaged a predetermined advance movement into said furnace.



1,570,464. SAFETY DEVICE FOR AUTOMOBILES. ANTONIO DAMORE, Brooklyn, N. Y. Filed Feb. 13, 1923. Serial No. 618,875. 11 Claims. (Cl. 180—83.)

1. A safety device for automobiles, comprising a fender, means for holding said fender in raised position, means carried on the rear axle of the automobile for jacking up the rear wheels thereof, and spring tension means for lowering said fender and operating said jacking means on forcible contact of the fender with an obstacle.

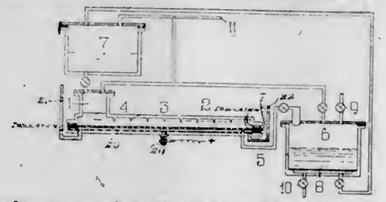


1,570,465. SHOE-POLISHING MACHINE. SALVATORE D'APREA, Brooklyn, N. Y. Filed May 7, 1923. Serial No. 637,212. 2 Claims. (Cl. 15—23.)

1. In a shoe polishing device a frame, a tubular handle for holding said frame in the hand of an operator, polishing brushes carried in said frame, a driving shaft for driving said polishing brushes, a clutch sleeve connected to a power drive rotatatively extending within said handle and adapted to engage said shaft, said

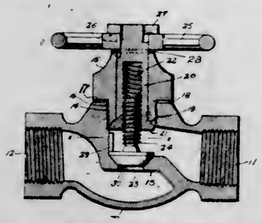
handle adjacent its free end being formed with an annular groove, and a spring member formed with an enlargement to fit in said grove secured to said clutch sleeve for locking the same in said tubular handle.

1,570,466. DISPLAY DEVICE. EDWIN C. ESSINGER, Chicago, Ill. Filed July 23, 1925. Serial No. 45,640. 5 Claims. (Cl. 211—28.)



1. In combination with a container, a display device comprising side plates insertable within the container, the upper margins of said plates being inclined, the low point of each of the plates terminating within the container and the high point exteriorly thereof, a body plate, means for operatively connecting the inclined marginal portions of the side plates to the body plate, a plate pivotally connected with the low end of the body plate and upwardly disposed when the device is applied, and a flat plate pivotally connected with the opposite marginal portion of said last named plate.

1,570,467. MANUFACTURE OF ALKALI-METAL AMIDES. THOMAS EWAN, Glasgow, Scotland. Filed Mar. 31, 1924. Serial No. 703,104. 16 Claims. (Cl. 204—9.)

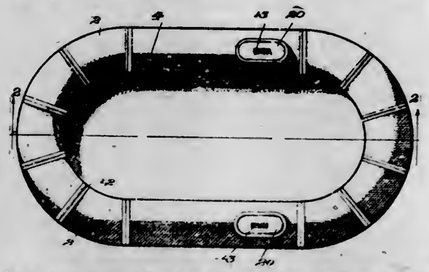


1. The process of manufacturing alkali metal amide which comprises passing an electric current between

an anode of alkali metal amalgam and a cathode immersed in a solution of inert alkali metal salt in liquid

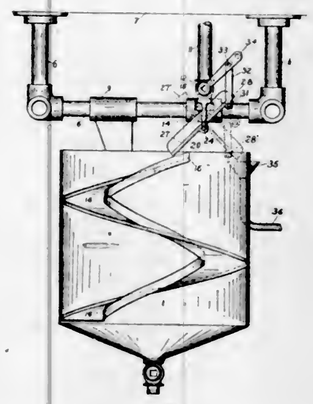
anhydrous ammonia and catalyzing the reaction between the ammonia and the metal thus removed to yield the amide.

1,570,468. VALVE. HARVEY E. FREEBURY, Belfry, Mont. Filed June 28, 1921. Serial No. 480,972. 1 Claim. (Cl. 251—47.)



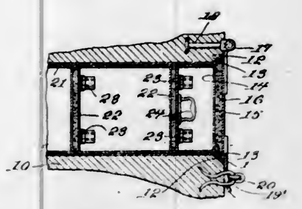
A valve comprising a casing having an internal valve seat and a guide rib extending from the seat, a member supported in said casing and having an internally threaded socket, means for rotating said member and a valve head having a threaded stem engaging said threaded socket and provided with a marginal notch slidably engaging said guide rib.

1,570,469. RESIN SUBSTITUTE PRODUCED BY FRIEDEL CRAFTS REACTION. ERICH FREUND and HANS JORDAN, Berlin, Germany, assignors to the Firm: Chemische Fabrik auf Actien (vorm. E. Schering), Berlin, Germany. Filed Aug. 25, 1923. Serial No. 659,359½. 6 Claims. (Cl. 260—2.)



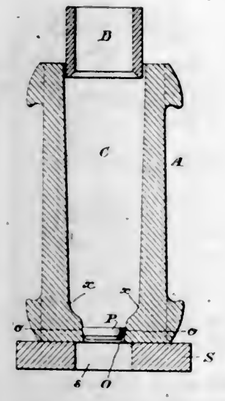
5. The method of making substitutes for natural resins which consists in subjecting an aromatic compound of the kind which can react with certain halogen compounds according to Friedel and Crafts reaction, to the action of such a halogen compound in the presence of a quantity of fuller's earth not exceeding ten percent.

1,570,470. AIR BOAT. WALTER P. FRITSCHE and JOHN DIEHL CLARKE, New Haven, Conn. Filed Jan. 14, 1925, Serial No. 2,324. Renewed Nov. 12, 1925. 11 Claims. (Cl. 9—11.)



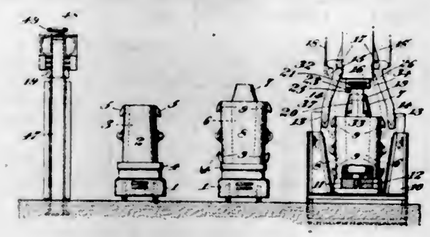
6. A boat comprising an air container, a floor for the boat dividing the container into a plurality of separate air chambers, independent valves permitting filling the respective chambers from adjacent sides of the floor, and duplicate sets of oarlocks on opposite sides of the boat providing for use of the boat when launched either side up.

1,570,471. WEIGHING LIQUIDS. EUGENE J. GABE, Saginaw, Mich., assignor to Baker-Perkins Company, Inc., White Plains, N. Y. Filed May 15, 1923. Serial No. 639,066. 7 Claims. (Cl. 249—1.)



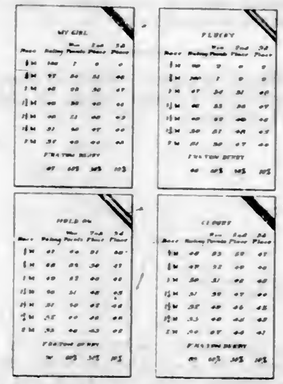
1. A weighing mechanism having in combination a weighing receptacle arranged to be moved by the weight of the contained material, means for feeding the material in a stream into said receptacle, a cut-off device for said stream, said receptacle having an inclined surface receiving the stream of material and extending from closely adjacent said cut-off downward toward the bottom of the receptacle, whereby when said cut-off operates substantially the entire stream of material flowing into the receptacle is then weighed with the mass of material at rest in the receptacle.

1,570,472. FIREPROOF VAULT. HENRY S. GASKILL, Hastings, Mich. Filed May 16, 1925. Serial No. 30,811. 2 Claims. (Cl. 109—2.)



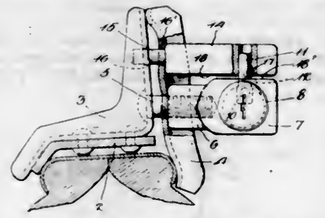
1. A vault of the character described having a layer of non-inflammable material arranged upon the inner sides thereof, a hollow door being filled with non-inflammable material and having its inner sides inwardly beveled and snugly fitting the inner ends of the vault and corresponding wall and lying in the same plane therewith, a pair of hinged members having their outer ends rigidly secured to the door and their opposite ends anchored or moulded within the vault wall, locking means included upon the door and wall, a plurality of correspondingly constructed auxiliary doors arranged in spaced relation within and extending longitudinally of the vault for creating a heat resisting space therebetween, and holding means included upon the upper sides of the auxiliary doors for holding the same in their relative positions substantially as set forth.

1,570,473. INGOT MOLD. EMIL GATHMANN, Baltimore, Md. Filed Oct. 16, 1925. Serial No. 62,755. 6 Claims. (Cl. 22—148.)



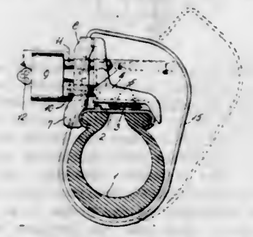
1. A sealing plug for ingot molds formed with a peripheral contact surface, the diameter of which is materially larger than the length of the plug, and which is reinforced by a lower portion of reduced diameter having no contact surface.

1,570,474. INGOT STRIPPING. HARRY R. GEER, Johnstown, Pa. Filed Apr. 24, 1922. Serial No. 556,229. 10 Claims. (Cl. 22—95.)



5. An automatic tongs comprising a casing, triggers mounted in the lower end of said casing with portions normally projecting therebelow, a yoke slidably mounted in said casing, supported by said triggers when in its upper position, said triggers being adapted to be partially rotated by the contact of their projecting portions with any object therebelow; whereby the ends of the yoke register with notches or cut-away portions of said triggers, thus allowing the yoke to drop by gravity, tongs comprising a pair of bell-crank levers pivotally mounted in said yoke, with the ends of their upper arms adapted to contact with and be supported by the casing aforesaid.

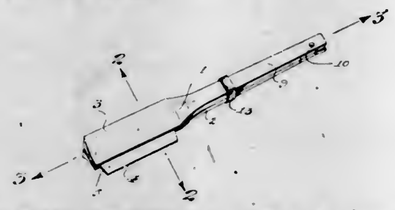
1,570,475. PLAYING CARDS. FRANK GERACI, Jr., and THOMAS GERACI, Washington, D. C. Filed Oct. 5, 1925. Serial No. 60,530. 10 Claims. (Cl. 273—152.)



1. A pack of playing cards, each of which represents a race horse, each of said cards having an indication of the rating of the horse and an indication of the number of points which the said card may win.

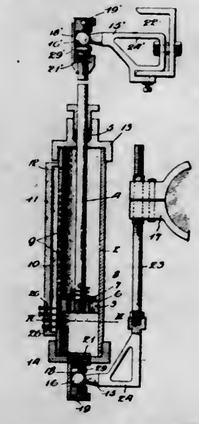
1,570,476. LOCKED-NUT APPARATUS. CLARENCE A. GODSHALK, Philadelphia, Pa. Filed July 22, 1924. Serial No. 727,481. 3 Claims. (Cl. 70—90.)

2. A nut adapted to engage with a screw-threaded pin, a lock casing at the end of the nut closing the screw-threaded opening therein, a lock mechanism supported in the casing, and a locking bolt adapted to be operated by the lock mechanism and located so as to be projected out laterally through one of the sides of the lock casing and beyond the face thereof.



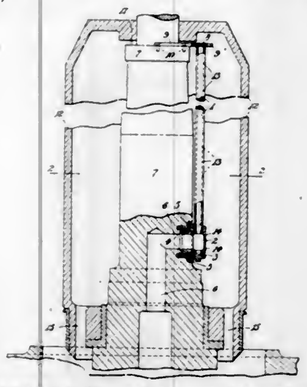
1,570,477. LOCKING MECHANISM FOR THE SPARE TIRES OF AUTOMOBILES. CLARENCE A. GODSHALK, Philadelphia, Pa. Filed Sept. 8, 1924. Serial No. 736,554. 6 Claims. (Cl. 70—90.)

1. In locking means for the spare tire of an automobile, the combination with a carrier on which a tire and its rim may be placed, a bracket secured to said



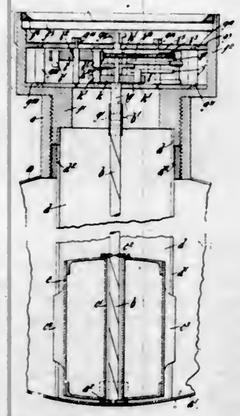
carrier, and a clamp piece for engaging with the tire rim and holding it upon the carrier, of a free metal band for encircling the tire, and a key-operated lock arranged to unite the clamping piece and also both ends of the encircling band to the bracket and to retain these in operative positions.

1,570,478. BLADE HOLDER. ABRAHAM GOETZ, Chicago, Ill. Filed Aug. 11, 1922. Serial No. 581,188. 1 Claim. (Cl. 30—25.)



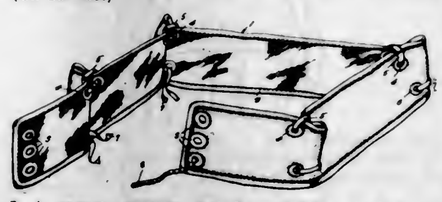
In a razor blade holder, two members each including a handle provided at one end with a head, the handles increasing in thickness toward the heads and the heads being provided with means for securing a razor blade inserted between them, a keeper freely slidable on the handles, and a rivet loosely inserted through the handles adjacent the other end thereof, one of the handles having the portion thereof beyond the rivet disposed at an angle outwardly away from the other handle whereby the heads may be forced apart when the keeper is in inoperative position by pressing the outer ends of the handles toward each other.

1,570,479. SHOCK ABSORBER. MILTON E. GOLDENSKY and SIMON SYLVAN HARRIS, Philadelphia, Pa. Filed Aug. 30, 1923. Serial No. 660,160. 7 Claims. (Cl. 188—88.)



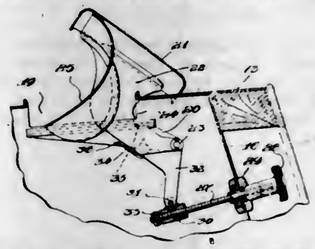
1. In a shock absorber, the combination with a cylinder containing a liquid, a piston movable therein, and a valve controlled passage arranged to permit free movement of the liquid in the cylinder from one side of the piston to the other when the latter moves in one direction and to prevent such movement when the piston moves in the opposite direction, of a by-pass through which the liquid circulates from one side of the piston to the other as the piston is moving in the second mentioned direction, the by-pass having relatively free communication with the interior of the cylinder near that end of the cylinder toward which the piston moves when the flow of liquid through the said valve-controlled passage is prevented, and having communication with the other end of the cylinder through a series of small perforations arranged to be successively opened by the piston when moving in the other mentioned direction.

1,570,480. APPARATUS FOR CASTING CURVED STEREOTYPE PRINTING PLATES. BENJAMIN JOSEPH JOHN GOULDING, Altrincham, England, assignor to Linotype and Machinery Limited, London, England, a British Limited Liability Company. Filed May 10, 1924. Serial No. 712,240. 5 Claims. (Cl. 22—4.)



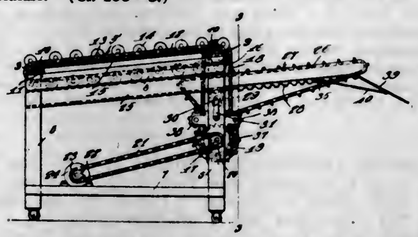
1. In apparatus for casting curved stereotype plates, the combination with a hollow vertical core and a central pillar about which the core is rotatable in two stages, each a semi-rotation, for the casting of plates successively on diametrically opposite sides of the core, of a series of vertical pipes ranged in a semi-circle within the annular space between the core and pillar, the perforations being directed outwardly to deliver jets of cooling liquid supplied to the pipes on to approximately one half only of the interior surface of the hollow core during the interval between the stages of its rotation.

1,570,481. LIQUID-REGISTERING DEVICE. FREDERICK HAROLD GRAIN and LESLIE FREDERICK MAXWELL, London, England. Filed Aug. 28, 1924. Serial No. 734,779. 2 Claims. (Cl. 235—91.)



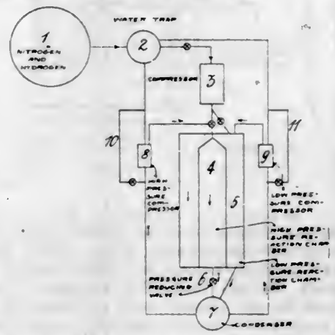
1. In a liquid registering device, having a tank, a shaft, and means in the tank for rotating the shaft by the change of liquid level in said tank; a member on the shaft; a spindle; a ratchet wheel on the spindle; a pivoted lever adapted to be operatively engaged by the said member; a pawl on said lever adapted to engage the ratchet wheel; and a device adapted to limit the movement of the ratchet wheel by the pawl when the shaft turns in one direction, and to prevent engagement of the pawl with the ratchet wheel when the shaft turns in the opposite direction.

1,570,482. FURNITURE GUARD FOR CARPET SWEEPERS. KITTY L. HALE, San Francisco, Calif. Filed Oct. 28, 1924. Serial No. 746,444. 3 Claims. (Cl. 15—45.)



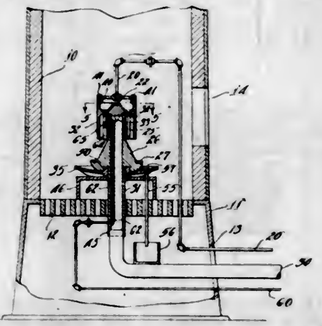
1. A carpet sweeper guard comprising a strip of suitable material having pairs of eyelets at its upper and lower edges located to correspond with the corners of a carpet sweeper to which the device is to be applied, cords passed through the eyelets of each pair and adapted to shape the strip to fit the perimeter of a carpet sweeper, the ends of the strip being equipped with spaced eyelets arranged transversely of the strip to receive a lacing cord.

1,570,483. MOTOR VEHICLE. JACOB HAMMERL, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Apr. 27, 1922. Serial No. 556,896. 7 Claims. (Cl. 98—22.)



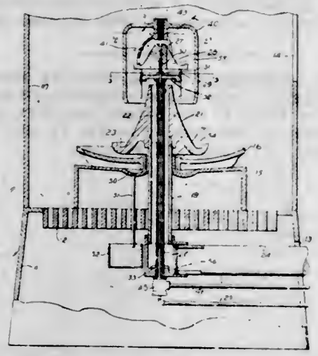
1. In a motor vehicle, the combination with the cowl having an opening therein, of a deflector plate formed to deflect air inwardly through the opening in the cowl and having a raised portion to divide and deflect the air laterally inside the cowl.

1,570,484. CONVEYER. HANS M. HANSON, Mason City, Iowa. Filed July 12, 1923. Serial No. 651,125. 2 Claims. (Cl. 198—8.)



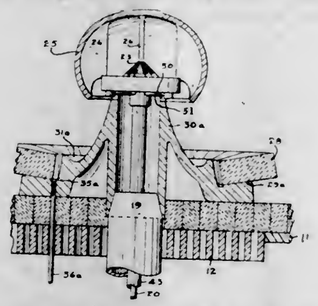
1. In combination with a fixed conveyer, an extension conveyer comprising a frame slidably mounted adjoining said fixed conveyer, a fixedly supported drive means for both said conveyers, and endless conveying element mounted on said slidable frame and having one run thereof looped away from said frame and about said fixed driving means, and means situated in the space provided by the looping of said conveying element and cooperating with said frame to slide the same back and forth.

1,570,485. SYNTHESIS OF AMMONIA BY MEANS OF CATALYSTS. HANS HARTER, Wurzburg, Germany, assignor to Albert T. Otto & Sons, New York, N. Y., a Corporation of New York. Filed Feb. 11, 1925. Serial No. 8,331. 6 Claims. (Cl. 23—198.)



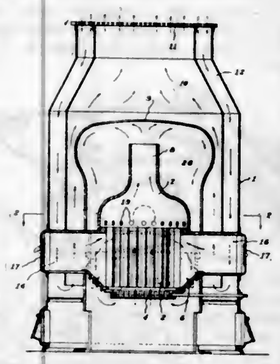
3. Process of synthetically producing ammonia by means of catalysts, consisting in treating one part of a mixture of hydrogen and nitrogen with the catalyst at a pressure exceeding 400 atmospheres and another part of the said mixture at a pressure not exceeding 400 atmospheres, expanding the treated gas of higher pressure to lower pressure uniting the gases thus treated with the reduction of the higher to the lower pressure, and condensing the ammonia formed.

1,570,486. OIL BURNER. JULIUS H. HILDEBRANDT, Cleveland, Ohio. Filed Sept. 15, 1923. Serial No. 662,804. 9 Claims. (Cl. 158—91.)



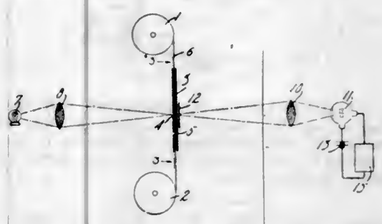
1. In a liquid fuel burner the combination with an upwardly extending air conduit, of a laterally deflecting baffle outside said conduit, a conical baffle disposed above the first mentioned baffle, a hood disposed above the conduit and extending downwardly over the sides thereof to deflect downwardly air which is ejected from the conduit, a liquid fuel distributor associated with the hood, a centrally located pocket within the distributor, spaced passage-ways leading outwardly an downwardly from the pocket, said passage-ways terminating beyond the edges of air conduit, whereby fuel is caused to intermingle with air in the region intermediate the hood and the outer walls of the conical baffle, and a fuel supply conduit arranged to conduct liquid fuel into said pocket.

1,570,487. OIL BURNER. JULIUS H. HILDEBRANDT, Cleveland, Ohio. Filed May 12, 1924. Serial No. 712,510. 6 Claims. (Cl. 158—91.)



6. In an oil burner, the combination with a base, of a baffle disposed thereabove, an air supply conduit extending through the base and baffle, a gas conduit extending through the air pipe, a liquid fuel supply conduit extending through the gas conduit, a distributor communicating with the gas conduit above the baffle and out of contact therewith, a second distributor connected with the fuel conduit and carried by the first mentioned distributor, a hood surrounding both distributors and serving to deflect the combustible mixtures downwardly over said baffle, and means for so connecting the air pipe and one of the conduits that the weight of the distributor and deflecting means is carried by the air pipe independently of said baffle.

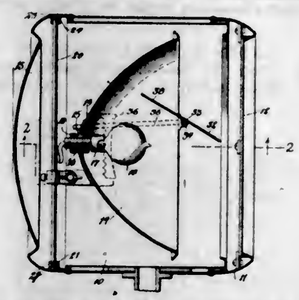
1,570,488. OIL BURNER. JULIUS H. HILDEBRANDT, Cleveland, Ohio. Filed Nov. 19, 1924. Serial No. 750,904. 6 Claims. (Cl. 158—91.)



1. In combination, an air conduit, an oil distributor resting on said conduit, a fuel supply pipe extending through the air conduit and connected to the distributor, a hood positioned on the distributor, said distributor having openings therein for enabling air to flow from the conduit through the distributor, and said distributor having a plurality of spaced passageways for conducting air from the supply pipe to spaced points adjacent the marginal edges of the distributor, said hood being so spaced that a mixture of air and fuel is deflected downwardly over the distributor and around the outer side of the air conduit, a baffle associated with the air conduit for deflecting the combined mixture outwardly, said air conduit having an opening adjacent the bottom thereof, the fuel pipe extending through said opening, and a member threaded to the fuel pipe outside the air conduit, said member functioning to clamp the distributor, the air conduit, and the fuel supply pipe together, and said member providing a continuation of the fuel supply pipe.

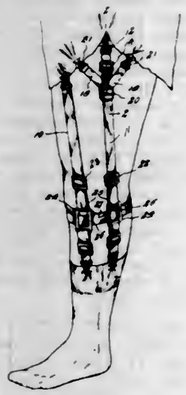
1,570,489. HEATER. FRANK M. HILL, Riverside, N. J. Filed Mar. 8, 1924. Serial No. 697,889. 7 Claims. (Cl. 126—99.)

1. In a heater, the combination of a fire-box, a dome forming a confining space for the products of combustion, means for guiding the products of combustion from the space within said dome to a point below said fire-box for passage upwardly through the fire-box, and a dome-like guiding flue within said first named dome, and enclosing the outlet from the fire-box for directing the products of combustion against the uppermost portion of said dome.



1,570,490. SOUND-REPRODUCING METHOD AND APPARATUS. JOSEPH W. HORTON, Bloomfield, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 31, 1923. Serial No. 654,916. 7 Claims. (Cl. 179—100.1.)

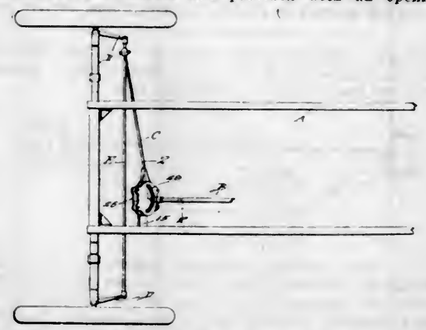
1. The method of reproducing sound from a record in the form of a transparent oscillographic trace of substantially constant width on an opaque background, which comprises varying the intensity of a beam of light as a time function of the lateral position of the trace on the background, and varying the value of an electric current as a function of the intensity of the beam of light.



1,570,491. HEADLIGHT. WILLIAM A. IRWIN and EDWARD S. SCHWARTZ, New York, N. Y. Filed Dec. 15, 1924. Serial No. 756,026. 1 Claim. (Cl. 240—48.4.)

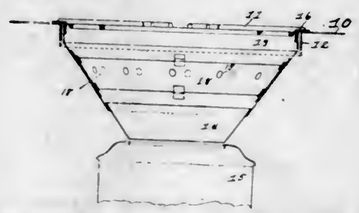
The combination with a headlight casing and a reflector of the beam projecting type mounted therein, of approximately diametrically opposed bearing brackets mounted on the forward edge of said reflector, a horizontal rod journalled in said brackets, a glare shield carried by the rod, a rearwardly and inwardly bent crank arm carried by one end of the rod, and a vertically disposed plate mounted on the outside of the reflector having

a series of notches in its edge to accommodate the free end of the crank arm, whereby the glare shield may be selectively tilted and locked in various positions of adjustment.



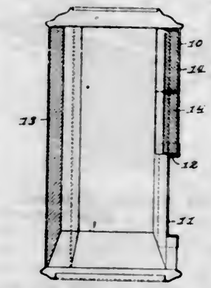
1,570,492. GARMENT SUPPORTER. MARVIN J. JACKSON, Youngstown, Ohio. Filed Jan. 30, 1922. Serial No. 532,885. 1 Claim. (Cl. 241—1.)

In a stocking supporter, a limb encircling band, an element slidable on the band, a stocking engaging member carried by the element, a strap connected with the element and adapted to extend upwardly along the wearer's leg, a buckle carried by the upper end of the strap, a V-shaped strap slidably engaged with the buckle and provided with fastening elements at its ends adapted to be engaged at the bifurcated part of a shirt, and a short strap connected with the buckle and having fastening means adapted to be connected with the shirt at the apex of the bifurcation.



1,570,493. STEERING GEAR. OVID M. JACKSON, Jackson, Mich. Filed May 14, 1923. Serial No. 638,986. 1 Claim. (Cl. 280—96.)

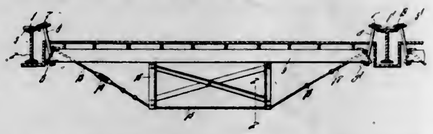
The combination with a vehicle frame and a transversely shiftable steering gear bar, of a bracket secured to the frame and provided with an opening, a bushing threaded in the opening, a shaft rotatably supported in the bushing, a disc mounted on the shaft to rotate therewith the shaft having its upper end projecting above the disc, an annulus encircling the disc and adapted to be shifted by the latter, an operative connection between the annulus and transversely shiftable steering gear bar, a crank shaft carried by the upper end of the shaft and including an upstanding arm, a steering gear post, laterally extending arms carried by the lower end thereof and provided with an opening



which receives the upper end of the upstanding arm, and a nut threaded upon the lower end of the first mentioned shaft.

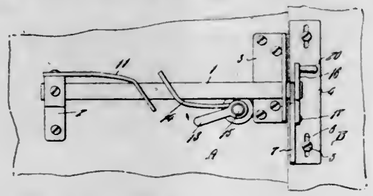
1,570,494. DEPENDING SHIELD ATTACHMENT FOR OIL STOVES. ALBERT H. JEWELL, Lawrence, Kans., assignor to The Perfected Chimney Company, Lawrence, Kans., a Corporation of Kansas. Filed Mar. 29, 1923. Serial No. 628,475. 3 Claims. (Cl. 126—214.)

1. An attachment for an oil stove comprising a depending shield composed of two mating cone-shaped members, one movable within the other, with means for suspending the shield beneath the spider of the stove, its lower extremity being positioned above the opening of the stove chimney.



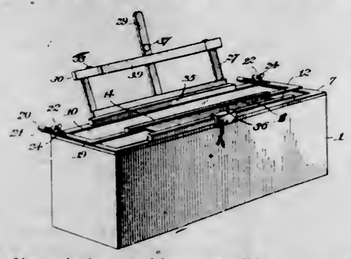
1,570,495. INSULATING ATTACHMENT FOR OIL-STOVE CHIMNEYS. ALBERT H. JEWELL, Lawrence, Kans., assignor to The Perfected Chimney Company, Lawrence, Kans., a Corporation of Kansas. Filed Mar. 29, 1923. Serial No. 628,476. 2 Claims. (Cl. 126—47.)

1. An inner wall lining for oil stove chimneys of cylindrical formation with doors formed in the wall thereof comprising a plurality of mating longitudinal blocks extending from the base to the top of the chimney, said blocks covering the inner wall of the chimney



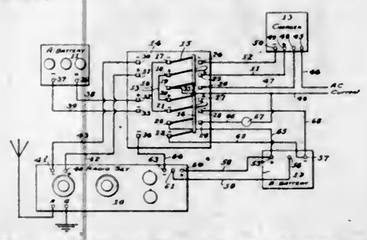
except for the space above the door, key atone blocks filling the space above the door and locking all blocks in relative position to form a complete lining.

1,570,496. TRUSS-FORM SYSTEM. CLAUDE CIRTUS JONES, Charleston, W. Va. Filed Mar. 3, 1924. Serial No. 696,664. 2 Claims. (Cl. 304—15.)



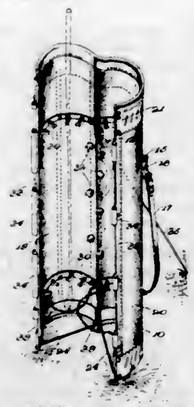
1. A truss system comprising hangers for engaging I beams of a building, some of the hangers having hooks thereon for engaging the I beams and each hanger having a plurality of holes therein, bolts passing through certain of the holes in the hangers, nuts for holding the bolts in the hangers, a beam and plates at the ends of the same having holes therein through which the bolts pass and truss means for the beam.

1,570,497. LATCH. WILLIAM E. JONES, White, Ark., assignor of one-half to Frank Saturly Cannon, Crossett, Ark. Filed June 3, 1925. Serial No. 34,662. 2 Claims. (Cl. 292—226.)



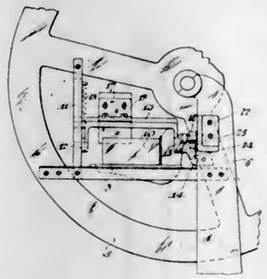
1. A latch of the class described comprising a latch bar, a keeper member having a notch therein for receiving the end of the bar, a slotted guide for the bar, a spring for holding the bar in latching position, a knob stem, an arm thereon having a slot therein for receiving the bar, and a thumb latch on the keeper member for locking the bar in latching position.

1,570,498. FILM-PRINTING MACHINE. JACOB KALMANOVITCH, Brooklyn, N. Y. Filed Nov. 13, 1924. Serial No. 749,740. 2 Claims. (Cl. 95—73.)



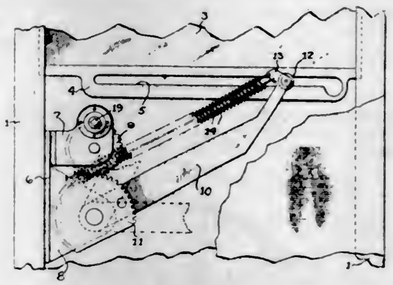
1. A film printing machine, comprising a casing, having an open top, a sheet of glass supported in the casing adjacent the top thereof, a hinged closure for the top having a glass plate therein, and a bar secured on the closure and having a groove in one face thereof, a frame mounted to move laterally of the closure and adapted to be secured at any desired adjustment, a bar on said frame parallel with the first mentioned bar and having a groove in its face opposed to the grooved face of the bar, said grooved bars adapted to support a film and a mask having a plurality of exposure openings therein, a pressure device adapted to engage the film and mask, and electric lamps in the casing included in circuit with a source of electricity and with means operated by the pressure device for closing the same.

1,570,499. RADIO-BATTERY-CHARGING SWITCH MEANS. JOHN F. KEANE, Bridgeport, Conn. Filed Feb. 28, 1924. Serial No. 695,692. 3 Claims. (Cl. 250—27.)



1. The combination with a radio set, storage "A" and "B" batteries, and a charger, of switch means, leads connecting said set, said batteries and said charger to said switch means, a switch member carried by said switch means adapted in one operative position to contact with the set leads and in another operative position to contact with the charger leads, a charger control switch member carried by said switch means adapted in one operative position to contact with the "A" battery leads and in another operative position to contact with the "B" battery leads whereby only one of said batteries may be charged at a time, and electrical connections between said switch members whereby individual connections may be made in various positions of said switch members between said set and "A" battery, said "A" battery and charger, and said "B" battery and charger, an operative connection between said switch members adapted to permit movement of said second switch member to either of its operative positions in the position of said first switch member in contact with said charger leads, to prevent movement of said first switch member from its position in contact with said charger leads in the position of said second switch member in contact with said "B" battery leads.

1,570,500. GOLF BAG. BERT KENNEDY, Gloversville, N. Y. Filed Apr. 24, 1925. Serial No. 25,680. 8 Claims. (Cl. 150—1.5.)



1. A golf bag consisting of semi-cylindrical sections hingedly connected along one side, each section having inner stick clasping means and each section having stick engaging and holding means extendable into the other section when the sections are closed.

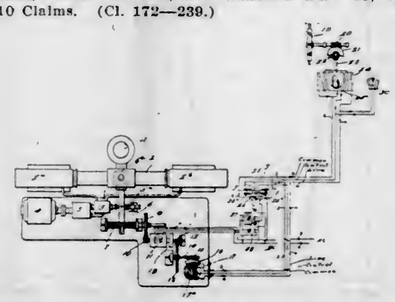
1,570,501. BRICK MACHINE AND METHOD OF OPERATING THE SAME. HOWARD K. KING, Philadelphia, Pa., assignor to Chambers Brothers Company, a Corporation of Pennsylvania. Filed Aug. 20, 1925. Serial No. 51,287. 9 Claims. (Cl. 25—109.)

1. The method of preventing distortion in the wire cutting of bars into bricks, which consists in clamping the end of the bar to its moving support during the cutting operation.

1,570,502. WINDOW REGULATOR. EMIL KOEB, Tuckahoe, N. Y., assignor, by mesne assignments, to Perfect Window Regulator Corporation, Long Island City, N. Y., a Corporation of Delaware. Filed Mar. 15, 1923. Serial No. 625,291. 8 Claims. (Cl. 268—4.)

1. In a window regulator, an operating arm engaging the window, a handle, a hub portion connected to said handle, a bearing for said hub portion, a pinion connected to said hub portion and having a radius appreciably smaller than the radius of said hub portion and means engaging said pinion and arm to permit movement of the window upon actuation of the handle.

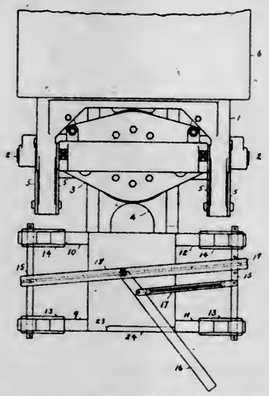
1,570,503. HEADLIGHT. ANTON F. KRALICEK, Baltimore, Md. Filed Sept. 30, 1925. Serial No. 59,616. 2 Claims. (Cl. 240—41.)



1. A reflector comprising a cup-shaped body provided with upper and lower circumferential ribs, the inner surface of the foremost lower rib having a backward and outward slant, the inner surface of the rearmost lower rib having a forward and outward slant, and the inner surfaces of the intermediate lower ribs varying progressively, from the front of the body toward the back thereof, from a backward and outward slant to a forward and outward slant, all of said surfaces being so located as to reflect upwardly upon the inner surfaces of the upper ribs, the said inner surfaces of the upper ribs being rearwardly and inwardly inclined, to reflect downwardly and forwardly the rays received from the inner surfaces of the lower ribs.

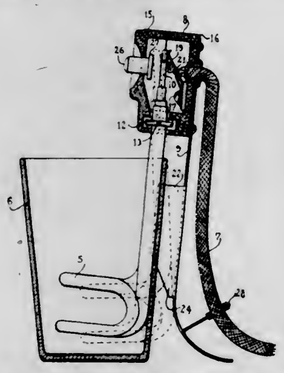
1,570,504. ROOF OR BUILDING TILE. LOUIS LANE, Habana, Cuba. Filed Mar. 4, 1924, Serial No. 696,851. Renewed Dec. 12, 1925. 6 Claims. (Cl. 108—10.)

5. As a new article of manufacture, a roof or building element of the class described having a body of porous tile material and having a covering or surfacing formed of sheet metal of foil-like thickness.



1,570,505. ELECTRIC TELEMOTOR APPARATUS. MYRON PENN LAUGHLIN, Bath, Me. Filed Mar. 2, 1922, Serial No. 540,656. Renewed Mar. 18, 1924. 10 Claims. (Cl. 172—239.)

1. In an electric transmission system, a pair of induction regulators each comprising stationary and movable coil portions, a contactless closed circuit including like coil portions of each of the regulators, means for

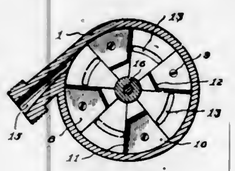


producing a variating current therein, the other coil portions being each electrically connected to one of the lines of said circuit, and having a conductor joining points of balanced potential on said other coil portions when the latter are in balanced position, said conductor including means responsive to current interchange.

1,570,506. ATTACHMENT FOR ROLL-OVER PATTERN-DRAWING MOLDING MACHINES. WILFRED LEWIS, Haverford, Pa. Filed Nov. 12, 1923, Serial No. 674,184. Renewed Oct. 22, 1925. 4 Claims. (Cl. 22—90.)

1. An attachment for roll-over pattern-drawing molding machines comprising in combination a leveling mechanism adapted to engage the flask and contents and to operate in opposition to the weight thereof and stops for limiting the opposition of the leveling mechanism to the weight of the flask and contents, whereby and upon uncoupling, the roll-over mechanism is relieved of the weight of the flask and contents and of the effect of such release.

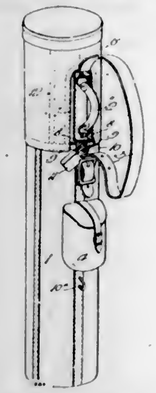
1,570,507. ELECTRIC APPLIANCE. EDWIN N. LIGHTFOOT, New York, N. Y., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Sept. 21, 1921. Serial No. 502,293. 13 Claims. (Cl. 219—41.)



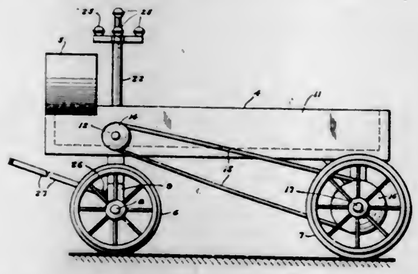
4. In combination, a switch casing, a switch operating element rigidly secured thereto, a heater pivotally carried by said casing and having a terminal movable relatively to said casing, a resilient contact fixed to said casing and tending to engage with said terminal, and means biasing said terminal out of engagement with said contact.

1,570,508. CLOTHES-DRYING APPARATUS. PAUL LUNGSTRAS, St. Louis, Mo., assignor to Lungstras Dyeing and Cleaning Company, St. Louis, Mo., a Corporation of Missouri. Filed Aug. 20, 1924. Serial No. 733,240. 4 Claims. (Cl. 223—19.)

1. A clothes drying apparatus comprising an inflatable garment-fitting body having one end open, a valve thru which the said body is inflated, and means for sealing the said open end of the body during the period of inflation, said means being removable to open the said end to effect the quick removal of the inflating medium from the inside of the said body.



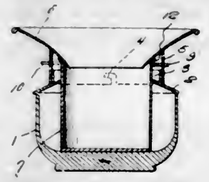
1,570,509. WINDOW WASHER. ROBERT A. LYCHOU, Chester, Pa. Filed Apr. 29, 1924. Serial No. 709,862. 1 Claim. (Cl. 15—29.)



In a device as set forth, a body casing, a brush rotatably carried thereby and including a bristle carrying brush-head having a plurality of spaced elongated openings therein, a rotor attached to the inner surface of said brush-head and positioned within said body casing, said body casing having a fluid inlet adapted to permit fluid entering the casing to engage against said rotor for rotating the rotor and brush, said rotor including buckets having flat portions secured to the inner surface of the brush head, portions extending perpendicularly with reference to the flat portions and arranged radially to the axis of rotation, and said perpendicular portions having their inner ends directed rearwardly to the direction of rotation and positioned inwardly of the elongated openings, whereby water engaging said rotor will be deflected through said openings.

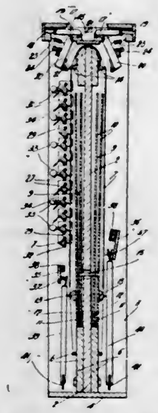
1,570,510. GOLF BAG. PHIL S. MCQUIRK, Audubon, Iowa. Filed June 29, 1925. Serial No. 40,345. 2 Claims. (Cl. 150—1.5.)

1. A golf bag having a carrying handle near its upper end, a staple below the handle, a closure for the upper end of said bag having a downwardly projecting sleeve to surround the upper portion of said bag, said sleeve having a longitudinal slot which opens through its lower end to receive said handle, and a pair of links engaged over the staple for connecting the edges of said slot with each other under said handle.



1,570,511. TOY. PAUL MARCHESE, Norristown, Pa. Filed Apr. 7, 1922. Serial No. 550,333. 1 Claim. (Cl. 46—47.)

A toy comprising a substantially rectangular body and rotatable carrying axles therefor, transverse spindles supported in the side walls of the body, vertical stub shafts supported within the body and having operative connections with the spindles, said stub shafts having their upper ends grooved, partially tubular members mounted over said vertical shafts, transverse pins carried by said tubular members and engaging the grooved ends of the stub shafts, reduced vertical extensions on said tubular members forming an annular shoulder, radial arms mounted on the reduced extension and resting upon the shoulder, sounding devices carried by the arms and extension and means forming operative connection between the spindles and one of the carrying axles whereby to impart movement to the sounding devices upon movement of the axles.



1,570,512. SANITARY CUSPIDOR. SKILES F. MASSY, Pittsburgh, Pa. Filed Sept. 22, 1925. Serial No. 57,884. 3 Claims. (Cl. 4—285.)

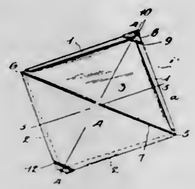
1. A sanitary cuspidor comprising a bowl having its upper end directed inwardly and terminating in a restricted opening, a vertical flange extending from said upper end and surrounding said opening and being spaced from the peripheral edge thereof, a receptacle removably fitted into said bowl and extending through and beyond the restricted opening, the upper portion of the receptacle extending above said flange and the edge of said opening being in contact the wall of the receptacle, a funnel shaped mouth having its lower end telescoping into the upper end of the receptacle and flaring outwardly beyond said upper end, and the body

portion of the bowl, a collar depending from the intermediate portion of said mouth and telescopically engaged with said flange, and coacting means between the flange and collar for detachably connecting the collar with the flange.

1,570,513. PIANOFORTE. EDGAR MAXTED-MASSEY, South Ashford, England. Filed Nov. 8, 1924. Serial No. 748,656. 12 Claims. (Cl. 84—175.)

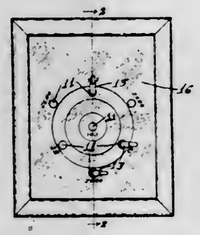
8. A musical instrument of the pianoforte type comprising a central frame with strings arranged upon both sides thereof, sound boards mounted upon the frame and carrying bridges over which the strings pass and suitable hammers adapted to strike the strings when actuated by the player, the frame and the strings and the sound boards being mounted in a casing provided with a series of keys at its upper end and adapted to actuate hammers to strike the strings upon both sides of the frame, strikers being mounted in front of the casing and each being provided with a series of projections or hammers adapted to strike two or more notes at one operation so that each striker will sound a suitable chord.

1,570,514. PROCESS OF MANUFACTURING ACETIC ANHYDRIDE. RUDOLF MEINGAST and MARTIN MUGDAN, Munich, Germany, assignors to Consortium für Elektrochemische Industrie G. m. b. H., Munich, Germany. Filed Mar. 6, 1923. Serial No. 623,161. 16 Claims. (Cl. 260—123.)



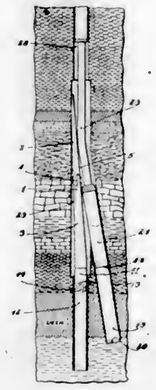
1. The process of manufacturing acetic anhydride which consists in heating the vapors of acetic acid to from 400° C. to 800° C. in the absence of base metals and of metal oxides.

1,570,515. HAND BAG. ELLIE MELTZER, New York, N. Y. Filed Apr. 28, 1925. Serial No. 26,457. 7 Claims. (Cl. 150—28.)



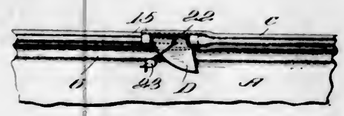
1. A lady's hand bag, comprising a pocketbook structure and covering side members therefor, each side member being formed with a flap, and means for fastening both flaps on the same side of the pocketbook.

1,570,516. SHINGLE. THOMAS D. MILLER, Clarksville, Md. Filed May 24, 1924. Serial No. 715,644. 7 Claims. (Cl. 108—17.)



7. A shingle comprising a substantially square plate having upper and lower triangular halves offset from one another along a diagonal line and the lower corner portion of the lower half being downwardly offset along a line parallel with said diagonal line.

1,570,517. GAME. HOWARD B. MINNICK, Chicago, Ill. Filed May 3, 1922. Serial No. 558,149. 1 Claim. (Cl. 273—115.)

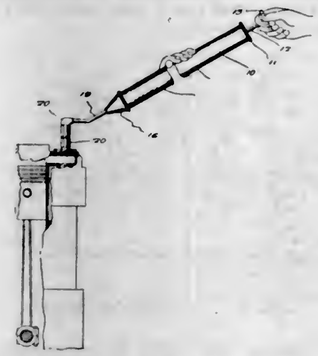


A game comprising a receptacle and a transparent cover therefor; a plate positioned in the base of the receptacle and provided with a plurality of recesses to receive and temporarily retain movable objects, said recesses bearing certain numbers or zero characters; being arranged circumferentially around a center, said plate being painted with stripes similar to the bull's eye on a target hazards on the plate positioned in close proximity to their respective recesses; movable objects to be seated in the recesses, substantially as and for the purposes set forth.

1,570,518. METHOD AND APPARATUS FOR DRILLING HOLES. JOSEPH STUART MITCHELL, Chicago, Ill., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Mar. 26, 1919. Serial No. 285,379. 13 Claims. (Cl. 255—1.)

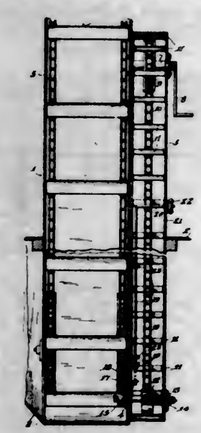
7. In a core drilling apparatus, a flexible cutting mechanism having a plurality of cutting tools mounted in longitudinal spaced relation thereon, and a deflecting mechanism cooperating therewith to change the direction of the hole.

1,570,519. FASTENING AND CLAMPING RING. GEORGE EUGENE MITTINGER, Cleveland Heights, Ohio. Filed Mar. 25, 1925. Serial No. 18,171. 8 Claims. (Cl. 220—61.)



1. A device for clamping and fastening the cover of a container in place, comprising a ring provided with openings, a locking and clamping lug carried by the cover and having a curved outer edge, and said lug adapted to enter and engage said ring openings, whereby the application of the ring over the lug clamps and fastens the ring in place.

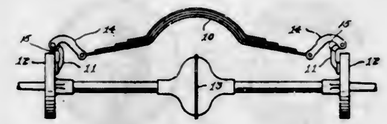
1,570,520. TESTING APPLIANCE. ARTHUR O. OEHRLI, Williamsport, Pa. Filed May 25, 1923. Serial No. 641,526. 1 Claim. (Cl. 137—75.)



In a device of the character described, a pair of tubular elements each of which is provided with exterior screw threads at one end and one of which has interior screw threads to receive the adjacent threaded end of the other section, and the other exterior screw threaded end being adapted to be received in the spark plug opening of an internal combustion engine cylinder, wrench engaging surfaces formed upon each of the tubular sections,

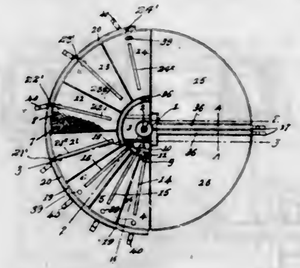
a lateral nipple formed upon the upper end of one of the sections, and a conduit having a portion of its length in alignment with the nipple and engaged therewith, and

the remainder of its length extending upwardly at an oblique angle with respect to the vertical and adapted to communicate with a pump barrel.



1,570,521. GRAIN-ELEVATOR ATTACHMENT. HECTOR H. PARLIAMENT, Henry, S. Dak. Filed Sept. 11, 1925. Serial No. 55,743. 3 Claims. (Cl. 198—207.)

1. An attachment for the lifting leg of a grain elevator comprising a casing adapted to be secured to one side of said leg and having a discharge spout at its upper end, means for establishing communication between the lower end of the casing and the lower end of said leg, grain elevating means arranged within said casing, and means operated from said elevating means and extending into the lifting leg for conveying grain from the latter into the path of said elevating means.

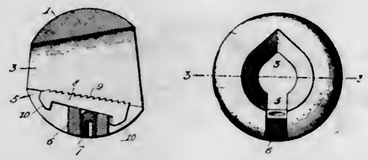


1,570,522. ROAD EQUALIZER. CHESTER J. PATTERSON, Lancaster, Pa. Filed June 13, 1924. Serial No. 719,850. 2 Claims. (Cl. 267—54.)

1. The combination with a motor vehicle including axles and body supporting springs of equalizers for equalizing the action of uneven road surfaces, comprising perches, rigidly carried by the axle structure, suspension members pivotally carried by the perches and normally extending inwardly and downwardly from their points of connection with the perches, the inner lower ends of said suspension members being pivotally connected to the vehicle springs, certain of said suspension members

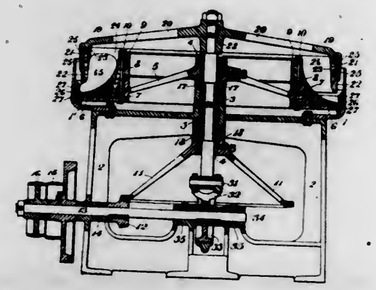
having laterally curved snubber extensions on their free ends extending beneath the adjacent portions of the springs.

1,570,523. FILTRATION OF WATER OR LIQUID. REGINALD HUMPHREY LEE PENNELL, Cairo, Egypt. Filed Apr. 24, 1922. Serial No. 556,222. 6 Claims. (Cl. 210—125.)



1. Water or liquid filtering apparatus, comprising in combination a well having an inlet at its upper part for the admission of crude liquid and an outlet for liquid at its lower part, a catch-pit chamber communicating at its lower end with said outlet and having near its upper end a discharging orifice, a series of pre-filtering devices, said devices increasing in area successively and each comprising an upper and lower chamber, a foraminous false bottom separating the chambers, and a filtering medium carried by the false bottom, said medium being of a finer grade in successive devices, means for conducting liquid from said discharging orifice to the lower chamber of the first pre-filtering device in the series, means for conducting liquid in turn from the upper chamber of a pre-filtering device and discharging it into the lower chamber of the pre-filtering device next in series, a tank provided with a foraminous false floor, a sand filtering medium carried by the last said floor, means for withdrawing liquid from the upper chamber of the pre-filtering device last in the series and discharging same above the said sand filtering medium, means for collecting the liquid which percolates through the sand medium, and a filtered water reservoir in communication with said collecting means, substantially as described.

1,570,524. WEIGHT FOR THE HORNS OF CATTLE. FRANK H. PETERSEN, Denver, Colo., assignor of one-half to Carl N. Rose, Denver, Colo. Filed Mar. 7, 1924. Serial No. 697,639. 1 Claim. (Cl. 128—76.)

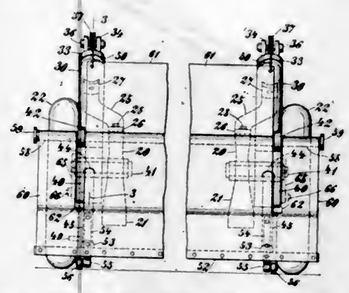


A horn weight of the character described, comprising a weight having a tapered horn-receiving hole, the outer half of which is V-shaped in cross section; a keyway extending through said weight at right angles to the horn-receiving hole, and intersecting said hole; a central bridge block connecting the sides of said keyway and having an inclined top; a tapered key adapted to rest upon said inclined top; an edged rib on the top of said key and diagonally disposed to the longitudinal axis of

said key, which is adapted to impinge against the horn when the key is drawn forward and thereby wedge the weight upon the horn, said key having depending stops

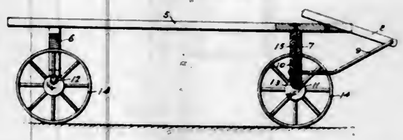
at its ends, and a screw which passes through said bridge block, and impinges against said key to prevent slipping of the same.

1,570,525. DOUGH-MOLDING AND LIKE MACHINE. WILLIAM HEYCOCK RIPPIN, Desford, near Leicester, England. Filed Oct. 11, 1922. Serial No. 593,835. 4 Claims. (Cl. 107—9.)



4. A dough molding or like machine, having an annular rotor, an annular stator within which the rotor is disposed to provide an intermediate annular molding trough, an annular press ram forming the striker part of the stator and also disposed within the stator body and adapted for vertically reciprocating positive and unyielding movement over and within the molding trough, said annular press ram or striker embodying a depending annular flange slidable loosely within the body part of the stator and arranged to cooperate with shaped renewable sectors fitted within the exterior angle of the rotor frame and within the interior angle of the stator body, said depending annular flange being also fitted with shaped renewable sectors.

1,570,526. SPRING BUMPER FOR AUTOMOBILES. FREDERICK D. ROBINSON, Baldwinsville, N. Y., assignor to Penn Spring Works Incorporated, Baldwinsville, N. Y., a Corporation of New York. Filed Oct. 3, 1924. Serial No. 741,371. 8 Claims. (Cl. 293—55.)

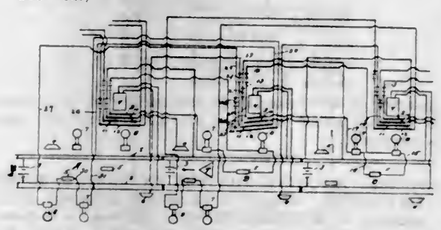


1. An automobile bumper comprising a resilient impact member having bolt-eyes at both ends, and supporting means for the impact member including reversely arranged spring loops having outer convex portions facing the adjacent bolt-eyes a sufficient distance inwardly therefrom to allow the bolt-eye ends of the impact member to flex in the direction of convexity of said convex portions relatively thereto.

1,570,527. COMBINED BUMPER AND FENDER. LOUIS RONCA and STANISLAO SANTORO, Jersey City, N. J., assignors, by direct and mesne assignments, to Bumper and Fender Co. Inc., Jersey City, N. J., a Corporation of New Jersey. Filed July 5, 1924. Serial No. 724,317. 5 Claims. (Cl. 293—25.)

1. In a bumper and fender the combination of a cylinder supported on a vehicle, a plunger adapted to reciprocate in and extending through one end of the cylinder, means to move the plunger through said end of the cylinder, a bumper connected to the lower end of the plunger, a spring actuated shade roller journaled adjacent to the cylinder, a pair of curtains with one end of each connected to the shade roller, the other end of one curtain connected to the bumper and the other end of the other curtain in connection with the other end of the plunger and means to detachably lock the plunger in its raised position.

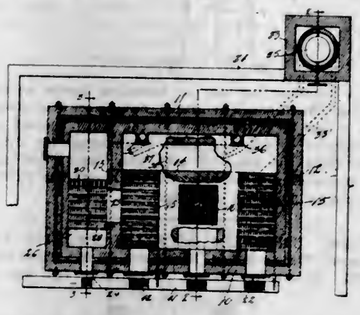
1,570,528. COASTER WAGON. LEON R. SCHAFFNER, Fort Dodge, Iowa. Filed Aug. 21, 1922. Serial No. 583,165. 1 Claim. (Cl. 280—87.5.)



The combination with the platform of a coaster of a front bolster therefor, said bolster being rigidly secured to the underside of said platform and having its free edge provided with a curved rocker edge, an axle beam arranged in juxtaposition to the said front bolster, the same being provided with a curved rocker edge adapted to abut the curved edge of the bolster, a king pin rigidly carried by the front bolster and loosely extending thru a downwardly diverging slot formed in the axle beam whereby pivotal and rocking motion is permitted between the said front bolster and axle beam, an axle carried by said axle beam and wheels eccentrically mounted on the said axle.

1,570,529. MANUFACTURE OF MARGARINE AND EDIBLE FATS. EINAR VIGGO SCHOU, Palsgaard, near Juelsminde, Denmark. Filed Oct. 14, 1921. Serial No. 507,689. 10 Claims. (Cl. 99—13.)

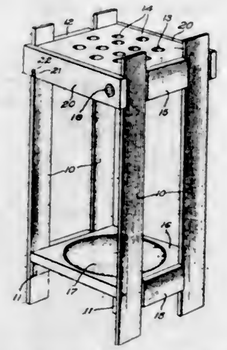
1. A process for the manufacture of edible compositions of the kind referred to which comprises dissolving an oil soluble water dispersing medium derived from fatty oils in an oily constituent, and distributing the watery constituent in the oily or fatty constituent until a state of permanent dispersion is reached.



4. Edible compositions of the kind referred to in which the oily constituent containing an oil soluble water dispersing medium derived from fatty oils forms the outer phase and the watery constituent the inner phase of a stable emulsion.

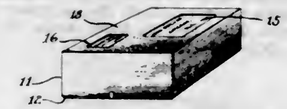
1,570,530. TRAIN-CONTROL SYSTEM. JUDSON SHOECRAFT, Eskridge, Kans. Continuation of application Serial No. 711,712, filed May 7, 1924. This application filed Nov. 1, 1924. Serial No. 747,265. 7 Claims. (Cl. 246—63.)

4. In a train control system, the combination of a cautionary inductive control and an emergency contact control, and electrical circuits serving when energized to render both controls ineffective.



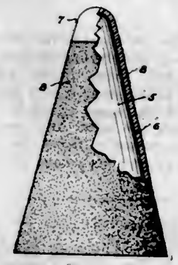
1,570,531. INCINERATOR. JOHN W. STOKES, Dallas, Tex. Filed May 7, 1925. Serial No. 28,533. 3 Claims. (Cl. 110—8.)

1. In an incinerator, the combination of a main combustion chamber having a plurality of spaced transversely alined grates, an auxiliary combustion chamber separate from said main combustion chamber and disposed at one side thereof and parallel therewith, a grate in the auxiliary combustion chamber disposed in alinement with the grates in the main combustion chamber, a wall between said chambers having a restricted flue passage connecting the said chambers for the flow of the flames and products of combustion across the main combustion chamber and laterally into the auxiliary combustion chamber, a transversely extending horizontal flue beneath the floor of the main combustion chamber in rear of the line of the grates, a downdraft flue leading to one end of said passage from the auxiliary combustion chamber in rear of the grate therein, a stack in communication with the opposite end of said flue, and vertical return flues communicating with the horizontal flue between the downdraft flue and outlet to the stack and leading from said horizontal flue to the top of the main combustion chamber.



1,570,532. ARTICLE OF FURNITURE. ABRAHAM LINCOLN STROUSE and SAMUEL WEINSCHENK, New York, N. Y.; said Strouse assignor of his entire right to Nathan Shaw, New York, N. Y. Filed Nov. 28, 1924. Serial No. 752,698. 2 Claims. (Cl. 45—33.)

1. A knockdown umbrella stand, comprising upper and lower end members, side members, and means for separably holding all of said members in set-up condition in which the end members are spaced from each other and in which the said side members are spaced from each other, said means comprising portions on the end members which fit between portions on the side members and

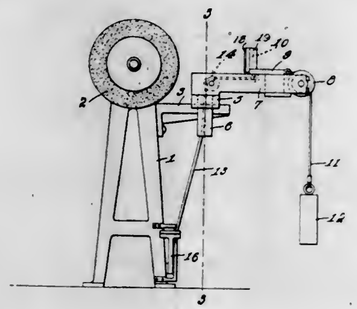


locking members pivotally connected to one of said side members and releasably engageable with the other side member.

1,570,533. MAILING BOX. HARRY H. STYLL, Southbridge, Mass. Filed Apr. 7, 1924. Serial No. 704,679. 5 Claims. (Cl. 229—6.)

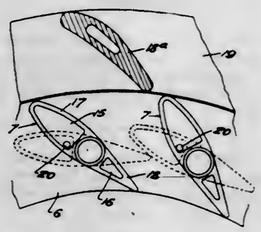
5. A mailing box of the character described comprising a box member and a cover therefor, a removable address sheet and a member carried by the cover movable into and out of an operative position to hold or release the address sheet.

1,570,534. BOBBIN. EDWARD SWEENEY, Norristown, and GEORGE A. HUNSBERGER, Pottstown, Pa. Filed Dec. 3, 1923, Serial No. 678,257. Renewed Dec. 9, 1925. 5 Claims. (Cl. 242—120.)



2. As a new article of manufacture, a cover for yarn bobbins formed of sponge rubber and having a rough outer surface, the outer surface of the apex portion of said covering being smooth.

1,570,535. GRINDING MACHINE. WALTER SWIDERSKI, Monroe, Mich., assignor of one-half to James J. Kelly, Monroe, Mich. Filed July 7, 1923, Serial No. 650,066. Renewed Sept. 9, 1925. 3 Claims. (Cl. 51—240.)

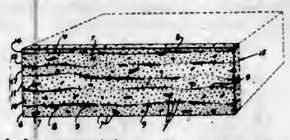


1. In combination with a frame having a revoluble grinding wheel thereon, of means for advancing work to

the wheel, comprising a plate pivotally associated with the frame and susceptible to rotary and longitudinal adjustment thereon, a work holder pivotally associated

with the plate, a feed block carrying a jaw slidable on the work holder, weighted means holding the block in one position, and pedal operated means for moving the block in the direction of the grinding wheel.

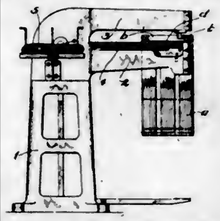
1,570,536. GATE STOP FOR TURBINE CONSTRUCTION. HARALD SIVERTSEN, York, Pa., assignor to S. Morgan Smith Company, York, Pa., a Corporation of Pennsylvania. Filed Feb. 20, 1925. Serial No. 10,619. 5 Claims. (Cl. 253—122.)



1. The combination with a turbine and runner, of gate means mounted to have pivotal swinging operation and provided with an open space therein with opposite wall portions, and stop means secured to a part of the turbine and projecting into the open space of the gate means and concealed within the latter and operative with relation to said wall portions to limit the movement of the gate means in the event of breakage of the operating devices therefor.

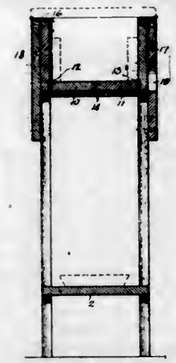
1,570,537. ABSORBENT MATERIAL AND PROCESS OF MAKING SAME. CLARK S. TEITSWORTH, Lompoc, Calif., assignor to The Celite Company, Los Angeles, Calif., a Corporation of Delaware. Filed Mar. 27, 1924. Serial No. 702,474. 21 Claims. (Cl. 23—182.)

1. The process of preparing a silica gel which consists in allowing silicic acid to set to a gel in contact with an added porous substance.



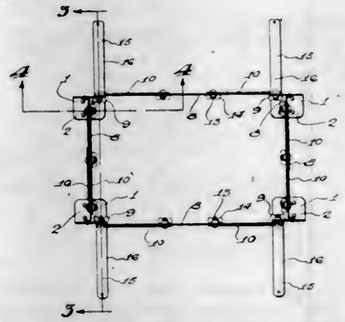
1,570,538. METHOD OF MAKING ARTIFICIAL STONE. JAMES THOMAS, Montrose, Calif. Filed Mar. 24, 1925. Serial No. 17,922. 3 Claims. (Cl. 25—155.)

1. The herein described method of forming artificial stone, which consists in forming a cementitious mixture of semi-fluid consistency and pouring the same into a mold form in a plurality of layers, and depositing a small



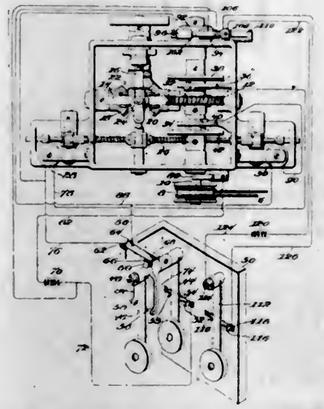
quantity of dry material on the surface of each layer to form stratified veins, in the mass when the same is hardened.

1,570,539. MACHINE FOR USE IN MAKING BOXES OR CRATES. OSCEOLA C. THOMPSON, Rockaway, N. J., assignor to Wirebounds Patents Company, a Corporation of Maine. Filed Mar. 24, 1921. Serial No. 455,301. 15 Claims. (Cl. 1—11.)



8. A machine for use in fastening heads or ends to cleat-reinforced boxes or crates, having an arm adapted to enter a box or crate, close to the sides thereof and in the corners, which comprises mechanism for driving a staple from the nose of said arm; and cleat-engaging work-controlling means movable in a circular path about the driving point as a center.

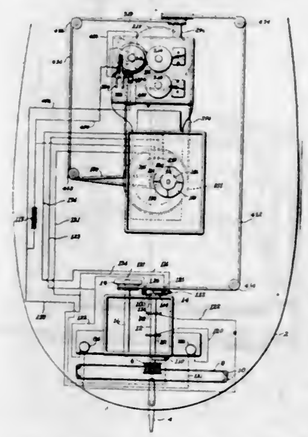
1,570,540. UMBRELLA RACK AND SMOKING STAND. SAMUEL WEINSCHENK, New York, N. Y. Filed Mar. 12, 1925. Serial No. 15,000. 6 Claims. (Cl. 45—33.)



6. A combined umbrella rack and smoking stand, comprising a plurality of supporting legs, means forming a chamber for the top of said legs, said chamber being open at the top and one side, the bottom of said chamber being formed by a pair of hinged members capable of being moved from a horizontal to a vertical position, a hinged door for closing the open side of said chamber, and a pair of hinged covering members for closing the top of said chamber, one of said covering members having a plurality of apertures whereby umbrellas may be passed therethrough, the hinged bottom members being moved to a vertical position when the apertured top member is used in order to permit the umbrellas to extend downwardly beyond this chamber.

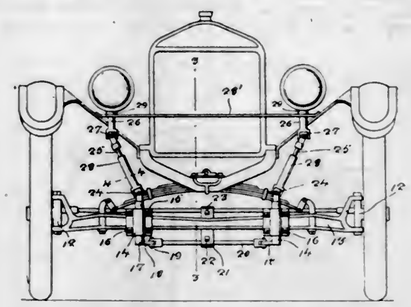
1,570,541. SCAFFOLD OR STAGING. CHARLES M. WEST, Chicago, Ill. Filed Apr. 4, 1923, Serial No. 629,860. Renewed Sept. 10, 1925. 1 Claim. (Cl. 304—2.)

Staging and scaffolding comprising a plurality of corner posts, horizontal platform supporting rails, bolts detachably and adjustably connecting said rails to said posts, drop cloth supporting arms, said drop cloth supporting arms having down turned attaching portions engaging between certain of said rails and said posts, said drop cloth supporting arms being attached to the posts by means of the rail attaching bolts, diagonal braces adjustably and detachably connected to said posts and detachably connected to said rails, and casters carried by said posts.



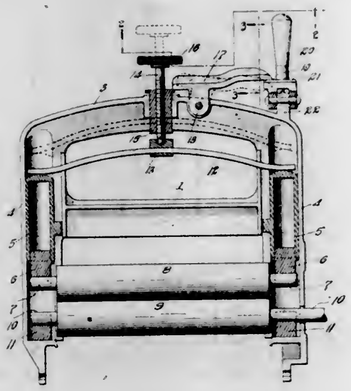
1,570,542. EQUILIBRATING APPARATUS. ERASTUS E. WINKLEY, Lynn, Mass. Filed Sept. 28, 1920. Serial No. 413,447. 6 Claims. (Cl. 244—29.)

1. A controlling apparatus for an object having, in combination, a guiding device, and means for moving the guiding device in a direction to restore the object to normal position upon its displacement therefrom until the object starts to return to normal, for moving the guiding device in the opposite direction following a return movement of the object and to stop said movement upon the return of the object to normal position.



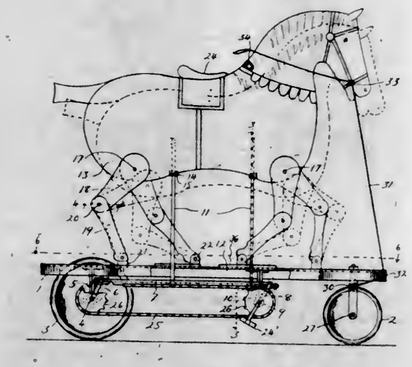
1,570,543. STEERING APPARATUS. ERASTUS E. WINKLEY, Lynn, Mass. Filed Sept. 28, 1920. Serial No. 413,448. 21 Claims. (Cl. 114—23.)

1. A controlling apparatus for a moving object having, in combination, a guiding device movable relatively to the object in opposite directions from normal position to change the direction of travel of the object, mechanism acting when thrown into operation to move the guiding device relatively to the object, to maintain the guiding device in the position moved until the direction of travel of the object has been changed a predetermined



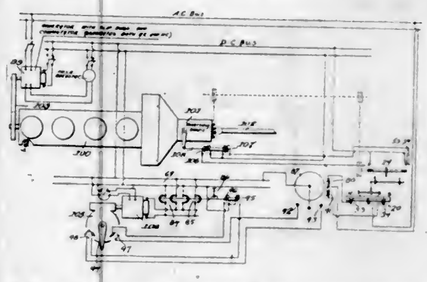
amount and to then return the guiding device to its normal position, and means acting automatically to throw said mechanism into operation and to throw said mechanism out of operating when the guiding device has been returned to normal position.

1,570,544. MOVABLE HEADLIGHT. FRANK EDWARD ZINN, Hartford, Conn. Filed Dec. 13, 1924. Serial No. 755,731. 2 Claims. (Cl. 240—62.)



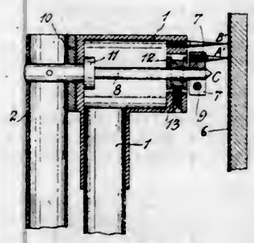
1. A movable headlight attachment for use upon vehicles comprising a pair of spaced castings secured to the front axle of the vehicle, a pair of substantially L-shaped members having their long arms journaled within the bearing castings, a cross rod pivotally secured to the end of the short arms of their L-shaped members, a double hook like member connected intermediately of the radius rod and the cross rod, a pair of telescopic sections keyed together and having their lower ends universally joined to the ends of the long arm of the L-shaped member, said telescopic sections being universally joined to the lower ends of the lamp posts, and a brace rod extending transversely of and associated with the lamp brackets whereby the latter may be easily swung in the same path of movement with the motor vehicle wheels.

1,570,545. WRINGER. ALPHEUS W. ALTORFER, Peoria, Ill., assignor to Altorfer Bros. Company, East Peoria, Ill., a Corporation of Illinois. Filed Apr. 10, 1924. Serial No. 705,558. 4 Claims. (Cl. 68—32.)



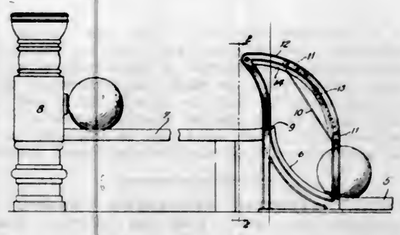
1. In a wringer, in combination, a wringer frame, wringer rolls journaled in said frame, a single means to apply pressure at a central point mediate the ends of said rolls resulting in impinging frictional contact between said rolls, means to hold said pressure applying means, and a control member at one end of said frame to co-act with said holding means and pivoted to the frame to be swung cross-wise thereof in either direction.

1,570,546. VEHICULAR TOY. WILLIAM H. APPLEBY, Windsor, Ontario, Canada, assignor of one-fourth to Roy Rodd, Windsor, Ontario, Canada. Filed Jan. 10, 1925. Serial No. 1,645. 11 Claims. (Cl. 208—42.)



1. In a device of the character described, the combination with an animal figure providing a seat for an operator, and front and rear wheels upon which said figure is adapted to travel, the front wheel being swiveled for steering purposes, of a pair of reins controlling swivel movement of said front wheel, and guide members for said reins carried upon opposite sides of the head of the animal figure and simulating bridle rings.

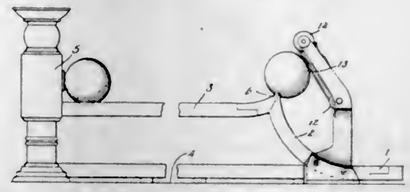
1,570,547. TRACTOR. ARCH U. AVERA, Florence, Ala. Filed June 18, 1921. Serial No. 478,610. 6 Claims. (Cl. 172—8.)



6. In a self propelled vehicle, the combination of a prime mover, and driving means and automatic steering and reversing means deriving energy from said prime mover.

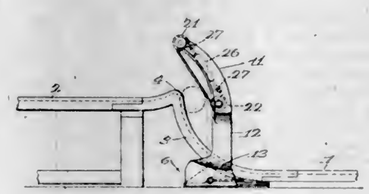
1,570,548. PROFILOGRAPH. DAVID BERGE, Trondhjem, Norway. Filed Apr. 18, 1924. Serial No. 707,504. 3 Claims. (Cl. 33—18.)

1. A profilating apparatus including a two-legged compass, the lower ends of said legs forming points adapted to be placed in contact with the ground, two marking points on the compass arranged on a line parallel to a line drawn through the points of the legs, and a recording board adapted to carry a record sheet and provided with leveling means to permit the operator to maintain the board in a predetermined position while pressing the board against said marking points.



1,570,549. BOWLING-ALLEY BALL RETURN. JOSEPH W. BISHOP, Muskegon, Mich., assignor to The Brunswick-Balke-Collender Company, Wilmington, Del., a Corporation of Delaware. Filed Jan. 9, 1924, Serial No. 685,112. Renewed Sept. 14, 1925. 5 Claims. (Cl. 273—47.)

1. A bowling alley ball return comprising a return track, an elevated receiving track in alignment with the return track, a curved track intermediate of the return

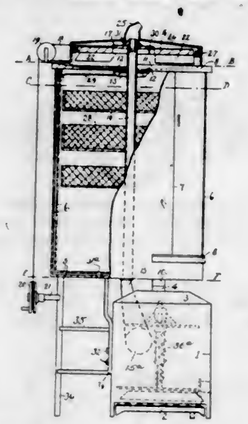


track and the receiving track and connecting the adjacent ends thereof, and curved guide tracks disposed opposite to the juncture of the curved track with the receiving track.

1,570,550. BOWLING-ALLEY BALL RETURN. JOSEPH W. BISHOP, Muskegon, Mich., assignor to The Brunswick-Balke-Collender Company, Wilmington, Del., a Corporation of Delaware. Filed Sept. 29, 1924. Serial No. 740,539. 11 Claims. (Cl. 273—47.)

1. A bowling alley ball return comprising a return track, an elevated receiving track in alignment with the return track, an upwardly curved track intermediate of the return track and the receiving track and connecting the adjacent ends thereof, and means adjacent said curved track for changing the direction of travel of the ball when it reaches the top of the curved track.

1,570,551. BOWLING-ALLEY BALL RETURN. JOSEPH W. BISHOP, Muskegon, Mich., assignor to The Brunswick-Balke-Collender Company, Wilmington, Del., a Corporation of Delaware. Filed Sept. 4, 1925. Serial No. 54,428. 10 Claims. (Cl. 273—47.)

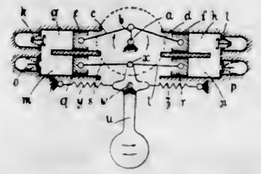


1. A bowling alley ball return comprising a return track, an elevated receiving track in alignment therewith, an upwardly curved track connecting the adjacent ends of said return and receiving tracks, a buffer forming a combined deflector and retarder adjacent the juncture of said receiving track and said connecting track, and means for adjusting said buffer longitudinally of said tracks.

7. A bowling alley ball return comprising a support formed of spaced standards, a pair of rolls, a strap trained over said rolls and terminating at each end in a loop, a transverse pin disposed in each loop, the material of said strap being cut away to form a slot at each pin, and a turnbuckle having hooks inserted in said slots to engage said pins and fasten said strap in place on said rolls.

1,570,552. COMBINED BOILING, WASHING, CONDENSING, AND DRYING MACHINE. JOHN WAINWRIGHT BOWERBANK, Kidderminster, England. Filed Apr. 5, 1924. Serial No. 704,540. 5 Claims. (Cl. 34—22.)

1. A boiling, washing, condensing and drying machine, comprising in combination, a boiler, means for heating said boiler, water circulating means within said boiler, a drying chamber, means for heating said chamber by the

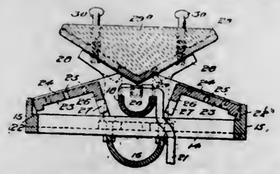


steam and waste heat from the boiler, means for returning condensation water to the boiler, and means for ventilating said drying chamber and articles therein.

1,570,553. PROCESS FOR THE MANUFACTURE OF CELLULOSE SOLUTIONS. ALEXANDER CLASSEN, Aachen, Germany, assignor to The Commercial Alcohol Company, Limited, London, England, a British Company. Filed Aug. 18, 1924. Serial No. 732,886. 17 Claims. (Cl. 127—37.)

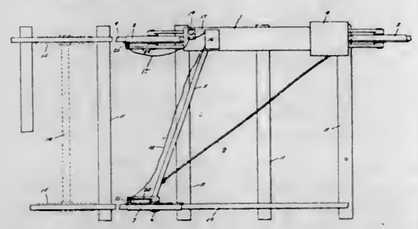
1. A process for the manufacture of cellulose solutions in concentrated hydrochloric acid, consisting in causing hydrochloric acid to act at a moderate temperature upon material containing cellulose in the presence of metallic contact substances which are not readily attacked by hydrochloric acid.

1,570,554. PUMP. GEORGE CONSTANTINESCO, Weybridge, England. Filed July 25, 1923. Serial No. 653,775. 2 Claims. (Cl. 103—206.)



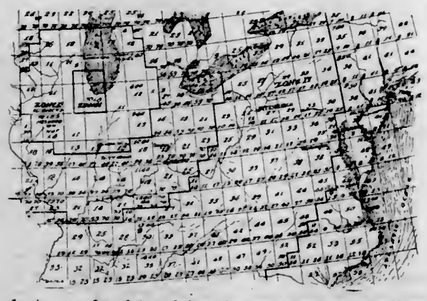
1. In combination a piston pump for liquids, and oscillating solid mass, and means for oscillating the said mass by fluid pressure generated in the pump with the same frequency as that of the pump delivery but with an amplitude which increases with increase of the delivery head of the pump, and decreases with decrease of the said head.

1,570,555. LIQUID-FUEL BURNER. JAMES M. DIAL, Bogart, Ga. Filed Mar. 31, 1925. Serial No. 19,662. 9 Claims. (Cl. 158—91.)



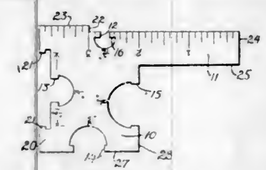
9. A liquid fuel burner including in combination a burner body, a burner trough supported within said body, means for supplying liquid fuel to the burner trough, a baffle plate upon each side of said burner trough arranged and adapted to direct an air supply into the path of the products of combustion, oppositely

disposed ports through the inner downturned edges of said baffle plates for delivering the air supply in a multiplicity of independent streams, a centrally posi-



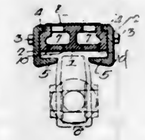
tioned drip pan beneath the burner trough, an overflow pipe from the latter, and means under control of said overflow for closing a cut-off valve in the supply pipe line.

1,570,556. SAFETY APPLIANCE FOR RAILWAY HAND CARS. VITANDREA DI TOMMASO, Moody, Oreg. Filed Apr. 2, 1924. Serial No. 703,701. 2 Claims. (Cl. 246—64.)



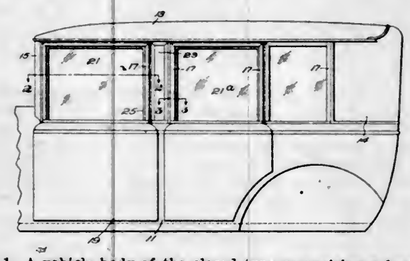
2. A safety appliance for hand cars comprising the combination of a hand car consisting of a frame for supporting a pair of wheels in tandem relation, an arm of non-conducting material attached to the frame adjacent one of its ends, the free end of said arm supporting an axle and a wheel arranged in parallel relation with one of the first mentioned wheels, a brace rod between said frame and said arm, an electrically operable signal mechanism, a normally broken electric circuit for operating the signal mechanism whenever the circuit is completed, a source of electrical energy on the car frame, a bracket support carried by the axle of each of the parallel wheels, and a brush contact member carried by each of said brackets in engagement with its respective wheel for making electric connection between said broken circuit and said wheels whereby upon the approach of another vehicle in the track, the signal mechanism will be actuated.

1,570,557. MAP. BENJAMIN A. DICKSON, Indianapolis, Ind. Filed Nov. 17, 1924. Serial No. 750,298. 5 Claims. (Cl. 283—34.)



1. A map for determining the more economical of two shipping agencies to be employed in shipping parcels to or from a certain base point, said map being divided into a plurality of blocks and having designations in each block indicating the limiting weight below which parcels may be shipped at less cost by one agency than by the other.

1,570,558. GAUGE. HENRY E. DURTSCHE, Galion, Ohio. Filed Apr. 27, 1925. Serial No. 26,009. 4 Claims. (Cl. 33—168.)



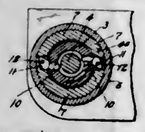
1. A gauge having a body portion and having a lateral extension integral therewith and projecting from one edge of the body portion, said extension being provided with a scale, and the body portion having a recess in one of its other edges to define an outside measurement.

1,570,559. CROSSHEAD GUIDE. EDWARD O. ELLIOTT, Philadelphia, Pa., assignor to The Baldwin Locomotive Works, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 2, 1924. Serial No. 717,387. 2 Claims. (Cl. 308—3.)

1. The combination in a guide for a cross head, of a body portion having a longitudinal cavity open at the top and having a series of holes in the bottom communicating with the cavity; means for covering the opening; and a side guide bar secured to each side of the body portion, said side guide bars having upper and lower flanges, the upper flange of each side bar extending over the body portion, and the lower flange of each side bar extending under the body portion, and forming, with the body portion, a guide for a cross head.

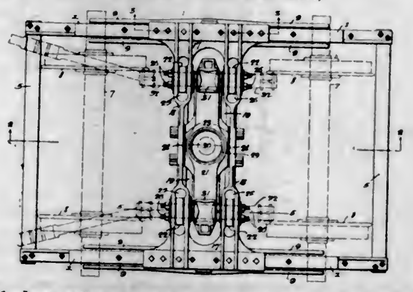
1,570,560. BODY CONSTRUCTION FOR VEHICLES. WILLIAM H. EMOND, Syracuse, N. Y. Original application filed Sept. 13, 1923, Serial No. 662,472. Divided and this application filed Dec. 14, 1925. Serial No. 75,280. 10 Claims. (Cl. 296—44.)

1. A vehicle body of the closed type comprising a lower body section from which rise permanent top-supporting posts, said body section having an opening cooperating with certain of the posts to define a door opening, a door for said body opening, a metallic window frame fixedly carried by said door and having continuous side members within which the window slides between an



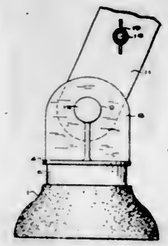
extreme raised position and an extreme lowered position beneath the belt line and which permanently project above the belt line of the door and which close between said posts.

1,570,561. NECKTIE PRESS. WILLIAM H. GEIS, Jr., New York, N. Y. Filed May 16, 1925. Serial No. 30,810. 2 Claims. (Cl. 223—19.)



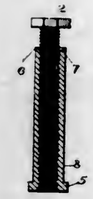
1. A necktie presser comprising a member formed of a single strip of springy material having its ends curved in the same direction, said member adapted to be flexed midway between its ends to bring said curved ends into co-acting position to form a continuous band adapted to receive a necktie in a wound condition, the ends of said member tending to expand to exert a longitudinal pull on the necktie.

1,570,562. WRINGER. BENJAMIN E. GETZ, Morton, Ill., assignor to Getz Power Washer Co., Morton, Ill., a Corporation of Illinois. Filed Apr. 26, 1924. Serial No. 709,111. 3 Claims. (Cl. 68—32.)



1. In a swinging wringer, a tubular support provided with an annular flanged seat opening out of its upper end, a wringer frame swingable on said support and provided with a tubular sleeve journaled in said support, a sectional gripping ring arranged within said seat, cam-like members between said rings arranged to be operated by said frame, when the frame is swung in one direction to cause said ring members to frictionally impinge with the flange of said seat, and manually operable means to release said cam-like members, whereby said frame may be swung in either direction.

1,570,563. RAILWAY TRUCK. HARRY GLAENZER and JOHN S. KEEN, Philadelphia, Pa., assignors to The Baldwin Locomotive Works, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 11, 1925. Serial No. 29,429. 6 Claims. (Cl. 105—190.)

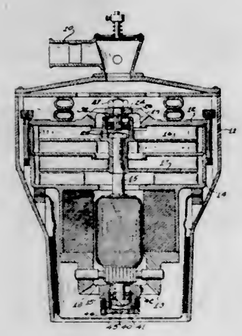


1. In a railway truck, the combination with the truck wheels, the axles, the journal boxes and the main frame, of means for supporting the main frame on the said boxes, a transverse bolster support extending across the main frame and comprising two transverse members with a transverse recess between them, a bolster located in the said recess and adapted to support a car body, two pairs of links respectively located at opposite sides of the center of the truck and connected with the respective transverse members and serving to support the bolster on the bolster support while permitting it to move laterally in the said recess, and two pivot pins at one end of each link and engaging it only at their outer sides so that pivotal movement can take place about either of them.

1,570,564. LADDER FOOT. JOSEPH LEWIS HAMEL, Buffalo, N. Y. Filed May 14, 1925. Serial No. 30,296 1 Claim. (Cl. 228—62.)

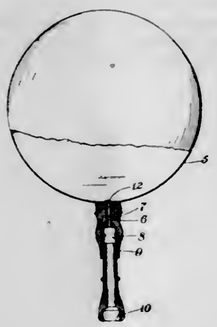
A ladder foot, comprising a socket member, a suction cup secured to the socket member, a pair of lugs having orifices therein and extending upwardly from the socket member, and a pair of plates having bosses thereon adapted to be detachably secured to a ladder rail, the bosses being adapted to be inserted into the orifices in the lugs.

1,570,565. COMBINED BOLT AND NUT. WALTER B. HANNER, Glenwood, N. C. Filed Feb. 14, 1925. Serial No. 9,292. 2 Claims. (Cl. 151—2.)



1. A bolt adapted to penetrate a plurality of pieces of material for the purpose of securing said pieces together, a nut adapted to threadably engage said bolt, said nut having its face portion which is nearest the head of the bolt hollowed at its central portion, and having a knife-like edge of circular formation at the peripheral portion of said face adapted to imbed itself in the head of the bolt when in tightened position.

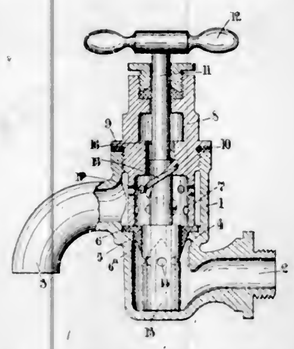
1,570,566. BEARING CONSTRUCTION. CLINTON H. HANSON, Chicago, Ill., assignor to Motor Player Corporation, a Corporation of Illinois. Filed Mar. 31, 1921. Serial No. 457,339. 1 Claim. (Cl. 308—227.)



In combination, a vertical motor shaft, a frame comprising a support therefor, a fan blade mounted at one end of the shaft and having a hollow hub projecting

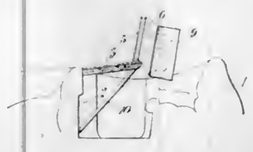
beyond the end thereof, a stem extending downwardly from the frame and cooperating with the hub to form an upper bearing for said shaft, said frame having a

recess in the bottom thereof, the walls of said recess cooperating with the shaft to form a bottom bearing therefor, and a closure member for each of said recesses.



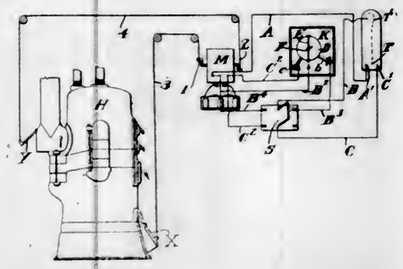
1,570,567. TOY BALLOON. LEVVA R. HOLYCROSS, Columbus, Ohio. Filed June 10, 1922. Serial No. 567,486. 4 Claims. (Cl. 46—46.)

1. A toy balloon comprising, in combination, an inflatable member provided with a stem having a sound producing vibrant member and a socket, and a horn having a tapered end adapted to be movably applied to and longitudinally shifted in said socket for varying the sound emitted.



1,570,568. VALVE AND COCK. RICHARD HOWELL, London, England. Filed Mar. 9, 1925. Serial No. 14,286. 4 Claims. (Cl. 251—80.)

4. In a bibcock, a hollow body, an inflow passage, an outflow passage, an internal annular shoulder to said body, a flanged tapering cone or hat joint, a hollow plug, a perforated skirt to said plug, means for mounting said plug within said body so that said skirt holds the flange of the hat joint on said shoulder, a hollow perforated piston valve reciprocable in said joint, the outside diameter of said valve being substantially less than the inside

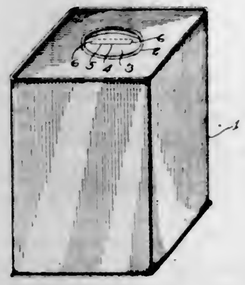


diameter of said skirt so as to be spaced therefrom when in the position giving communication between said passages.

1,570,569. REAR-SEAT WINDSHIELD. JEAN CLÉMENT KELSCH, Levallois-Perret, France. Filed Sept. 16, 1924. Serial No. 738,094. 5 Claims. (Cl. 296—85.)

1. A windshield for the rear seat of motor vehicles, comprising panels overlying the space in advance of the rear seat and movably connected in the longitudinal center of the vehicle to permit swinging movement of said panels, and a wind screen carried by and projecting upwardly from each panel.

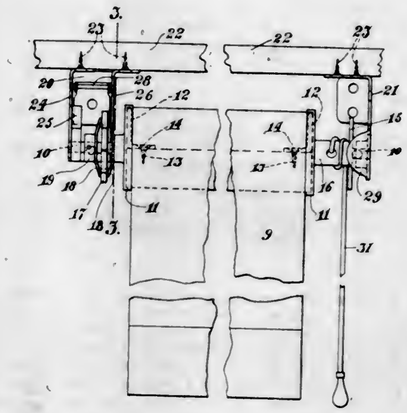
1,570,570. CONTROLLING DEVICE FOR HEATERS AND THE LIKE. FRANKLIN LAWRENCE, Portland, Me. Filed Jan. 17, 1924. Serial No. 686,735. 4 Claims. (Cl. 236—16.)



1. In combination with the draft control of a combustion apparatus, means for operating said draft control, a thermostatic circuit for operating the control to open the draft, and periodically effective means for intermittently closing the drafts for predetermined periods.

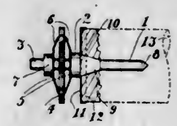
1,570,571. TRUSS PAD. THOMAS J. LE CRAS, Toronto, Ontario, Canada. Filed Jan. 12, 1922. Serial No. 528,757. 1 Claim. (Cl. 128—117.)

A truss pad comprising a back plate having an outwardly turned edge, and a cushion pad of resilient material having a flat back and a flange of rubber material encircling the back and curled inwardly to envelope the outturned flange of the back plate, said flange being capable of being rolled outwardly to disengage the flange of the back plate to enable its removal.



1,570,572. CONTAINER. FRANK E. LOWENSTEIN, Atlanta, Ga. Filed June 30, 1925. Serial No. 40,693. 1 Claim. (Cl. 232—4.)

The combination with a container formed with a delivery opening and a friction cap to seal said opening and capable of removal and replacement for delivery of the contents of the container as desired, of means whereby the cap may be utilized without removal from the container to permit the introduction into the container of coins or the like, said means consisting in dividing the bottom of the cap on three angularly related lines to form a section divided from the cap on three edges with the fourth edge forming a hinge for such section, and a flexible sealing strip to be secured to the bottom of the cap to overlie and seal the lines of division while the section is in the plane of the bottom, said sealing strip being broken on depression of such section to provide an opening in the bottom of the cap.

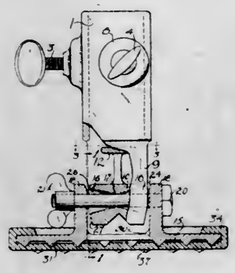


1,570,573. WINDOW-BLIND FITTING. CHARLES NEVATT, Glasgow, Scotland. Filed Jan. 12, 1924. Serial No. 685,894. 4 Claims. (Cl. 156—28.)

1. A blind roller, journals having discs to bear against the end of the roller having flanges to embrace the peripheral surface thereof adjacent the ends, L-shaped brackets having their outstanding portions secured to the discs within the plane of the flange and their lateral portions seated in recesses formed in the roller and of a depth materially exceeding the thickness of such lateral portions, a securing means passed through the lateral portions of the brackets and engaging the roller, a ratchet wheel loosely arranged upon one of the journals, springs carried by the journal engaging the ratchet wheel on opposite sides thereof, the other journal being enlarged to provide a cord drum.

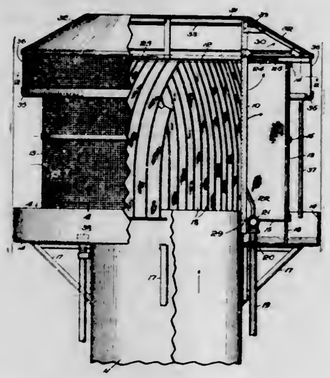
2. In combination with a drum carrying journal of a blind roller, a bearing bracket having integral front and rear flanges with curved free edges to overlie the drum and form inclined guides to cause the cord to wind upon the drum.

1,570,574. ROLLER WINDOW-BLIND FITTING. CHARLES NEVATT, Glasgow, Scotland. Filed June 11, 1924. Serial No. 719,410. 2 Claims. (Cl. 156—34.)



1. End fittings for a solid window blind roller, each comprising a disc having a peripheral flange to fit the normal end of the roller, and a spike member passed through the said disc into the roller and adapted to prevent rotation of the disc, said member comprising at its outer end an enlarged boss, at its inner end a driving portion, and formed between the boss and driving portion to present a trunk of rectangular section which from the part next the driving portion is gradually expanded to the part next the boss.

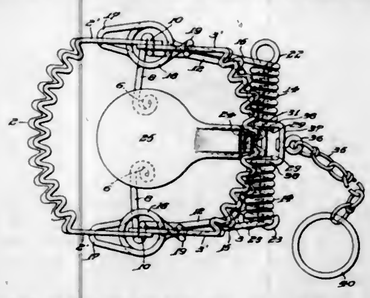
1,570,575. PROCESS FOR DYEING WOOD. HERBERT RENNER, Philadelphia, Pa., assignor, by direct and mesne assignments, to Forest Research Corporation, Philadelphia, Pa., a Corporation of Delaware. Filed Oct. 26, 1923. Serial No. 670,890. 2 Claims. (Cl. 99—12.)



1. The process of dyeing wood which consists in combining with the sap through the cellular tissue of the wood a mixture of a coloring metal compound and a volatile or unstable chemical in solution or suspension forming salts for a time, and in the drying out of the wood then decomposing the complex salts and dyeing the wood by depositing permanent dyes fixed in the cells of the wood.

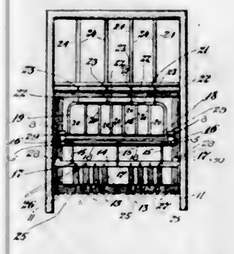
1,570,576. LADDER SHOE. CHARLES S. RIVITZ, Cleveland, Ohio. Filed June 15, 1925. Serial No. 37,024. 9 Claims. (Cl. 228—61.)

1. A ladder shoe comprising in combination a member adapted to be secured to the end of a ladder leg, a base member, one of said members having a projection with an opening extending therethrough restricted in a region intermediate its ends, and the other of said members having a pair of ears and a member carried thereby and extending through the opening in close engagement with the restricted portion, whereby a universal connection is had between said first named member and the base.



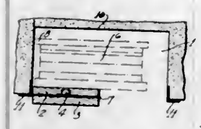
1,570,577. AIR WASHING AND CONDITIONING APPARATUS. ANTONIO S. ROMERO, Santurce, and LUIS R. GONZALEZ, San Juan, P. R. Filed Sept. 29, 1922. Serial No. 591,333. 8 Claims. (Cl. 261—126.)

1. In a device of the class described, in combination, a flue, means for opposing the escape of air and gases in the line of the flue, spirally formed perforate vanes arranged to provide a series of lateral outlet passages, and means for washing and cooling the air and gases discharged through said passages.



1,570,578. TRAP. LEOPOLD C. SCHNEIDER, Hatboro, Pa. Filed Dec. 23, 1921. Serial No. 524,345. 14 Claims. (Cl. 43—88.)

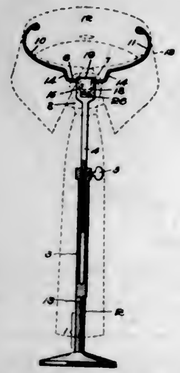
4. An animal trap comprising a pair of cooperative jaws and a pair of independent spring elements, each of said elements being formed of spring wire bent to provide a spring coil and extended from one end of the coil to cooperably encircle the adjacent sides of the jaws and extended from the other end of the coil to form a base for the trap and a pivot for the jaws, a supporting pin extending through both of said coils, and a pedal movably



supported on said pin between the coils and having a dog cooperative with one of said jaws to releasably hold the same in set position against the tension of said coils.

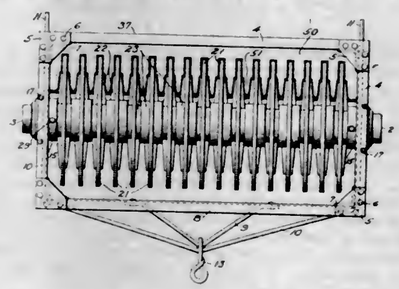
1,570,579. BED. ALBERT W. SMITH and WILLIAM J. DUVALL, St. Louis, Mo. Filed Oct. 18, 1922. Serial No. 595,260. 1 Claim. (Cl. 5—53.)

A bed comprising a stationary head presenting a plurality of hollow rods spaced laterally across its upper portion, a bed bottom pivoted to the said head for movement into a vertical position, a frame composed of a plurality of curved rods arranged between the said stationary head and the pivoted end of the said bed bottom with its lower part pivoted to the said bed bottom, said frame being adapted to move vertically of the said stationary head as the said bed bottom is raised and lowered and being of such curvature as to close over the lower end of the bed bottom in the upended position of the latter, and a plurality of rods slidably engaged within the said hollow rods of the stationary head and connected to the said frame for movement exteriorly of the hollow rods as the said frame is moved downwardly, said rods being adapted when extended from the hollow rods to form continuations of the said hollow rods.



1,570,580. BED. ALBERT W. SMITH, St. Louis, Mo. Filed Jan. 10, 1923. Serial No. 611,696. 1 Claim. (Cl. 20—1.11.)

In a wall bed, in combination, a bed alcove, a door turnable in the opening of the said alcove on vertical pivots lying within the plane of the door and substantially concealed between the top and the bottom edges



of the door and the adjacent portions of the alcove, said pivots being centered relative to the vertical edges of the door but excentrically located with respect to the sides thereof so as to be positioned nearer to one side of the door than to the other, and an article supported on the side of the door which is remote from the pivots.

1,570,581. DISPLAY DEVICE. CLYDE WILLIAM STUART, Melrose Highlands, Mass. Filed Nov. 24, 1923. Serial No. 676,706. 5 Claims. (Cl. 211—24.)

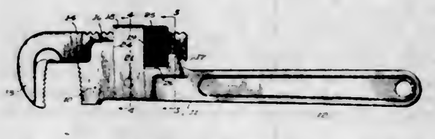
1. In a display device, in combination, a base portion, a stem adjustably mounted in said base portion having a portion of its length flattened and laterally deflected, a cross piece having a depending tongue embraced by the upper extremity of said stem and forming a necktie support, the extremities of said cross piece being curved laterally and upwardly inclined to embrace and support the neck band of a collar in normal relation to said tie.

1,570,582. ROAD-PACKING MACHINE. ROBERT ARTHUR THOMPSON, New Orleans, La. Filed July 17, 1925. Serial No. 44,336. 5 Claims. (Cl. 94—50.)

1. In a road packing machine, the combination of a hollow axle; a plurality of road packing disks rotatably mounted with relation to said axle and provided with laterally extending overlapping hubs to form a broken, dust excluding joint; and means for automatically lubricating said disks while the device is in operation.

1,570,583. PLASTER OF PARIS AND METHOD OF MAKING THE SAME. ELLERY LEWIS WILSON, Providence, R. I., assignor to Rumford Chemical Works, Providence, R. I., a Corporation of Rhode Island. Filed Aug. 22, 1924. Serial No. 733,550. 5 Claims. (Cl. 222—6.)

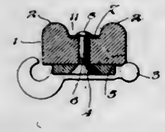
4. The process of producing plaster of Paris from precipitated gypsum, which consists in effecting crystalline accretion by subjecting the material to pressure to cause the crystals to coalesce, in converting the coalesced crystals into a non-compacted, interstitially extended mass, and in uniformly calcining the extended mass.



1,570,584. CUMARON RESIN COMPOSITION AND PROCESS OF MAKING SAME. CARLETON ELLIS, Montclair, N. J., assignor to Ellis-Foster Co., a Corporation of New Jersey. Filed Nov. 12, 1917. Serial No. 201,473. 5 Claims. (Cl. 260—7.)

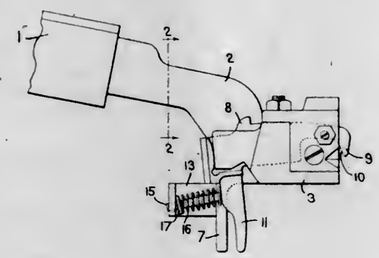
1. A process which comprises the step of treating cumaron resin containing acid bodies, with a basic neutralizing agent in the absence of sufficient water to dissolve such basic material, in combination with the step of heating such resin to above its melting point.

1,570,585. PLASTIC COMPOSITION. CHARLES J. HOOVER, New York, N. Y. Filed Mar. 18, 1925. Serial No. 16,563. 2 Claims. (Cl. 44—34.)



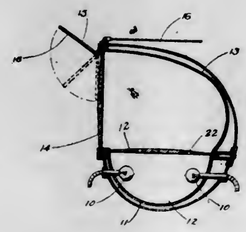
1. A fire-kindler comprising 8% charcoal, 60% granulated saw-dust, 2% lycopodium and 30% crude turpentine.

1,570,586. WRENCH. JOSEPH E. KENERSON, Cliftondale, Mass., assignor to Trimont Manufacturing Company, Roxbury, Mass., a Corporation of Massachusetts. Filed July 10, 1924. Serial No. 725,301. 5 Claims. (Cl. 81—101.)



1. In a wrench of the type described, a main body portion having a fixed jaw and a shank connecting the fixed jaw to a handle, a relatively movable jaw having a threaded stem, a pair of lugs formed integral with the main body portion near the fixed jaw and extending outwardly a substantial distance from the shank to form guides for said stem, a U-shaped housing for the stem having spaced legs, slots formed in the opposite faces of the shank and having spaced shoulders one of which is in alignment with the rear edge of each lug, means for securing the legs in said slots with their opposite edges abutting against said shoulders and with the front face of the housing resting firmly against said lugs at points beyond said shank and at each side of said stem, a second pair of lugs formed integral with the main body portion at a substantial distance from the first pair of lugs for holding the stem form lateral displacement, and a nut for the stem confined between the rear face of the housing and the second pair of lugs.

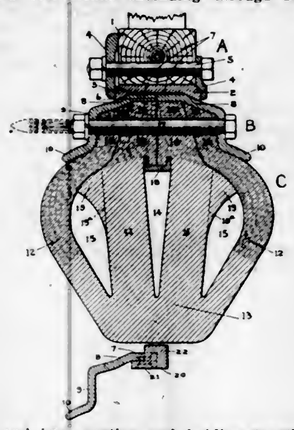
1,570,587. SLATTED CONVEYER OR APRON AND THE LIKE. MATHEW F. KEVLIN, Springfield, Vt., assignor to The James Hunter Machine Company, North Adams, Mass., a Corporation of Massachusetts. Filed Dec. 4, 1923. Serial No. 678,473. 2 Claims. (Cl. 198—229.)



1. The combination with a roll, of a flexible conveyer or apron cooperating therewith and comprising transversely extending slats each having a plurality of raised wiping ribs adapted to wipe adherent matter from the periphery of the roll.

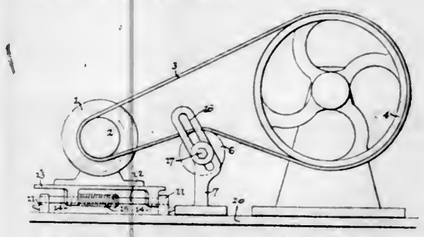
1,570,588. THREAD-CUTTING TEMPLE FOR LOOMS. ALPHONSE LECOMTE, Fall River, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Oct. 9, 1925. Serial No. 61,405. 2 Claims. (Cl. 139—303.)

1. A thread cutting temple for looms comprising a head having a depending heel, a movable cutter member having a depending heel and mounted to rock vertically and slide longitudinally in the head, a bracket extending laterally from the temple heel in front of the movable cutter member heel and having a vertical slot opposite the latter heel, a stud rigid with and projecting forwardly from the movable cutter member heel and passing through the slot in the bracket, and a helical compression spring surrounding the stud and extending between the bracket and the movable cutter member heel.



1,570,589. HEADLIGHT. ROBERT P. MCCURDY, Pittsburgh, Pa., and FREDERICK W. HOCHSTETTER, Dayton, Ohio, assignors to Joseph C. Trees, Pittsburgh, Pa. Filed May 23, 1924. Serial No. 715,408. 1 Claim. (Cl. 240—41.)

A headlight embodying a lower reflector facing upwardly, light sources near the peripheral edge of the reflector, and an upper secondary reflector positioned above the light sources to receive the light rays from the lower reflector and project them forwardly, a lens disposed between the two reflectors, said lens having a translucent area immediately above the rear light source.

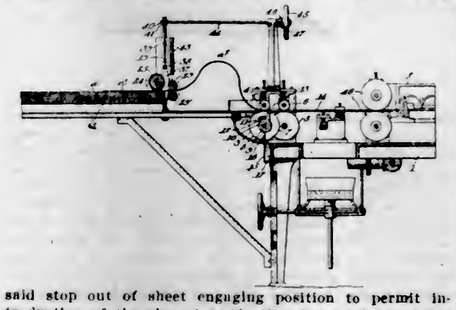


1,570,590. TIRE AND DEMOUNTABLE RIM. CHARLES M. MANLY, Richmond Hill, N. Y., assignor to O. & W. Company, a Corporation of New York. Filed Aug. 18, 1922. Serial No. 582,673. 10 Claims. (Cl. 301—11.)

1. In combination, a flanged tire-rim circumferentially divided into two parts; a tire having an internal clamping ring, the base portion of said tire when on the rim being compressed and clamped between said ring and the rim; and bolt means extending through holes in said

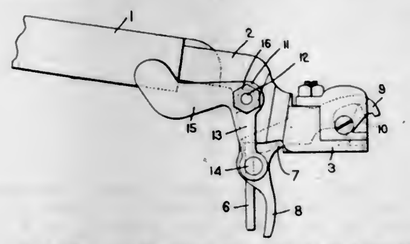
flanges and base portion and holding together the two parts of the flanged rim with the base of the tire compressed and clamped between said ring and the rim.

1,570,591. AUTOMATIC ELECTRIC MACHINERY. WILLIAM D. MERCER, Detroit, Mich., assignor, by mesne assignments, to Kelvinator Corporation, Detroit, Mich., a Corporation of Michigan. Filed Nov. 1, 1924. Serial No. 747,201. 2 Claims. (Cl. 308—11.)



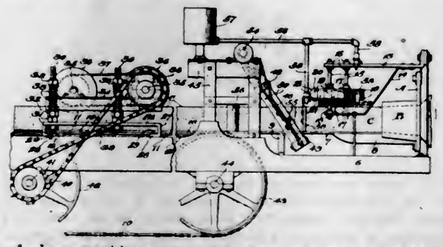
1. In a device of the character described, in combination, a substantially horizontal base, a motor mounted thereon, a pulley carried by said motor having its axis perpendicular to the direction of such movement, a driven mechanism comprising a pulley located in the plane of said first pulley, a belt surrounding said pulleys, an idler pulley fixedly mounted relative to said base at a point between said pulleys and serving to increase the area of contact between said belt and the first mentioned pulley, and yielding means acting continuously upon said motor to move it relative to said base in a direction to tighten said belt.

1,570,592. SHEET-FEEDING MECHANISM FOR FORMING MACHINES. LUCIAN E. PARKER, Wadsworth, Ohio, assignor to The Ohio Match Company, Wadsworth, Ohio, a Corporation of Ohio. Filed Mar. 10, 1925. Serial No. 14,522. 3 Claims. (Cl. 271—10.)



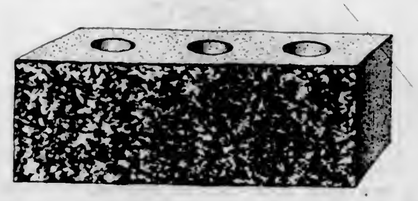
1. The combination with a forming machine, including as essential elements in its construction a forming mechanism, feed rollers and a stop member actuated in timed relation to the operation of the forming mechanism, of a sheet feeding mechanism for feeding sheets separately to said feed rollers, including means to retain a pile of sheets, a feed roller arranged for cooperation with said pile of sheets and in contact with one of same, means for imparting rotation to the feed roller of the sheet

feeding mechanism to feed the sheet in contact therewith off of the pile of sheets and against the stop of the forming machine and to continue the feed thereof after contact with said stop, and means embodied as a part of the forming machine for intermittently withdrawing



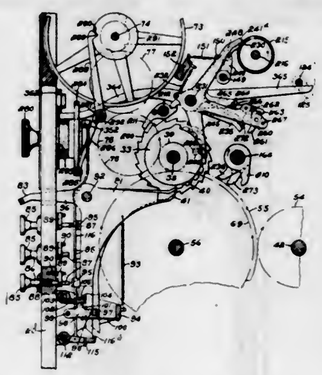
said stop out of sheet engaging position to permit introduction of the sheet into the forming machine by the feed rollers thereof, the feeding of the sheet into the forming machine by the feed rollers thereof timing the feed by the feed roller of the sheet feeding mechanism of the sheet next adjacent to that just fed.

1,570,593. THREAD-CUTTING TEMPLE FOR LOOMS. JAMES A. SORRELLS, Gainesville, Ga., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Oct. 8, 1925. Serial No. 61,194. 3 Claims. (Cl. 139—303.)



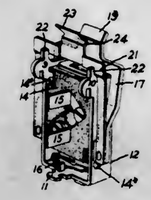
1. A thread cutting temple for looms having a movable cutter member mounted for vertically rocking and longitudinally sliding movement in the temple, and a lever fulcrumed on the temple, pivoted at one end to the movable cutter member, weighted at the other end and acting to move the movable cutter member to, and hold it yieldingly in, rearward projected open position.

1,570,594. APPARATUS FOR AND METHOD OF ORNAMENTING SURFACES OF CERAMIC PRODUCTS. DOUGLAS F. STEVENS, Danville, Ill., assignor to Ida K. Stevens, Danville, Ill. Filed May 7, 1925. Serial No. 28,721. 21 Claims. (Cl. 25—1.)



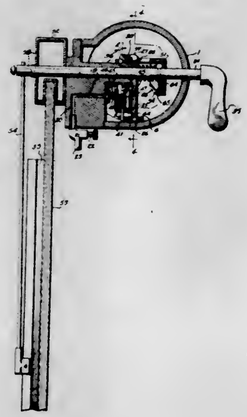
1. In a machine arranged to have a column of plastic material move therein, mechanism comprising a plurality of plowing members, and means whereby said members are given reciprocatory movement across and in surface material of the column obliquely with respect to the direction of motion thereof.

1,570,595. STRUCTURAL UNIT. DOUGLAS F. STEVENS, Danville, Ill., assignor to Ida K. Stevens, Danville, Ill. Filed May 7, 1925. Serial No. 28,722. 2 Claims. (Cl. 72—36.)



1. A structural unit having a face of mottled-like texture characterized by flat-surfaced nubbles of different shapes disposed in unalined distribution throughout the face area among depressions of different shapes.

1,570,596. TRANSMITTER. NATHAN H. SUREN, Needham, Mass., assignor, by mesne assignments, to The Gamewell Company, Newton, Mass., a Corporation of Massachusetts. Filed Nov. 15, 1919. Serial No. 338,287. 57 Claims. (Cl. 177—380.)

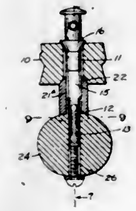


1. In an apparatus for formulating signals represented by digits or groups of integers and transmitting such signals with one or more repetitions, the combination with independently movable digit-setting means, one to correspond to each group, of individually movable and manually operable setting devices, one for each integer of each group, the actuation of any setting device conditioning its associated setting means for the formulation of the integer represented by the setting device so actuated, signal transmitting means, controlling means therefor governed by the conditioning of the setting means to control the transmitting means for the transmission of the signal represented by the actuated setting device, devices to adjust the apparatus to automatically repeat the signal a predetermined number of times, and starting mechanism to set the transmitting means into operation, said controlling means including devices to introduce a pause between the transmission of successive digits and a longer pause between successive repetitions.

1,570,597. LIGHTING FIXTURE. FRANK C. DE REAMER, Bridgeport, Conn., assignor to General Electric Company, a Corporation of New York. Filed Nov. 11, 1922. Serial No. 600,206. 3 Claims. (Cl. 173—330.)

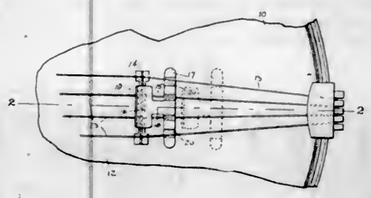
1. In a device of the character described, the combination of a metallic member having supporting means, a holder for a removable canopy comprising a U-shaped resilient piece, the legs of which straddle the member and are secured to the sides thereof, and a second U-shaped piece, the legs of which also straddle the member and are secured thereto and which is provided with means for pressing a canopy support outwardly from a wall thereby flexing the holder until approximately the seating positions of the canopy and its support are reached.

1,570,598. WINDSHIELD CLEANER. FREDERICK G. FOLBERTH and WILLIAM M. FOLBERTH, Cleveland, Ohio, assignor to Trico Products Corporation, Buffalo, N. Y., a Corporation of New York. Filed Feb. 4, 1924. Serial No. 690,552. 6 Claims. (Cl. 15—253.)



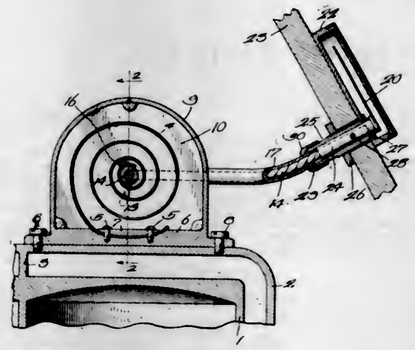
1. In a suction operated windshield cleaner, a motor casing, an actuating member mounted in said casing, a shaft extending through said casing and projecting therefrom, one end of said shaft being adapted to receive a cleaner element normally maintained in contact with the windshield to be cleaned under tension, a disk surrounding said shaft and operatively connected to said actuating member, said disk being provided with a notch, and being provided with inclined portions on each side of said notch, a pin carried by said shaft and adapted to be received in said notch to connect said shaft to said disk, and a spring surrounding said shaft and normally retaining said pin in said notch.

1,570,599. SAFETY RAZOR. THOMAS S. GOFF, Martin, Tenn. Filed July 19, 1923. Serial No. 652,576. 2 Claims. (Cl. 30—12.)



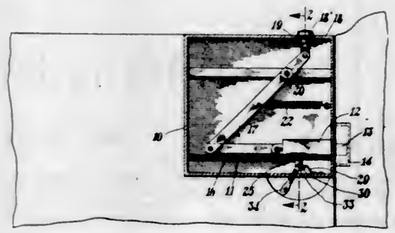
1. A safety razor comprising a base having a solid handle of uniform diameter projecting from one end thereof with one side of said handle disposed in the same longitudinal plane with the bottom of the base for the entire length of said handle and forming a continuation of the base, the other side of the handle at its junction with the base being expanded laterally and inclined in the direction of said base, a cutting blade carried by the base, a guard fitting over the blade, and means for clamping the guard and blade in position on the base, the clamping means lying wholly inwardly of a longitudinal plane touching the last-mentioned side of the handle.

1,570,600. TUNING PEG FOR STRINGED MUSICAL INSTRUMENTS. ALBERT D. GROVER and LOUIS H. BERTRAM, Long Island City, N. Y. Filed Jan. 18, 1924. Serial No. 686,964. 2 Claims. (Cl. 84—305.)



1. A tuning peg for stringed musical instruments, comprising a shank, a sleeve embracing a portion of the shank, one end of said sleeve projecting into a peg hole and the opposite end of the sleeve having diametrically opposite recesses therein, a button having intact parts of its periphery projecting into said recesses, and means for securing the button to the shank.

1,570,601. MUTE FOR MUSICAL STRINGED INSTRUMENTS. ALBERT D. GROVER, Long Island City, N. Y. Filed Oct. 25, 1924. Serial No. 745,857. 1 Claim. (Cl. 84—311.)



A mute for stringed musical instruments, consisting of an integral structure comprising a string engaging arm having transverse alternating string receiving grooves in its upper and lower faces, a bridge engaging arm having an elongated bridge receiving groove in its lower face, and an intermediate member at right angles to and interconnecting said arms.

1,570,602. APPARATUS FOR MEASURING THE TEMPERATURE OF INTERNAL-COMBUSTION ENGINES. JOHN W. HOBBS, Moline, Ill., assignor, by mesne assignments, to Pyrene Manufacturing Company, Newark, N. J., a Corporation of Delaware. Filed Dec. 22, 1921. Serial No. 524,132. 1 Claim. (Cl. 73—118.)

In a temperature measuring apparatus for internal combustion engines, the combination with an internal combustion engine; of a spirally formed thermostatic element having its outer end assembled with the engine cylinder; a flexible shaft connected at one end with the inner end of the thermostatic element to be turned thereby as the thermostatic element responds to temperature changes; and a temperature indicator coupled with the other end of said shaft.

1,570,603. LOCK. JOHN M. HOLDA, Chicago, Ill. Filed July 28, 1924. Serial No. 728,533. 2 Claims. (Cl. 292—164.)

1. A lock comprising a casing, a bolt slidable therein, means for retracting said bolt, said bolt being formed on one face with a longitudinal groove having a vertical offset at one end, a bar slidable in the casing transversely to the said bolt and having at its lower end a projection normally engaging in said offset from said groove to hold the bolt against retraction, and a dog pivoted to said bar and projecting at one end through the casing and forming the medium through which the said bar may be moved to bring the said projection thereon into registry with the longitudinal portion of said groove, said dog being arranged to grip the said bolt by swinging movement of the dog when in depressed position.

Patents Nos. 1,570,604 to 1,571,176.

THE OFFICIAL GAZETTE OF THE United States Patent Office.

Vol. 342—No. 4. TUESDAY, JANUARY 26, 1926. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $5.00 per annum; single numbers, 10 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Reference to Related Applications.

RULE 43. When an applicant files two or more applications relating to the same subject matter of invention, all showing but only one claiming the same thing, the applications not claiming it must contain references to the application claiming it.

Interference Notices.

U. S. PATENT OFFICE, *Washington, Jan. 15, 1926.*

Robert Carr, his assigns or legal representatives, take notice:

An interference has been declared by this Office between applications for patents filed by Thomas Lonet, of 273 Ninth Street, Oakland, Calif., and Robert Carr, of General Delivery, Anaconda, Mont. Counsel for Carr states that the present whereabouts of Carr is unknown to him. Notice is hereby given that unless said Carr, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Dec. 30, 1925.*

George F. Johnstone, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Lynn L. Bunnell, Main and Maple Avenues, Norwood, Cincinnati, Ohio, for registration of a trade-mark and trade-mark registered April 13, 1915, No. 103,815, to George F. Johnstone, 3527 Fourteenth Street NW., Washington, D. C., and a notice of such declaration sent by registered mail to said Johnstone, at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Johnstone, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN, *Acting Commissioner.*

ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,395,624, H. A. Young, Vacuum and boiler-feed apparatus, decided December 19, 1925, claim 1.

Pat. 1,438,008, H. A. Young, Vacuum-producing and boiler-feeding apparatus, decided December 19, 1925, claims 1 and 2.

Pat. 1,483,178, J. H. Hunt, Suction burner, decided December 16, 1925, claim 1.

Pat. 1,501,858, C. L. McCuen, Expansion valve for refrigerating machines and the like, decided January 8, 1926, claims 10, 11, 12, 13, 14, 15, and 16.

Pat. 1,510,594, H. Hellberg, Wax-seal presses, decided December 5, 1925, claims 1, 2, and 3.

Pat. 1,517,331, S. B. Williams, jr., Telephone-exchange systems, decided December 16, 1925, claims 28, 31, 32, 33, and 34.

TRADE-MARKS CANCELED.

102,936. Plastic compounds for repairing brickwork and laying up brickwork. Chicago Fire Brick Co., Chicago, Ill. Registered March 2, 1915. Canceled December 28, 1925.

187,334. Waste pipe, drain pipe, and sink opener and cleaner. B. Heller & Company, Chicago, Ill. Registered July 29, 1924. Canceled January 8, 1926.

192,201. Rubber tires and inner tubes for pneumatic tires. The Gates Rubber Company, Denver, Colo. Registered November 25, 1924. Canceled January 8, 1926.

196,577. Salve for pulmonary and bronchial afflictions. Keates Chemical Products Corporation, New York, N. Y. Registered March 17, 1925. Canceled January 8, 1926.

Condition of Applications Under Examination at Close of Business January 15, 1926.

Room No.	(Total number of applications awaiting action, exluding Trade-Mark Division, 41,453; Trade-Mark Division, 2,225. Oldest new case, July 17, 1925; oldest amended, July 8, 1925. The dates given are 1925 except where † indicates 1926.) *Divisions, Examiners, and Subjects of Inventions.	Oldest new application and oldest action by applicant awaiting office action. New.	Amended.	No. of applications awaiting action.

DECISIONS IN PATENT AND TRADE-MARK CASES.

Supreme Court of the United States.

AMERICAN STEEL FOUNDRIES *v.* ROBERTSON, COMMISSIONER OF PATENTS, AND SIMPLEX ELECTRIC HEATING COMPANY.

No. 156. Decided January 4, 1926.

1. TRADE-MARKS—UNFAIR COMPETITION—PURPOSE OF LAW.

The law of trade-marks is but a part of the broader law of unfair competition, the general purpose of which is to prevent one person from passing off his goods or his business as the goods or business of another.

2. SAME—TRADE NAMES—COMPARISON OF.

To some extent the terms "trade-mark" and "trade name" overlap; but there is a difference more or less definitely recognized, which is, that, generally speaking, the former is applicable to the vendible commodity to which it is affixed, the latter to a business and its goodwill.

3. TRADE NAMES—CORPORATE NAMES.

A corporate name seems to fall more appropriately into the class of trade names.

4. CORPORATE NAME—EFFECT OF ASSUMING.

The effect of assuming a corporate name by a corporation under the law of its creation is to exclusively appropriate that name.

5. SAME—WRONGFUL APPROPRIATION OF—EFFECT.

In some degree at least the natural and necessary consequence of the wrongful appropriation of a corporate name is to injure the business and rights of the corporation by destroying or confusing its identity.

6. TRADE-MARKS—TRADE NAMES—APPROPRIATION AND USE OF IDENTICAL MARK OR NAME—SIMILAR MARK OR NAME.

The general doctrine is that equity not only will enjoin the appropriation and use of a trade-mark or trade name, where it is completely identical with the name of the corporation, but will enjoin such appropriation and use where the resemblance is so close as to be likely to produce confusion as to such identity, to the injury of the corporation to which the name belongs.

7. SAME—LAW OF 1905—INTENTION OF CONGRESS.

It reasonably may be assumed that, to the extent the contrary does not appear from the statute, the intention of Congress, when it came to enact the registration statute, was to allow the registration of such marks as the substantive law of trade-marks, and the general law of unfair competition of which it is a part, recognized as legitimate.

8. CORPORATE NAME—COMPLETE APPROPRIATION OF, BY APPLICANT FOR REGISTRATION.

Where the appropriation of the corporate name is complete, the rule of the statute by its own terms is absolute and the proposed mark must be denied registration.

9. SAME—PARTIAL APPROPRIATION OF BY APPLICANT FOR REGISTRATION—DECEPTIVE SIMILARITY.

Where less than the whole name has been appropriated, the right of registration will turn upon whether it appears that such partial appropriation is of such character and extent that, under the facts of the particular case, it is calculated to deceive or confuse the public to the injury of the corporation to which the name belongs.

10. SAME—SAME—ARTICLES OF DIFFERENT DESCRIPTIVE PROPERTIES.

The fact that the articles upon which the mark is used are not of the same description as those put out by the corporation is entitled to weight, since the probability of such confusion and injury in that situation obviously is more remote than where the articles are of like kind.

11. SAME—SAME—APPROPRIATED WORD A SALIENT FEATURE OF CORPORATE NAME.

The fact that the word in question is the salient feature in the name of the corporation does not settle the question whether its appropriation is calculated to confuse or deceive the public.

12. SAME—"SIMPLEX"—CORPORATE NAME—"SIMPLEX ELECTRIC HEATING CO."

Where it was not shown that the word "Simplex," standing alone, had the effect of designating to the mind of the public the corporation, Simplex Electric Heating Company, *Held* that the use of the word as a trade-mark upon car-brake apparatus would probably not confuse or deceive the public to the injury of that or any other corporation.

ON a certificate from the United States Circuit Court of Appeals for the Seventh Circuit.

Mr. George L. Wilkinson for American Steel Foundries.

Mr. Nathan Heard for Simplex Electric Heating Co.

Mr. Justice SUTHERLAND delivered the opinion of the Court.

Plaintiff and its predecessor, the Simplex Railway Appliance Company, have used the trade-mark "Simplex" on railway-car bolsters since 1897 and on car couplers since 1907, the former being registered in the Patent Office in 1911, the latter, in 1909. In 1917 plaintiff adopted and thereafter used the same trade-mark on brake rigging, brake heads, brake beams, brake shoes, brake hangers, and clasp brakes. Application was made in 1917 to register the trade-mark for the last-named uses, but the Commissioner of Patents refused the registration on the ground that the trade-mark consisted merely in the name of a corporation, viz, the Simplex Electric Heating Company, defendant herein. The Commissioner's ruling was affirmed by the Court of Appeals of the District of Columbia. *In re American Steel Foundries*, 264 O. G. 354; 49 App. D. C. 16; 258 Fed. 160. The case came to this Court on certiorari, but was dismissed for want of jurisdiction. Sub nom., *American Steel Foundries* v. *Whitehead, Commissioner of Patents*, 286 O. G. 866; 256 U. S. 40.

Thereupon, this suit in equity was brought in the Federal District Court for the Northern District of Illinois under section 4915 Revised Statutes (*American Foundries* v. *Robertson*, 324 O. G. 963; 262 U. S. 209), to which the Commissioner of

Patents voluntarily appeared. That court dismissed the bill and an appeal to the court of appeals followed.

The defendant company was organized as a corporation in 1902. Its predecessors in business had adopted in 1886, and thereafter had used, the trade-mark "Simplex" on insulating or protected conducting wire, the same being registered in 1890. In 1906, the company registered trade-marks comprising the word "Simplex" as applied to a large variety of other goods.

The word "Simplex" has comprised the whole or a part of trade-marks registered in the Patent Office in approximately sixty registrations by nearly as many different parties and as applied to many classes of merchandise. There are other corporations in the country which now have or have had names which embody the word "Simplex." Neither the defendant company nor its predecessors ever have been engaged in the manufacture or sale of any of the devices upon which plaintiff has used the trade-mark as hereinbefore specified.

Upon these facts the court below has certified the following questions upon which it desires instruction:

1. Does the clause of section 5 of the Trade Mark Act of February 20, 1905, "Provided, that no mark which consists merely in the name of an individual, firm, corporation, or association not written, printed, impressed, or woven in some particular or distinctive manner, or in association with a portrait of an individual" • • • shall be registered under the terms of this act, prohibit registration as a trade-mark under said act of the word "Simplex" by the plaintiff under the recited facts?

2. Does the said clause quoted of section 5 prohibit registration under the act of February 20, 1905, of a trade-mark consisting solely of a single word otherwise registrable under the said act if that word is the salient feature of the name of a corporation not the applicant for registration?

3. Does the above quoted clause of section 5 of the Trade Mark Act of February 20, 1905, prohibit the registration under said act, of a common-law trade-mark which is the name, or part of the name of another than the applicant, whose business relates exclusively to goods in a different and non-competing class from the goods on which the trade-mark is used by the applicant?

For the purposes of discussion, these three questions may be resolved shortly into one: Upon the facts, is the word "Simplex" merely the name of the Simplex Electric Heating Company within the meaning of the quoted proviso? The answer to this question will be simplified if we approach it by first considering certain principles of the substantive law of trade-marks and unfair competition, in the light of which the legislation under review must be examined.

[1] The mere fact that one person has adopted and used a trade mark on his goods does not prevent the adoption and use of the same trade-mark by others on articles of a different description. There is no property in a trade-mark apart from the business or trade in connection with which it is employed. *United Drug Co.* v. *Rectanus Co.*, 257 O. G., 1082; 248 U. S. 90, 97; *Hanover Milling Co.* v. *Metcalf*, 224 O. G., 1407; 240 U. S. 403, 413–414. "The law of trade-marks is but a part of the broader law of unfair competition" (idem), the general purpose of which is to prevent one person from passing off his goods or his business as the goods or business of another.

[2, 3, 4, 5] Whether the name of a corporation is to be regarded as a trade-mark, a trade name, or both, is not entirely clear under the decisions. To some extent the two terms overlap, but there is a difference more or less definitely recognized, which is, that, generally speaking, the former is applicable to the vendible commodity to which it is affixed, the latter to a business and its goodwill. See *Ball* v. *Broadway Bazaar*, 194 N. Y. 429, 434-435. A corporate name seems to fall more appropriately into the latter class. But the precise difference is not often material, since the law affords protection against its appropriation in either view upon the same fundamental principles. The effect of assuming a corporate name by a corporation under the law of its creation is to exclusively appropriate that name. It is an element of the corporation's existence. *Newby* v. *Oregon Cent. Ry. Co., et al.*, Deady 609 616; s. c. 18 Fed. Cases 38, case No. 10,144. And, as Judge Deady said in that case:

> Any act which produces confusion or uncertainty concerning this name is well calculated to injuriously affect the identity and business of a corporation. And as a matter of fact, in some degree at least, the natural and necessary consequence of the wrongful appropriation of a corporate name, is to injure the business and rights of the corporation by destroying or confusing its identity.

[6] The general doctrine is that equity not only will enjoin the appropriation and use of a trade-mark or trade name where it is completely identical with the name of the corporation, but will enjoin such appropriation and use where the resemblance is so close as to be likely to produce confusion as to such identity, to the injury of the corporation to which the name belongs. *Cape May Yacht Club* v. *Cape May Yacht & Country Club*, 81 N. J. Eq. 454, 458; *Armington & Sims* v. *Palmer*, 21 R. I. 109, 115. Judicial interference will depend upon the facts proved and found in each case. *Hendriks* v. *Montagu*, L. R. 17 Ch. Div. 638, 648; *Higgins Co.* v. *Higgins Soap Co.*, 144 N. Y. 462, 469–471.

[7] These principles, it must be assumed, were in mind when Congress came to enact the registration statute. And, since that body has been given no power to legislate upon the substantive law of trade-marks, it reasonably may be assumed, also, that, to the extent the contrary does not appear from the statute, the intenion was to allow the registration of such marks as that law, and the general law of unfair competition of which it is a part, recognized as legitimate. The House Committee on Patents, in reporting the bill which upon enactment became the registration statute in question, said:

> Section 5 of the proposed bill we believe will permit the registration of all marks which could, under the common law as expounded by the courts, be the subject of a trade-mark and become the exclusive property of the party using the same as his trade-mark. Report No. 3147, Dec. 19, 1904, H. of R., 58th Cong., 3d Sess.

[8, 9] The provision, therefore, that no mark consisting merely in the name of a corporation shall be registered, is to be construed in harmony with those established principles in respect of the appropriation of corporate names to which we have referred. Where the appropriation of the corporate name is complete, the rule of the statute, by its own terms, is absolute and the proposed mark must be denied registration without more. But where less than the whole name has been appropriated, the right of registration will turn upon whether it appears that such partial appropriation is of such character and extent that, under the facts of the particular case, it is calculated to deceive or confuse the public to the injury of the corporation to which the name belongs.

[10] The fact, for example, that the articles upon which the mark is used are not of the same description as those put out by the corporation, is entitled to weight, since the probability of such confusion and injury in that situation obviously is more remote than where the articles are of like kind. The cases, naturally, present varying degrees of difficulty for the application of the rule. Primarily, the power and the duty rests with the Commissioner of Patents to determine the question in each case in the exercise of an instructed judgment upon a consideration of all the pertinent facts.

[11] In the present case, these facts are: The word "Simplex" is only a portion of the corporate name; its use by plaintiff is upon articles the like of which has never been manufactured or sold by the defendant corporation; it comprises the whole or a part of about sixty registrations by nearly as many different parties upon many kinds of merchandise; and it forms part of the names of other corporations in the country.[1] It is argued that the word in question is the salient feature in the name of the defendant corporation. But that, if conceded, does not settle the question. There may be, of course, instances where a single word in the corporate name has become so identified with the particular corporation that whenever used it designates to the mind of the public that particular corporation. But here it is not shown that, standing alone, the word "Simplex" has that effect; that it is any more calculated to denote to the public the defendant corporation than any of the other corporations in the names of which it is likewise embodied; or, indeed, that it signifies the appropriation of some corporate name though incapable of exact identification. In *Simplex Electric Heating Co.* v. *The Ramey Co.*, Decisions, Commr. Pat., 1916, pp. 74, 77, 79, 82–83, the Commissioner of Patents, admitting the same word to registry under like facts, said:

> It is a fact that the word "Simplex" has been in such wide and varied use in this country not only as a trade-mark but as part of a firm or corporation name that everybody has heretofore considered something more than the word "Simplex" necessary to identify a corporation. • • •
>
> • • • The word "Simplex" does not identify any corporation in particular, for the simple reason that it is equally the name of various corporations. In short, if one referred to "the company Simplex" without anything else, it would not be known to what he was referring. • • •
>
> The word involved in this case is one of a large class of words which have for a great many years been much used because of their peculiarly suggestive meaning. For other examples there are the words "Acme," "Anchor," "Champion," "Eureka," "Excelsior," "Ideal," "Jewel," "Liberty," "National," "Pride," "Premier," "Queen," "Royal," "Star," "Sunlight," "Triumph," "Victor." It would be a serious matter if the law actually permitted any one who chose to do so to organize a series of corporations with names containing these words, respectively, and thereupon virtually withdraw these words from public use as trade-marks and monopolize them by preventing their registry as such.

On appeal to the district court of appeals, the decision of the Commissioner was reversed upon the ground, in part, that the word "Simplex" was a distinctive part of the name of the corporation, *Simplex Electric Heating Co.* v. *Ramey Co.*, 243 O. G. 793; 46 App. D. C. 400, 406; and this was followed by the same court in the present case. It already is apparent that we agree with the Commissioner and not with the court.

[12] Under the facts, we are of opinion that it does not appear that the use of the word as a trade-mark upon the goods of the plaintiff will probably confuse or deceive the public to the injury of the defendant or of any other corporation. It follows that the refusal to allow the registration was erroneous.

Question No. 1, therefore, should be answered in the negative, and, since this will dispose of the case, categorical answers to the other questions are deemed not necessary.

It is so ordered.

[1] The Commissioner of Patents, in a footnote to *Simplex Electric Heating Co.* v. *The Ramey Co.*, Decisions, Commr. Pat., 1916, 74, 78, gives the following list of corporations, in the names of which the word "Simplex" occurs: Simplex Arms Mfg. Co., Denver; Simplex Window Co., San Francisco; Simplex Lubricating Co., Boston; Simplex Wire & Cable Co., Boston; Simplex Auto Specialty Co., Detroit; Simplex Concrete Piling Co., Cincinnati; Simplex Machine Co., Atlanta; Simplex Exercising Co., Philadelphia; Simplex Valve & Meter Co., Philadelphia; Simplex Floor Surfacing Co., Baltimore; Simplex Railway Appliance Co., St. Louis; Simplex Air Brake & Mfg. Co., Pittsburgh; Simplex Button Works, New York; Simplex Fire Extinguisher Co., New York; Simplex Golf Practice Machine Corporation, New York; Simplex Ink Co., New York; Simplex Letter Opener Co., New York; Simplex Typewriter Co., New York; Simplex Refrigerating Machine Co., Chicago; Simplex Sand Blast Manufacturing Co., Chicago.

Court of Appeals of the District of Columbia.

E. A. ZATARAIN & SONS, INC., *v.* THE OHIO SALT COMPANY.

No. 1,769. Decided December 7, 1925.

TRADE-MARKS—SAME DESCRIPTIVE PROPERTIES.

Salt belongs to that class known generally as condiments and is "merely one of a group including pepper, mustard, and spices, which are used for seasoning food."

APPEAL from Patent Office. Reversed.

Mr. E. T. Brandenburg and *Mr. J. F. Brandenburg* for E. A. Zatarain & Sons, Inc.

Mr. George W. Saywell for The Ohio Salt Co.

Before MARTIN, Chief Justice, ROBB, Justice, and SMITH, Judge U. S. Court of Customs Appeals.

ROBB, *J.*:

Appeal from a decision of an Assistant Commissioner of Patents in a trade-mark opposition proceeding in which the decision of the Examiner of Interferences was reversed and the opposition dismissed.

The opposer, appellant here, and its predecessor, long prior to the adoption in 1921 by the applicant, appellee here, of the trade-mark "Pappoose" for use on salt, had built up a very extensive business under the same mark in connection with the sale

of various condiments, including pepper sauce, table sauce, mustard, tomato catchup, cayenne pepper, whole and ground pepper, and the like.

The Examiner of Interferences found that salt belongs to that class known generally as condiments; that—

It is merely one of a group including pepper, mustard, and spices, which are used for seasoning food.

With that postulate, his decision of course was against the right of registration by the newcomer. The decisions of this court upon which he relied fully sustain his ruling. See *Walter Baker & Co.* v. *Harrison*, 138 O. G. 770; 32 App. D. C. 272; *Simplex Elec. H. Co.* v. *Gold Car H. & L. Co.*, 213 O. G. 1117; 43 App. D. C. 28; *Anglo-American I. L. Co.* v. *Gen. Elec. Co.*, 215 O. G. 325; 43 App. D. C. 385; *Fishbeck Soap Co.* v. *Kleeno Mfg. Co.*, 216 O. G. 663; 44 App. D. C. 6; *Canton Culvert & Silo Co.* v. *Consol. Car-Heat Co.*, 226 O. G. 1799; 44 App. D. C. 491; *Gutta-Percha & Rubber Mfg. Co.* v. *Ajax Mfg. Co.*, 259 O. G. 184; 48 App. D. C. 230; *Macy & Co.* v. *N. Y. Grocery Co.*, 276 O. G. 596; 50 App. D. C. 105; *Cal. Pkg. Corp.* v. *Price-Booker Mfg. Co.*, 308 O. G. 451; 52 App. D. C. 259, and *Cal. Pkg. Corp* v. *Halferty*, 320 O. G. 700; 54 App. D. C. 88; 295 Fed. 229.

The wide reputation established by the opposer furnishes the only apparent excuse for the adoption of this mark by the applicant. Decision reversed.

Reversed.

Disclaimers.

1,449,058.—*Thomas Robinson*, Babylon, N. Y. ROOFING ELEMENT. Patent dated March 20, 1923. Disclaimer filed January 6, 1926, by the assignee, *Anaconda Sales Company.*

Hereby disclaims from claims 1, 2, and 3 of the said Letters Patent roofing elements of the type described in the said claims in which the base is not made of materials selected to provide irregularities over its surface and in which elements the metallic coating applied to the surface of the base does not have a substantially uniform thickness, whereby the metal, in conforming to the irregularities on the surface of the base, similarly has an irregular outer surface, whose crests and depressions correspond to similar crests and depressions in the surface of the base beneath.

1,480,202.—*Charles L. Goodrum*, New York, N. Y. TELEPHONE SYSTEM. Patent dated January 8, 1924. Disclaimer filed January 5, 1926, by the patentee, the assignee, *Western Electric Company, Incorporated*, consenting.

Hereby enters this disclaimer to the said claim of said Letters Patent which is in the following words, to wit:

"15. In a telephone system, incoming lines, transfer circuits, outgoing lines, separately movable switching mechanisms for connecting said incoming lines to said transfer circuits, separately movable switching mechanisms individual to each of said transfer circuits for connecting them to said outgoing lines, magnets for said switching mechanisms, and means including bars for cooperating with said magnets to actuate a plurality of said switching mechanisms whereby said incoming lines may be extended through said transfer circuits to said outgoing lines, said bars also acting to maintain said mechanisms throughout the connection."

1,481,586.—*William A. Benson*, Chicago, Ill. WIRE CHIEF'S TEST CIRCUITS FOR TELEPHONE SYSTEMS. Patent dated January 22, 1924. Disclaimer filed January 7, 1926, by the patentee.

Hereby enters this disclaimer to claims 2 and 3 in said specification, which are in the following words, to wit:

"2. In a wire chief's testing system, two test circuits each terminating in a manual cord and plug and each being provided with keys and associated testing apparatus, and a cord reverse key in each test circuit whereby the two test circuits may be interchanged with respect to said plugs.

"3. In a wire chief's testing system, a primary test circuit terminating in a manual cord and plug, keys and a voltmeter associated with said test circuit for making voltmeter tests of subscribers' lines, a secondary test circuit also terminating in a manual cord and plug, keys and other devices associated with said secondary test circuit for making line tests not requiring a voltmeter, and a cord reverse key in each test circuit whereby the two test circuits may be interchanged with respect to said plugs."

1,484,771.—*Charles L. Goodrum*, New York, N. Y. TELEPHONE SYSTEM. Patent dated February 26, 1924. Disclaimer filed January 5, 1926, by the patentee, the assignee, *Western Electric Company, Incorporated*, consenting.

Hereby enters this disclaimer to the said claims of said Letters Patent which are in the following words, to wit:

"11. In a telephone system, incoming lines, transfer circuits, an outgoing line, switching mechanisms to connect said outgoing line to said incoming lines through said transfer circuits, an actuating bar for rendering said switching mechanisms operative, and a magnet individual to each of said switching mechanisms to actuate said switching mechanisms when made operative by said actuating bar.

"14. In a telephone system, incoming lines, transfer circuits, outgoing lines, separately movable switching mechanisms for connecting said incoming lines to said transfer circuits, separately movable switching mechanisms for connecting said transfer circuits to said outgoing lines, magnets for said switching mechanisms, and bars for cooperating with said magnets to actuate a plurality of said switching mechanisms whereby said incoming lines may be extended through said transfer circuits to said outgoing lines.

"15. In a telephone system, incoming lines, transfer circuits, outgoing lines, separately movable switching mechanisms for connecting said incoming lines to said transfer circuits, separately movable switching mechanisms for connecting said transfer circuits to said outgoing lines, magnets for said switching mechanisms, and bars cooperating with said magnets to simultaneously actuate a plurality of said switching mechanisms whereby said incoming lines may be extended through said transfer circuits to said outgoing lines.

"16. In a telephone system, incoming lines, transfer circuits, outgoing lines, separately movable switching mechanisms for connecting said incoming lines to said transfer circuits, separately movable switching mechanisms for connecting said transfer circuits to said outgoing lines, magnets for said switching mechanisms, and bars cooperating with said magnets to selectively actuate a plurality of said switching mechanisms whereby said incoming lines may be extended through said transfer circuits to said outgoing lines.

"17. In a telephone system, incoming lines, transfer circuits, outgoing lines, separately operable switching mechanisms for connecting said incoming lines to said transfer circuits, separately operable switching mechanisms for connecting said transfer circuits to said outgoing lines, incoming line magnets each having control over

a plurality of said first mentioned switching mechanisms, outgoing line magnets each having control over a plurality of said latter switching mechanisms, bars cooperating with said magnets whereby a single one of said mechanisms controlled by each of said magnets may be actuated in conjunction with such of said magnets as are actuated, and means for simultaneously operating an incoming line magnet and an outgoing line magnet to connect an incoming line through a transfer circuit to an outgoing line.

"18. In a telephone system, incoming lines, transfer circuits, outgoing lines, separately operable switching mechanisms for connecting said incoming lines through said transfer circuits to said outgoing lines, incoming line magnets, outgoing line magnets, actuating bars operated by said magnets, magnets for rendering said bars effective to actuate switching mechanisms, and means for simultaneously operating an incoming line magnet and an outgoing line magnet to actuate said switching mechanisms to connect the incoming line through a transfer circuit to an outgoing line.

"20. In a telephone system, incoming lines, transfer circuits, outgoing lines, separately movable switching mechanisms for connecting said incoming lines to said transfer circuits, separately movable switching mechanisms individual to each of said transfer circuits for connecting them to said outgoing lines, magnets for said switching mechanisms, and bars for cooperating with said magnets to actuate a plurality of said switching mechanisms whereby coexisting connections may be extended from said incoming lines through said transfer circuits to said outgoing lines.

"21. In a telephone system, incoming lines, transfer circuits, outgoing lines, separately movable switching mechanisms for connecting said incoming lines to said transfer circuits, separately movable switching mechanisms individual to each of said transfer circuits for connecting them to said outgoing lines, magnets for said switching mechanisms, and bars cooperating with said magnets to simultaneously actuate a plurality of said switching mechanisms whereby coexisting connections may be extended from said incoming lines through said transfer circuits to said outgoing lines.

"22. In a telephone system, incoming lines, transfer circuits, outgoing lines, separately movable switching mechanisms for connecting said incoming lines to said transfer circuits, separately movable switching mechanisms individual to each of said transfer circuits for connecting them to said outgoing lines, magnets for said switching mechanisms, and bars cooperating with said magnets to selectively actuate a plurality of said switching mechanisms whereby coexisting connections may be extended from said incoming lines through said transfer circuits to said outgoing lines.

"23. In a telephone system, incoming lines, transfer circuits, an outgoing line having multiple contacts corresponding to said transfer circuits, separately movable switching mechanisms, incoming line magnets, an outgoing line magnet, a single operating magnet for each of said transfer circuits, and means to operate an incoming line magnet, a transfer circuit magnet and an outgoing line magnet to actuate a plurality of said switching mechanisms to extend an incoming line through a transfer circuit to said outgoing line.

"25. In a telephone system, incoming lines, transfer circuits, outgoing lines, separately movable switching mechanisms for connecting said incoming lines to said transfer circuits, separately movable switching mechanisms individual to said transfer circuits for connecting them to said outgoing lines, magnets for said switching mechanisms and bars for cooperating with said magnets to actuate a plurality of said switching mechanisms whereby said incoming lines may be extended through said transfer circuits to said outgoing lines.

"26. In a telephone system, incoming lines, transfer circuits, outgoing lines, separately movable switching mechanisms for connecting said incoming lines to said transfer circuits, separately movable switching mechanisms individual to said transfer circuits for connecting them to said outgoing lines, and a plurality of bars for controlling and operating said switching mechanisms, certain of said bars maintaining said switching mechanisms in operation independently of mechanical connection to said other bars which assisted in the operation of said mechanisms.

"27. In a telephone system, incoming lines, transfer circuits, outgoing lines, separately movable switching mechanisms for connecting said incoming lines to said transfer circuits, separately movable switching mechanisms individual to said transfer circuits for connecting them to said outgoing lines, bars for preparing said switching mechanisms for operation, other bars cooperating mechanically with said first bars for causing and maintaining the operation of said prepared switching mechanisms, and means for returning said first bars to a normal position independent of any mechanical connection with said operated switching mechanisms.

"28. In a telephone system, incoming lines, transfer circuits, outgoing lines having multiple contacts corresponding to said transfer circuits, separately movable switching mechanisms, incoming line bars, outgoing line bars, and bars cooperating with said line bars to actuate and maintain actuated said switching mechanisms to extend said incoming lines through said transfer circuits to said outgoing lines, said switching mechanisms being maintained in operated condition independently of said line bars.

"29. In a telephone system, incoming lines, transfer circuits, outgoing lines having multiple contacts corresponding to said transfer circuits, separately movable switching mechanisms, incoming line bars, outgoing line bars, and bars cooperating with said line bars to actuate and maintain in actuated condition said switching mechanisms to extend said incoming lines through said transfer circuits to said outgoing lines, said switching mechanisms being maintained in operated condition independently of any mechanical connection with said line bars."

1,504,295.—*Samuel B. Williams, jr.*, Brooklyn, N. Y. TELEPHONE-EXCHANGE SYSTEM. Patent dated August 12, 1924. Disclaimer filed January 5, 1926, by the patentee, the assignee, *Western Electric Company, Incorporated*, consenting.

Hereby enters this disclaimer to the said claim of said Letters Patent which is in the following words, to wit:

"22. The combination in a switching system of incoming lines, link circuits and outgoing lines, with means for establishing line-link-line connections comprising fixed conducting elements constituting said link circuits, a set of incoming line contacts, a set of outgoing line contacts and means for simultaneously moving said sets of contacts to engage said fixed conducting elements."

1,506,899.—*Charles L. Goodrum*, New York, N. Y. TELEPHONE SYSTEM. Patent dated September 2, 1924. Disclaimer filed January 5, 1926, by the patentee, the assignee, *Western Electric Company, Incorporated*, consenting.

Hereby enters this disclaimer to the said claims of said Letters Patent which are in the following words, to wit:

"1. In a telephone system, telephone lines, a line relay, a line bar, and a combined line bar magnet and cut-off relay associated with each line, trunk lines for extending said lines, a trunk bar, a trunk bar magnet and an auxiliary relay associated with each trunk, an allotter circuit for said trunks independent of said line relays and said combined line bar magnets and cut-off relays for placing idle trunks in condition for seizure by said lines through the agency of said line and trunk bars, and means for directly controlling said allotter circuit over said line and trunk bars.

"2. In a telephone system, a cross bar switch comprising a plurality of line bar magnets, a plurality of trunk bar magnets, a relay associated with each of said trunk bar magnets, means controlled by said relays for holding one of said trunk bar magnets energized, means for energizing one of said line bar magnets, means controlled by said energized line bar magnet and said energized trunk bar magnet for energizing the relay associated with said trunk bar magnet.

"3. In a telephone system, a cross bar switch comprising a plurality of line bar magnets, a plurality of trunk bar magnets, a relay associated with each of said trunk bar magnets, means controlled by said relays for holding a single one of said trunk bar magnets energized, and means controlled by said line bar magnets for energizing said relay associated with said energized trunk bar magnet."

1,548,548.—*Charles H. Patten*, Providence, R. I. WRITING INSTRUMENT. Patent dated August 4, 1925. Disclaimer filed December 8, 1925, by the patentee, Charles H. Patten, assignee, *Rex Manufacturing Company*, consenting.

Hereby enters this disclaimer to the claims in said specification which are in the following words, to wit:

"1. A writing instrument having a barrel portion, a threaded bearing guide plug screwed into one end of said barrel, said plug having a shoulder and a collar portion extending above said shoulder, a spring clip having a resilient arm lying along said barrel portion and having a laterally extending end with an opening therein embracing said collar, and means being provided for securing said clip end to said shoulder.

"4. A writing instrument having a barrel portion, a threaded bearing guide plug screwed into one end of said barrel, a spring clip having a resilient arm lying along said barrel portion and having a laterally extending end immovably secured to the plug to prevent a relative rotation of said clip and plug.

"5. A writing instrument having a barrel portion, a threaded bearing guide plug screwed into one end of said barrel, a spring clip having a resilient arm lying along said barrel portion and having a laterally extending end with an opening therein receiving a portion of said plug, and means for securing said clip end to said plug."

TRADE-MARKS

OFFICIAL GAZETTE, JANUARY 26, 1926.

[VOL. 342. No. 4.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 152,937. (CLASS 50. MERCHANDISE NOT OTHERWISE CLASSIFIED.) THE STONE STRAW COMPANY, Washington, D. C. Filed Sept. 14, 1921.

Stone's PAPER JULEP Straws

No claim is made to the words "Stone's Paper Straws" apart from the mark shown in the drawing; but applicant does not by this disclaimer surrender its common-law rights to this phrase.

Particular description of goods.—Paper Straws.

Claims use since Jan. 1, 1910.

Ser. No. 181,587. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) COMPLETE MUSIC STORES, Niles, Mich., and Chicago, Ill. Filed June 6, 1923.

The pennant bearing the word "Complete" is lined to indicate blue. The staff note is lined to indicate orange.

Particular description of goods.—Musical Instruments and Supplies, Particularly, Pianos, Organs, Talking Machines, Player Pianos, Guitars, Banjos, Ukuleles, Mandolins, Harps, Music Boxes, Cornets, Drums, Fifes, Flutes, Flageolets, Bassoons, Horns, Piccolos, Zithers, Violins, Xyliphones, Violoncellos, Lutes, Autoharps, Concertinos, Accordions, Phonograph Records, Perforated Music Rolls for Automatic Player Pianos and the Like; Tuning Tools, and Stringed-Instrument Strings, Bridges, and Keys.

Claims use since about Nov. 15, 1921.

Ser. No. 186,737. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) THE AUTROLA COMPANY, Tucson, Ariz., and Los Angeles, Calif. Filed Oct. 9, 1923.

Autrola

Particular description of goods.—Talking Machines, Automatic Multiple-Record Phonographs.

Claims use since July 10, 1918.

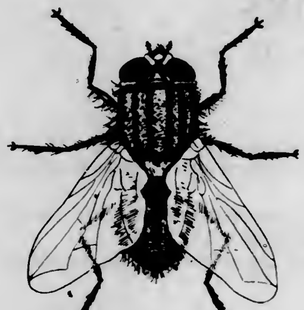
Ser. No. 189,108. (CLASS 29. BROOMS, BRUSHES, AND DUSTERS.) MAX GRUMBACHER, New York, N. Y. Filed Dec. 1, 1923.

Banner Fitch

No claim is made to the registration of the word "Fitch" apart from its association as shown in drawing.

Particular description of goods.—Artists' Brushes.

Claims use since Oct. 1, 1923.



Ser. No. 192,965. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE DIRIGOLD CORPORATION, Minneapolis, Minn. Filed Feb. 28, 1924.

Dirigold

Particular description of goods.—Spoons, Knives, Forks, Nutcrackers, Sugar Tongs, and Corkscrews Made of Non-precious Metal.

Claims use since Jan. 10, 1924.

Ser. No. 201,067. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ROY L. WORTHAM, Hammond, Ill. Filed Aug. 6, 1924.

Wonderful!

Particular description of goods.—Insecticide.
Claims use since Mar. 1, 1924.

Ser. No. 202,075. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) BOND PICKLE COMPANY, Oconto, Wis. Filed Sept. 24, 1924.

BOND BRAND

No claim is made to the word "Brand" apart from the mark shown in the drawing.
Particular description of goods.—Sweet Pickles, Sour Pickles, Mixed Pickles, Dill Pickles, and Pickle Relish.
Claims use since October, 1916.

Ser. No. 204,578. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE WOOLSON SPICE CO., Toledo, Ohio. Filed Oct. 29, 1924.

OLD HOMESTEAD

Particular description of goods.—Coffee.
Claims use since before 1907.

Ser. No. 205,099. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES.) SHURWYN TIRE & RUBBER CO., St. Louis, Mo. Filed Nov. 10, 1924.

SHURWYN

Particular description of goods.—Rubber Automobile Tires, Rubber Inner Tubes, and Rubber Patch Material.
Claims use since about Apr. 1, 1924.

Ser. No. 205,566. (CLASS 39. CLOTHING.) THE STEIN-BLOCH CO., Rochester, N. Y. Filed Nov. 19, 1924.

Capri Blues

No claim is made to exclusive use of the word "Blues" apart from the mark shown.
Particular description of goods.—Men's Overcoats and Sack Coats.
Claims use since Oct. 1, 1924.

Ser. No. 205,792. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) SQUIRE DINGEE COMPANY, Chicago, Ill. Filed Nov. 24, 1924.

BANQUET

Particular description of goods.—Jellies, Jams, Fruit Butters, Fruit and Berry Preserves, and Pickles.
Claims use since 1887 on jellies, jams, fruit butters, and preserves; since 1915 on pickles.

Ser. No. 206,177. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) MANITOWOC PRODUCTS COMPANY, Manitowoc, Wis. Filed Dec. 3, 1924.

BANQUET

Particular description of goods.—Cheese and Koch Kase (Cooked Cheese).
Claims use since Nov. 1, 1918.

Ser. No. 206,246. (CLASS 12. CONSTRUCTION MATERIALS.) S. E. LYONS LUMBER COMPANY, Shreveport, La. Filed Dec. 4, 1924.

SELCO

Particular description of goods.—Lumber.
Claims use since about Apr. 1, 1923.

Ser. No. 207,262. (CLASS 32. FURNITURE AND UPHOLSTERY.) ROLL-A-WAY BED CORPORATION, Chicago, Ill. Filed Dec. 26, 1924.

Roll-A-Way

Particular description of goods.—Household Couches, Beds, Mattresses, and Bed Springs.
Claims use since May 4, 1923.

Ser. No. 209,149. (CLASS 32. FURNITURE AND UPHOLSTERY.) UNIVERSAL WILLOW AND REED WARE COMPANY INCORPORATED, Long Island City, N. Y. Filed Feb. 5, 1925.

UNIVERSAL WILLOW & REED WARE CO. LONG ISLAND CITY N. Y.

No claim is made to the exclusive use of the words "Willow and Reed Ware" and "Long Island City, N. Y." apart from the mark as shown in the drawing.
Particular description of goods.—Willow, Reed, Rattan, Raffia, and Spool Fiber, Settees, Couches, Benches, Chaise Longues, Chairs, Rockers, Tables, Ferneries, Bird Cages, Desks, Tea Wagons, Flower Stands, Radiator Covers, Hatracks, Screens, Bookcases, Telephone Stands, Telephone Stools, Smoking Stands, and Day Beds.
Claims use since Nov. 17, 1919.

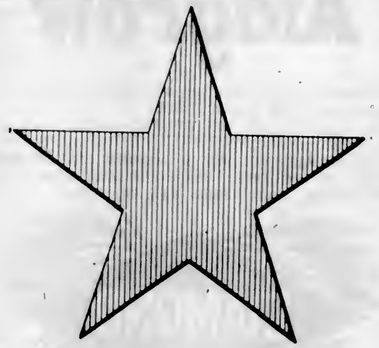
Ser. No. 210,329. (CLASS 37. PAPER AND STATIONERY.) UNITED STATES ENVELOPE COMPANY, doing business as P. P. Kellogg & Co., Springfield, Mass. Filed Feb. 28, 1925.

KELKO

Particular description of goods.—Writing and Printing Papers, Cards, and Envelopes.
Claims use since Jan. 1, 1924.

Ser. No. 210,330. (CLASS 37. PAPER AND STATIONERY.) UNITED STATES ENVELOPE COMPANY, doing business as P. P. Kellogg & Co., Springfield, Mass. Filed Feb. 28, 1925.

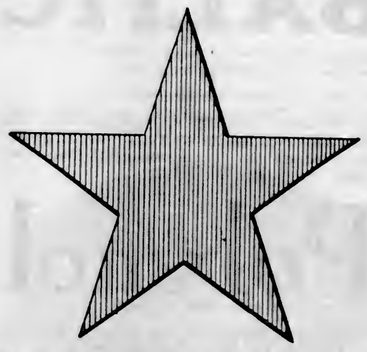
MARQUESS



Particular description of goods.—Writing and Printing Papers, Cards, and Envelopes.
Claims use since Sept. 1, 1923.

Ser. No. 210,331. (CLASS 37. PAPER AND STATIONERY.) UNITED STATES ENVELOPE COMPANY, doing business as P. P. Kellogg & Co., Springfield, Mass. Filed Feb. 28, 1925.

PAPILLON



Particular description of goods.—Writing and Printing Papers, Cards, and Envelopes.
Claims use since Apr. 1, 1924.

Ser. No. 210,491. (CLASS 45. BEVERAGES, NONALCOHOLIC.) R. H. MACY & CO., INC., New York, N. Y. Filed Mar. 3, 1925.

The trade mark is lined for red.
Particular description of goods.—Lemon Soda, Soda Water, Sarsaparilla, Ginger Ale, Root Beer, and Birch Beer.
Claims use since June, 1924, on birch beer, on root beer since 1908; and since about 1897 on lemon soda, soda water, sarsaparilla, and ginger ale.

Ser. No. 210,493. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) R. H. MACY & CO., INC., New York, N. Y. Filed Mar. 3, 1925.

The drawing is lined for red color.
Particular description of goods.—Perfume Extracts, Toilet Water, Triple Waters, Cologne, Bay Rum, Perfumed Salts, Sachet Powders, Ammonia, Denatured and Medicated Alcohols, Sea Salt and Similar Articles Prepared for Bathing Purposes, Complexion and Tooth Powders, and Face Lotions.
Claims use since May, 1892.

Ser. No. 210,848. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE LAKESIDE BISCUIT CO., Toledo, Ohio. Filed Mar. 11, 1925.

GOLD SEAL

Particular description of goods.—Crackers, Cakes, Biscuits, and Sugar Wafers.
Claims use since Sept. 1, 1924.

Ser. No. 212,280. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) MOSELEY MANUFACTURING COMPANY, Louisville, Ky. Filed Apr. 6, 1925.

Aidgrow

Particular description of goods.—Mineral Feeds.
Claims use since Mar. 1, 1925.

Ser. No. 212,642. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) RUSSELL-MILLER MILLING CO., Minneapolis, Minn. Filed Apr. 13, 1925.

Particular description of goods.—Wheat Flour.
Claims use since about Jan. 1, 1909.

Ser. No. 212,643. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) RUSSELL-MILLER MILLING CO., Minneapolis, Minn. Filed Apr. 13, 1925.

BALTIC

Particular description of goods.—Wheat Flour.
Claims use since about Sept. 15, 1891.

Ser. No. 214,621. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) GEORG SCHICHT A. G., Aussig-on-the-Elbe, Czechoslovakia. Filed May 20, 1925.

Polynol

Particular description of goods.—Toilet Preparations—Namely, Pomades for the Beard, Moustache, and Hair; Borax, Brilliantine, Disinfectants, Glycerin, Scalp Washes, Hair Washes, Dentifrices, Cold Creams, Lotions and Salves for the Skin, Perfumes, Toilet Powders, Tooth Paste, and Tooth Powder; Chemical and Chemical-Technical Products—Namely, Bleaching and Finishing Fluids for Textiles, Soda, and Benzine, and Dyestuffs and Tints for Textiles.
Claims use since 1923.

Ser. No. 214,623. (CLASS 15. OILS AND GREASES.) GEORG SCHICHT A. G., Aussig-on-the-Elbe, Czechoslovakia. Filed May 20, 1925.

Polynol

Particular description of goods.—Lubricating and Rust-Protecting Oils and Greases, Illuminating Oils, Gasoline, and Paraffin.
Claims use since 1923.

Ser. No. 214,983. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) VAN ANTWERP'S DRUG CORPORATION, INC., Mobile, Ala. Filed May 27, 1925.

HEPA-PEANUT BAR

No claim is made to "Peanut Bar" apart from the mark shown in the drawing.
Particular description of goods.—Candy.
Claims use since Apr. 26, 1924.

Ser. No. 215,566. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) AUGUST GORETZ & CO., INC., Newark, N. J. Filed June 10, 1925.

FYNUR

Particular description of goods.—Vernier Controls for Radio Instruments, Telephone Jacks, Jack Switches, and Cord Tip Jacks.
Claims use since about May 20, 1925.

Ser. No. 216,120. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) Mrs. POTTS SANDERS, doing business as N. L. Payne and Lady Betty Mayonnaise Products, Texarkana, Tex. Filed June 20, 1925.

Lady Betty

No claim is made to the word "Betty" apart from the mark shown in the drawing.
Particular description of goods.—Mayonnaise and Thousand Island Dressing.
Claims use since Apr. 10, 1925.

Ser. No. 216,285. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) PASCO GRAIN & MILLING CO., Pasco, Wash. Filed June 23, 1925.

No claim is made to the word "White" apart from the mark shown in the drawing.
Particular description of goods.—Cake Flour.
Claims use since May, 1924.

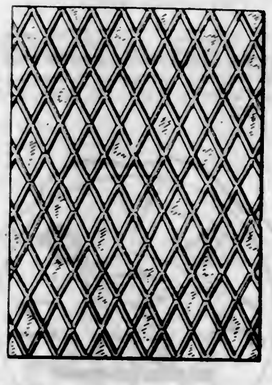
Ser. No. 216,297. (CLASS 11. INKS AND INKING MATERIALS.) H. M. STORMS COMPANY, New York and Brooklyn, N. Y. Filed June 22, 1925.

"Whitedge Efficiency"

The word "Efficiency" is disclaimed apart from the mark shown on the drawing.
Particular description of goods.—Carbon Paper.
Claims use since May 17, 1918.

Ser. No. 216,314. (CLASS 32. FURNITURE AND UPHOLSTERY.) JOSEPHINE A. BATES, Springfield, Mass. Filed June 24, 1925.

HOB NOB



Particular description of goods.—Furnishings—Namely, Ornamental Novelties for Household Use Particularly Useful as Curtain Tie-Backs and Picture or Mirror Hangers, Made of Wool, Base Metal, Glass, or Other Materials.
Claims use since June 12, 1925.

Ser. No. 216,319. (CLASS 39. CLOTHING.) BURNHAM-MUNGER-ROOT DRY GOODS COMPANY, Kansas City, Mo. Filed June 24, 1925.

GOOD MORNING
IT'S GOING TO BE A
COMFORTABLE DAY
TRU-FIT

Particular description of goods.—Athletic Underwear, Undershirts; Dress, Work, and Negligee Shirts; Union Suits, Shirts, and Drawers Made of All Fabrics for Men, Women, and Children.
Claims use since May 1, 1924.

Ser. No. 216,341. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) HOOD RUBBER COMPANY, Watertown, Mass. Filed June 24, 1925.

Particular description of goods.—Battery Boxes of Plastic Material and Hard Rubber.
Claims use since Mar. 10, 1925.

Ser. No. 216,687. (CLASS 38. PRINTS AND PUBLICATIONS.) THE MUTUAL SYSTEM COMPANY, Bridgeport, Conn. Filed June 30, 1925.

THE MUTUAL SYSTEM

The words "The" and "System" appearing in the drawing are disclaimed apart from the mark shown.
Particular description of goods.—Saving Certificates.
Claims use since Apr. 1, 1925.

Ser. No. 216,794. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) PACIFIC COAST BISCUIT COMPANY, Seattle, Wash. Filed July 2, 1925.

CHEESE PUFFS

Particular description of goods.—Crackers.
Claims use since Nov. 15, 1924.

Ser. No. 217,075. (CLASS 7. CORDAGE.) E. H. EDWARDS COMPANY, San Francisco, Calif. Filed July 9, 1925.

SILVER STRAND

Particular description of goods.—Wire Rope.
Claims use since Apr. 11, 1923.

Ser. No. 217,985. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) NICHOLAS P. DAMIANAKES, doing business as California Peanut Co., Oakland, Calif. Filed July 28, 1925.

Particular description of goods.—Sugared and Salted Almonds.
Claims use since Jan. 1, 1925.

Ser. No. 218,040. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS, NOT INCLUDING ELECTRICAL APPARATUS.) MATTHEW R. BIRK, New York, N. Y. Filed July 29, 1925.

"ARISTO"

Particular description of goods.—Artificial Candles and Lighting Fixtures Other Than Electrical.
Claims use since June, 1925.

Ser. No. 218,125. (CLASS 39. CLOTHING.) HYMAN & GOLDSTON, INC., New York, N. Y. Filed July 30, 1925.

Phyllis Jane

Particular description of goods.—Ladies' and Misses' Outer Garments—Namely, Dresses and Coats.
Claims use since July 1, 1925.

Ser. No. 218,128. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) LAMONT, CORLISS & COMPANY, New York, N. Y. Filed July 30, 1925.

DELECTA

Particular description of goods.—Chocolate Coatings.
Claims use since some time in November, 1922.

Ser. No. 218,553. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) HAWAIIAN PINEAPPLE PRODUCTS CO., LTD., San Francisco, Calif., and Iwilei, Hawaii. Filed Aug. 8, 1925.

SILVER SWORD

Particular description of goods.—Canned Pineapple, Jam, Marmalade, and Jelly.
Claims use since June 9, 1925.

Ser. No. 218,579. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) SMITH, KLINE & FRENCH COMPANY, Philadelphia, Pa. Filed Aug. 8, 1925. Under ten-year proviso.

A-CORN SALVE

Particular description of goods.—Remedy for the Treatment and Removal of Corns and Bunions.
Claims use since on or about Nov. 1, 1884.

Ser. No. 218,848. (CLASS 39. CLOTHING.) FRANKLIN SWEATER MILLS, Philadelphia, Pa. Filed Aug. 14, 1925.

WOOLASTIK

Particular description of goods.—Bathing Suits, Trunks, and Shirts and Sweater Coats and Vests.
Claims use since Aug. 1, 1925.

Ser. No. 219,052. (CLASS 39. CLOTHING.) GEORGE J. WINTER, doing business as Super-Foot-Form Cushion Shoe Company, Buffalo, N. Y. Filed Aug. 18, 1925.

No claim is made to the words "Super Foot Form, Cushion Shoe" apart from the trade-mark as shown in the drawing.
Particular description of goods.—Cushion Shoes Constructed of Leather, Rubber, or Fabric or of Combinations of Those Materials.
Claims use since Aug. 13, 1924.

Ser. No. 219,225. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) BÜRKI & CIE., Berne, Switzerland. Filed Aug. 22, 1925.

No claim is made to the exclusive use of the words, numerals, and abbreviations "Bürki, Gruyère Extra Fin, Net Weight 8 oz., Made in Switzerland, Queso De Suiza, 6 Portions, Brand, Swiss Cheese, Bürki & Cie., Berne-Suisse" apart from the mark as shown in the drawing.

Claims use since March, 1924.

Ser. No. 219,388. (CLASS 39. CLOTHING.) FRANKLIN SWEATER MILLS, Philadelphia, Pa. Filed Aug. 26, 1925.

WOOLASTIK

Particular description of goods.—Bathing Suits, Trunks, and Shirts and Sweater Coats and Vests.
Claims use since Aug. 19, 1925.

Ser. No. 219,431. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) WALTER J. HIRSCH CO., doing business as Onliway Corporation, Chicago, Ill. Filed Aug. 27, 1925.

VIRGINIA BELLE

No claim is made to the word "Virginia" apart from the mark shown in the drawing.
Particular description of goods.—Peanut Butter.
Claims use since Mar. 15, 1925.

Ser. No. 219,483. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) JOSEPHINE POMEROY HERRICK, Cleveland, Ohio. Filed Aug. 28, 1925.

POM.

Trade-mark consists of the word "Pom."
Particular description of goods.—Cooking Tongs.
Claims use since Aug. 5, 1925.

Ser. No. 219,805. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES). CHEMICAL TREATMENT COMPANY, INC., New York, N. Y. Filed Sept. 4, 1925.

CRODON

Particular description of goods.—Electric Wire, Electric Contact Pieces, Core and Armature Parts, Spheres for High-Tension Electrical Apparatus, Loop Tubes for Radio Apparatus, Electric Automobile Lamps, Storage-Battery Terminal Parts, Contacts for Radiomachines, Miscellaneous Parts of Various Electrical Apparatus, Electric Immersion Heaters, All Coated with Metal.
Claims use since Apr. 29, 1925.

Ser. No. 219,963. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) GREAT LAKES VARNISH WORKS, INC., Chicago, Ill. Filed Sept. 8, 1925.

Snowdrift

Particular description of goods.—Paint Enamel.
Claims use since Apr. 7, 1925.

Ser. No. 220,021. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) NATHAN GOLDMAN, doing business as Tectron Radio Co., New York, N. Y. Filed Sept. 9, 1925.

No claim is made to the word "Tubes" apart from the mark shown in the drawing.
Particular description of goods.—Vacuum Tubes for Radio Receiving Apparatus.
Claims use since February, 1923.

Ser. No. 220,156. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) TENNESSEE COAL, IRON & RAILROAD COMPANY, Birmingham, Ala. Filed Sept. 11, 1925.

TENNESSEE

No claim is made to the registration of the word "Tennessee" apart from the mark shown in the drawing.
Particular description of goods.—Steel and Iron Sheets.
Claims use since June 10, 1912.

Ser. No. 220,167. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) AMERICAN BOSCH MAGNETO CORPORATION, Springfield, Mass. Filed Sept. 12, 1925.

Particular description of goods.—Ignition and Starting Apparatus for Internal-Combustion Engines and Electric-Lighting Systems for Moving Vehicles and Radio Apparatus, Consisting of Magneto-Electric Generators, Spark Plugs, Mechanical Interrupters and Distributors for Ignition Systems, Timer Distributors for Battery Ignition Systems, Electric Condensers, Ignition Coils, Electric Motors, Electric Generators, Electric Switches, Headlights, Incandescent Lamps, Cable Conduits, Insulated Cables, Cable Terminals, Radio Receiving Sets, Loud Speakers, Alternating-Current Rectifiers, Electrical Filters, Radiotransformers, Radiocoils, Radiocondensers, Audio-Frequency Amplifiers, and Parts Thereof.
Claims use since July 1, 1925.

Ser. No. 220,274. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) LEE D. CROUCH, Oneonta, N. Y. Filed Sept. 16, 1925.

CLAR-A-DYNE

Particular description of goods.—Radio Receiving Sets.
Claims use since October, 1922.

Ser. No. 220,281. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) JANE ALLEN, Grasmere, Staten Island, N. Y., assignor to Ferrier T. Martin, John G. Davis, and Mary Dean Davis, all of New York, N. Y. Filed Sept. 15, 1925.

Jane Allen Products

The word "Products" appearing on the trade-mark is disclaimed. The trade-mark consists of the fanciful name "Jane Allen Products" in the handwriting of Thomas Percy Ratcliff, a member of the firm.
Particular description of goods.—Marmalades and Jam Containing Nuts.
Claims use since October, 1924.

Ser. No. 220,330. (CLASS 38. PRINTS AND PUBLICATIONS.) THE VIKING PRESS, INC., New York, N. Y. Filed Sept. 16, 1925.

VIKING PRESS

Applicant disclaims exclusive right to the use of the word "Press" except as same is used in connection with the other features of the mark shown on the drawing.
Particular description of goods.—Completely-Printed Books.
Claims use since Aug. 15, 1925.

Ser. No. 220,337. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) THE ENGINEERING PRODUCTS CORPORATION, INC., New York, N. Y. Filed Sept. 17, 1925.

Epco

Particular description of goods.—Insulating Materials, Composite Materials, and Compounds of Fluid Elements Resembling Paint for Electrical Insulation.
Claims use since on or about Jan. 1, 1925.

Ser. No. 220,532. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) CHARLES HEWITT & SONS CO., Des Moines, Iowa. Filed Sept. 21, 1925.

WAN-ETA

Particular description of goods.—Canned Vegetables—Namely, Lima Beans, String and Wax Beans, Pork and Beans, Peas, Kidney Beans, Sauerkraut, Spinach, Tomatoes, Condensed Tomatoes, Asparagus, Beets, Carrots, Corn, Hominy, Pumpkins, Sweet Potatoes, Onions, Pimientos, Succotash; Canned Fruits—Namely, Apricots, Blackberries, Cherries, Grapes, Loganberries, Pears, Peaches, Plums, Pineapple, Black Raspberries, Red Raspberries, Strawberries,; Fruit Jams—Namely, Apricot, Blueberry, Blackberry, Cherry, Gooseberry, Loganberry, Pear, Plum, Pineapple, Raspberry, Strawberry, Quince, Pineapple Apricot, Raspberry Strawberry; Fruit Jellies—Namely, Currant, Grape, Quince ,Raspberry, Strawberry, Apple, Plum, Crab Apple; Tomato Soup; Canned Sea Food—Namely, Lobsters, Salmon, Shrimp, Tunny; Sorghum Sirup, Salad Dressing, Chili Sauce, Catchup, Peanut Butter, Nut Meats in Their Natural State, Vinegar, Plum Pudding, Apple Butter, Olives, Pickles, Chile Con Carne, Canned Fruits for Salad, Mustard.
Claims use since Oct. 15, 1915.

Ser. No. 220,701. (CLASS 50. MERCHANDISE NOT OTHERWISE CLASSIFIED.) CHARTERS MANUFACTURING CO., Santa Cruz, Calif. Filed Sept. 24, 1925.

Charters
the incubator that remembers even if you forget

Particular description of goods.—Incubators and Brooders.
Claims use since Dec. 13, 1918.

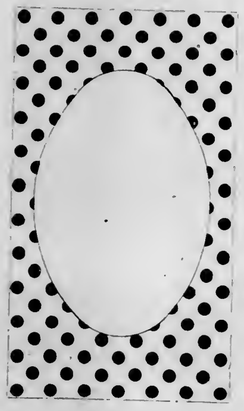
Ser. No. 220,730. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) KREUTER-FAASEN CO., Grand Rapids, Mich. Filed Sept. 24, 1925.

KRAFTSMAN

SHUMAN PROCESS

Applicant disclaims exclusive use of the words "Schuman Process" apart from the mark as shown.
Particular description of goods.—Varnish and Paint Enamel Products.
Claims use since July 20, 1925.

Ser. No. 220,746. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) OLIN R. TAYLOR, doing business as Taylor Products Co., Phoenix, Ariz. Filed Sept. 24, 1925.



TAYLOR'S MAYONNAISE

No claim is made to the word "Mayonnaise" or "Taylor's" apart from the mark shown in the drawing. The background of the drawing is blue.

Particular description of goods.—Mayonnaise.

Claims use since Jan. 1, 1925.

Ser. No. 220,830. (CLASS 45. BEVERAGES, NON-ALCOHOLIC.) AMERICAN STORES COMPANY, Philadelphia, Pa. Filed Sept. 26, 1925.

Particular description of goods.—Ginger Ale, Sarsaparilla, Root Beer, and Grape Juice.

Claims use since Mar. 20, 1919.

Ser. No. 220,934. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) AMERICAN TRANSFORMER COMPANY, Newark, N. J. Filed Sept. 29, 1925.

AMERCHOKE

The word "Choke" is disclaimed apart from the mark shown in the drawing.

Particular description of goods.—Choke Coil or Impedance in Filter Circuits of Electrical Apparatus.

Claims use since on or about Aug. 1, 1925.

Ser. No. 221,102. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE FISHBACK COMPANY, Indianapolis, Ind. Filed Oct. 2, 1925.

3/F

Particular description of goods.—Coffee, Tea, Mayonnaise, Olives, Canned Cherries, Vinegar, Mustard; Ground Spices, including Black Pepper, White Pepper, Red Pepper, Cayenne, Paprika, Mustard, Ginger, Ground Sage, Cinnamon, Cloves, Allspice, Mace, Nutmeg, Chili Powder, Curry Powder, Tumeric; and Whole Spices, including Cloves, Allspice, Cinnamon Fagots, Mixed Spice (Pickling Spice), Celery Seed, Yellow-Mustard Seed, Brown-Mustard Seed, White-Mustard Seed, Rubbed Sage, Whole Nutmeg, Caraway Seed, and Black Pepper.

Ser. No. 222,241. (CLASS 50. MERCHANDISE NOT OTHERWISE CLASSIFIED.) HERMETITE CORPORATION, New York, N. Y. Filed Oct. 24, 1925.

HERMETITE

Trade-mark consists of the word "Hermetite".

Particular description of goods.—Films Consisting of a Moisture and Air Proof Composition and Intended for Transfer, Under Application of Heat and Pressure to the Surface of Cotton Textile Fabrics, Silk Textile Fabrics, Paper Sheets, and Similar Purposes.

Claims use since Aug. 24, 1925.

Ser. No. 222,266. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) M & A PRODUCE CO., Los Angeles, Calif. Filed Oct. 24, 1925.

"MA"

Particular description of goods.—Fresh Vegetables—Namely, Potatoes.

Claims use since Sept. 8, 1925.

Ser. No. 222,353. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) THE TOLEDO TIMER CO., Toledo, Ohio. Filed Oct. 26, 1925.

BLACK-CAP

Particular description of goods.—Spark Timers for Internal-Combustion Engines.

Claims use since March, 1925.

Ser. No. 222,399. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) RAO-AD COMPANY, Alhambra, Calif. Filed Oct. 27, 1925.

Rao-ad

Particular description of goods.—Electrically-Operated Advertising Devices in Which Advertising Matter is Displayed on Rotary Members or Disks.

Claims use since July 1, 1925.

Ser. No. 222,433. (CLASS 29. BROOMS, BRUSHES, AND DUSTERS.) BAKELITE CORPORATION, New York, N. Y. Filed Oct. 28, 1925.

BAKELITE

Particular description of goods.—Clothes Brush, Hairbrush, Nailbrush, Hand Brush, and Toothbrush Backs and Handles and Shaving Brush and Paintbrush Handles.

Claims use since Jan. 15, 1925.

Ser. No. 222,445. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ARTHUR LUDOVIC DUPLANTIS, Chicago, Ill. Filed Oct. 28, 1925.

Arthur L. Duplantis M. D.

The trade-mark consists of applicant's portrait and signature.

Particular description of goods.—High-Blood-Pressure Tablets, Indigestion Tablets, and a Saline Laxative Compound.

Claims use since Jan. 1, 1924.

Ser. No. 222,448. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) FAMOUS PLAYERS-LASKY CORPORATION, New York, N. Y. Filed Oct. 28, 1925.

Applicant disclaims the word "Films" apart from the mark as shown.

Particular description of goods.—Moving Pictures.

Claims use since Sept. 17, 1925.

Ser. No. 222,594. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS, NOT INCLUDING ELECTRICAL APPARATUS.) MAX E. BERNHARDT, New York, N. Y. Filed Oct. 31, 1925.

JMCO

Particular description of goods.—Cigar Lighters.

Claims use since Sept. 16, 1925.

Ser. No. 222,624. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) EMILIO MARTINI, Chicago, Ill. Filed Oct. 31, 1925.

MARCA FRANTOIO

The word "Marca" does not form a part of the mark sought to be registered apart from the mark as shown in the drawing.

Particular description of goods.—Olive Oil.

Claims use since 1919.

Ser. No. 222,631. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) PAXTON & GALLAGHER CO., Omaha, Nebr. Filed Oct. 31, 1925.

YELLOWSTONE

Particular description of goods.—Canned Peas, Canned Peaches, Spices, Stuffed Olives, Cider Vinegar, Tomato Catchup, Peanut Butter, Food Sirup, Canned Salmon, Rice, Food-Flavoring Extracts, Macaroni, Tea, Raisins, and Pickles.

Claims use since 1908.

Ser. No. 222,640. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) SUCESION J. SERRALLES, Ponce, Porto Rico. Filed Oct. 31, 1925.

Snow White
Cane Sugar

Applicant disclaims exclusive right to the use of the words "Snow White," "Cane Sugar," "Refined Standard Granulated Pure Cane Sugar," and "Made in America" except as the same are used in connection with the other features of the mark shown on the drawing.

Particular description of goods.—Granulated Sugar.

Claims use since Sept. 17, 1925.

Ser. No. 222,644. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) VALLEY ELECTRIC COMPANY, Wilmington, Del., and St. Louis, Mo. Filed Oct. 31, 1925.

Valley

Particular description of goods.—Electric Motors, Electric Relays for Controlling Electric-Light Circuits.

Claims use since Jan. 19, 1920.

Ser. No. 222,650. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) ABRAHAM WITT, Hoboken, N. J. Filed Oct. 31, 1925.

Mother's
MALTED MILK

The expression "Malted Milk" is disclaimed apart from the mark shown in the drawing.

Particular description of goods.—Malted Milk.

Claims use since Aug. 1, 1925.

Ser. No. 222,665. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) CONSOLIDATED BATTERY COMPANY, Buffalo, N. Y., and Philadelphia, Pa. Filed Nov. 2, 1925.

CONSOL

Particular description of goods.—Electric Batteries.

Claims use since on or about June 30, 1924.

Ser. No. 222,719. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) VAN NETTE LAWN MOWER COMPANY, Tiffin, Ohio. Filed Nov. 2, 1925.

JACKKNIFE

Particular description of goods.—Lawn Mowers.

Claims use since Apr. 1, 1921.

Ser. No. 222,749. (CLASS 12. CONSTRUCTION MATERIALS.) KRAUS KASTONE PRODUCTS CORPORATION, New York, N. Y. Filed Nov. 3, 1925.

KASTURN

Particular description of goods.—Ornamental Architectural Figures and Ornaments Made of Stone or Stone Composition or of Plaster or Plaster Composition.

Claims use since March, 1925.

Ser. No. 222,753. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) EDWARD TALCOTT MOORE, Syracuse, N. Y. Filed Nov. 3, 1925.

EDMOORE

Particular description of goods.—Electric Control of the Power Demand and Peak Loads in Electric Power Circuits.

Claims use since June 15, 1925.

Ser. No. 222,762. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) PERRYMAN ELECTRIC COMPANY, INC., New York, N. Y. Filed Nov. 3, 1925.

G. H. Perryman

The mark consists of the signature of G. H. Perryman of the applicant corporation.

Particular description of goods.—Vacuum Tubes.

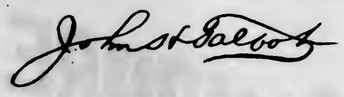
Claims use since Oct. 1, 1925.

Ser. No. 222,860. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) GEORGE C. MILLER & CO., INC., Boston, Mass. Filed Nov. 5, 1925.

LIK-WID

Particular description of goods.—Candy.

Claims use since January, 1925.



Ser. No. 222,880. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE REA-PATTERSON MILLING COMPANY, Coffeyville, Kans. Filed Nov. 5, 1925.

S AND P

Particular description of goods.—S and P Wheat Bran and Wheat Screenings, S and P Wheat Mixed Feed and Wheat Screenings, S and P Wheat Gray Shorts and Wheat Screenings, S and P Corn Chop.

Claims use since July 1, 1894.

Ser. No. 222,888. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) TALBOT MANUFACTURING CO., Los Angeles, Calif. Filed Nov. 5, 1925.

The trade-mark represents the facsimile signature of John H. Talbot.

Particular description of goods.—Insecticides.

Claims use since 1913.

Ser. No. 222,890. (CLASS 45. BEVERAGES, NONALCOHOLIC.) GEORGE TOLCHIN, doing business as Los Angeles Beverage Soda and Seltzer Works, Los Angeles, Calif. Filed Nov. 5, 1925.

Thrill

Particular description of goods.—Nonalcoholic, Maltless Beverage Used as Soft Drink, together with Sirups and Extracts for Making Same.

Claims use since June 15, 1922.

Ser. No. 222,974. (CLASS 39. CLOTHING.) WOODWARD & LOTHROP, Washington, D. C. Filed Nov. 6, 1925.

Jane Wandl

Particular description of goods.—Women's, Girls', and Misses' Undergarments and Clothing—Namely, Dresses, Tailored Suits, Riding Suits, Knicker Suits, Skirts, Coats, Corsets, Brassières, Shirt Waists, Middies, Hats, Caps, Bath Robes, Negligees, Lounging Robes, Petticoats, Costume Slips, Bloomers, Chemises, Nightgowns, Combinations, Sweaters, Hosiery, and Scarfs, Made Out of Knitted Material, and Women's and Girls' Shoes, Boots, Slippers, Leggings, Putties Made out of Leather, Rubber, Canvas, Buckskin, or Linen or Composition of Similar Materials, and Women's and Girls' Gloves Made out of Leather and Kid.

REISSUES

JANUARY 26, 1926.

16,256. PAPER-MATCH MACHINE. JOHN MOSCINI, Brooklyn, N. Y., assignor to Oval Match Company, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 10, 1921. Serial No. 521,556. Original application filed Dec. 19, 1918, Serial No. 267,476. Renewed Oct. 7, 1919, Serial No. 329,083. Original No. 1,327,627, dated Jan. 13, 1920. 16 Claims. (Cl. 144—51.)

1. In a machine of the character described, the combination with means for cutting a strip of material into transversely arranged intermeshing fingers alternate ones of which are joined to opposite uncut margins of the strip, of means for bending down the free end of said fingers for receiving coatings of striking substance while the uncut margins of the strip travel in a horizontal plane, and means for finally cutting said fingers from the margins of the strip to produce finished individual matches.

DESIGNS

JANUARY 26, 1926.

69,307. SUPPORTING ARM FOR LAMP STANDS. WILLIAM BLOCK, Chicago, Ill. Filed Dec. 7, 1925. Serial No. 15,673. Term of patent 3½ years.

The ornamental design for a supporting arm for lamp stands, as shown.

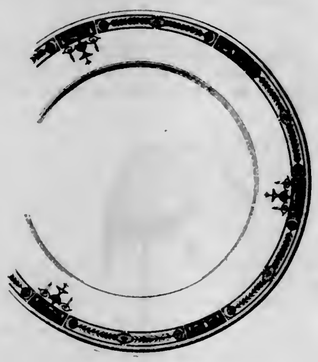
69,308. ARM-SUPPORTING BRACKET FOR LAMP STANDS. WILLIAM BLOCK, Chicago, Ill. Filed Dec. 7, 1925. Serial No. 15,674. Term of patent 3½ years.

The ornamental design for an arm supporting bracket for lamp stands, as shown.

69,309. FINIAL FOR LAMPS. WILLIAM BLOCK, Chicago, Ill. Filed Dec. 7, 1925. Serial No. 15,675. Term of patent 3½ years.

The ornamental design for a finial for lamps, as shown.

69,310. TOILET-ARTICLE CABINET. GLADYS POTTER CUMMING, Windsor, Ontario, Canada. Filed Sept. 19, 1923. Serial No. 7,271. Term of patent 14 years.

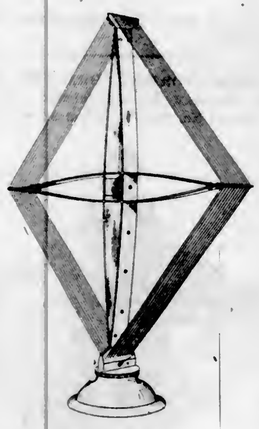


The ornamental design for a toilet article cabinet, as shown.

69,311. JUG. GEORGE E. CURTISS, New Britain, Conn., assignor to Landers, Frary & Clark, New Britain, Conn., a Corporation of Connecticut. Filed July 16, 1924. Serial No. 10,165. Term of patent 14 years.

The ornamental design for a jug, as shown.

69,312. PLATE OR SIMILAR ARTICLE. GEORGE ELLIS, Trenton, N. J., assignor to Scammell China Company, Trenton, N. J. Filed Dec. 5, 1924. Serial No. 11,595. Term of patent 14 years.

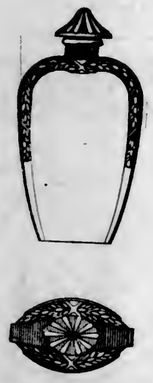


The ornamental design for a plate or similar article as shown.

69,313. LOOP ANTENNA. CARL R. ENGLUND, West Long Branch, and ARTHUR HADDOCK, East Orange, N. J., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 26, 1923. Serial No. 6,289. Term of patent 14 years.

The ornamental design for a loop antenna, as shown.

69,314. LOOP ANTENNA. CARL R. ENGLUND, West Long Branch, and ARTHUR HADDOCK, East Orange, N. J., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 26, 1923. Serial No. 6,288. Term of patent 14 years.

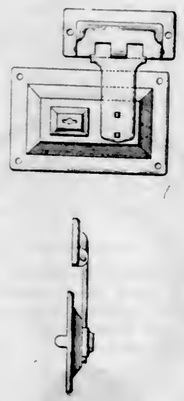


The ornamental design for a loop antenna as shown.

69,315. PERFUME BOTTLE. GUY T. GIBSON, New Rochelle, N. Y. Filed Dec. 7, 1925. Serial No. 15,664. Term of patent 14 years.

The ornamental design for a perfume bottle as shown.

69,316. PERFUME BOTTLE. GUY T. GIBSON, New Rochelle, N. Y. Filed Dec. 15, 1925. Serial No. 15,756. Term of patent 14 years.

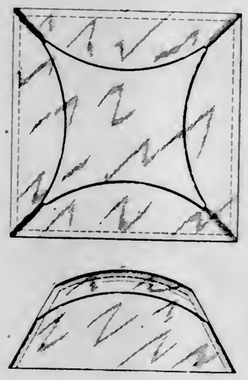


The ornamental design for a perfume bottle as shown and described.

69,317. PERFUME BOTTLE. GUY T. GIBSON, New Rochelle, N. Y. Filed Dec. 15, 1925. Serial No. 15,757. Term of patent 14 years.

The ornamental design for a perfume bottle as shown and described.

69,318. LOCK FOR A SUITCASE OR SIMILAR ARTICLE. AUGUST GOERTZ, Newark, N. J., assignor to August Goertz & Co., a Corporation of New Jersey. Filed Feb. 15, 1922. Serial No. 708. Term of patent 7 years.

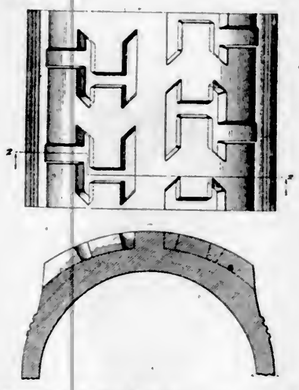


The ornamental design for a lock for a suitcase or similar article, as shown.

69,319. LOCK FOR A SUITCASE OR SIMILAR ARTICLE. AUGUST GOERTZ, Newark, N. J., assignor to August Goertz & Co., a Corporation of New Jersey. Filed Feb. 15, 1922. Serial No. 710. Term of patent 14 years.

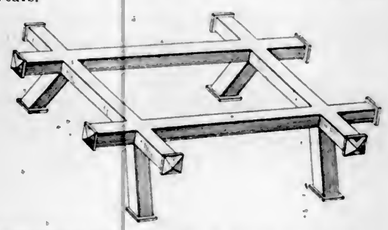
The ornamental design for a lock for a suitcase or similar article, as shown.

69,320. ELECTRIC-LIGHT GLOBE. JAMES WILLARD HALL, Brighton, Mass., assignor to The Moore Pen Company, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 21, 1925. Serial No. 14,551. Term of patents 3½ years.



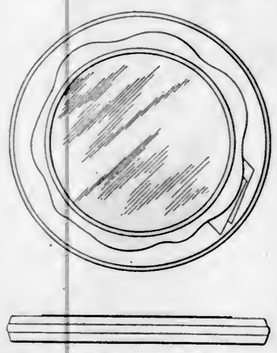
The ornamental design for an electric-light globe, as shown.

69,321. ATTACHMENT-PLUG BASE. WILLIAM HENRY HARRINGTON, Hartford, Conn., assignor to The Arrow Electric Company, Hartford, Conn., a Corporation of Connecticut. Filed June 26, 1923. Serial No. 6,588. Term of patent 14 years.



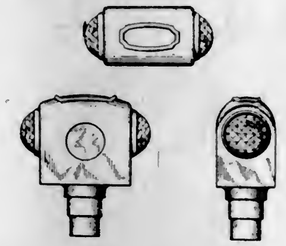
The ornamental design for an attachment plug base, as shown.

69,322. TIRE TREAD. JULES HAUVETTE-MICHELIN, New Brunswick, N. J., assignor to Michelin Tire Company, Milltown, N. J., a Corporation of New Jersey. Filed Oct. 30, 1925. Serial No. 15,293. Term of patent 14 years.



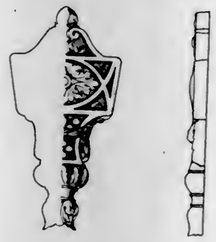
The ornamental design for a tire tread, as shown.

69,323. STAND FOR SILVERWARE OR SIMILAR ARTICLE. ALEXANDER KARSH, New York, N. Y. Filed July 5, 1923. Serial No. 6,676. Term of patent 3½ years.



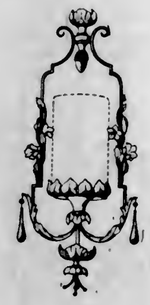
The ornamental design for a stand for silverware or similar article, as shown.

69,324. LAMP FRONT FRAME. PHILIP JAMES KENT, Detroit, Mich., assignor to Chrysler Corporation, Highland Park, Mich., a Corporation of Delaware. Filed July 16, 1925. Serial No. 14,117. Term of patent 14 years.



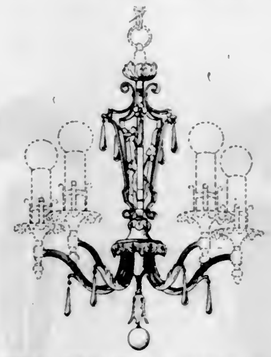
The ornamental design for a lamp front frame, as shown.

69,325. AUTOMOBILE PARKING LAMP. PHILIP J. KENT, Detroit, Mich., assignor to Chrysler Corporation, Detroit, Mich., a Corporation of Delaware. Filed Oct. 9, 1925. Serial No. 15,073. Term of patent 14 years.



The ornamental design for an automobile parking lamp as shown.

69,326. BACK PLATE FOR LIGHTING FIXTURES. ARTHUR R. KRAUSE, Woodhaven, N. Y., assignor to The Lion Electric Manufacturing Co., Inc., a Corporation of New York. Filed Dec. 9, 1925. Serial No. 15,694. Term of patent 7 years.

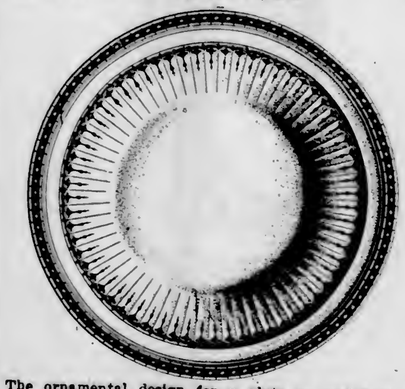


The ornamental design for a backplate for lighting fixtures, substantially as shown and described.

69,327. LIGHTING FIXTURE. ARTHUR R. KRAUSE, Woodhaven, N. Y., assignor to The Lion Electric Manufacturing Co., Inc., a Corporation of New York. Filed Dec. 9, 1925. Serial No. 15,695. Term of patent 7 years.

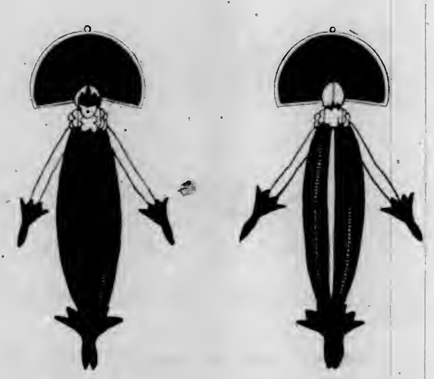
The ornamental design for a lighting fixture, substantially as shown.

69,328. CHANDELIER. ARTHUR R. KRAUSE, Woodhaven, N. Y., assignor to The Lion Electric Manufacturing Co., Inc., a Corporation of New York. Filed Dec. 9, 1925. Serial No. 15,696. Term of patent 7 years.



The ornamental design for a chandelier, substantially as shown.

69,329. CEILING LIGHTING FIXTURE. ARTHUR R. KRAUSE, Woodhaven, N. Y., assignor to The Lion Electric Manufacturing Co., Inc., a Corporation of New York. Filed Dec. 9, 1925. Serial No. 15,697. Term of patent 7 years.

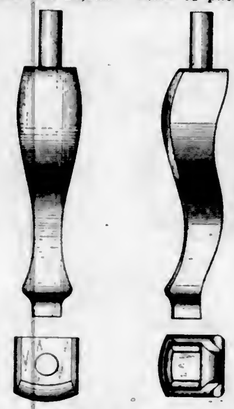


The ornamental design for a ceiling lighting fixture, substantially as shown.

69,330. PLATE OR ANALOGOUS ARTICLE. HAROLD E. NOCK, Newburyport, Mass., assignor to Towle Manufacturing Company, Newburyport, Mass., a Corporation of Massachusetts. Filed Dec. 9, 1925. Serial No. 15,698. Term of patent 7 years.

The ornamental design for a plate or analogous article, substantially as shown and described.

69,331. BAG OR SIMILAR ARTICLE. CATHERINE FRASER PITMAN, Stockton, Calif. Filed Oct. 7, 1925. Serial No. 15,051. Term of patent 3½ years.

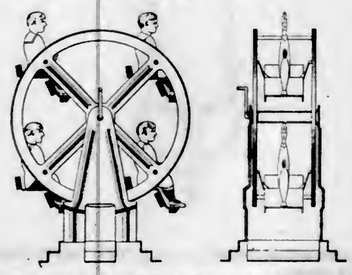


The ornamental design for a bag or similar article, substantially as shown.

69,332. LIGHTING-FIXTURE ARM OR ARTICLE OF SIMILAR NATURE. ISIDOR ROSENBLATT, New York, N. Y. Filed Nov. 11, 1925. Serial No. 15,400. Term of patent 3½ years.

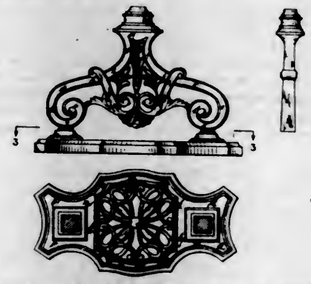
The ornamental design for a lighting fixture arm, or article of similar nature as shown.

69,333. PIANO LEG OR SIMILAR ARTICLE. HERMAN ROTHKIRCH, New York, N. Y. Filed July 31, 1924. Serial No. 10,330. Term of patent 3½ years.



The ornamental design for a piano leg or similar article, as shown.

69,334. LIGHTING-FIXTURE LOOP. HERMAN A. SAPION, New York, N. Y. Filed Dec. 5, 1925. Serial No. 15,649. Term of patent 3½ years.

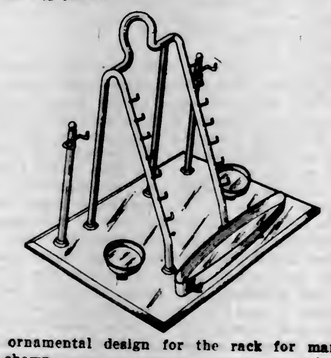


The ornamental design for a lighting fixture loop, as shown.

69,335. FERRIS-WHEEL TOY. EDGAR HOWARD TUNLEY, Brooklyn, N. Y. Filed Aug. 28, 1925. Serial No. 14,619. Term of patent 7 years.

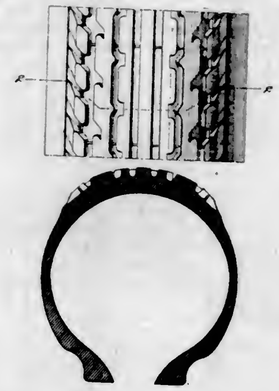
The ornamental design for a Ferris wheel toy, as shown.

69,336. BASE FOR PORTABLE ELECTRIC LAMPS. GUSTAVE E. VILLARET, Leonia, N. J., assignor to William R. Noe & Sons, New York, N. Y., a Copartnership. Filed May 21, 1925. Serial No. 13,518. Term of patent 7 years.



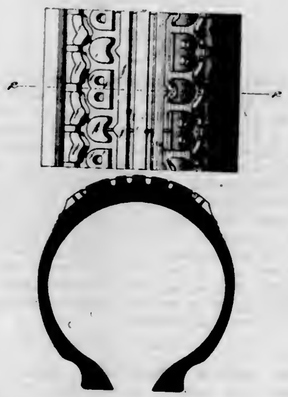
The ornamental design for a base for portable electric lamps, as shown.

69,337. LOOP FOR LIGHTING FIXTURES OR THE LIKE. GUSTAVE E. VILLARET, Leonia, N. J., assignor to Harry Hilfman, New York, N. Y. Filed Oct. 3, 1925. Serial No. 15,000. Term of patent 3½ years.



The ornamental design for a loop for lighting fixtures or the like as shown.

69,338. RACK FOR MANICURING SET. FRED E. WRIGHT, Leominster, Mass., assignor to J. C. Dowd & Co., New York, N. Y., a Corporation of New York. Filed Sept. 26, 1925. Serial No. 14,910. Term of patent 3½ years.

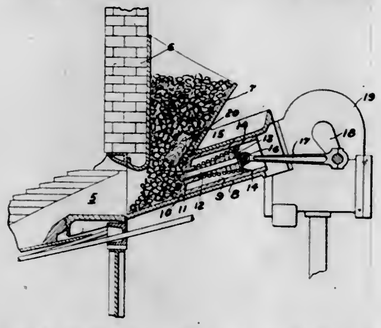


The ornamental design for the rack for manicuring set as shown.

69,339. TIRE. LYSANDER E. WRIGHT, East Orange, and HENRY B. CONSTANTIN, Clifton, N. J. Filed Nov. 19, 1925. Serial No. 15,474. Term of patent 7 years.

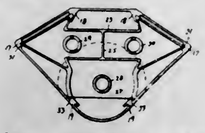
The ornamental design for a tire, as shown.

69,340. TIRE. LYSANDER E. WRIGHT, East Orange, and HENRY B. CONSTANTIN, Clifton, N. J. Filed Nov. 19, 1925. Serial No. 15,475. Term of patent 7 years.



The ornamental design for a tire, as shown.

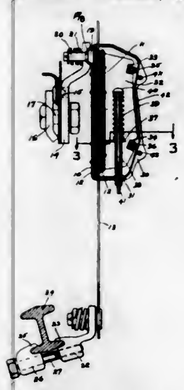
PATENTS



GRANTED JANUARY 26, 1926.

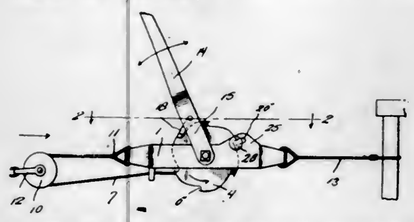
1,570,604. STOKER RAM. Otto Aram, Philadelphia, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed June 4, 1923. Serial No. 643,365. 6 Claims. (Cl. 110—109.)

1. In a mechanical stoker, the combination with a fuel hopper, of a fuel ram disposed to eject fuel therefrom, said ram being provided with an opening in its face, a rod axially disposed within said ram and terminating in said opening, spring means for normally restraining said rod within said ram, and drive means for said ram attached to the other end of said rod.



1,570,605. SIGNAL LAMP. Neil T. Albright, Kokomo, Ind., assignor to Kokomo Automotive Mfg. Co., Kokomo, Ind., a Corporation. Filed Mar. 28, 1924. Serial No. 702,531. 3 Claims. (Cl. 177—329.)

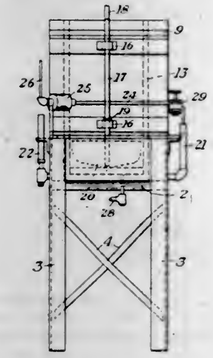
1. A signal lamp comprising a casing cast integral with a back portion and an open face, said back portion having an aperture formed therein, an insert casting forming a plurality of compartments outlined in the shape of oppositely directed arrows extending in alignment with each other having their blunt ends abutting the walls of said casing and insert casting being provided with interengaging means whereby the latter is supported within the former, and snugly seated within said casing a transparent closure removably secured over the open face of said casing, and individual means in each of said arrows for illuminating the same, whereby said illumination will be apparent through said closure in the outline of the respective combined arrows, substantially as shown and described.



1,570,606. SHOCK ABSORBER. Neil T. Albright, Kokomo, Ind., assignor to Kokomo Automotive Manufacturing Company, Kokomo, Ind., a Corporation. Filed July 14, 1924. Serial No. 725,918. 8 Claims. (Cl. 188—129.)

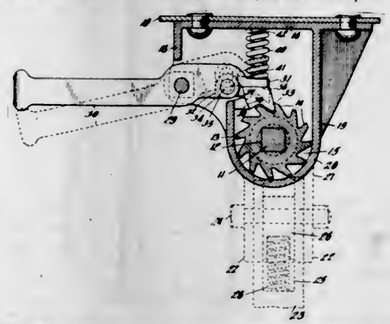
1. In a shock absorber of the character described, a stationary friction member, a movable friction member, a wedging roller associated with said movable friction member, a member associated with said stationary friction member provided with an inclined surface and so positioned as to be engaged by said roller and wedging said friction members together when said movable member is moved in one direction, and releasing the same when moved in the other direction, a bolt adjustably

mounted with respect to said stationary member, an ear projecting from said movable member through which said bolt slidably extends, and a spring secured between said ear and the free end of said bolt for normally maintaining said movable member and wedging roller in operative position under spring tension.



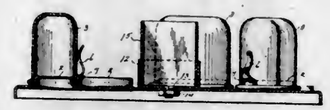
1,570,607. PULLING DEVICE. George S. Bashline, Wynona, Okla. Filed Feb. 3, 1925. Serial No. 6,563. 1 Claim. (Cl. 254—164.)

A pulling device of the class described comprising a frame, upstanding ears formed on the upper edges of the sides of the forward portion of the frame, said ears having angularly disposed aligning slots formed therein, a shaft extending transversely through the sides of the frame at the intermediate portion thereof, a drum loosely mounted on said shaft, a pair of discs at the respective ends of the drum, said discs being provided with a series of aligning notches in the peripheral edges thereof, means for securing the forward end of the frame to a stationary object, a pulling cable secured at one end to said drum and adapted to be wound therearound, an operating lever, a yoke portion formed on the lower end thereof and straddling said frame, the lower free ends of the arms of said yoke portion being supported on the respective ends of said shaft, a plate, means for pivotally supporting the same between the upper ends of the arms of the yoke portion, said means comprising pins projecting from the respective ends of the plate and



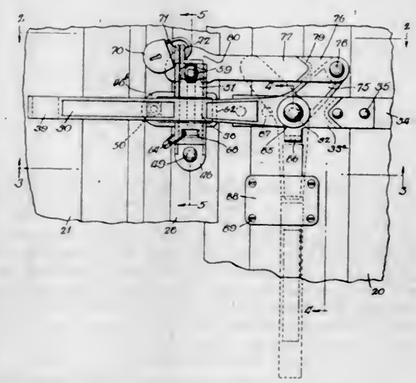
adapted to be disposed in sockets provided therefor in the upper portions of the arms of the yoke portion, the lower edge of the plate being adapted for engagement with the aligning notches formed in the peripheral edges of the discs for rotating the drum in one direction, means for preventing the rotation of the drum in the opposite direction during the movement of said plate from one pair of aligning notches to another, said last mentioned means comprising a transverse locking pin having its ends disposed within the aligned angularly disposed slots formed in said upstanding ears and adapted for engagement with one pair of aligning notches by gravity.

1,570,608. SHOE-BOTTOM-FILLING APPARATUS. Louis L. Bentley, Beaver Falls, and John W. Sloan, New Brighton, Pa., assignors to Armstrong Cork Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Mar. 12, 1925. Serial No. 14,948. 6 Claims. (Cl. 18—1.)



1. Shoe filling apparatus comprising a dip-pot, a heating chamber above the rear portion of the filler-receiving cavity of said pot, means for heating said pot and chamber, and a revolving paddle in said cavity forming in normal position a partition for maintaining the bulk of the melted filler material in the rear portion of said cavity beneath the heating chamber and adapted to be revolved to draw said material into the front portion of said cavity, substantially as described.

1,570,609. HAND BRAKE. Arild M. Brenne, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Oct. 8, 1923. Serial No. 667,120. 4 Claims. (Cl. 74—118.)

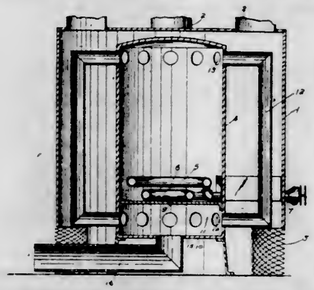


1. In a hand brake, including a brake winding shaft having a ratchet wheel thereon and means for rotating the shaft, the combination with a locking dog; of an operating lever therefor; and a fixed stop opposing movement of said dog by the ratchet wheel when the dog is in locking position, said stop being arranged to permit releasing movement of said dog in the direction of releasing movement of said ratchet wheel.

1,570,610. SMOKER'S NOVELTY ASH TRAY. Clarence N. Cahusac, Newark, N. J. Filed Mar. 26, 1925. Serial No. 18,534. 5 Claims. (Cl. 131—51.)

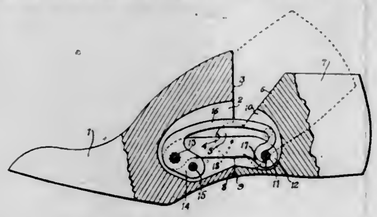
1. In an ash tray, the combination of a circular sheet metal base, having a plurality of upwardly stamped bosses concentrically arranged thereon, with a plurality of individual ash receivers each detachably secured to one of said bosses, and each of said receivers having a clip thereon whereby it may be attached to the apparel of the user.

1,570,611. SEALING LOCK AND DOOR STARTER. Lawrence V. Calhoun, Lima, Ohio, assignor to The Dayton Malleable Iron Company, Dayton, Ohio, a Corporation of Ohio. Filed Sept. 2, 1922, Serial No. 586,017. Renewed July 27, 1925. 11 Claims. (Cl. 292—208.)



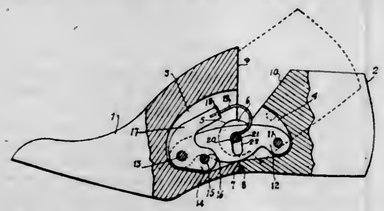
6. In combination, a bracket, a lever loosely pivoted on said bracket, and means carried by said bracket for engaging said lever and limiting its swinging movement in planes parallel to its pivotal axis.

1,570,612. GAS FURNACE. Legendre Cinq-Mars, San Francisco, Calif. Filed Mar. 3, 1924. Serial No. 696,524. 1 Claim. (Cl. 126—116.)



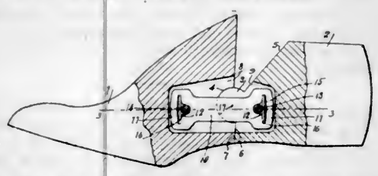
A heater comprising a burner casing closed at its upper and lower ends, a false bottom mounted within the casing at a point spaced above the lower end of the casing and defining between it and the lower end a collection chamber, said casing having a plurality of equi-distantly spaced openings disposed between the lower end and false bottom, a plurality of similarly arranged openings adjacent the upper end of the casing, a burner mounted within the casing above the false bottom, said casing having a centrally disposed outlet opening at its lower end, an outlet flue in communication with

the opening, a plurality of upright flues arranged in a circular series around and spaced from the casing, lateral extensions at the ends of said flues communicating with the openings at the upper and lower ends of the casing,



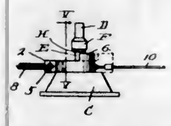
another casing surrounding the first named casing and last named flues and being provided with hot air discharge openings at its upper end and atmospheric air intake openings at its lower end.

1,570,613. LAST. GEORGE CLAUSING, Portsmouth, Ohio, assignor to The Vulcan Last Company, Portsmouth, Ohio, a Corporation of Ohio. Filed May 18, 1925. Serial No. 31,097. 9 Claims. (Cl. 12—136.)



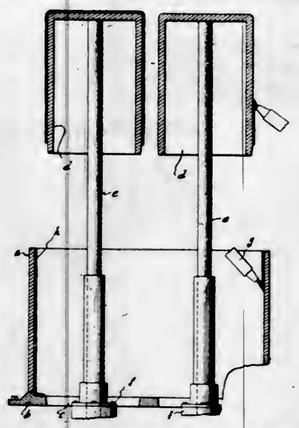
1. In a last, a toe part and a heel part adapted to rock one on the other, a link joining said parts, an anchor pin in one last part supporting the link at one end, a lever pivotally supporting the link at its other end, an anchor pin in the other last part for supporting said lever, and means attached to said lever projecting from said lever in one last part to a point within the other last part for supporting a spring, and a spring engaging said first mentioned last part.

1,570,614. LAST. GEORGE CLAUSING, Portsmouth, Ohio, assignor to The Vulcan Last Company, Portsmouth, Ohio, a Corporation of Ohio. Filed May 18, 1925. Serial No. 31,098. 15 Claims. (Cl. 12—136.)



1. In a last, a toe part, a heel part, said parts being adapted to rock upon one another, an abutment carried by one of said parts, means to join said parts one to the other, said means being pivoted upon one of said parts and upon a lever pivoted in another of said parts, a lever so pivoted, and positioned between said means, and a resilient U-shaped member carried in the free end of said lever engaging with said abutment.

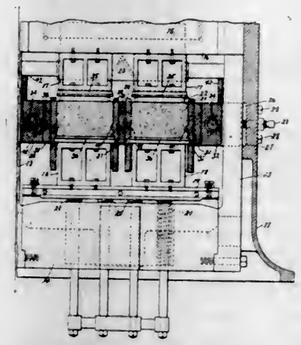
1,570,615. LAST. GEORGE CLAUSING, Portsmouth, Ohio, assignor to The Vulcan Last Company, Portsmouth, Ohio, a Corporation of Ohio. Filed May 28, 1925. Serial No. 33,353. 8 Claims. (Cl. 12—136.)



1. In a last, a toe part and a heel part, a link connecting said parts, and yielding means comprising vertically arranged spring plates separably mounted in the ends of said link to resist the movement of the last parts from expanded or collapsed positions.

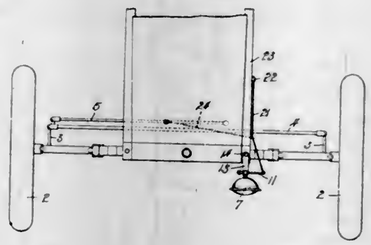
1,570,616. STARTING-SWITCH INTERLOCKING DEVICE. HERSHEL R. COFFMAN, Independence, Kans. Filed Mar. 3, 1925. Serial No. 12,889. 4 Claims. (Cl. 74—83.)

1. A device of the character described consisting of a member adapted to hold the starting switch of a motor vehicle in open position, spring means for holding said member in active position when the spark controlling mechanism of the motor vehicle is advanced, and means connecting said member to the spark controlling mechanism, so that the latter when moved to retarded position may move the former to inactive position.



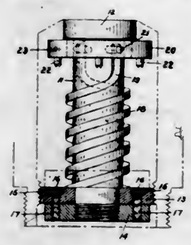
1,570,617. METHOD OF REFRIGERATOR MANUFACTURE. LLOYD G. COPEMAN, Flint, Mich. Filed Apr. 6, 1925. Serial No. 21,002. 6 Claims. (Cl. 25—155.)

1. A method of making a refrigerator or other article of manufacture, which comprises the coating of the moulding surfaces of the outer and inner mould sections



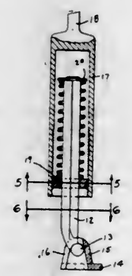
with a relatively thin layer of finishing material, and the pouring of a plastic filler in said mould to form a composite shell structure.

1,570,618. PRESSING MECHANISM. WALTER H. COTTON, Chicago, Ill. Filed Mar. 8, 1924. Serial No. 697,924. 10 Claims. (Cl. 25—97.)



1. In a machine for pressing material into forms, a mold, two pressing heads adapted to press material in the mold, means interlocking the pressed material with one of the pressing heads while the other pressing head is moved out of engagement with the pressed material, and means for ejecting the pressed material from the mold without previously releasing the interlocking means.

1,570,619. VEHICLE-LAMP CONTROL. EDWIN C. CROMPTON, Toledo, Ohio, assignor to The Rollaway Motor Company, Toledo, Ohio, a Corporation of Ohio. Filed Dec. 29, 1923. Serial No. 683,284. 2 Claims. (Cl. 240—62.)

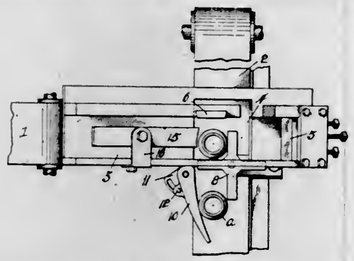


1. In combination with a vehicle having steering arms rigidly inter-connected, a dirigible lamp mounted on the frame of the vehicle and having an arm projecting laterally therefrom, a flexible cable connected at one end to said arm and at the opposite end to the vehicle frame, spring means tending to hold said arm in position to maintain said cable taut, a draft cable connected at one end to said first cable intermediate the ends thereof and at the opposite end to the steering rod of the vehicle thereby automatically to control the position of the lamp by the steering mechanism.

1,570,620. MECHANICAL DELAY ELEMENT FOR FUSES. FRANK T. CROWELL, Dover, N. J. Filed Nov. 18, 1924. Serial No. 750,656. 5 Claims. (Cl. 102—39.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)

5. A mechanical delay element for fuses embodying a column formed with a flanged head, a plunger embracing the column and adapted to be supported on set back by the flanged head, and shear wires for normally holding the plunger in unarmed position.

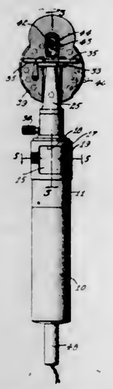
1,570,621. HOOD LATCH. EMANUEL L. CRUM, Indianapolis, Ind. Filed July 18, 1925. Serial No. 44,488. 2 Claims. (Cl. 292—66.)



1. A hood latch comprising a hollow barrel provided with internal screw threads, a stem adapted to extend therein, a cap on one end of said stem, an adjusting disc provided with external screw threads adapted to screw in said barrel whereby its position longitudinally thereof may be adjusted by its rotation, said disc being provided with an opening through which said stem slidably but non-rotatably extends, and a compression spring mounted intermediate said disc and cap.

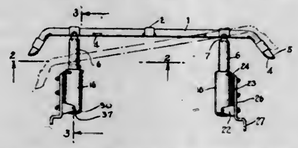
1,570,622. ARTICLE-SETTING-UP MEANS. FRED W. DANBERG, Toledo, Ohio. Filed Oct. 11, 1922. Serial No. 593,668. 3 Claims. (Cl. 214—1.)

1. The combination with a chute down which articles move by gravity in reclining position and having an opening over which an article partially passes, and a bumper in advance of the opening with which the forward end of the article engages to stop its forward movement and cause it to fall backward and downward through the opening in setting up position, of a guide members disposed over a portion of the trough for coacting with an article to prevent the forward end of the article tipping down into the opening as it passes over the same.



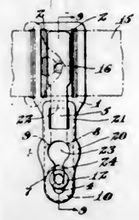
3. The combination with a continuously moving conveyor, and means for guiding successive articles to a position over the conveyor and then permitting a dropping of the same in upright position on the conveyor, of a rotatable member having pockets for successively

receiving articles as they drop on the conveyor, guide means cooperating with said rotatable member for preventing articles toppling as they drop onto the conveyor said guide means including an adjustable arm extending



approximately parallel with said conveyor and adapted to cooperate with an article as it passes from engagement with said rotatable member to place said member in predetermined article receiving position.

1,570,623. DIAGNOSTIC INSTRUMENT. HENRY L. DE ZENG, Geneva, N. Y., assignor to De Zeng Standard Company, Camden, N. J., a Corporation of New Jersey. Filed Aug. 29, 1924. Serial No. 734,876. 17 Claims. (Cl. 88—20.)



1. In a device of the character described, an adjustably mounted illuminating means, a light passageway extending therefrom, a lens disposed in the passageway, and means for longitudinally moving the lens to compensate for adjustment of the illuminating means.

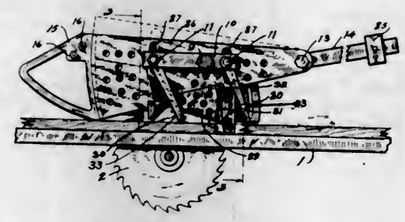
1,570,624. BUMPER FOR VEHICLES. MANUEL D. DOMINGUEZ, New Orleans, La. Filed Oct. 21, 1924. Serial No. 744,938. 17 Claims. (Cl. 293—55.)

1. A vehicle bumper structure comprising an impact bar of clincher cross-section and a cushion of resilient material extending along the outer face of the bar and having a base formation co-operating with the clincher form of the bar to hold the cushion in position, the ends of the cushion being lapped around the ends of the bar and firmly secured thereto.

1,570,625. GARMENT CLASP AND METHOD OF MAKING SAME. SEXTUS A. EDDINS, Brockton, Mass. Filed Jan. 2, 1925. Serial No. 110. 4 Claims. (Cl. 24—247.)

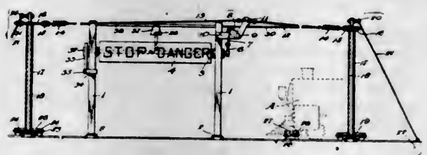
1. A clasp of the kind described comprising a body portion having a resilient button attached at its lower end and extending through and outwardly therefrom, said button being set eccentric relatively with its base, a resilient retaining strip secured to said body portion a clasping member slidably mounted between said body portion and said resilient retaining strip, said clasping member being provided with a perforation and adapted to fit over the button, whereupon it will be held under constant tension by the pressure of the resilient strip.

1,570,626. METHOD OF DEHYDRATING LIQUIDS. ARTHUR S. ELSENBAST, New York, N. Y., assignor, by mesne assignments, to The Celite Company, a Corporation of Delaware. Filed Mar. 14, 1922. Serial No. 543,781. 3 Claims. (Cl. 87—12.)



2. The method of separating water from nonaqueous liquids, which consists in mixing substantially dehydrated diatomaceous earth with a non-aqueous liquid containing a small percentage of water and subjecting the mixture to filtration.

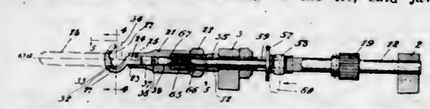
1,570,627. PIPE WRENCH. EDWIN J. EVANS and WILLIAM H. BARBER, Salt Lake City, Utah. Filed Mar. 25, 1924. Serial No. 701,844. 1 Claim. (Cl. 81—106.)



In a wrench, a frame and handle comprising a bar of metal bent to U-shaped form providing spaced legs, a fixed jaw secured to the ends of the legs, a carrier provided with spaced openings which slidably receive said legs, an extension integral with said carrier, said extension having an opening, an adjustable outer jaw confronting said fixed jaw, a shank formed integral with said outer jaw and pivotally secured to said extension, said fixed jaw having an elongated opening through which said shank is slidably and swingably fitted, an operating screw rotatably mounted on the frame and on the fixed jaw, said operating screw coacting with the carrier, and a traveling nut slidably mounted on the legs of the frame and co-acting with the operating screw.

1,570,628. SAW GUARD. ANDREW FLOHR, Colorado Springs, Colo. Filed Oct. 23, 1924. Serial No. 744,919. 1 Claim. (Cl. 143—159.)

A saw guard comprising a support, a frame pivotally attached to said support and projecting to one side of the support, a counterweight attached to said frame, said counterweight being located on the opposite side of the support, a guard plate pivotally attached to said frame, said plate being sector shaped, an auxiliary guard plate, also of substantially sector shape pivoted near its vertex to the first mentioned plate at a point near the arcuate portion of the latter and means for guiding and limiting the movement of the auxiliary plate with respect to the main guard plate.

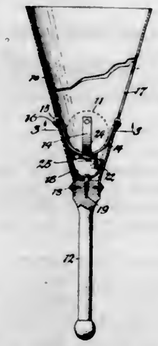


1,570,629. AUTOMATIC SIGNAL FOR RAILROAD CROSSINGS. LELAND L. FOSS and DAVID L. FOSS, Pulaski, and CHARLES H. PARRISH, Statesboro, Ga. Filed Aug. 12, 1925. Serial No. 49,774. 2 Claims. (Cl. 246—293.)

1. In an automatic signal for railroad crossings, the combination of spaced posts, a cross rod extending between the posts, a bell carried by the cross rod, a visible signal board, a rod to which the said signal board is affixed, said rod being rotatably mounted on the posts, a bell clapper affixed to the signal board and positioned to strike the bell when the board is swung to vertical position, a resiliently controlled device for releasably holding the visible signal in either a vertical or horizontal position, an arm affixed to one end of the rod on which the visible signal is affixed, a bellcrank to which said arm is linked, a train-operated signal actuating device, and wires and springs operatively connecting the last mentioned device with the bellcrank.

1,570,630. WIRE-TYING TOOL. HENRY B. FOULDER, Glenbrook, Conn., assignor to J. P. Curry Mfg. Co., Inc., Stamford, Conn., a Corporation of New York. Filed Aug. 21, 1924. Serial No. 733,257. 6 Claims. (Cl. 140—119.)

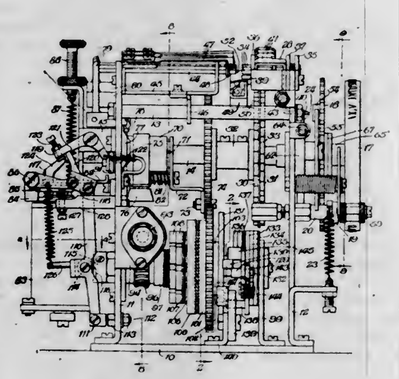
5. A tie twisting head of the character described, including a pair of jaws forming together a single slot for both ends of a wire tie, with a pair of spaced recesses at the rear of the slot, one recess for each enlarged extremity of the tie when extended through the slot, whereby the extremities of the tie are held in spaced apart relation irrespective of the twisting of the tie, said jaws



being movable toward and from each other to vary the width of the slot to prevent and to permit the tie extremities to pass forwardly therethrough.

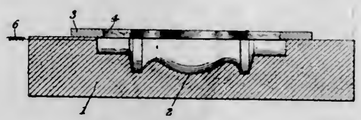
1,570,631. BAGGAGE RACK FOR RAILROAD PASSENGER CARS. CHARLES P. HOWARD, Hartford, Conn., assignor to James L. Howard and Company, Hartford, Conn., a Corporation of Connecticut. Filed Jan. 26, 1923. Serial No. 615,121. 1 Claim. (Cl. 224—29.5.)

In a sectional baggage rack for railway cars having uninterrupted space for baggage extending over a plurality of sections, the combination of a wall plate having means for attachment to a wall, a single projecting beam support of substantially uniform modulus of rupture throughout its length projecting from the wall plate a web portion formed integrally with said beam support and with said wall plate and extending upwardly from the beam support at the plate end thereof, said web portion tapering from the beam support toward the wall plate and merging with the latter at its end, a lug formed on the web portion at a point above the beam support and below the upper end of the wall plate, bottom sections on each side of said beam support having rear longitudinal bars supports in said lug and having front longitudinal bars supported in the free end of the beam support, transverse tie members carried by the front and rear longitudinal bars and having upper and lower edges gradually convex lengthwise, and intermediate bars supported in the transverse tie members intermediate the upper and lower edges thereof.



1,570,632. DEVICE FOR CATCHING AND THROWING BALLS. ROBERT J. KIDENEY, Buffalo, N. Y. Filed Jan. 16, 1922. Serial No. 529,435. 3 Claims. (Cl. 273—96.)

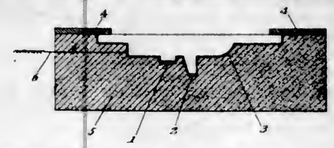
1. A device for catching and throwing a ball comprising a hollow cone shaped receptacle having its large front end open to form an inlet through which the ball



enters and leaves the receptacle while the rear small end is closed and of a diameter which is larger than the ball so that the latter will not become lodged frictionally in the receptacle, and means for giving an audible indication when a ball enters the receptacle and reaches the bottom of the same.

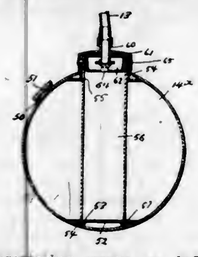
1,570,633. PRINTING-TELEGRAPH RECEIVER. HOWARD L. KRUM, Chicago, Ill., assignor, by mesne assignments, to Morkrum-Kleinschmidt Corporation, Chicago, Ill., a Corporation of Delaware. Filed June 13, 1921. Serial No. 477,012. 14 Claims. (Cl. 178—23.)

1. In a start-stop printing telegraph receiver, a rotary selector member, printing means controlled thereby, a power shaft, a common clutch for operating said selector member and said printing means and comprising toothed driving and driven members, a slip friction clutch yieldingly connecting said driven member to said power shaft, and electro-magnetic means responsive to line impulses for controlling said clutch and the operation of said selector member.



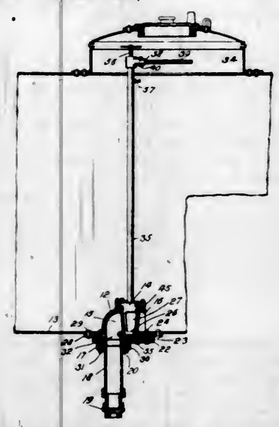
1,570,634. DEPOSITED-METAL PATTERN AND METHOD OF MAKING IT. ARTHUR K. LAUKEL, Detroit, Mich. Filed May 24, 1922. Serial No. 563,188. 10 Claims. (Cl. 22—195.)

1. A method of making metal patterns comprising forming an impression in a mold from a pattern, coating the surface with a conducting substance, and depositing metal thereon electrolytically to form a shell of considerable thickness.



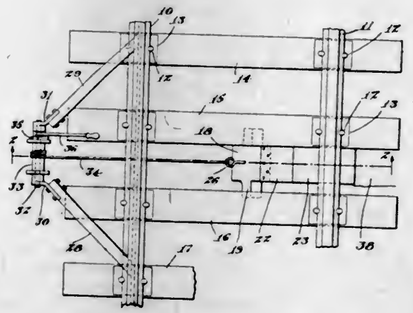
1,570,635. METHOD FOR THE PRODUCTION OF DEPOSITED-METAL PATTERNS AND METAL PATTERN PRODUCED BY SUCH METHOD. ARTHUR K. LAUKEL, Detroit, Mich. Filed Aug. 2, 1924. Serial No. 729,674. 6 Claims. (Cl. 22—195.)

4. The method for the production of deposited metal patterns consisting in making a mold of the desired form, preparing it for electro-deposition, placing therein metal parts made of hard metals in such a position as to lie in the portions of the pattern which are eventually



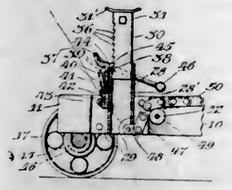
to be exposed to heavy wear, and then depositing metal in the molds to form the pattern with said metal parts embedded in the same.

1,570,636. LIFE-PRESERVING SUIT. ANDREW MEILLAND, Buffalo, N. Y. Filed Oct. 13, 1924. Serial No. 743,408. 2 Claims. (Cl. 9—20.)



1. In life preserving means, an inflatable container, a tank, a tube detachably secured in the tank with its interior normally isolated from the interior of the tank, and movable relative to the tank to establish communication between the interiors of tank and tube, a closure at the outer end of the tube including a rectilinearly-movable nipple and a valve carried by the nipple and adapted to control the escape of gas from the tube, and a tube connecting said nipple and the interior of the inflatable container.

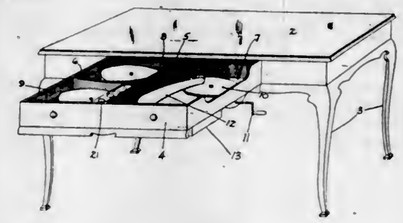
1,570,637. VALVE FOR TANK CARS AND THE LIKE. SVEN JOHAN NORDSTROM, San Francisco, Calif, assignor, by direct and mesne assignments, to Merco Nordstrom Valve Company, San Francisco, Calif., a Corporation of Delaware. Filed Aug. 28, 1922. Serial No. 584,618. 6 Claims. (Cl. 137—21.)



3. A valve for tank cars and the like comprising a casing located in the bottom of the tank, a plug seated in the casing, a hollow valve stem connected with the plug and extending upwardly into the dome at the top of the tank, a handle for manipulating the plug, a pipe located within the valve stem, lubricating channels in the bearing surface of the plug connected with the pipe and means for forcing the lubricant in the pipe into the lubricating channels.

1,570,638. CRIBBER AND BALLAST REMOVER. JOSEPH A. PARANT, Melrose Highlands, Mass. Filed Oct. 21, 1925. Serial No. 64,010. 3 Claims. (Cl. 104—2.)

2. An improved plow for performing the operations of cribbing and ballast removing on railroad right of ways comprising a wedge-shaped nose, laterally extending projections formed thereon and at each side thereof, and extensions formed on said nose and extending rearwardly thereof.



1,570,639. LIFTING JACK FOR AUTOMOBILES. ANDREW J. PERKINS and LESTER I'BAKINS, Chicago, Ill., assignors to Yellow Jack-It Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed Aug. 5, 1921. Serial No. 489,991. 2 Claims. (Cl. 254—4.)

1. In a lifting jack a longitudinal frame, a lifting member mounted in said frame, an extensible member mounted in said lifting member, means including a pawl having a vertically extending shank, said pawl being pivoted on the lower edge of said shank on said lifting member for locking said extensible member in adjusted positions, and means extending through said shank and secured to said lifting member for guiding said pawl in its movement.

1,570,640. COMBINED TABLE AND PHONOGRAPH CABINET. JOHN PETERSON, Faribault, Minn. Filed Feb. 20, 1922, Serial No. 537,868. Renewed Dec. 7, 1925. 5 Claims. (274—2.)

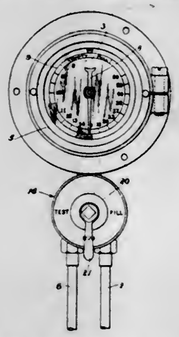
1. A drawer support and a drawer adapted for movement to an open or closed position, a phonograph turntable and tone arm therefor mounted within said drawer, a sound amplifier with its mouth opening inside of said

drawer that is opened to the outside when the drawer is opened and closed to the outside when the drawer is closed to modify the volume of the sound emitted.

1,570,641. DOOR-CONTROL MECHANISM. ROSS L. PERKINS, Orosi, Calif. Filed Feb. 18, 1924. Serial No. 693,555. 3 Claims. (Cl. 268—9.)

1. A control mechanism for a pair of oppositely hinged doors comprising means extending between and connected to the doors to cause them to open and close simultaneously, and means whereby while both doors will be moved to the same extent when fully opened, the relative speed of opening movement of the doors at the start from a closed position may be varied at will.

1,570,642. TOY-BALLOON VALVE. JOHN D. REED, Toledo, Ohio. Filed Dec. 9, 1922. Serial No. 605,781. 5 Claims. (Cl. 46—37.)

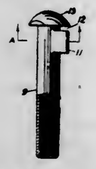


1. In a toy rubber balloon valve, the balloon having a stem, a ring through which the stem is inserted, and spread over the entire outside surface of the ring, the end portion of the stem located in position so that the soft rubber of the stem of the balloon will make contact with the soft rubber of the inflated body portion of the balloon to retain the ring and stem in position relative to the body portion of the balloon when the body portion of the stem is twisted to seal balloon.

1,570,643. FUEL CONSUMPTION METER FOR USE WITH LIQUID-FUEL ENGINES. FRANK SIDEBOTHAM RIPPINGILLE, Birmingham, England. Filed June 9, 1923. Serial No. 644,425. 3 Claims. (Cl. 73—151.)

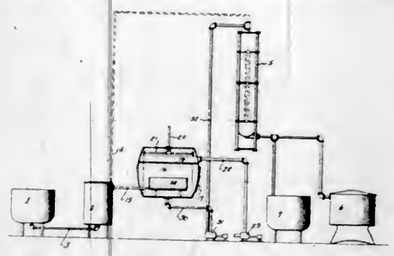
1. A fuel consumption meter for liquidfuel engines comprising a fuel chamber, a three-way cock adapted to connect the fuel chamber either to the engine or to a supply tank or to connect the supply tank direct to

the engine, a float within the fuel chamber, a dial provided with graduations showing rates of fuel consumption, a pointer adapted to move over said scale, and mechani-



cal gearing between the float and the pointer whereby the said pointer is turned when the float falls due to the emptying of the chamber.

1,570,644. OIL BURNER. ELIAS RIZK, Sioux City, Iowa. Filed Oct. 27, 1924. Serial No. 746,122. 6 Claims. (Cl. 158—91.)



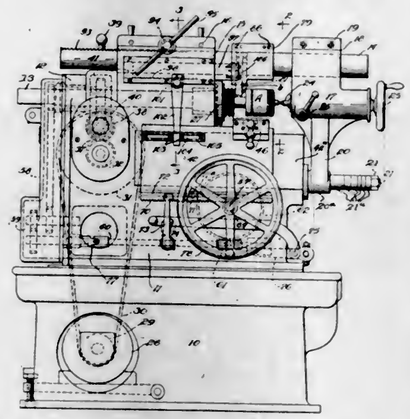
6. In an oil burner, an air chamber base comprising two semi-cylindrical halves each having side walls and inwardly projecting annular shoulders, means for closely joining the halves together to form a ring shaped continuous flange of said shoulders, a bowl received in the opening defined by said flange and having an annular rim resting thereon, said bowl having opposed air orifices, triangular in shape, and with diametrically opposed apexes, shoulders formed in the bowl around said orifices, upstanding flanges bordering said shoulders on the sides of the orifices adjacent the apexes thereof, said rim having a channel in its under surface of greater width than the rim between said orifices, and resting flat against the ring shaped flange within the limits of said orifices, packing material engaged between said channel and the ring shaped flange of the base, and an air flue having triangular shaped ends adapted to rest on the last mentioned shoulders, the flanges serving to position the air flue but to allow expansion thereof outwardly.

1,570,645. BOLT. EDWARD G. ROCHE, San Leandro, Calif. Filed Feb. 12, 1923. Serial No. 618,501. 2 Claims. (Cl. 85—1.)

2. A bolt, comprising a head and body, the body thereof provided with a lateral lug spaced from the head a predetermined distance, a support therefor having an opening of the size and shape of the cross-section through the body and lug, the lug adapted to be turned out of registry with the said opening in said support after insertion, the said lug preventing the bolt from being backed out of engagement with said support, and said lug further adapted to engage the base of the support to prevent rotation of the bolt.

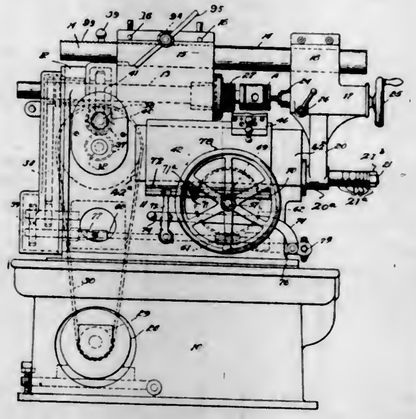
1,570,646. METHOD OF PASTEURIZING AND DEODORIZING CREAM. CHARLES E. ROGERS, Detroit, Mich. Filed Mar. 22, 1923. Serial No. 626,813. 6 Claims. (Cl. 99—15.)

6. The herein described method of treating lacteal fluid for removal of volatile matter, gases, odors, etc., consisting in heating the fluid to a temperature below that productive of detrimental change in the butterfat and at which the casein and curd content becomes hardened, then passing the fluid while at such temperature into an unheated vacuum chamber of such degree of exhaust as to cause an immediate drop in the temperature of the fluid to the temperature of the boiling point of the vacuum thereby liberating the volatile matter, gases, etc., with the heat causing the casein and curd content to break and releasing the butterfat globules to influence of vacuum, the said volatile matter, gases, etc., passing through the condenser out of the vacuum chamber, withdrawing the treated fluid previous to possible detrimental chemical or physical change in the chamber, and finally cooling the fluid.



1,570,647. EARTH-BORING SAMPLER. JACOB STEIGH and EARL F. CHOATE, Taft, Calif. Filed Aug. 11, 1923. Serial No. 656,911. 2 Claims. (Cl. 255—72.)

1. A device of the character specified consisting of a casing, an operating means for the casing, a sampling tube located within the casing, means within the casing supporting said sampling tube, said casing having

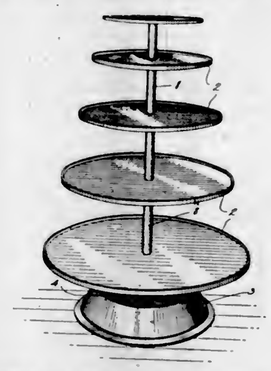


cutting means at its lower end, and means of fluid supply through said operating means having a pipe extending exteriorly of the casing and having communication with the interior of the casing below said supporting means.

1,570,648. LATHE. GUSTAF DAVID SUNDSTRAND, Rockford, Ill., assignor to Rockford Tool Company, Rockford, Ill., a Corporation of Illinois. Filed July 7, 1923. Serial No. 650,171. 9 Claims. (Cl. 82—2.)

1. A lathe having an overarm, a tool carrier supported by the overarm, a reciprocatory member, means providing an enclosed slideway for said member, means for actuating said member including a shaft having a gearing connection with the member, and means connecting the member with the tool carrier.

1,570,649. AUTOMATIC LATHE. GUSTAF DAVID SUNDSTRAND, Rockford, Ill., assignor to Rockford Tool Company, Rockford, Ill., a Corporation of Illinois. Filed July 7, 1923. Serial No. 650,172. 13 Claims. (Cl. 82—2.)

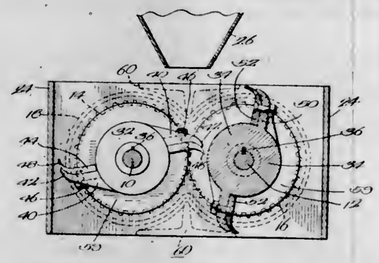


4. A lathe having, in combination, means to support and rotate the work, a carriage movable longitudinally of the work, a turning tool on said carriage, a tool holder mounted for movement transversely of the work, a tool on said tool holder, a common drive for said carriage and tool holder, a trip mechanism actuated in the movement of the carriage for throwing out said drive, and a connection between said tool holder and said drive adapted to reciprocate said tool holder, said reciprocating means being so arranged that upon failure of the trip mechanism to operate at the proper time the direction of movement of the tool holder will be reversed.

1,570,650. COLD CHISEL. WILLIAM STRATTON THOMSON, Plantsville, Conn., assignor to The Tobrin Tool Company, Plantsville, Conn., a Corporation. Filed Oct. 18, 1923. Serial No. 669,413. 3 Claims. (Cl. 145—24.)

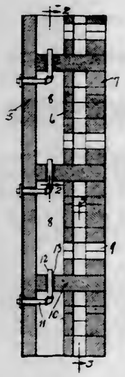
1. A cold chisel having a handle and a blade merged one with the other, said handle being in the rough, said blade being finished on all sides and faces, and the portion of said blade at the junction with the handle being larger, on all sides than the handle in the diametrical dimensions, whereby the finishing of the blade is facilitated without encroachment upon the handle.

1,570,651. DISPLAY STAND. WILBUR TOPPING and ANDREW W. NELSON, Terre Haute, Ind., assignors to Columbian Enameling & Stamping Co., Terre Haute, Ind., a Corporation of Indiana. Filed Sept. 17, 1925. Serial No. 56,787. 2 Claims. (Cl. 211—20.)



1. A display stand having a base with a central perforation, a socket bearing member fitting into said perforation, a plurality of inner pipe sections detachably and interfittingly connected to each other and resting in said socket, a plurality of disconnected external pipe sections fitting over said inner pipe sections, brackets connected to said outer sections, and trays mounted upon the said brackets, each of the said external pipe sections extending two adjacent trays.

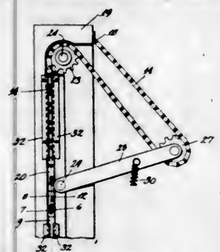
1,570,652. SAND-RAMMING MACHINE. JOHN S. TOWNSEND, Harvey, Ill., assignor to Whiting Corporation, Harvey, Ill., a Corporation of Illinois. Filed Apr. 7, 1920. Serial No. 371,799. 6 Claims. (Cl. 22—36.)



1. In mechanism of the class described, in combination with a suitable passage, open at its top and bottom, and a chute for delivering sand at a given speed, through said passage, a pair of rotatable drums in said passage on opposite sides of the path of travel of the sand through the passage intermeshing fingers on the drums each having a sand engaging face extending substantially

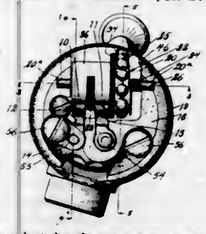
radially from its adjacent drum adapted when the drums are rotated to collect quantities of sand from the stream of sand going thru the passage and means for rotating said drums at a sufficiently high speed so that said fingers

travel faster than the sand moving thru said passage and successively collect portions of said sand into wads and deliver it from the bottom of said passage at a speed greater than the entering speed of the sand.



1,570,653. FURNACE WALL. FRANK H. WAITE and GEORGE W. DAVEY, Long Island City, N. Y. Filed Sept. 26, 1924. Serial No. 740,106. 6 Claims. (Cl. 110—56.)

1. A construction of the class described comprising an outer wall, an inner spaced wall having passages extending therethrough, a spacing tile between the said outer and inner walls forming independent air chambers and means connecting the spacing tile with the outer wall to permit the admission of air to the respective chambers, said spacing tile being free to move with the inner wall under contraction and expansion.

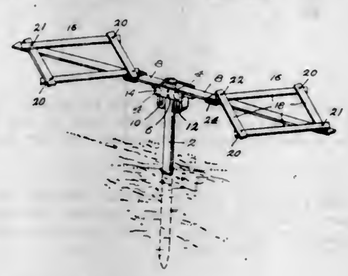


1,570,654. LOCK MECHANISM FOR SLIDABLE WINDOWS. WILLIAM CARLILE WALLACE, New York, N. Y., assignor of one-half to Joseph E. Garrabrant, New York, N. Y. Filed Dec. 1, 1923. Serial No. 677,927. 2 Claims. (Cl. 292—342.)

2. Locking means adapted for use in connection with a slidable window having a guide channel and control means, comprising a two-part wedge device within said channel, one part of said wedge device having means of connection with the window, and also having means of engagement capable of limited slack movement with the control means, the other part of the wedge device being free within the channel, and spring means to normally

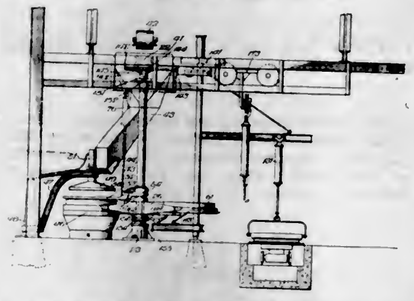
extend the parts of the wedge device to frictionally bind it within the guide channel thereby locking the window in a set position.

1,570,655. ELECTRICAL SWITCH. CHESTER E. WARNER, Berwyn, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 24, 1919, Serial No. 340,337. Renewed May 9, 1925. 5 Claims. (Cl. 173—354.)



1. A switch socket having a receptacle contact, a wiring terminal and means for establishing electrical connection between said receptacle contact and said wiring terminal, said means comprising a rotatably mounted insulating carrier having cams terminating in abrupt drops, contact plate carried by said carrier and covering one of the cams thereof, said plate having a pair of contact extensions, the carrier having a radially projecting barrier extending therefrom between said extensions, a spring contact finger electrically connected to said receptacle contact, a second spring contact finger electrically connected to said wiring terminal, both of said spring contact fingers being arranged to ride on said curved contact plate and to snap off its said extensions, said barrier being disposed to pass in between said contact fingers before said fingers leave said contacts and to separate said fingers when the latter snap off said extensions.

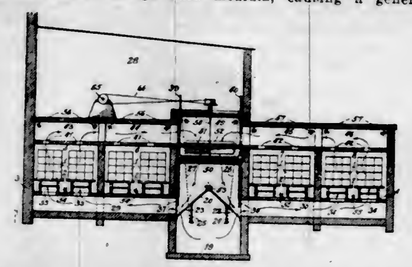
1,570,656. DISPLAY DEVICE FOR ADVERTISEMENTS. FREDERICK L. WERTZ, Montclair, N. J. Filed Sept. 18, 1924. Serial No. 738,495. 2 Claims. (Cl. 40—146.)



1. In a mounting structure for displaying advertisements, an advertising sign, reinforcement therefor, a stationary and a movable finger on said structure, said movable finger being adapted for displacement with respect to said stationary finger, and two openings in said reinforcement one near the upper and the other near the lower end of the sign, said openings registering with said fingers to hold the sign against lateral and vertical displacement.

1,570,657. CAMP GRATE. LE ROY J. WHITE and OTTO C. TEUFEL, Eldon, Iowa. Filed July 21, 1925. Serial No. 45,037. 2 Claims. (Cl. 126—30.)

1. A device of the character described consisting of a stake, a pair of transverse members fixed to the upper portion of said stake, pivots carried by said transverse members, a pair of brackets provided at their adjacent ends with loops extending at an angle thereto, a sleeve slidable upon each bracket, and a pair of foldable shelves each of which consists of bars pivotally connected at their ends, one pivot being secured to the associate sleeve and another pivot being secured to the associate bracket.



1,570,658. MOLDING MACHINE. ALGOT A. WICKLAND, Chicago, and FREDERICK K. VIAL, La Grange, Ill., assignors to Griffin Wheel Company, Chicago, Ill., a Corporation of Massachusetts. Filed Oct. 10, 1919. Serial No. 329,682. 36 Claims. (Cl. 22—25.)

1. In a molding machine, the combination of a rotatable conveyer movable past a plurality of operating stations and having a plurality of mold supports, and means for alternately locking said conveyer to said rotating means and against movement therewith being substantially overlapping in its locking actions.

1,570,659. METHOD OF AND APPARATUS FOR DRYING REFRACTORY MATERIALS. WILLIAM E. WILSON, Mason City, Iowa, and HENRY G. LYKKEN, Minneapolis, Minn. Filed Dec. 11, 1923. Serial No. 679,954. 26 Claims. (Cl. 34—46.)

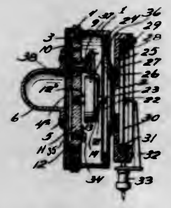
1. A method of drying refractory ware, comprising moving the ware through a heating and humidifying medium, the ware being subjected to increasing temperatures and decreasing humidities during said movement of the ware through said medium, causing a general

travel of said medium in a direction opposite to the travel of the ware, and forcing said medium at successive points vertically through said ware.

1,570,660. METHOD OF DIE ROLLING. WILLIAM P. WITHEROW, Pittsburgh, Pa., assignor to Witherow Steel Company, Neville Island, Pa., a Corporation of Pennsylvania. Filed Aug. 1, 1923. Serial No. 655,060. 8 Claims. (Cl. 80—60.)

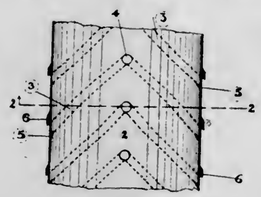
8. In the method of die rolling, the steps consisting in passing a heated metal leader through a die roll pass with the rolls thereof driven at a given speed and with the leader at a given temperature, whereby a sample article of a certain length is produced, and thereafter passing successive leaders through the same die roll pass, the leaders being at a different temperature than the sample leader and the rolls being driven at a speed different than that used in the rolling of the sample whereby articles differing in length from the sample are produced, both of said variations being in accordance with the percentage of reduction to be effected by the die rolls.

1,570,661. NEEDLE THROAT FOR BUTTONHOLE-SEWING MACHINES. ALFRED R. WOOD, Bridgeport, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Dec. 28, 1923. Serial No. 683,092. 8 Claims. (Cl. 112—71.)



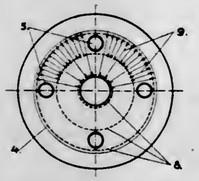
1. A needle-throat member for cut-first buttonhole sewing machines, said member having a needle-clearance aperture, and means for deflecting the body-material towards the buttonhole-slit.

1,570,662. SOUND-WAVE-INTENSIFYING DEVICE FOR REPRODUCERS. ALFRED WYATT, Kansas City, Mo., assignor of one-third to Samuel J. Cochran and one-third to Frank A. Cochran, both of Kansas City, Mo. Filed Apr. 10, 1922. Serial No. 550,991. 2 Claims. (Cl. 179—100.1.)



1. In a device of the character described, the combination with a casing provided with an opening at one of its ends, of a microphone carried within said casing, a diaphragm in said casing having its center substantially alined with respect to the axis of said casing-opening and being mechanically connected to said microphone so that vibration of the diaphragm shall be transmitted to the microphone diaphragm, means interposed between the opening-provided end of said casing and the edges of the

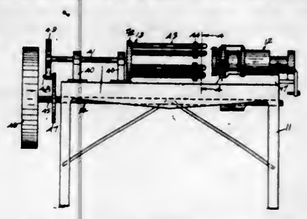
diaphragm for cushioning same against metallic noises, a second casing secured to said first-named casing and provided with an opening registering with the opening in said first-named casing, means interposed between said



casings for preventing the transmission of metallic noises, a second diaphragm within said second casing and having its center substantially alined with the axis of the casing-opening, and means for effecting vibration of said second diaphragm.

1,570,663. PNEUMATIC VEHICLE TIRE CASING. AMOS A. WYCKOFF, Oakland, Calif. Filed Oct. 4, 1924. Serial No. 741,568. 2 Claims. (Cl. 152—13.)

2. A pneumatic tire having thereon a tread provided therein with a series of V-shaped holes which extend from the sides of the tread to points located at central points within the tread, and a series of radial openings extending from points on the outer surface of the tread to the said points where the holes meet.

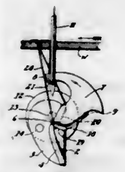


1,570,664. ARTIFICIAL-STONE ABRASIVE WHEEL. HERMANN AMOS, Doltzschen, near Dresden, Germany. Filed Aug. 31, 1925. Serial No. 53,622. 15 Claims. (Cl. 82—75.)

1. An abrasive wheel for the production of wood powder, made of artificial stone and adapted to be mounted on a shaft between clamping plates, said wheel comprising struts embedded in the artificial stone parallel to the axis of the wheel at a distance from said axis not exceeding the radius of the clamping plates.

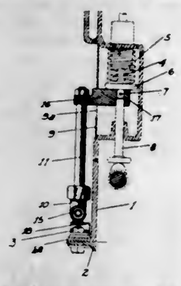
1,570,665. CUTTING MACHINE. JAMES W. DIXON, Chicago, Ill., assignor, by mesne assignments, to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed June 27, 1921. Serial No. 480,859. 2 Claims. (Cl. 164—61.)

1. A tube cutting machine comprising a hollow guide through which the tube is fed, a plurality of fingers successively positioned in alignment with the guide and receiving the tube as it passes therefrom, means to clamp the tube in the guide, means to sever the tube



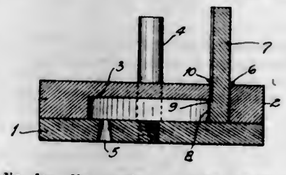
and means to move the fingers after the severing operation to carry the severed tube away from the cutter and position a second finger in alignment with the guide.

1,570,666. WICK. JOSEPH GEPPERT, Chicago, Ill., assignor to The Mantle Lamp Company of America, Chicago, Ill. Filed June 3, 1922. Serial No. 565,728. 10 Claims. (Cl. 67—69.)



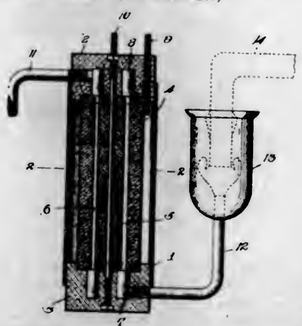
1. A wick containing a chemically and physically-stable solid stiffening substance heat-treated in situ.

1,570,667. SEWING-MACHINE LOOP TAKER. ALFRED GAIBB, Elizabeth, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Jan. 14, 1922. Serial No. 529,112. 8 Claims. (Cl. 112—201.)



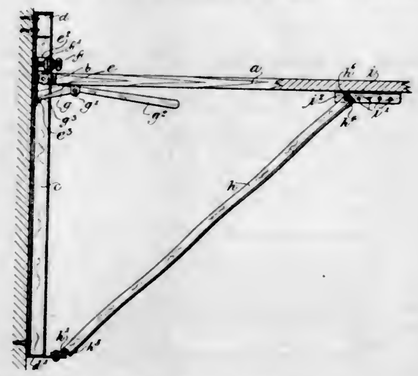
1. A rotary chain-stitch looper comprising a body fashioned from a sheet-metal blank and shaped and bent to form a loop-seizing beak, a loop-spreading wing, and an ear adjoining said wing and disposed substantially parallel to and spaced from the plane of action of the loop-seizing beak, a shank element formed separately from the looper-body and adapted to be detachably secured to the looper-shaft of a sewing machine, and means for securing said ear to said shank element.

1,570,668. OIL-PUMP ATTACHMENT FOR GAS ENGINES. VERNIA E. GRIFFITH, Lodi, Calif. Filed Aug. 13, 1924. Serial No. 731,773. 2 Claims. (Cl. 184—6.)



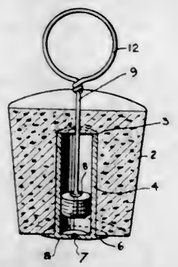
2. An oil pump attachment for gas engines comprising a pump member, a plunger therefor, a rigid block fixed at one end onto the plunger and having an orifice at the other end of a size at its upper end to snugly receive and be secured to the lower end of a valve stem; and at its lower end to receive the push rod of the engine with a running fit, whereby the strain imposed on the block by the plunger is distributed between the valve stem and push rod without interfering with the movement of the latter independent of the stem.

1,570,669. DIE FOR DIE CASTING. CHESTER ARTHUR HEINZELMAN, Belleville, Ill. Filed Aug. 13, 1925. Serial No. 49,930. 5 Claims. (Cl. 22—183.)



1. A die for die casting provided with an opening therethrough and a plunger shaped to fit said opening, said plunger having a cut away portion.

1,570,670. ELECTRIC WATER HEATER. MILTON J. HORSWILL, Oakland, Calif., assignor to Anna B. Donahoo, Alameda, Calif. Filed Mar. 5, 1923. Serial No. 622,810. 3 Claims. (Cl. 219—40.)

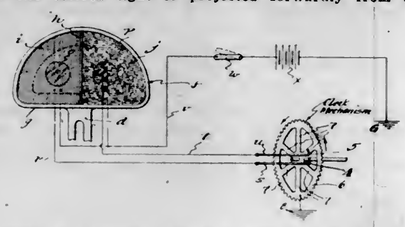


1. An electric heater comprising a conducting core, a second conducting core, said second core being spaced from said first core to form an annular water passage through which the water is adapted to flow, a cap at both ends of said cores, said caps having annular chambers therein communicating with said water passage, an inlet pipe extending into one of said annular chambers, and an outlet pipe extending into the other annular chamber, an electric terminal connected to one core and a second electric terminal connected to the other core, said second terminal being a post extending through one of the cores and both caps.

1,570,671. IRONING BOARD. HENRY E. JANES, Pelham Manor, N. Y., assignor to Janes & Kirtland, Inc., New York, N. Y., a Corporation of New York. Filed June 24, 1925. Serial No. 39,190. 1 Claim. (Cl. 68—10.)

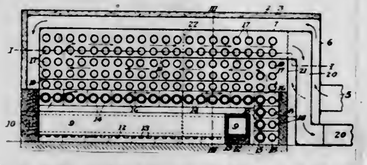
The combination of an ironing board, vertical guides for the inner end thereof, a support for the inner end thereof, means to secure the support in vertically adjusted position, a latch carrier by the board and adapted to engage the support, a brace for the outer end of the board, and means to adjust the brace to support the board in a horizontal position.

1,570,672. BOTTLE STOPPER. WARDLOW M. JESSUP, Clinton, Iowa. Filed Oct. 30, 1922. Serial No. 598,000. 6 Claims. (Cl. 215—58.)



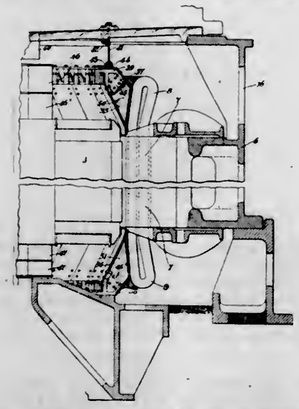
1. A bottle stopper comprising a flexible cork, a cylinder positioned within said cork having its lower end exposed and having an opening therein, a piston within said cylinder, a piston rod attached to said piston and extending outwardly thru said cork and a finger engaging member secured to the outer end of said piston rod.

1,570,673. PARKING LIGHT. SAM JOHNS, Detroit, Mich. Filed Feb. 12, 1923. Serial No. 618,512. 2 Claims. (Cl. 177—329.)



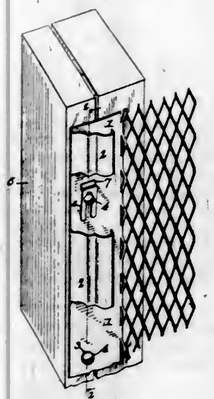
1. In a parking light for vehicles, the combination of illuminating means, a housing for said illuminating means provided with light openings at the front and rear

thereof, and means for controlling the beams of light projected from said illuminating means, whereby a ray of one colored light is projected forwardly from the



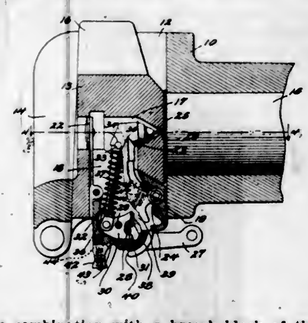
housing and alternate lights of different colors are continuously and intermittently projected rearwardly from said housing.

1,570,674. HEAT EXCHANGER. BOYD M. JOHNSON, Metuchen, N. J., assignor to The Carborundum Company, Niagara Falls, N. Y., a Corporation of Pennsylvania. Filed Feb. 9, 1924. Serial No. 691,576. 14 Claims. (Cl. 263—20.)



14. A heat exchanger, comprising a radiating combustion chamber having a silicon carbide radiating wall, a plurality of banks of conducting tubes arranged side by side above said wall and each composed of metal tubes and independent silicon carbide tubes arranged between said wall and the metal tubes, means for directing the gases of combustion in contact with said tubes in such manner as to subject the silicon carbide tubes of each bank to the higher temperatures, and a mixing chamber between the discharge ends of the tubes of each bank and the intake ends of the tubes of the next bank.

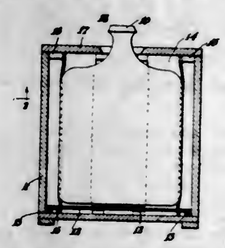
1,570,675. DYNAMO-ELECTRIC MACHINE. JOSEPH ALLEN JOHNSON, Niagara Falls, N. Y. Filed Mar. 9, 1923. Serial No. 623,833. 17 Claims. (Cl. 171—252.)



1. In a dynamo electric machine having suitable stator and rotor windings with wound portions of the stator windings exposed from and extending beyond the magnetic structure in which they are wound and in which stator parts are cooled by circulation of air produced by the rotor, the improvement which consists in means between the rotor and exposed portions of the stator windings substantially preventing the rotor from causing motion of air along or around the exposed portions of the stator windings circumferentially of the machine.

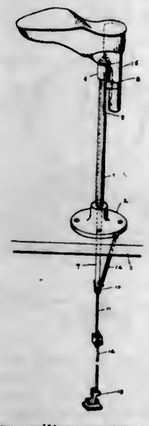
1,570,676. FASTENING FOR PLASTER TERMINALS. EDMUND H. JONES, Milwaukee, Wis., assignor to Milwaukee Corrugating Company, Greenfield, Wis., a Corporation of Wisconsin. Filed June 24, 1922. Serial No. 570,537. 3 Claims. (Cl. 72—118.)

1. A fastening for a sheet-metal plaster terminal comprising a headed stud secured in the foundation to which the terminal is applied and adapted to project through an opening in the terminal, and a forked wedge adapted to straddle the stud and when forced under the head of the stud against the base of the terminal to clamp and hold it tightly to the foundation.



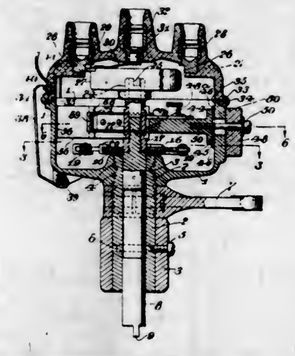
1,570,677. SELF-COCKING FIRING MECHANISM. CLAS J. JULSTEDT, Bethlehem, Pa., assignor to Bethlehem Steel Company, Bethlehem, Pa., a Corporation of Pennsylvania. Filed July 26, 1922. Serial No. 577,677. 21 Claims. (Cl. 89—27.)

1. The combination with a breech block of the sliding type having a recess extending thereinto from one face, and a second recess extending thereinto from another face and opening into the first recess, of a frame, having a firing mechanism mounted thereon, insertable into and removable from one of said recesses, said frame having also means to cooperate with the breech block to lock the frame in operative position within the block, said locking means being accessible through the other of said recesses.



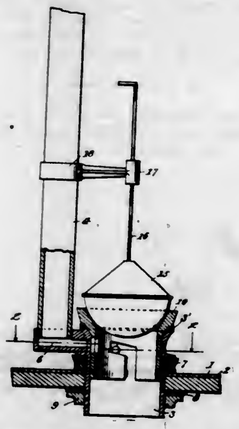
7. In a firing mechanism for guns in combination, a hammer, a spring for operating the hammer, a pivoted operating element for cocking the hammer and stressing the spring, the operating element being adapted while stressing the spring to shift the line of action of the spring toward the pivot.

1,570,678. CARBOY. HARRY A. KAST, Elmhurst, N. Y., assignor to The Kalbfleisch Corporation, New York, N. Y., a Corporation of New York. Filed July 11, 1924. Serial No. 725,501. 2 Claims. (Cl. 217—54.)



1. A carboy comprising a bottle and an enclosing box or casing therefor, abutments on the casing bottom opposite the plane sides thereof, transverse cushions supported on the abutments and extending beneath the bottle leaving a clear space beneath near the middle portions, vertical acid resisting cushions each comprising a flat strip of material, said cushions being unconnected with each other leaving a clear space between them, the lower ends of said cushions being secured at points within the plane of the bottle sides and at a lower point than the support for the bottom cushions, and acid resisting corner blocks in the upper corners of the casing of a size to bring the upper ends of the vertical cushions within the plane of the bottle sides.

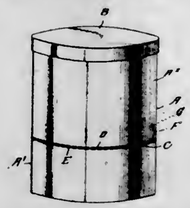
1,570,679. SHOEHORN-PULLING MACHINE. MICHAEL W. KELLY, Rochester, N. Y. Filed May 2, 1924. Serial No. 710,675. 2 Claims. (Cl. 12—15.)



1. In a shoe horn pulling machine the combination of a hollow standard, a socket mounted on top of said standard, an arbor supported within said socket and projecting upwardly therefrom, a rod mounted to reciprocate within said standard, a pulling latch carried in the upper end of said rod, said pulling latch projecting to one side of said rod and thru a slot in said standard, a treadle, adjustable means conning said treadle with the lower end of said rod to reciprocate said rod within said standard and move said pulling latch up or down on the outside of said standard.

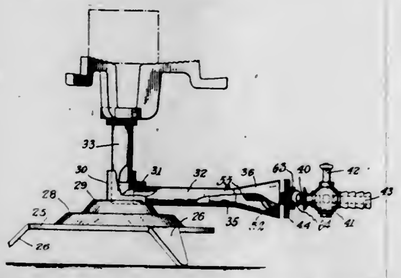
1,570,680. IGNITION APPARATUS. ARTHUR ATWATER KENT, Ardmore, Pa. Filed July 2, 1921. Serial No. 482,074. 41 Claims. (Cl. 200—22.)

24. Ignition controlling apparatus comprising a cam-actuated arm, an interrupter contact by said arm and movable in an arc, a co-acting stationary contact, at least one of said contacts having a substantially plane face, a member carrying said stationary contact, and a pivot for said member about which it is adjustable in an arc, said pivot disposed approximately in alignment with said face of said one of said contacts, and the radii of said arcs having different lengths.



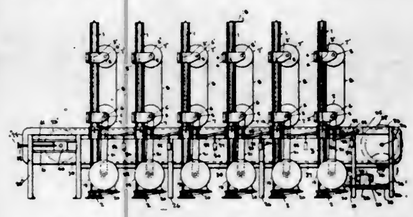
1,570,681. SEAT FOR FLUSH VALVES. WALTER J. KIRKHAM, Helena, Ark. Filed Apr. 4, 1922. Serial No. 549,451. 1 Claim. (Cl. 4—57.)

In a flush tank, the combination with an outlet pipe provided with an opening in its wall adjacent the upper end thereof, the upper end of said pipe being flared outwardly, a laterally extending throat formed on the upper portion of said pipe and in communication with said opening, and a vent pipe connected with said throat; of a valve seat provided with an outer peripheral offset portion for reception on the upper flared end of said



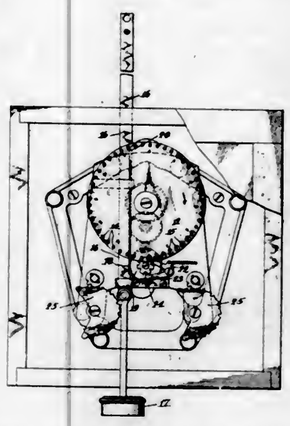
outlet pipe, an integral tubular body extension formed on said seat in continuation of said annular offset portion thereon, said body extension being provided in its wall with an opening adapted for registration with the opening in the wall of the outlet pipe, said body extension being also provided at diametrically opposite points thereon with bayonet slots extending upwardly from the lower edge of said extension, and inwardly extending ears carried at diametrically opposite points on the wall of said pipe for reception in said bayonet slots to removably secure said valve seat in position on the upper end of said pipe, the opening in the body extension being intermediate of said bayonet slots, whereby said opening may only register with the opening in said outlet pipe when the bayonet slots and the valve seat are disposed to locked position as and for the purposes described.

1,570,682. CARDBOARD BOX FOR MEN'S HATS. FERDINAND R. KLING, New York, N. Y. Filed June 10, 1925. Serial No. 36,220. 1 Claim. (Cl. 229—6.)



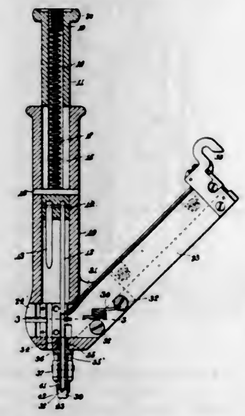
A large circular cardboard box provided with perforations in and around the wall of the box at a distance from the bottom of the box equal to one-third the height of the box dividing the wall into detachable sections, a wire secured immediately over the said perforations on the outside of the box, and a thin sheet of paper pasted on the outside of the said box over the perforations and wire, the end of said wire drawn through one of the perforations and left free and loose in the said box and provided with a knob at the end of said wire, whereby when the knob at the end of said wire is pulled the portion of the box above the perforations is severed from the portion below the same, the box is reduced to a size equal to one third the height of the large box as and for the purpose specified.

1,570,683. GAS BURNER. MILTON M. KOHN, New York, N. Y. Filed June 20, 1923. Serial No. 646,680½. 8 Claims. (Cl. 158—118.)



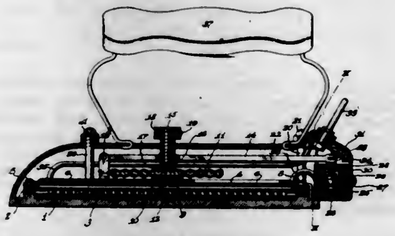
1. In a gas burner having an inlet tube, a hollow cone removably secured in said tube, a hollow screw supplying gas to said tube, means in said screw for controlling the passage therethrough, means for entering air therein, and a plurality of helical vanes integral in said cone for causing the entering air to assume a whirling motion prior to commingling with the gas.

1,570,684. GRINDING AND POLISHING MACHINE. FRANK KUHN and LAURENCE H. THOMAS, Detroit, Mich., assignors to American Electrical Heater Company, Detroit, Mich., a Corporation of Michigan. Filed July 24, 1922. Serial No. 577,188. 2 Claims. (Cl. 51—138.)



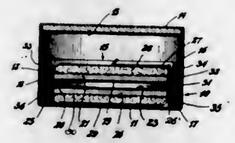
1. A grinding and polishing machine comprising a horizontal frame, a pair of sprockets journalled in opposite ends thereof, an endless link chain engaging said sprockets, plates secured to the links of said chain, longitudinal guide ways on said frame for receiving the edges of said plates, flanges extending inwardly from said guide ways forming stops for said plates to limit the upward movement thereof, levers pivoted to said frame, weights depending from the ends of said levers, a vertically movable rod attached to each of said levers at the end opposite said weights, and a head on said rod adapted to bear against the under side of said plate, said head being arranged beneath one of said flanges.

1,570,685. TIME-CONTROLLED DEVICE FOR DAMPERS, VALVES, AND THE LIKE. CLINTON E. LARRABEE, Binghamton, N. Y., assignor to International Time Recording Company of New York, Endicott, N. Y., a Corporation of New York. Filed Aug. 7, 1924. Serial No. 730,595. Renewed Dec. 8, 1925. 10 Claims. (Cl. 161—8.)



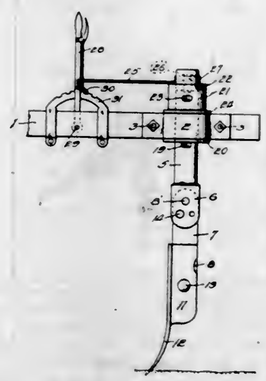
1. A time controlled apparatus for dampers, valves and the like, comprising a controlling member, a prepositioned program wheel, and means for controlling the former member from said wheel to permit a differential displacement of said member, said means including a Geneva device controlled by the program wheel, geared connection therefrom to said controlling member, and an escapement device controlled by said program wheel for preventing movement of said controlling member at times when the Geneva device is out of cooperation with the program wheel.

1,570,686. TACK-DRIVING DEVICE. OSCAR L. LAWSON, Lynn, Mass. Filed Apr. 15, 1925. Serial No. 23,256. 15 Claims. (Cl. 1—46.)



5. In a device of the class described, a casing; a reciprocating member therein; a spring for forcing said member outwardly; a driving member secured to said reciprocating member; a block secured to said casing and having a cylindrical opening therein through which said driving member is adapted to move; a pair of jaws pivoted to said block and having opposed curved faces adapted to curve the point of a tack passing between them, said curved faces having inclined pockets in the upper ends thereof; springs normally retaining the lower ends of said jaws in contact; means for feeding a tack into the path of said driving member; and means permitting said jaws to separate when the driving member is actuated.

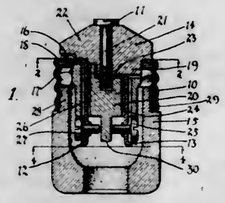
1,570,687. THERMAL SWITCH FOR ELECTRIC IRONS. JAMES N. LEWIS, Detroit, Mich., assignor to Lewis Electric Mfg. Co., Inc., a Corporation of New York. Filed Apr. 29, 1922. Serial No. 557,343. 1 Claim. (Cl. 200—140.)



In an electrically heated iron having a cover under which is located an electric switch and a thermostatic control device adapted to control said switch and the heating of said iron:—means for supporting said thermostatic control device and mechanism by which said switch may be actuated by said device, said means comprising a four-arm spider under said cover on which is mounted said thermostatic control device, a bearing on one of the arms of said spider at one side of said thermostatic device, a lever pivotally supported by said bearing between said spider and said cover and extending in the direction of another arm of said spider and articulated with said switch, said thermostatic control device being at the juncture of said spider arms and having a portion thereof attached to said spider, and means carried by said lever opposite the attached portion of said control device and extending through said cover adapted for adjustment to regulate the operation of said lever by said thermostatic control device.

1,570,688. TOILET ARTICLE. HORTENSE LICHTENTAG, New York, N. Y.; Ruth Paskin, administratrix of said Lichtentag, deceased, assignor to herself and Louis Paskin, a Copartnership doing business as Paris Laboratories, New York, N. Y. Filed Mar. 31, 1923. Serial No. 628,959. 5 Claims. (Cl. 132—83.)

1. In a toilet article of the two powder compact type, powder compact carrying means comprising a plurality of powder compact supporting members interfitting at their peripheral edges, a powder compact carried by each of said supporting members on the exposed faces thereof, means associated with said supporting members for detachably fastening the same together, a container for the powder compact supporting members, and means to pivotally mount the said supporting members within the container, whereby either compact may be operatively exposed.



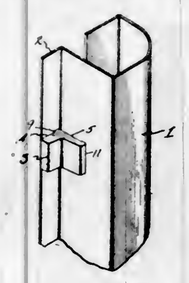
1,570,689. CULTIVATOR. JACOB W. LYONS, Morrisonville, Ill. Filed Mar. 31, 1922. Serial No. 548,515. 1 Claim. (Cl. 97—187.)

In a cultivator construction, a beam, a vertically disposed concaved recess in the outer side face of the beam, a bearing fixed to the beam having a vertically disposed opening having an open inner side to register with the recess in the beam to provide a circular bearing opening, a shovel shank having a plurality of transverse openings disposed at right angles to each other oscillatingly receivable in said bearing opening, a washer mounted upon the shaft and engaging the lower face of the bearing, a cotter-pin receivable in one of the transverse shaft openings below the washer and engaging the lower face thereof for holding the washer from downward displacement, a washer loosely mounted upon the shaft and engaging the upper face of said

bearing, an arm having a head provided with an opening at one end for receiving the upper end of said shaft, the lower face of said arm engaging the washer that engages the upper face of the bearing, a cotter-pin passing through the head of said arm and passing through one of the transverse shaft openings for holding the arm against upward and rotary displacement and means for actuating said arm for oscillating the shovel shank.

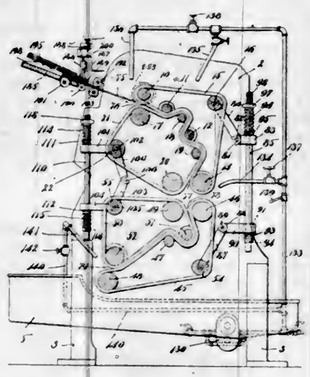
1,570,690. ATTACHMENT PLUG. STANLEY MCCLATCHIE, Cambridge, Mass., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed July 3, 1920. Serial No. 393,973. 3 Claims. (Cl. 173—358.)

3. A swivel attachment plug comprising a threaded shell contact, having an inwardly-extending annular flange, an insulating base having a longitudinally extending hole therethrough, and an integral sheet metal member comprising a binding plate portion, a conducting portion extending through said hole, and a pair of contact members straddling said flange and having a sliding engagement therewith.



1,570,691. INDICATING INSTRUMENT. LEWIS A. MAPEL, St. Louis, Mo., assignor to The Automatic Appliance Company, St. Louis, Mo., a Corporation of Missouri. Filed Mar. 1, 1920. Serial No. 362,573. 5 Claims. (Cl. 73—110.)

1. A pressure gage comprising, a casing, an imperforate diaphragm mounted within said casing and dividing the same into two liquid-receiving compartments, an indicator connected for operation by said diaphragm, a pipe connection to each compartment adapted to supply thereto and maintain therein the pressure-transmitting liquid, and means for connecting said compartments, adapted to permit the liquid from one of said connections to flow into its compartment and therefrom into the other compartment, in order to fill both compartments, said connections being arranged to permit displacement of the air in said compartments while they are being filled.

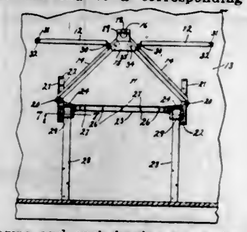


1,570,692. DOOR BUFFER. WILLIAM MARSHALL, Detroit, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 17, 1924. Serial No. 750,426. 5 Claims. (Cl. 16—86.)

1. The combination with a metal door jamb having a lateral flange, of a door buffer having a portion seating against the outer face of the jamb, and having a portion seating against the outer face of the flange,

and projections extending from the portion aforesaid of said buffer extending through said jamb and flange respectively.

1,570,693. LEATHER-TEMPERING MACHINE. WALLACE C. WRIGHT, Brookfield, N. H., and FRANK W. MERRICK, Boston, Mass., assignors to American Shoe Machinery Company, Boston, Mass., a Corporation of Massachusetts. Filed Jan. 7, 1921. Serial No. 435,733. 7 Claims. (Cl. 91—17.)

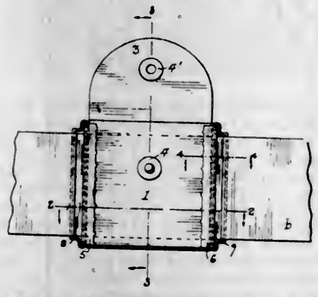


4. A leather tempering machine of the kind described, having in combination a plurality of endless belts arranged in groups, means cooperating with said belts for deflecting a predetermined portion of them in opposite directions, means supplying tempering solution both to said belts and to the material operated upon and means applying a substantially uniform tension upon predetermined belts of said groups.

1,570,694. VEHICLE SHIPPING BRACKET. CHARLES L. MICHOD, Chicago, Ill., assignor, by mesne assignments, of one-half to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey, and one-half to The Copony Auto Loading Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 17, 1923. Serial No. 681,212. 8 Claims. (Cl. 105—368.)

1. A bracket of the class described, comprising a member adapted to fixedly fasten the hub portion of an axle thereto, a pair of upwardly converging arms pivotally connected to said member and having means on their lower ends adapted to fasten said converging arms to

a car wall, and a second pair of arms each pivotally connected at one end to a corresponding one of said



converging arms and each having a member on its other end adapted to fixedly fasten said second mentioned arms to the wall.

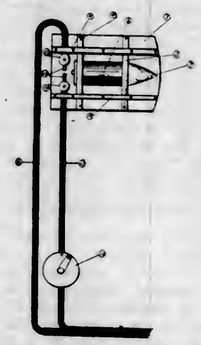
1,570,695. GLASS-DRAWING APPARATUS. WILLIAM L. MONRO, Pittsburgh, Pa., assignor to Window Glass Machine Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Nov. 6, 1922. Serial No. 599,236. 4 Claims. (Cl. 49—121.)

1. In apparatus for drawing glass cylinders, a bait, a chamber adjacent the bait, and a nozzle of smaller cross sectional area than the chamber adapted for the discharge of air in jet form through the chamber and into the bait, the chamber having a substantially continuous wall at one side of the path of said air jet and having an opening opposite such wall, substantially as described.

1,570,696. POCKET FOR BATHING BELTS. ROSWELL A. MOORE, Waterbury, Conn., and SOLOMON BYER, New York, N. Y. Filed Jan. 6, 1925. Serial No. 875. 1 Claim. (Cl. 224—26.)

A bathing belt pocket comprising a strip of material folded upon itself to form a front, a back and a cover flap, co-operating means on the front and cover flap for securing the flap in closed position, a metal clip provided with toothed edges secured to each side edge of the front and back to close the sides and a loop carried by each of said clips and adapted to engage a belt.

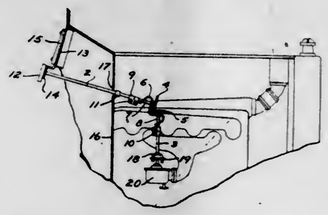
1,570,697. WELL POINT. THOMAS F. MOORE, Morris Plains, N. J. Filed Dec. 8, 1924. Serial No. 754,617. 3 Claims. (Cl. 166—7.)



1. In a well point of the character described, a suction pipe, a plate secured flatwise to one side only of the receiving end of the pipe and extended laterally some distance beyond opposite sides of said pipe and a screen wrapped around said plate and pipe and forming therewith collecting chambers external to the pipe for receiving water passing thru the screen.

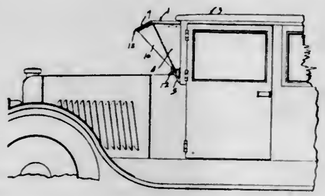
1,570,698. TOY. ELBERT E. MOORHEAD, San Francisco, Calif. Filed Jan. 12, 1922. Serial No. 528,721. 5 Claims. (Cl. 273—127.)

1. A toy including a pair of spaced supports, a back brace connecting the supports, and tensioned elastic barrier means connected to said supports and arranged in front of the back brace.



1,570,699. SHOOTING DEVICE. FRANCIS E. MOORMAN, Guthrie, Okla. Filed Nov. 7, 1925. Serial No. 67,623. 2 Claims. (Cl. 89—1.)

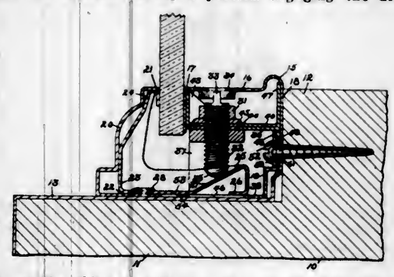
1. A device having a support, a pair of shell supports carried thereby, a shell carried in the supports, a fusible cap for the shell, a pair of binding posts, naked



wires passing through the binding posts and in proximity to each to form a gap, electric lines leading from the binding posts, and a switch in one of the lines, the shell discharging at the instance of flashing of the spark at the said gap.

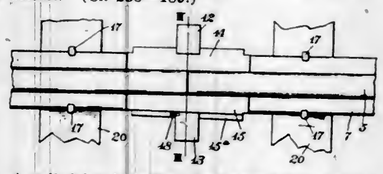
1,570,700. VALVE ADJUSTER. RIN N. MURAKAMI, Milwaukee, Wis., assignor to Harry W. Bolens, Port Washington, Wis. Filed Feb. 15, 1924. Serial No. 693,051. 20 Claims. (Cl. 137—139.)

1. A needle valve adjuster comprising, a pair of movable rod-like elements, a motion transmitting connection between said elements, and a sheet metal bracket coacting with said elements adjacent to said connection, said bracket being supported entirely by said elements.



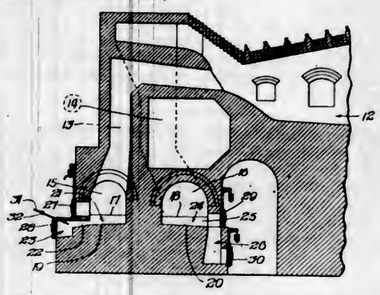
1,570,701. SUN AND RAIN SHIELD FOR AUTOMOBILES. SHOICHI NAKAGAWA, San Jose, Calif. Filed May 11, 1925. Serial No. 29,301. 3 Claims. (Cl. 296—95.)

1. A sun and rain shield for automobiles comprising a metallic plate adapted to be secured to the upper portion of a windshield of an automobile, and project outwardly therefrom, glass side shields fastened to the ends of said plate and extending downwardly therefrom, metallic visor plates hinged to the forward edge of the first named plate and adapted to be moved into position inclining downwardly and forwardly from said plate into position folded against the under side of the plate and vice versa, and glass extension plates for the side shields hinged at their upper ends to the metallic extension plate and movable from a position extending outwardly from the stationary glass plates into position folded upon the under side of the metallic extension plate and vice versa.



1,570,702. METAL WINDOW SASH. CHARLES G. NELSON, Chicago Heights, Ill., assignor to Zouri Drawn Metals Company, Chicago Heights, Ill., a Corporation of Illinois. Filed Dec. 18, 1924. Serial No. 756,653. 8 Claims. (Cl. 20—56.4.)

1. In a structure of the class described, a glass-clamping member for one side of a sheet of glass, a draw-bar extending from said member to the other side of the sheet of glass and having a cam surface thereon adjacent its end, a bracket, and a screw passing through a portion of the bracket and engaging said cam surface, the bracket having a portion engaging the draw-

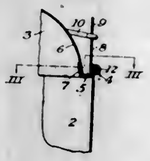


bar on the side opposite the cam surface and preventing thrust of the screw against the cam surface from exerting a twisting force on either the bracket or draw-bar.

1,570,703. RAIL JOINT. DANIEL O. NEWPORT, Columbus, Ohio. Filed Mar. 23, 1925. Serial No. 17,479. 5 Claims. (Cl. 238—189.)

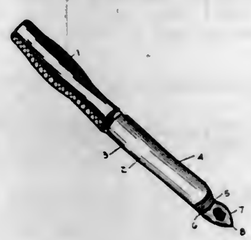
1. A rail joint including, in combination, a truss for the meeting ends of the rails consisting of a plate provided with a second plate bent at its end portions and providing a seat therebetween, a yoke seated in said seat and fish blocks held in said yoke.

1,570,704. SLAG POCKET AND METHOD OF DRAINING THE SAME. FRANK ORTH, Indiana Harbor, Ind. Filed Mar. 14, 1923. Serial No. 625,095. 17 Claims. (Cl. 263—45.)



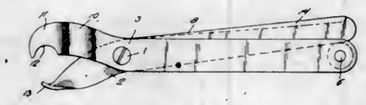
1. The combination with the down-comer of an open-hearth furnace or the like, of a slag pocket in the lower portion of said down-comer, there being an opening in said outer wall giving access to the slag pocket, a suitable closure for said opening, an auxiliary slag pocket at a lower level than the first mentioned slag pocket, a connection from the lower portion of the first mentioned slag pocket to the auxiliary slag pocket, there being an opening giving access to the auxiliary slag pocket, a suitable closure for said opening, means for introducing fuel or the like into the first mentioned slag pocket for the purpose specified, and means for at times isolating the auxiliary slag pocket from the first mentioned slag pocket.

1,570,705. ALARM DEVICE. HERBERT E. ROSE, Warwick, and ALBERT J. LOEPSINGER, Providence, R. I., assignors, by mesne assignments, to General Fire Extinguisher Company, Providence, R. I., a Corporation of Delaware. Filed Oct. 18, 1923. Serial No. 669,409. 6 Claims. (Cl. 253—136.)



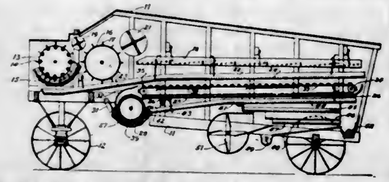
1. The combination with a motor having a wheel impelled by liquid striking its blades, of a casing guiding a portion of the liquid around the periphery of the wheel and into the path of the blades on the remote side of the wheel from where liquid first strikes them.

1,570,706. CONTAINER ATTACHMENT AND METHOD OF MAKING THE SAME. HUGH M. ROSS, Woodhaven, N. Y., assignor to Eagle Manufacturing Company, Wellsburg, W. Va., a Corporation of West Virginia. Filed Oct. 25, 1923. Serial No. 670,689. 13 Claims. (Cl. 220—91.)



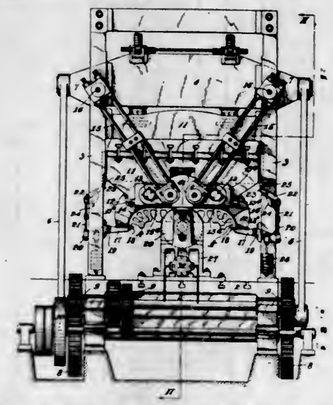
1. An attachment for containers having a top formed with a shoulder, and a seam between the top and the walls thereof, which includes a tongue bent around the seam, and means bearing on the top and engaging said shoulder for preventing rotation of the attached member.

1,570,707. VEGETABLE KNIFE. JOHN KING ROSS, Fort Erie, Ontario, Canada. Filed July 25, 1924. Serial No. 728,114. 1 Claim. (Cl. 146—204.)



A vegetable knife comprising a handle and a knife blade having a cutting edge and a dull edge and having a substantially spoon-shaped portion at one end thereof, one edge of said spoon-shaped portion having a groove situated substantially at a point where said spoon-shaped portion joins said knife blade.

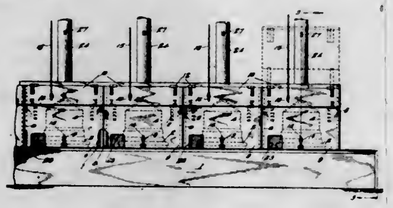
1,570,708. BENDING TOOL. FRANK I. ROUSH, Northumberland, Pa. Filed Apr. 17, 1925. Serial No. 23,883. 1 Claim. (Cl. 81—15.)



In a tool of the class described, a pivot bolt, a lever pivoted on the bolt, a pair of levers pivoted on the bolt, one on each side of the first lever, the terminals of the pair of levers being notched, the adjacent end of the first mentioned lever being twisted, at right angles and having a curved terminal, the notched ends of the pair of levers being bent outwardly from each other.

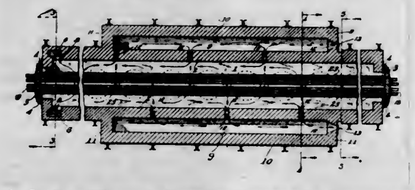
1,570,709. COMBINED THRASHER AND HULLER. WILLIAM N. RUMELY, Chicago, Ill. Filed Jan. 27, 1923. Serial No. 615,208. 9 Claims. (Cl. 130—2.)

1. In a combined thrasher and huller, the combination of a thrashing cylinder, a straw rack, a chaffer beneath said rack, hulling mechanism, and a return floor interposed between said chaffer and hulling mechanism, said floor extending from one end of said chaffer to said hulling mechanism and being completely removable to prevent delivery of material to the hulling mechanism when it is desired to use the apparatus merely as a thrasher.



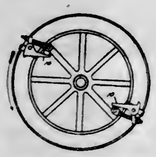
1,570,710. APPARATUS FOR FORMING WHEEL SHAPES. CHARLES SCHENCK, LEWIS FINE, and EMIL IBACH, Bethlehem, Pa., assignors to Bethlehem Steel Company, Bethlehem, Pa., a Corporation of Pennsylvania. Filed Apr. 27, 1923. Serial No. 634,953. 12 Claims. (Cl. 153—33.)

1. In apparatus for making metal wheels from flanged beams or sheets having web and spoke portions, a split die block having annular projections arranged to support the flanged portion of the wheel blank and to receive between them the web and spoke portions of the blank, and a forming die having arc-shaped faces thereon, the



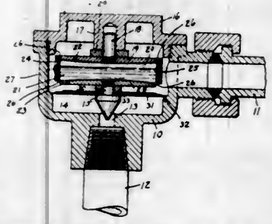
said forming die being movable relatively to the die block and said arc-shaped faces being adapted to engage and bend the blank about the projections of the die block into wheel form.

1,570,711. COLLECTING BOX FOR WIRE-DRAWING BLOCKS. WILLIAM H. SOMMER, Peoria, Ill. Filed May 11, 1923. Serial No. 638,265. 5 Claims. (Cl. 205—16.)



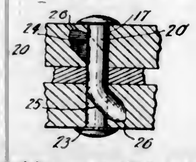
1. In combination with a wire-drawing-block, of a collecting and safety box for enclosing said block having an opening therein to receive a drawing-die and adapted to collect smoke, dust and gases created by the drawing operation, and a draft-flue in communication with the interior of said box for carrying the smoke, dust and gases therefrom.

1,570,712. FURNACE. WILLIAM H. SOMMER, Peoria, Ill. Filed Nov. 21, 1923. Serial No. 676,187. 3 Claims. (Cl. 263—28.)



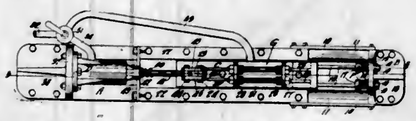
1. In a continuous annealing furnace, in combination, an annealing chamber extending longitudinally thru the furnace, combustion chambers on either side of said annealing chamber, fuel inlet ports in staggered arrangement in the opposite walls of said annealing chamber and in communication with the combustion chambers, said inlet ports being located at relatively considerable distances from the ends of the annealing chamber and exhaust stacks at the material inlet end of said furnace and on opposite sides thereof, the arrangement of fuel inlet ports and stacks creating a swirling action of the flame emitted from said fuel inlet ports about the material being annealed.

1,570,713. EMERGENCY GRIP FOR VEHICLE WHEELS. JAMES OLIVER STEWART, Gorrie, Ontario, Canada. Filed Mar. 30, 1925. Serial No. 19,207. 10 Claims. (Cl. 152—14.)



1. In emergency grips for vehicle wheels, a band forming a shoe mounting and adapted to be secured around the rim and tire of the vehicle wheel, a shaft extending from said band, a shoe having a gripping surface and rotatably mounted on said shaft and a resilient clamping mechanism limiting the rotation of said shoe on said shaft.

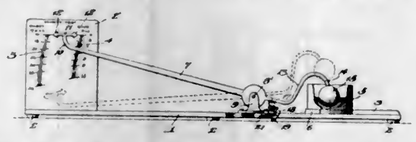
1,570,714. THERMOSTATIC-VALVE MECHANISM. COLE STICKLE, Indianapolis, Ind., assignor to Stickle Steam Specialty Company, Indianapolis, Ind., a Corporation. Filed May 27, 1924. Serial No. 716,167. 3 Claims. (Cl. 236—58.)



1. A thermostatic valve construction including a fluid containing diaphragm formed of two similar cup-shaped members reversed and telescoped one within the other, a rigid band surrounding the rims of said diaphragm members, solder for securing said band and diaphragm members together and closing the joints between them, and a valve adapted to be actuated by the diaphragm.

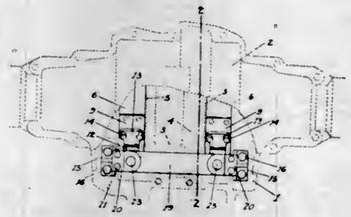
1,570,715. RIVET CONSTRUCTION. EDWIN B. STIMPSON, Brooklyn, N. Y., assignor to Edwin B. Stimpson Company, Brooklyn, N. Y. Filed Sept. 28, 1921. Serial No. 503,863. 8 Claims. (Cl. 85—39.)

1. A rivet comprising cooperating headed studs having shanks cut away to provide prongs having flat contacting faces and each having an inclined bending shoulder at the base of a prong, the face of the shoulder being perpendicular to the flat contacting face of the shank, and arranged with the inclined length thereof extending the full thickness of the shank across from one side to the opposite side thereof.



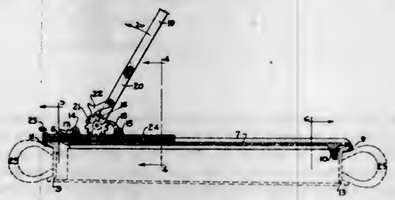
1,570,716. CLEANING APPARATUS. JOHN T. STONEY, Lakewood, Ohio. Filed Apr. 11, 1923, Serial No. 631,301. Renewed May 11, 1925. 14 Claims. (Cl. 22—1.)

1. A cleaning apparatus comprising, rigid means for supporting an object to be cleaned, resilient means for abutting one side of said object, and means for producing vibrations in said object.



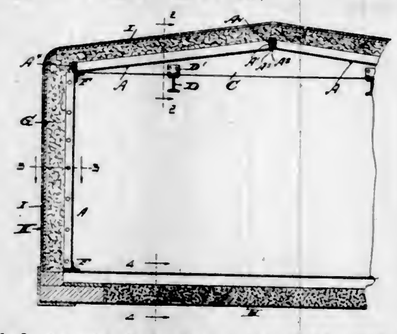
1,570,717. ACIDITY-TEST MACHINE. DONALD W. SUTHERLAND, Jr., Sioux Falls, S. Dak. Filed May 1, 1924. Serial No. 710,306. 3 Claims. (Cl. 73—51.)

3. In an acidity testing machine, a base, a vertical scale plate on the base, a lever pivoted between its ends to the base and having a pointer on one end cooperating with the scale plate, a cup on the base, a float on the other end of the lever receivable in the cup, a latching arm pivoted to the base plate and engageable at one



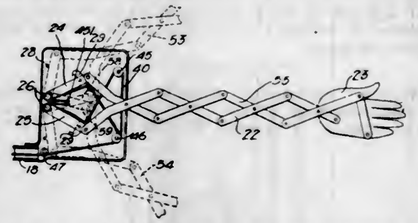
end beneath the lever to hold the float upwardly above the cup to allow the latter to be moved out of register with the float, and a catch engageable with the opposite end of the arm to hold the latter in operative position.

1,570,718. STEERING MECHANISM FOR TRACTORS. EVAN W. SWAIN and OWEN E. SMITH, Stockton, Calif. Filed July 7, 1924. Serial No. 724,582. 8 Claims. (Cl. 188—77.)



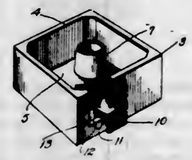
5. In combination with a brake drum mounted in a housing, and a split-end band about the drum, a readily detachable lug on one end of the band, a bracket structure mounted in the housing and overhanging the lug, and having a detachable member formed therewith, means whereby the band can be removed only by detaching the lug, and means whereby said lug can only be detached by removing the detachable bracket member.

1,570,719. AUTOMOBILE RIM COMPRESSOR. HERBERT J. ADAIR, Ardmore, and EDWARD J. FLANNERY, Philadelphia, Pa. Filed Jan. 14, 1919, Serial No. 271,111. Renewed Dec. 6, 1924. 4 Claims. (Cl. 157—1.)



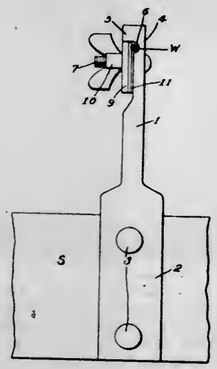
1. A tire tool comprising a main member provided at one end with a hook for engaging an edge of a tire rim and an abutment arranged to bear against the inner face of said rim, an auxiliary member slidably connected with the main member and having a head providing an abutment adapted to bear against the inner face of the rim and having at one end a hook like portion for engaging the edge of the rim and supporting the device, the opposite end of said head forming a hook adapted to be engaged with the edge of the rim, means for effecting relative longitudinal movement between members, and means for retaining the parts in adjusted relation.

1,570,720. INDUSTRIAL OVEN. WENTWORTH V. BAKER, Detroit, Mich. Filed Dec. 11, 1924. Serial No. 755,241. 7 Claims. (Cl. 72—16.)



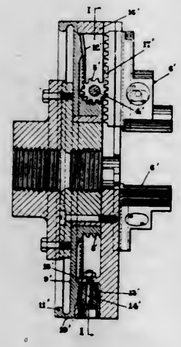
1. In an oven, a plurality of side panels formed of sheet metal having marginal interlocking edges, a plurality of ceiling panels having their side edges interlocked, the ceiling plates having their ends bent to provide an interlocking connection with the upper ends of the side panels, and an insulating non-heat conducting blanket covering the side and ceiling panels.

1,570,721. AUTO SIGNALING DEVICE. FREDERICK M. BALDWIN, Los Angeles, Calif. Filed Oct. 16, 1922, Serial No. 594,804. Renewed June 27, 1925. 13 Claims. (Cl. 116—40.)



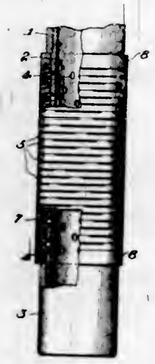
1. In an automobile signal of the class described, the combination of: a support; an extensible display member, including lazy tongs mounted upon said support; and means for exerting a forward pull upon said lazy tongs in the direction of their extension to cause their extension.

1,570,722. BATTERY TERMINAL. JAMES C. BALDWIN, Junction City, Kans., assignor of one-fourth to W. C. Donnell and one-fourth to Ray C. Sheets, both of Navarre, Kans., and one-fourth to Elmer B. Saufley, Kansas City, Mo. Filed Dec. 26, 1924. Serial No. 757,982. 5 Claims. (Cl. 173—259.)



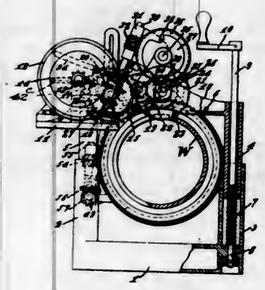
1. A secondary battery connection comprising a housing having an upstanding tubular member carried by its bottom to engage the battery post terminal by fitting over the terminal, the member having an outer face to receive a cable clamp and a removable cover for the housing.

1,570,723. INSULATOR. CLARENCE E. BANKS, Monticello, Mo., assignor of one-half to Jesse L. Brightwell, Monticello, Mo. Filed July 12, 1921. Serial No. 484,156. 1 Claim. (Cl. 173—314.)



The combination with a head having a groove in one side, and a flange extending from one end of the head at an angle to said grooved side, of a clamping disk insertable under the flange, insulating washers between the disk and the head for receiving a wire therebetween, a bolt extending laterally from the head and loosely through the disk and washers, and means engaging the bolt and disk for forcing a wire and one of the insulating washers to the groove and for keeping the clamping disk below the flange.

1,570,724. AUTOMATIC CHUCK. FRÉDÉRICK BECK, Neuilly-sur-Seine, France. Filed Nov. 9, 1921. Serial No. 514,025. 4 Claims. (Cl. 279—117.)

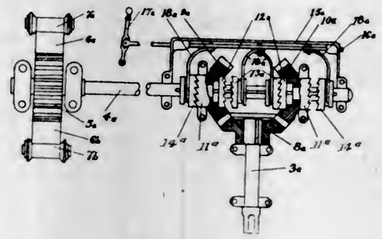


3. An automatic chuck, comprising, a plate, clamping dogs slidably positioned in the plate, pinions for operating the dogs, an endless screw for operating the pinions, said endless screw having a multiple thread equal in number to the number of pinions in the chuck, the divided pitch of which is equal to the pitch of the pinions, and the true pitch of which is equal to the divided pitch times the number of pinions in the chuck, so that the relative position of the pinions remain unchanged during operation of the chuck, whereby to make the dogs mutually interchangeable.

1,570,725. SCREEN FOR OIL WELLS. CHARLES H. BENCKENSTEIN, Vinton, La. Filed Nov. 3, 1924. Serial No. 747,651. 2 Claims. (Cl. 166—5.)

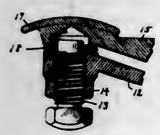
1. A screen for wells including a perforated pipe, a series of hard metal rings mounted on said pipe, each ring being of unbroken formation and means for spacing said rings, the rings being shrunk on the perforated pipe.

1,570,726. PIPE-CUTTING MACHINE. FRANK W. BRODERICK, Memphis, Tenn., assignor of one-half to Emmet H. Slater, Memphis, Tenn. Filed Apr. 1, 1924. Serial No. 703,558. 4 Claims. (Cl. 29—69.)



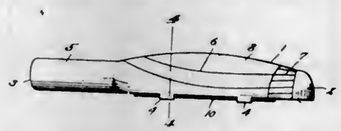
1. In a machine of the class described the combination with a rotatable work holder, of an adjustably supported table, a motor, a saw frame pivotally mounted on the table, a rotatable saw, a cam rotatably mounted, means operated by the motor for simultaneously rotating the work holder and the cam at a slow speed and for rotating the saw at a high speed, said cam cooperating with the frame to shift the frame at the beginning of the movement of the cam to force the saw into the work and thereafter to maintain the saw in engagement with the work.

1,570,727. MECHANICAL MOVEMENT. MANUEL CARRASCO-SÁNCHEZ, Washington, D. C. Filed Sept. 4, 1925. Serial No. 54,572. 4 Claims. (Cl. 74—54.)



1. In motion transformation mechanism, the combination with angularly disposed driving and driven shafts, of a gear on one of said shafts, a pair of opposite gears

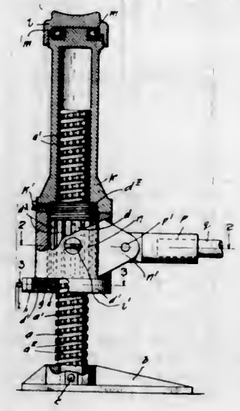
journaled on the other shaft and in operative association with the first-mentioned gear, a set of reverse clutch mechanisms for each of said opposite gears, and means



for moving one or the other of the sets of the two gears into and out of coaction to cause the gears and shaft to rotate together in either of opposite directions.

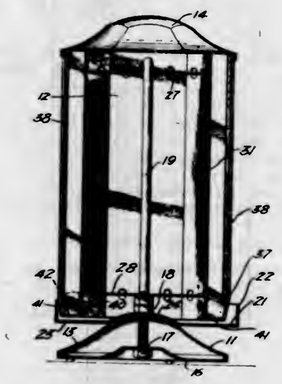
1,570,728. VALVE FOLLOWER. HENRY CHANDLER, Marysville, Mich. Filed Nov. 13, 1922. Serial No. 600,551. 5 Claims. (Cl. 123—90.)

5. A force transmitting member embodying a pair of arms connected together at one end, the other ends being normally spaced apart, one of the arms being resilient, one of the arms being formed to receive pressure from a cam mechanism, the other being formed to transmit pressure to a valve mechanism and means to limit the relative movement between said arms in one direction.



1,570,729. ADVERTISING NOVELTY. LOUIS F. CLEMENTS, Kansas City, Mo. Filed July 31, 1925. Serial No. 47,334. 1 Claim. (Cl. 40—10.)

A device of the class described struck out from a sheet of metal and bent to form an elongated body open at its lower face and having inturned card securing clamping fingers along its side edges and with a rolled tail at one end and a head at the other.

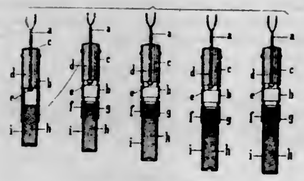


1,570,730. RATCHET MECHANISM. ROY A. DE LANO, Eugene, Oreg. Filed Sept. 15, 1925. Serial No. 56,505. 12 Claims. (Cl. 254—98.)

1. In a power device of the character described, a base, a threaded screw provided with a plurality of longitudinally arranged notches in the threaded portion thereof, said screw being carried by said base, a nut threaded upon said screw, said nut being provided with a pawl normally arranged to engage one of the notches on said screw to prevent the relative rotation of said parts in one direction, a head journaled upon said nut, a handle pivotally carried by said head and adapted to rotate the latter, and cooperating means carried by said head and nut, respectively, adapted to cause the

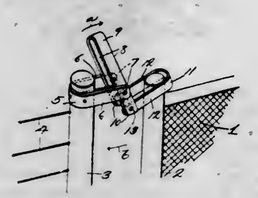
engagement of said parts when they are relatively rotated in one direction and to cause their disengagement when rotated relatively in the opposite direction.

1,570,731. ROTARY DISPLAY CASE. LEE F. DUFF and GEORGE LANGHANS, Los Angeles, Calif. Filed Sept. 18, 1923. Serial No. 663,392. 3 Claims. (Cl. 211—8.)



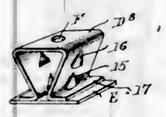
1. In a display case, the combination of: a base; and a rotary display member mounted on said base and consisting of mounting plates and vertical channels disposed around said mounting plates with their legs outwardly extending, the outer edges of each pair of said legs forming part of one of said channels being bent to provide edge channels opening toward each other, said edge channels extending to a position near the lower edge of said legs; outwardly extending projection portions of the lower ends of said legs extending in the same plane therewith and terminating in a horizontal plane, being used to obstruct the lower ends of said channels; binding strips extending over the outer edges of the adjacently disposed legs of said channels; and transparent plates extending across said channels, the edges thereof being received in said edge channels.

1,570,732. VACUUM INDICATOR FOR SEALED CANS AND THE LIKE. KENNETH W. EMERSON, Honolulu, Territory of Hawaii, assignor to Hawaiian Pineapple Company, Limited, Honolulu, Territory of Hawaii. Filed Feb. 4, 1924. Serial No. 690,463. 4 Claims. (Cl. 220—1.)



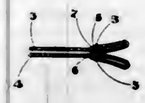
1. A vacuum indicator for sealed cans compriaing a relatively small section of the can deformed to a normal outward convexity adapted to assume an inwardly convexed relation to the surface of the can when the pressure within the can is less by a given amount than the external pressure, and to resume the normal outward convexity when the pressure inside the can approximates the atmospheric pressure.

1,570,733. ELECTRIC TIME FUSE FOR BLASTING CARTRIDGES. WILHELM ESCHBACH, Troisdorf, near Cologne-on-the-Rhine, Germany. Filed July 12, 1922. Serial No. 574,594. 1 Claim. (Cl. 102—7.)



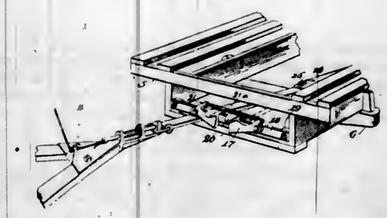
In combination, in separate casings, a blasting cartridge and a fuse cartridge, a retarding element interposed between the fuse cartridge and the blasting cartridge, a priming head positioned at the inner end of the fuse cartridge, a free air space, substantially equal to the fuse cartridge, being left between the priming head and the blasting cartridge, and a vent in the fuse cartridge near one edge thereof connecting the said free air space with the atmosphere whereby to carry the gases away from the shot in order to prevent pre-ignition.

1,570,734. GATE FASTENER. LEWIS W. EVERSMAN, Julesburg, Colo. Filed Dec. 14, 1923. Serial No. 680,676. 1 Claim. (Cl. 292—247.)



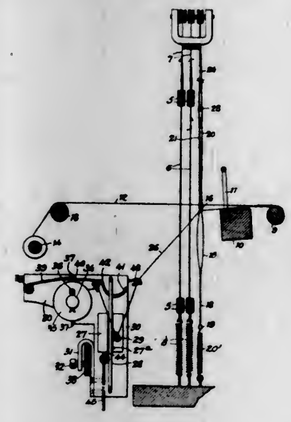
The combination with the free end of a gate having an upwardly extending projection, a gate post adjacent said free end of the gate, of a gate fastener, said fastener comprising a horizontally disposed U-shaped member arching one side of and secured to the gate post and extending towards the free end of the gate, a second U-shaped member having its arms pivoted to the inner sides of the arms of the first mentioned U-shaped member at points spaced from the ends of the arms of the second U-shaped member and a third U-shaped member having its arms pivoted to the inner sides of the ends of the arms of the second U-shaped member and adapted to receive the upwardly extending extension carried by the free end of the gate and to be moved into close and binding engagement therewith when the second U-shaped member is moved over the projection and over the third U-shaped member.

1,570,735. NAILHEAD-SPACING DEVICE. CORNELL FLAGSTAD, Minneapolis, Minn., assignor of one-fourth to Ivar Sivertsen, one-fourth to John P. Jacobsen, and one-fourth to Oscar Flagstad. Filed Aug. 25, 1923. Serial No. 659,362. 6 Claims. (Cl. 85—50.)



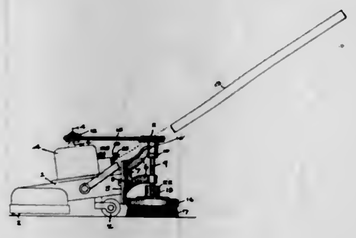
1. A perforated spacing device having integral converging side portions spaced at their near edges to receive a nail inserted in the perforation so that said edges will be forced toward the nail when the latter is driven with its head down against the spacer.

1,570,736. CUFF. ALBERT ADOLPHE FOURNIER, Ottawa, Ontario, Canada. Filed May 4, 1925. Serial No. 27,776. 2 Claims. (Cl. 2—123.)



1. In a cuff composed of two thicknesses of material, the respective ends of which are turned in, stitching to retain said turned in ends to said material at a distance from the free ends of said cuff and stitching inwardly of said first mentioned ends to cause a normal spacing apart of said free ends.

1,570,737. HAY-LOADER COUPLER. JOHN FURLER, Williamsburg, Iowa. Filed Dec. 17, 1924. Serial No. 756,528. 2 Claims. (Cl. 280—33.12.)

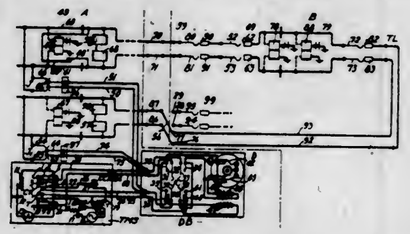


1. A hay-loader coupling, comprising, in combination with a wagon and its rack, a draw-bar pivotally connecting with the wagon and extending to the rear of the rack, brackets attached to the rack at the rear, a connecting cross-bar, and a pair of dogs pivoted to the cross-bar, and adapted to hold the draw-bar between them in a central position.

1,570,738. DOUP. THEODORE J. GARISIO, Allentown, Pa. Filed Apr. 11, 1925. Serial No. 22,351. 10 Claims. (Cl. 139—51.)

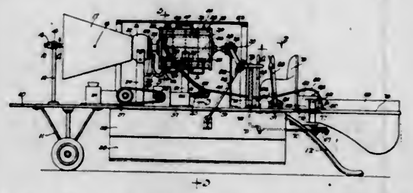
1. In a doup, the combination with a thread carrier having an eye; of a metal lifter having a loop at its lower end, the lower end of said loop being bent from the plane of the loop outwardly.

1,570,739. POLISHING ATTACHMENT FOR PORTABLE VACUUM CLEANERS. JOHN RALPH GILLILAND and WILLIAM J. GILLILAND, San Francisco, Calif. Filed Sept. 12, 1922. Serial No. 587,645. 1 Claim. (Cl. 15—49.)



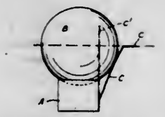
In combination with a vacuum cleaner casing having a motor thereon, of a bracket detachably secured to said casing; a vertical shaft revolubly mounted in said bracket; driving means connecting said shaft and motor; and a brush connected to the lower end of said shaft by means of a universal joint.

1,570,740. COMPOSITION OF MATTER FOR USE IN THE TREATMENT OF FABRICS. ED HAMBLIN, Jr., Woodward, Okla. Filed July 23, 1925. Serial No. 45,720. 2 Claims. (Cl. 134—13.)



1. A composition of matter for use in the treatment of the rail fabric of pool tables and the like, including a mixture of varnish resin and aluminum resinate with a volatile thinner and another mixture of glue, shellac and banana oil, approximately 86⅔ percent of the first mixture being combined with 13⅓ percent of the second mixture.

1,570,741. TESTING SYSTEM FOR MACHINE-SWITCHING CIRCUITS. WILLIAM H. HARDEN, Brooklyn, and MICHAEL A. GRAEFENECKER, New York, N. Y., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed Aug. 25, 1923. Serial No. 659,307. 24 Claims. (Cl. 179—175.)

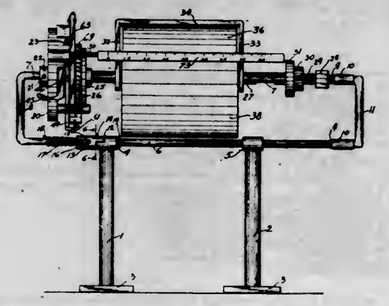


1. Method of establishing a transmission testing circuit which consists in connecting a transmission testing set to separated points in any circuit to be tested and completing a testing loop by controlling automatic selector switches to interconnect the parts of the circuit to which the set is connected and in holding the circuit thus established while the tests are made.

1,570,742. FLYING MACHINE. WINCENTY HOFMAN, South Chicago, Ill. Filed Feb. 6, 1925. Serial No. 7,328. 6 Claims. (Cl. 244—20.)

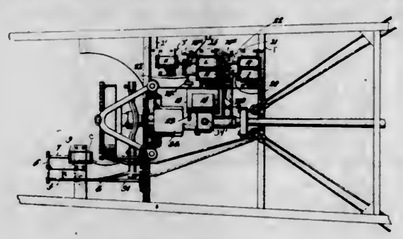
1. In a flying machine having a platform, a main shaft disposed thereabove, an air turbine rotating said shaft, a drum upon said platform for compressing the air on forward horizontal flight of the machine, hose connection between said drum and said turbine, a crank shaft in operative engagement with said main shaft, wings pivotally mounted upon said platform, and connecting arms between said crank shaft and said wings.

1,570,743. GOLF TEE. FREDERICK BOWYER HOLLIS, London, England. Filed June 6, 1925. Serial No. 35,485. 3 Claims. (Cl. 273—33.)



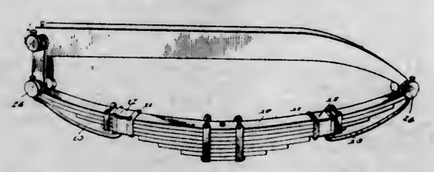
1. A golf tee comprising a collapsible body portion and an eye-spot associated therewith and arranged to be deflected by the placing of the ball on the body portion of the tee into an appropriate position clearly visible to the player.

1,570,744. COPYHOLDER. WALTER A. HOMAN, Denver, Colo. Filed Nov. 25, 1924. Serial No. 752,111. 13 Claims. (Cl. 120—32.)



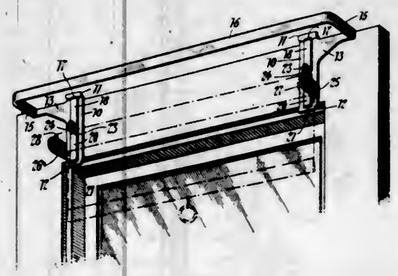
1. A copyholder comprising, in combination, a pair of spaced vertical standards adapted to rest on the top

of a desk, each of said standards having a horizontal bearing near their upper ends, a substantially rectangular frame having one side pivotally mounted in said bear-



ings, means limiting the amount of rotation of the frame in said bearings to a predetermined amount, and means for rendering said limiting means inoperative.

1,570,745. GEAR-SHIFTING MECHANISM. RAYMOND W. IVINS, Battle Creek, Mich. Filed July 21, 1922. Serial No. 576,542. 2 Claims. (Cl. 74—97.)

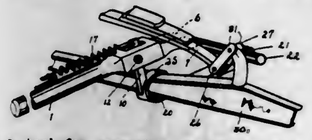


1. In combination, a vehicle, driving means associated with the vehicle including a transmission having a plurality of speeds, solenoids for operation of each speed of transmission, circuits including the solenoid and circuit breakers, at lever for each circuit breaker, a spring associated with each lever normally holding the circuit breaker in an open position, a raceway disposed adjacent the levers, a member movable in the raceway contacting with the levers so as to close the circuit breakers, a governor controlled by the speed of the driving means, and means actuated by the governor for moving the member in the raceway.

1,570,746. SHACKLE-BOLT AND SPRING LUBRICATING MEANS. JAMES MADISON JACKSON, Parkersburg, W. Va. Filed Feb. 7, 1925. Serial No. 7,606. 1 Claim. (Cl. 184—1.)

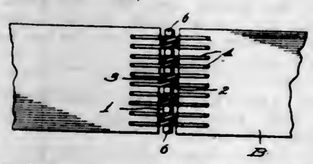
A spring lubricating device including a spring encircling layer of absorbent material, a confining band surrounding and holding said material in place, a flexible lubricant supply tube connected at one end to the lower portion of said confining band, and a lubricant holder having a threaded nipple at one side adapting the same for connection to a shackle bolt of the spring, and also having a depending nipple to which the other end of said tube is connected.

1,570,747. COMBINATION SHADE AND CURTAIN HOLDER. RALPH JEWETT, Elmora, Pa. Filed Sept. 4, 1924. Serial No. 735,731. 3 Claims. (Cl. 156—24.)



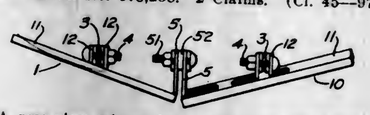
1. A combination drapery and curtain bracket comprising a plate having upper and lower perforated extension, enlargements on said plate carrying outturned arms adapted to be engaged by the hollow ends of a drapery holder, substantially Z-shaped brackets for attaching said plate to varying widths of window frames, means for clamping the brackets in their adjusted positions, and means for carrying a curtain roller.

1,570,748. CANDY-MAKING MACHINERY. JAMES N. KALKANIS, Detroit, Mich. Filed Aug. 7, 1925. Serial No. 48,722. 12 Claims. (Cl. 107—8.)



1. In a machine of the class described, a receptacle for molten candy provided with a discharge opening, a rotatably supported mold carrier provided with a series of molds which upon rotation of the carrier are brought into position to receive the discharge of such receptacle and upon further rotation discharge the contents of the molds and a scraper mounted within the receptacle for oscillatory travel therethrough from one side of the discharge opening to the other without traversing the opening.

1,570,749. TOOL FOR REMOVING SHACKLE BOLTS. HUGO F. KELLER, Oneida, N. Y. Filed Sept. 1, 1923. Serial No. 660,530. 5 Claims. (Cl. 29—87.1.)

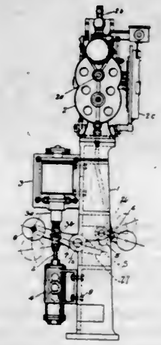


1. In a tool for removing shackle bolts, a lever for elevating a spring, whereby to relieve the strain on the shackle bolt, and yielding means having a member with a shoulder and hook attached to said lever for holding it in position with reference to said spring.

1,570,750. BELT FASTENER. WALTER S. LAKE, Kansas City, Mo. Filed Dec. 1, 1924. Serial No. 753,182. 6 Claims. (Cl. 24—33.)

1. A belt fastener comprising a pivot pin, and a plurality of metallic laces arranged in pairs and pivotally secured to and extending in opposite directions from said pin, the opposed laces of each pair being arranged to apply their pulling strain at diametrically opposite sides of said pin.

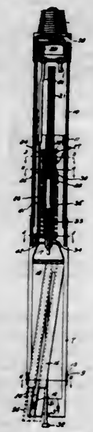
1,570,751. REAR-VIEW MIRROR. EARLE A. LANGLEY, Detroit, Mich., assignor to Sees-All Mfg. Co., Seattle, Wash., a Corporation of Washington. Filed Dec. 3, 1923. Serial No. 678,238. 2 Claims. (Cl. 45—97.)



1. A rear-view mirror for automobiles comprising two mirrors, separate supporting frames for each mirror, each frame having at one end a connecting ear and supporting pivot ears located approximately at the middle of the length of the frame, the two connecting ears and each of the supporting ears having its individual clamping pivot member, all of said pivot members being located upon a common axis, whereby separate elevational angular adjustment may be given to the individual mirrors without disturbing their longitudinal angular relation with each other.

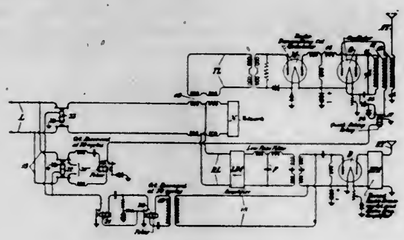
1,570,752. COMPOUND FOR ACCELERATING THE VULCANIZATION OF CAOUTCHOUC. VICTOR LEFEBURE and ANTHONY JAMES HAILWOOD, Manchester, England, assignors to British Dyestuffs Corporation Limited, Manchester, Lancashire, England. Filed Oct. 1, 1923. Serial No. 666,031. 4 Claims. (Cl. 260—128.)

4. As a new product a stable molecular compound of one molecular proportion of paranitrosoalkyl-arylamine and two molecular proportions of β-naphthol.



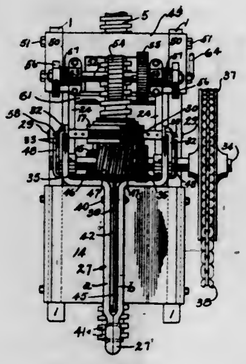
1,570,753. HOIST-CONTROL UNIT. HENRY H. LOGAN, Chicago, Ill. Filed Feb. 9, 1924. Serial No. 691,756. 4 Claims. (Cl. 192—139.)

1. A control unit for a hoisting apparatus including a hydraulically operated brake engine comprising a stand, a controller mounted upon said stand, said controller having a member arranged for synchronism with the hoist drum of the hoisting apparatus, and an electrical switch arranged for operation by said member when moved, a solenoid coil mounted upon said stand and in the electrical circuit controlled by said switch whereby actuation of said switch will occasion the actuation of said solenoid, a plunger for said solenoid, and gravity operated means for normally holding said plunger substantially out of said solenoid, means associated with said controller and



with said gravity operated means for limiting the movement of said plunger out of said solenoid depending upon the instrumentality of said member on said controller, and a valve having a stem connected with said plunger, said valve being arranged for connection with the hydraulically operated brake engine in such a manner as to cause said brake engine to operate when said plunger moves out of said solenoid as when the electrical circuit including said solenoid is broken by said switch.

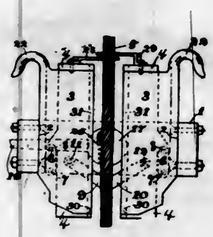
1,570,754. WELL TOOL. GEORGE B. LOUDERBACK, Compton, Calif. Filed June 24, 1924. Serial No. 722,174. 7 Claims. (Cl. 255—61.)



1. A well tool comprising; a tool body; cutting blades adapted for being advanced from said body; longitudinally slidable plunger rods normally projecting from the end of the body, adapted for retraction by the weight of the tool; and mechanism operatively connecting said rod and blades through an interposed cylindrical cam and a ratchet, whereby the blades may be advanced by the reciprocation of the rods.

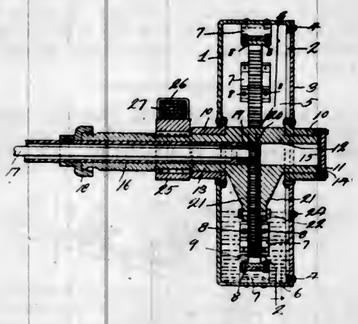
1,570,755. RADIO RINGING SYSTEM. OWEN H. LOYNES, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Aug. 22, 1923. Serial No. 658,776. 5 Claims. (Cl. 250—9.)

1. In a radio system, a vacuum tube oscillator for supplying radio oscillations, means to apply voice currents to said oscillator to cause said oscillator to modulate the generated radio oscillations in accordance with said voice currents, means responsive to ringing current for intermittently changing the grid to potential of the oscillator to intermittently interrupt the generated radio frequency, and means at a receiving station responsive to the interrupted radio frequency for producing a ringing signal.



1,570,756. TOOL-FEEDING MEANS FOR DRILLING RIGS. MORTON HOMER MAGIE, Los Angeles, Calif. Filed Feb. 18, 1922. Serial No. 537,412. 26 Claims. (Cl. 255—15.)

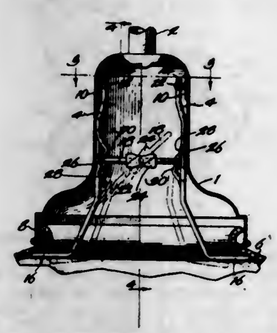
1. The combination with a walking beam and a shaft thereon; of reins spaced apart to form a vertical guide and journaled on said shaft; a case fixed to and supported by said reins; a guide block slidably mounted in said reins and provided with lugs adapted to fit the space between said reins; a temper screw fixed to said guide block; and alternative slow and rapid means for raising and lowering said temper screw relative to the case.



1,570,757. DRILLING-LINE SUPPORT. MORTON HOMER MAGIE, Los Angeles, Calif. Filed Nov. 14, 1921. Serial No. 514,942. 11 Claims. (Cl. 24—136.)

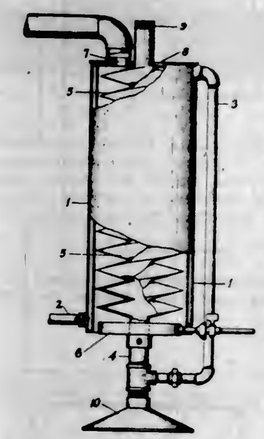
1. A line clamp comprising a frame provided with vertical guides, slips movable in said guides and pivotally connected thereto by rigid links, a toggle joint connected to the slips to draw them together and allow them to descend relative to the guides so that when the slips

engage a line between them while the guides are supported and the line is loaded, downward movement of the slips will cause the same to grip the line more firmly.



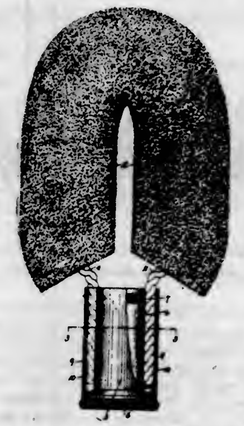
1,570,758. TRACTION WHEEL. JOHN MALZAHN, Westpoint, Nebr. Filed Apr. 26, 1923. Serial No. 634,755. 1 Claim. (Cl. 74—7.)

A tractor wheel comprising a casing having a chamber therein, a member disposed within the casing, the opposite sides of said casing being rotatably mounted on extensions carried by said member, a drive axle extending through one of said extensions, a drive pinion carried by the end of the axle, spaced arms carried by the member within the chamber of the casing, an intermediate gear pivotally mounted between the spaced arms and meshing with the drive pinion, U-shaped members carried by the inner periphery of the casing, an internal gear engaging the inner ends of the U-shaped members, said U-shaped members being wider than the internal gear; oppositely extending lugs carried by the opposite sides of the internal gear and secured to the inner ends of the U-shaped member, said intermediate gear meshing with the internal gear.



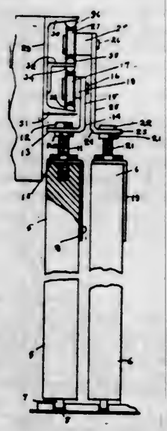
1,570,759. LIGHTING FIXTURE. MYER M. MARKS, Chicago, Ill. Filed Feb. 25, 1925. Serial No. 11,480. 4 Claims. (Cl. 240—133.)

1. A shade holder in the form of a canopy, arms pivotally supported at their upper end near the upper portion of the shade holder, said arms projecting outward at the bottom for underlying the upper rim of the shade when the arms are swung outward, and for releasing the shade when swung inward, and a rotary member mounted on the shade holder for backing up the arms and



holding them in acting position, said rotary member being located within the shade holder and being rotatable about a horizontal axis.

1,570,760. BOILER. FRANK ALBERT MAEDKE and CARL MICHEL RAITHEL, Portland, Oreg. Filed Mar. 18, 1922. Serial No. 544,741. 1 Claim. (Cl. 122—165.)

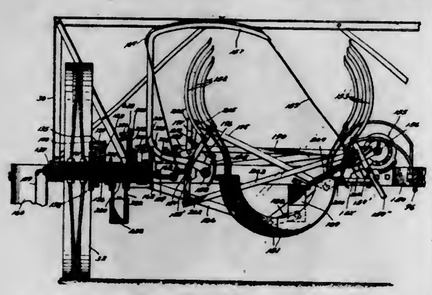


In a gas fired boiler for domestic purposes, a vertical, hollow screw with double V-shaped thread, cast integrally throughout the entire length, an axially disposed supporting pipe at the bottom of said screw and cast integrally with said screw, an axially disposed riser at the top of said screw and cast integrally with said screw, a water jacket enclosing said screw throughout the entire length, a receiving water pipe near the bottom of the water jacket, said receiving water pipe communicating with the interior of the water jacket, a discharging water pipe near the top of the water jacket and on a side opposite to the receiving water pipe, said discharging water pipe communicating with the interior of the water jacket, and a connecting pipe leading from the discharging water pipe downwardly below the bottom of the water jacket to establish communication with the screw and riser through the supporting pipe.

1,570,761. IRRIGATED BRUSH. ANTHONY J. MCCORMACK, New Haven, Conn. Filed Feb. 21, 1925. Serial No. 10,755. 4 Claims. (Cl. 15—128.)

1. The combination with a soft rubber sleeve, of a brush having a loop-shaped frame, having parallel, complementary ends embedded in the outer end of said sleeve at opposite points therein.

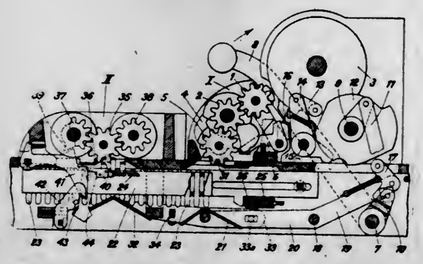
1,570,762. DOOR HANGER. FRANCIS H. MCTIGUE, Holyoke, Mass. Filed Nov. 10, 1921, Serial No. 514,367. Renewed Dec. 2, 1925. 6 Claims. (Cl. 16—97.)



1. A door hanger consisting of a beam providing horizontal tracks one above the other, each track providing a rail confronting the rail of the other track, a grooved wheel arranged to engage one of the rails and confront the other rail, a hanger, a shaft secured to said hanger on which the wheel is journaled and means for securing said hanger to a door.

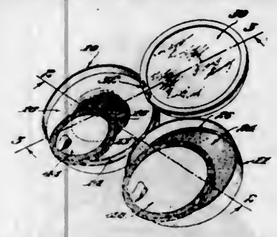
1,570,763. METALLIC COMPOSITION AND METHOD OF MAKING THE SAME. ADOLPH MILLER, Kirkwood, Mo. Filed July 19, 1924. Serial No. 726,940. 7 Claims. (Cl. 75—1.)

1. A metallic composition composed of about 90 per cent lead and about 10 per cent mercury.



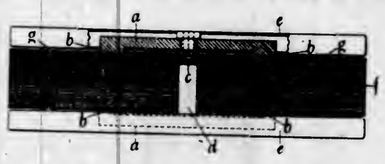
1,570,764. AUTOMATIC SHOCKING MACHINE. HENRY J. MILLER, Kansas City, Mo. Filed June 25, 1923. Serial No. 647,627. 21 Claims. (Cl. 56—409.)

1. An automatic shocking machine provided with supporting wheels and comprising, in combination, shock-forming mechanism mounted for rotative movement about the axis of said wheels, means for feeding bundles to said mechanism, means actuated by the movement of the machine for driving said mechanism and oscillating the same to discharge the shock, and means engaged and actuated by the bundles as fed to said mechanism for setting said driving means in operation for every predetermined number of bundles delivered by said feeding means.



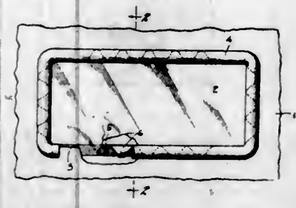
15. An automatic shocking machine provided with supporting wheels and comprising a frame movable about the axis of said supporting wheels, shock-forming and shock tying mechanism carried by said frame, a drive shaft connected axially for intermittent operation from one of said supporting wheels, a shaft carried by said frame and geared to said drive shaft for operating said shock-forming and shock-tying mechanism, and means for intermittently locking said shafts against relative movement for causing said drive shaft to lift said frame into shock-discharging position.

1,570,765. CALCULATING MACHINE PROVIDED WITH TWO COUNTERS. MAX MÜLLER, Rastatt, Germany, assignor to Thaleswerk m. b. H., Rastatt, Baden, Germany, a German Company. Filed May 22, 1923. Serial No. 32,157. 4 Claims. (Cl. 235—73.)



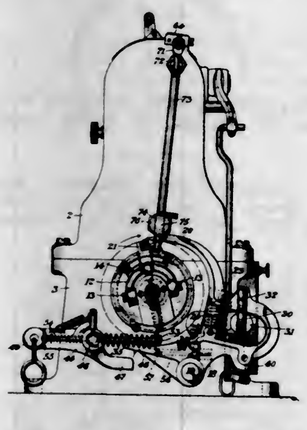
2. Counting machine for addition and multiplication permitting adjustment of the numbers to be transferred in gears with displaceable teeth, and having two laterally adjustable counter mechanisms, a driving crank, a transverse bar, transfer gears and locking anchors, said driving crank (8) being so connected with the transverse bar (16) that upon movement of the driving crank the transverse bar is locked, whereby said transverse bar depresses the locking anchors (4) of the transfer gears for the counter mechanism in holding position, said gears again being released upon return of the driving crank.

1,570,766. TOILET APPARATUS. JOHN H. MURPHY, Lowell, Mass. Filed Sept. 5, 1922. Serial No. 586,065. 4 Claims. (Cl. 132—83.)



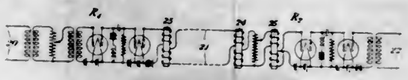
1. A toilet receptacle comprising two members hinged together and each adapted to contain powder or similar toilet ingredients, and a mirror hinged to one of the members at a point offset from the hinged connection between the members to swing at an angle to the swing of the other of said members and to be thrown back substantially in the plane of the members when the receptacle is open and to be closed over the toilet ingredient in the member to which it is hinged.

1,570,767. LOOSE-LEAF BOOK OR BINDER. JOHN WILLIAM MYATT, Tipton, England, assignor to Ledgers Limited, Tipton, England. Filed May 29, 1925. Serial No. 33,787. 3 Claims. (Cl. 129—13.)



2. In loose leaf books or binders the combination comprising a pair of clamping bars each provided with leaf gripping projections located on opposite sides of the centres of the bars, and a centrally arranged single binding screw connecting the bars, substantially as described.

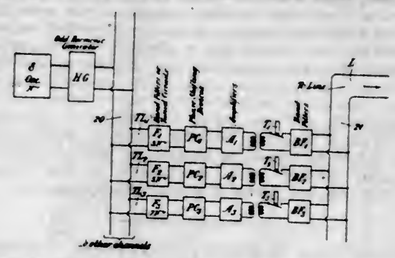
1,570,768. CURTAIN WINDOW. EDWIN B. NATHAN, Mount Vernon, and FRANK NATHAN, New York, N. Y. Filed Oct. 12, 1923. Serial No. 668,088. 1 Claim. (Cl. 296—145.)



In combination, a window and front and rear securing frames adapted to retain the window in a closure opening, prongs integral with the inner edges of the front frame and disposed to lie thereagainst, said front frame and prongs being bent convexly outward, the extremities of said prongs being offset at substantially right angles with respect to the frame at the outer edges and adapted to serve as a puncturing means to be forced through the material forming the closure, said end prongs engaging over the outer edge of the rear frame for retaining the window against the outer and inner rim edges of the convexly shaped front frame.

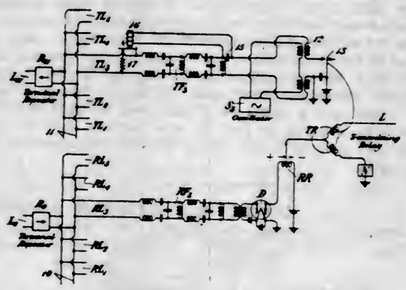
1,570,769. STOP MECHANISM FOR SEWING MACHINES. GEORGE W. NELSON, Cleveland, Ohio, assignor to The Standard Sewing Machine Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 17, 1919. Serial No. 297,857. 5 Claims. (Cl. 192—144.)

1. In a stop motion, the combination with a driven shaft, of a driving clutch member loose thereon having a recess in one end, a split clutch ring within said recess, a connector pivotally connected with the shaft for rotation therewith and having a wedge member projecting between the adjacent ends of the clutch ring, means yieldingly holding said connector in position with its wedge member expanding the clutch ring into engagement with the driving clutch member, and a controller cam automatically movable to a position in the path of rotation of the connector for shifting the latter to release the clutch at a predetermined time in the operation of the machine.



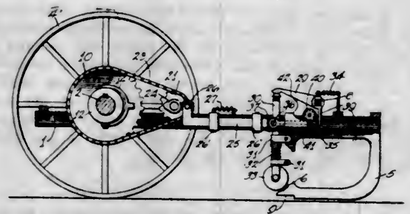
1,570,770. MEANS FOR AND METHOD OF REDUCING INTERFERENCE. HARRY NYQUIST, Elmhurst, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Mar. 20, 1922. Serial No. 545,295. 12 Claims. (Cl. 178—44.)

1. In a multiplex system in which a plurality of carrier frequencies are simultaneously transmitted through successive repeaters in a transmission line, the method of eliminating second harmonics and sum and difference frequencies produced by the distortion of the repeaters, which consists in impressing the several carrier frequencies on successive repeaters in opposite phase relation.



1,570,771. MEANS FOR AND METHOD OF REDUCING INTERFERENCE. HARRY NYQUIST, Elmhurst, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Mar. 20, 1922. Serial No. 545,296. 22 Claims. (Cl. 178—51.)

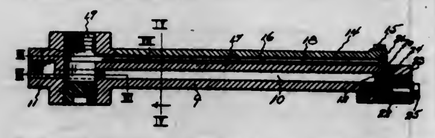
1. In a multiplex signaling system employing different carrier frequencies for a plurality of channels, the method of reducing interference between the channels due to interaction between frequencies of different channels, which consists in generating carrier frequencies for the various channels so related to each other that the



second harmonics of the carrier frequencies will fall substantially midway between two adjacent carrier frequencies.

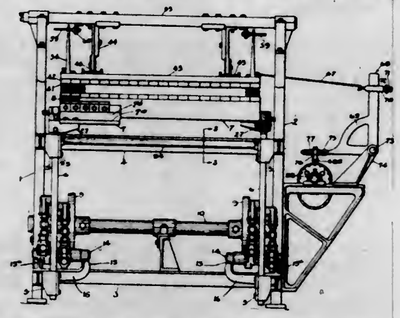
1,570,772. REDUCTION OF DISTORTION IN MULTIPLEX REPEATERS. HARRY NYQUIST, Elmhurst, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Mar. 20, 1922. Serial No. 545,298. 10 Claims. (Cl. 178—44.)

1. In a multiplex signaling system in which a plurality of frequencies from a plurality of channels may be transmitted over a circuit including a common repeater, the method of overcoming the effects of crowding of the channels in the repeater when more than one frequency is transmitted at the same time, which consists in increasing the transmission of the circuit for the frequencies of the other channels when a given channel is transmitting.



1,570,773. SPOT MARKER FOR CORN PLANTERS. JOSEPH PAUL OESCHGER, Chicago, and EDWIN STANTON JONES, Princeville, Ill. Filed Mar. 8, 1924. Serial No. 697,881. 2 Claims. (Cl. 111—80.)

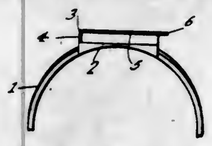
1. A corn planter of the type described comprising a chassis having wheels, a slidable member mounted on said chassis, means associated with the wheels of said chassis for reciprocating said slidable member longitudinally as the wheels turn, a checker bar mounted for



oscillation on said chassis, an arm carried by said checker bar, a vertically movable normally elevated supporting member disposed with its upper end in engagement with said arm, a scarring member disposed at the lower end of said supporting member, a radially extending member carried by said checker bar, a pivotally mounted spring retained push rod carried by said slidable member and arranged to engage with said radially extending member, a cam carried by said push rod, and a roller for engaging with said cam when said push rod is moved toward said radially extending member, whereby the push rod is moved out of engagement with the radially extending member when the slidable member bearing the push rod has moved a predetermined distance.

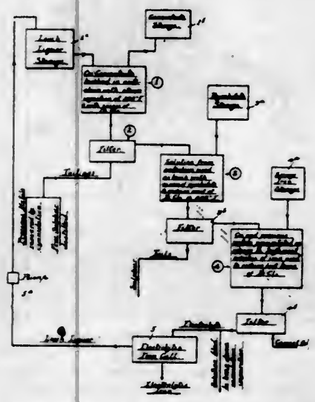
1,570,774. OIL BURNER. LOUIS OLSON, Enumclaw, Wash. Filed Mar. 11, 1925. Serial No. 14,632. 3 Claims. (Cl. 158—78.)

3. An oil burner comprising a block having a pressure fluid supply inlet and an oil supply inlet, separate passages formed within said block continuing from each of said inlets to outlets formed by said block, said oil passage overlying said pressure fluid supply passage and having a plurality of concave grooves in the bottom thereof extending from said oil supply inlet to said oil outlet and a baffle plate supported by said block in operative relation to both of said outlets, said oil passage and grooves being angled downwardly adjacent the oil outlet.



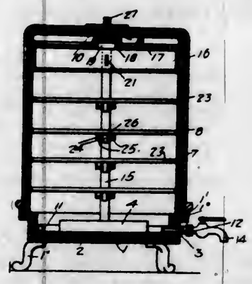
1,570,775. DOUBLE-RIB-KNITTING MACHINE. JOSEPH S. PECKER, Philadelphia, Pa. Filed Mar. 30, 1922. Serial No. 548,037. 12 Claims. (Cl. 66—33.)

1. A knitting machine including a frame having vertical guideways, vertically reciprocating staffs operating in the vertical guideways of the frame and located at the opposite ends of the latter and extending upwardly from the bottom of said frame, a needle bar carried by the said staffs, rocking levers located at the ends of the frame at the bottom thereof and extending beneath and connecting with the lower ends of the staffs, and means for actuating the levers.



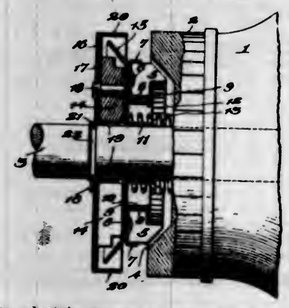
1,570,776. FINGER RING. HENRY W. PETERS, Boston, Mass. Filed Aug. 28, 1924. Serial No. 734,707. 2 Claims. (Cl. 63—29.)

2. An article of jewelry including a base, a holding device integral therewith having an open face and a second face, a separate member, said second face having means for the insertion of said member for exposure through the first named face, said first named face having means for preventing removal of said member there-



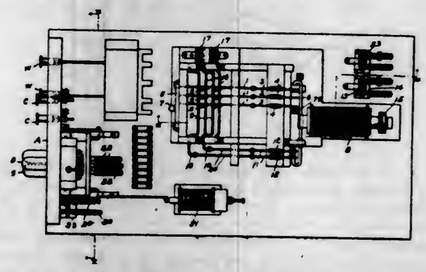
through, and means movable to position across said second face for retaining the member against withdrawal.

1,570,777. PROCESS FOR TREATING SULPHIDE ORES. ROBERT D. PIKE, San Francisco, Calif. Filed June 13, 1923. Serial No. 645,167. 14 Claims. (Cl. 75—18.)



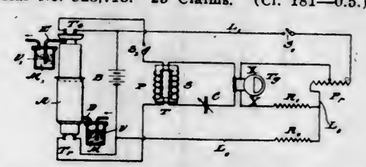
1. The method of treating ores containing sulphides of metals for decomposition of the contained sulphides which resides in subjecting the ores or concentrates to the action of a solution containing ferric chloride or ferric sulphate at a temperature equal to or above the melting point of sulphur.

1,570,778. PORTABLE ELECTRIC STOVE. THOMAS MERRITT PUTNAM, Toronto, Ontario, Canada. Filed Dec. 6, 1924. Serial No. 754,329. 9 Claims. (Cl. 219—35.)



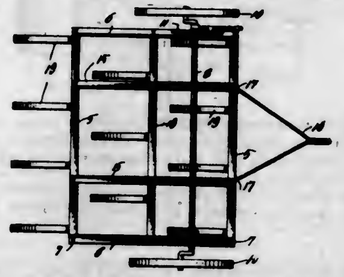
3. In a portable electric stove, the combination with a dished base member, and an electric element carried centrally in the dished base member and a dome supported by the base member to form a cooking chamber, of a water heating chamber located in the upper portion of the cooking chamber, a supporting stand comprising a tubular standard member communicating with the interior of the water heating chamber at its upper end, a circular base member with which the lower end of the standard communicates, provided with a tubular branch extending ontward through the base, and a tap for such branch.

1,570,779. SHORT-CIRCUITING DEVICE FOR ALTERNATING-CURRENT MOTORS. HERMAN G. REIBEL and VIRGIL P. SPARKS, Warren, Ohio, assignors to The Peerless Electric Company, Warren, Ohio, a Corporation of Ohio. Filed Apr. 14, 1924. Serial No. 706,468. 8 Claims. (Cl. 172—279.)



1. In an electric motor, a commutator, a shaft therefor, a short circuiting ring, a disk-like support for the ring slidable on the shaft and having tongues struck out against the ring to support the same, and a governor for sliding the support, said governor consisting of a plurality of radially movable members and the support having a beveled peripheral flange against which said members engage.

1,570,780. PIPE-ORGAN STRUCTURE. LEVI M. RINKER, Pittsburgh, Pa. Filed Dec. 21, 1922. Serial No. 608,365. 8 Claims. (Cl. 64—337.)

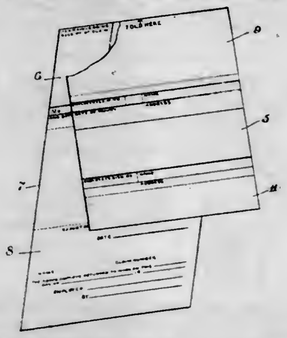


7. In mechanism for controlling the operation of the stops of a pipe organ, the combination of a plurality of stop members, a plurality of combination buttons, a plurality of longitudinally shiftable and laterally swinging push rods corresponding to the aggregate number of stop members and combination buttons, a rod for each, a rod extending transversely of and movable in the direction of the length of said push-rods and adapted to engage and shift longitudinally said push rods, an electro-magnet for each push rod, the arrangement of push rods being such that the push rods associated with the stop members are drawn by their electro-magnets when energized out of the pathway of the swinging transverse rod and the push rods associated with the combination buttons are drawn by their electro-magnets when energized into said pathway, an electro-magnet for said transverse rod, means for selectively energising the electro-magnets controlling the swing of push rods associated with the stop members, means for effecting the automatically sequent energizing first of electromagnets controlling swing of the push rods associated with the combination buttons, and then of the electromagnet controlling transverse rod swing, and means for moving the stop-members according to the antecedent selective swinging of the push rods associated therewith.

1,570,781. TESTING APPARATUS AND METHOD. SAMUEL RUBEN, New York, N. Y. Filed Dec. 20, 1921. Serial No. 523,713. 25 Claims. (Cl. 181—0.5.)

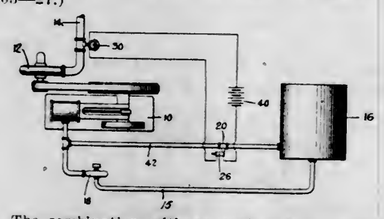
8. Apparatus for testing gaseous fluid comprising in combination, a microphone device such as a telephone receiver serving as a source of sound waves, an adjustable resonator chamber adapted and arranged to receive and transmit sound waves emitted thereby, said chamber having provision for passing a gaseous fluid therethrough, a second microphone device such as a telephone transmitter adapted and arranged to be actuated by such transmitted waves, a circuit including said second microphone device and also a source of current supply, an oscillatory circuit energized by the first mentioned circuit, and indicating means controlled by flow of current in said oscillatory circuit.

1,570,782. ROW WEEDER. EDWARD A. SCHEVING, Hensel, N. Dak. Filed Mar. 27, 1923. Serial No. 628,161. 2 Claims. (Cl. 97—165.)



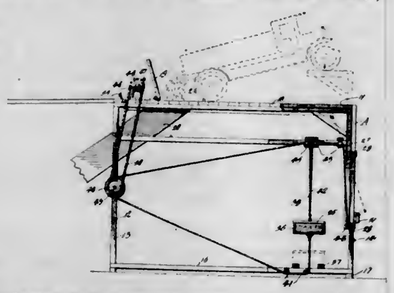
1. In a weeder, a frame composed of rigidly connected front and rear and side members, earth working teeth secured to the front and rear members, and a pair of longitudinal spaced angle irons rigidly secured on the front and rear frame members and having vertical flanges extending forwardly and inwardly from the front frame member, said extended flanges terminating in contiguous outer ends adapted for connection with draft means.

1,570,783. MANIFOLD RECORDING AND MAILING DEVICE. CHARLES D. SCHIFFLER, Columbus, Ohio. Filed June 2, 1923. Serial No. 643,000. 2 Claims. (Cl. 282—12.)



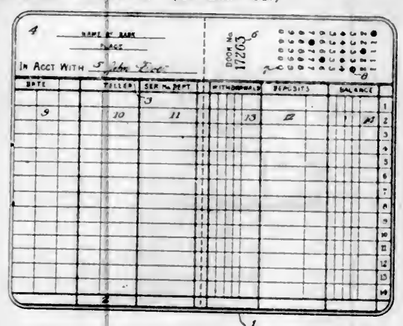
1. A manifold recording and mailing device consisting of a strip divided by transverse lines to form a record card and a plurality of mailing cards of substantially equal depth and a registering card of less depth than said record and mailing cards, said registering card occurring between the record card ond the plurality of mailing cards and adapted to project the record card

to lie over some of the mailing cards when the strip is folded at the junction of the registering card with the mailing cards whereby data may, with the aid of a duplicating paper interposed between the record and said mailing cards, be imprinted upon said record card



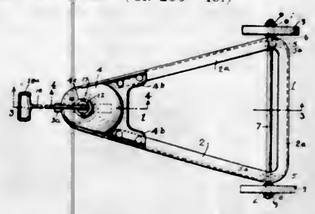
and one side of said mailing cards in one passage of the strip through a type writing machine, the terminal mailing card of said strip being reversely foldable to imprint, with the aid of a duplicating sheet, data upon it and the opposite side of one of said mailing cards.

1,570,784. AUTOMATIC ENGINE CUT-OFF. GEORGE C. SCHMIDT, Houston, Tex., assignor to The Texas Company, New York, N. Y., a Corporation of Texas. Filed Nov. 23, 1923. Serial No. 676,548. 5 Claims. (Cl. 103—27.)



1. The combination with an engine, a pump operated thereby and adapted to pump liquids through a pipe-line, a fuel supply tank and a fuel pump, of automatically operated means for diverting the flow of fuel from the engine to stop it from running when the pressure present in the pipe-line exceeds a predetermined high or low point.

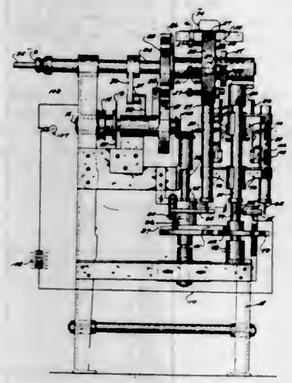
1,570,785. AUTOMATIC TRUCK DUMP. FRED E. SCHNEIDER, Hitchcock, Okla. Filed May 10, 1924. Serial No. 712,378. 3 Claims. (Cl. 214—46.5.)



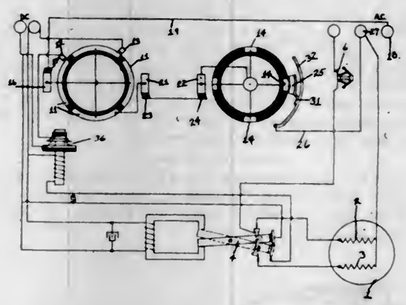
3. In a vehicle dumping device, a main platform upon which the vehicle to be dumped is adapted to be driven, a lift including a platform adapted to be arranged at one end of the main platform for receiving the front wheels of the vehicle to be dumped, and a movable counter-balancing weight, a pull cable having its terminals connected respectively to the upper and lower ends of the counter-balance, a second pull cable connecting the counter-balance to the lift for normally tending to raise the lift, a winding drum, the first-mentioned cable being trained about the winding drum, and means for operating the winding drum from the main platform.

1,570,786. BANK PASS BOOK. SAMUEL T. SCHOFIELD, Washington, D. C. Filed Mar. 29, 1924. Serial No. 702,904. 5 Claims. (Cl. 283—58.)

1. A bank pass book having at least one of its cover sections provided with means adapted to co-act with suitable type elements whereby type may be selected for printing indicia for identifying the particular book.



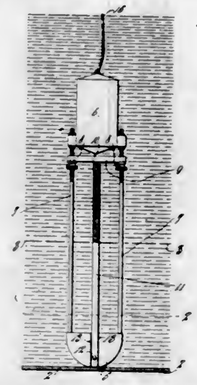
1,570,787. TRUCK. ANTHONY SCHROEDER, Cleveland, Ohio, assignor of one-half to James Merle Finney, Cleveland, Ohio. Filed May 5, 1922. Serial No. 558,628. 2 Claims. (Cl. 280—49.)



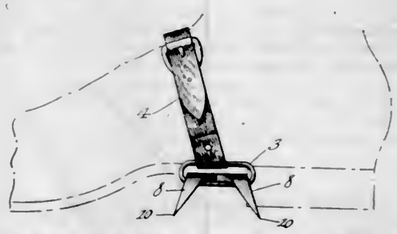
1. In a vehicle, the combination of a frame mounted on wheels, one of said wheels having a stem rotatably fitting an opening formed in the frame, whereby the wheel may be steered, said stem being formed with a slot extending inwardly from its free end and provided with spaced stop devices at the bottom of said slot and adjacent its opposite sides, a rod extending across said slot near its upper end, and a tong having at its inner end an elongated loop slidably fitting within the walls of the slot and pivotally and slidably mounted on said rod, said rod being disposed transversely of the vertical plane including said stop devices, whereby the positioning of the tong vertically and its movement downwardly into engagement with said stop devices will permit said devices and permit said devices and rod to lock the tong against pivotal movement.

1,570,788. SEALING MACHINE. JULIUS A. SCHWANTES, Milwaukee, Wis., assignor, by mesne assignments, to The Palmolive Company, a Corporation of Delaware. Filed July 25, 1923. Serial No. 653,692. 4 Claims. (Cl. 216—55.)

1. A sealing machine, comprising a revoluble member including a plurality of tubular seal containers, a rotary member for transferring the seals individually from said containers to packages, and means for causing the seals to adhere to packages, said rotary member being provided with a plurality of movable members operated by pinion and rack means for removing the seals from the containers and discharging the seals upon said packages.

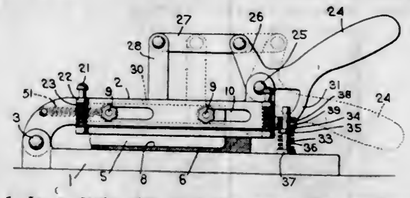


1,570,789. ALTERNATING-CURRENT RECTIFIER. HERMAN A. SEIFKE, San Francisco, Calif., assignor of twenty-two and one-half one-hundredths to Morris Edelman, twenty-five one-hundredths to Steve A. Beagle, and twenty-two and one-half one-hundredths to Max Lewis, all of San Francisco, Calif. Filed Jan. 3, 1923. Serial No. 610,500. 2 Claims. (Cl. 175—364.)



1. In a rotary rectifier, the combination with a synchronous motor and a direct current commutator associated therewith for rotation in synchronism with an alternating current supply and having a direct connection to one side of an alternating current line connected to said supply, of an independent alternating current commutator mounted for rotation therewith, said commutator having a plurality of relatively narrow segments corresponding the the poles of the motor, and electrically connected with alternate segments upon the first mentioned commutator; and a relatively long brush mounted in association with said alternating current commutator to make connection thereto from the other side of the alternating current supply line during portions of each rotation to direct current during a portion of each alternating cycle to the direct current commutator, said brush being adjustable to interrupt the alternating current supply independently of the direct current supply independentlyy of the direct current commutator and its connections.

1,570,790. GAUGE FOR OIL TANKS. HENRY RODIN SMITH, Prince Rupert, British Columbia, Canada. Filed Sept. 20, 1923. Serial No. 663,868. 6 Claims. (Cl. 73—120.)



1. A device for the purpose specified comprising in combination a sinker, buoyant means, means spacedly connecting the sinker and buoyant means, a gauge strip extending between the sinker and buoyant means but clear of contact with the connecting means, which strip is coated with a material on which the water and oil have distinctively different actions, and means for lowering the sinker to the bottom of a tank.

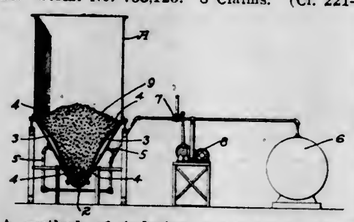
1,570,791. ICE CREEPER. GEORGE SOLARZ, Gallitzin, Pa. Filed July 23, 1925. Serial No. 45,672. 2 Claims. (Cl. 36—63.)

1. A device of the class described comprising a body provided at its ends with depending anti-slipping members, riders adjustable longitudinally of the body, and shoe-engaging means connecting the riders, the riders being adjustable downwardly on the anti-slipping members, the lateral edges of said members diverging downwardly to enhance the hold of said members on the ground and to prevent the riders from becoming detached.

1,570,792. MEAT TENDERER. JOSEPH P. SPANG, Quincy, Mass. Filed Apr. 25, 1925. Serial No. 25,898. 6 Claims. (Cl. 17—25.)

1. In a device for tendering meat, the combination with a bed, of a knife-carrier movable toward and from the bed, cuting knives carried by said knife-carrier, and means to give the knives a movement independently of that of the knife carrier.

1,570,793. COMBINATION WINDOW AND VENTILATOR. HALVER R. STRAIGHT, Adel, Iowa. Filed Nov. 3, 1921. Serial No. 512,674. 4 Claims. (Cl. 98—31.)



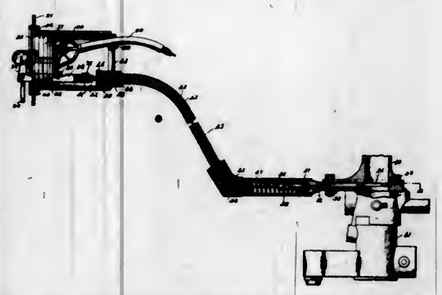
1. A ventilating device comprising a frame having a window opening, an air conductor in communication with the window opening and also in communication with the interior of the building, a window sash adapted to be placed either in the window opening or moved to an inclined position within the said conductor, said sash being adapted to be moved longitudinally while in the inclined plane to increase or decrease the opening between the conductor and the interior of the room, and means for locking said sash in any of its adjusted positions.

1,570,794. PROCESS OF BONDING NEW CONCRETE FORMATIONS TO OLD CONCRETE FORMATIONS. ROBERT C. STUBBS, Dallas, Tex. Filed Feb. 20, 1922. Serial No. 538,089. 2 Claims. (Cl. 94—24.)

1. The herein described process of eliminating shrinkage from a layer of new concrete when applied to the surface of old concrete which consists in applying pressure and vibrations to the surface of the new layer for driving material from the new layer down into the pores of the old concrete to form a bond of the new and old concrete.

1,570,795. STORAGE BIN OR HOPPER. URLYN C. TAINTON, Johannesburg, South Africa. Filed Aug. 20, 1924. Serial No. 733,123. 8 Claims. (Cl. 221—120.)

1. A method of inducing movement in a mass of granular or pulverulent material which consists in depositing the material on a resilient support disposed on an incline, and imparting a relatively small movement to the resilient support in a direction away from the material.

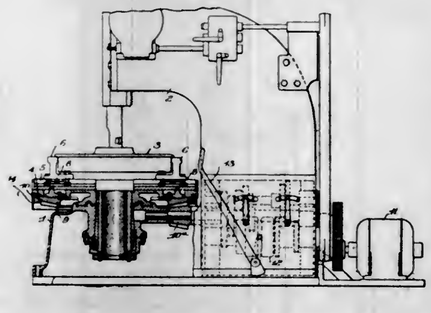


4. In a hopper of the character described, an inclined bottom section, a resilient member carried by the bottom section and forming a support for material deposited in the hopper, and means for imparting a pulsating movement to said resilient member.

1,570,796. PICKER STICK. JAMES B. TATEM, Putnam, Conn., assignor of one-half to The American Tube & Stamping Company, Bridgeport, Conn., a Corporation of Connecticut. Filed June 19, 1924. Serial No. 720,957. 9 Claims. (Cl. 139—157.)

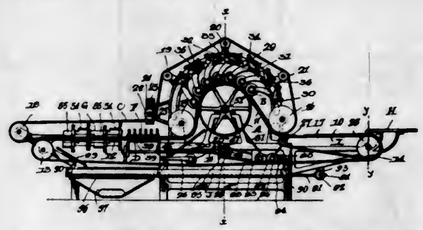
6. A picker stick having a metal section and a wooden section with its lower end fitting within the upper end of the metal section, a wedge between the sections provided with teeth engaging the wooden section and arranged to permit the wedge to creep into closer wedging position and to hold it against creeping out of wedging position, means for clamping the sections together, and a lug strap connected to the wedge and adapted to urge the same into closer wedging position.

1,570,797. AUTOMOBILE LOCKING DEVICE. J. CLARENCE THOMAS and CHARLES C. STAITI, Houston, Tex. Filed Apr. 17, 1923. Serial No. 632,729. 7 Claims. (Cl. 70—127.)



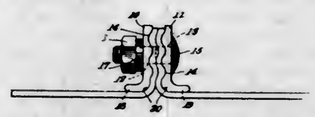
2. In a locking device for automobiles, a lock casing, a cover for said casing, operating means within said casing for controlling the fuel supply and electrical circuits, locking means for normally locking said operating means, locking means for locking said cover to said casing, and control means for operating either of said locking means independently of the other.

1,570,798. IDENTIFICATION-CARD AND REGISTRATION-TAG HOLDER FOR MOTOR VEHICLES. LAWRENCE T. THORN, Harrisburg, Ark. Filed Feb. 19, 1924. Serial No. 693,812. 3 Claims. (Cl. 40—125.)



1. In an identification card and registration tag holder for vehicles, a pair of interlocked cooperating plate members between which the identification card is to be disposed, the foremost plate having openings formed therein for displaying the wording on the card, said last mentioned plate member being formed in the upper central portion with an outwardly projecting projected portion forming a pocket in front of the identification card, and a registration tag mounted in said projecting portion and retained in the pocket by the registration card, said plate member having the projection formed with a display opening to exhibit said registration tag.

1,570,799. WORK-CLAMPING MECHANISM FOR VERTICAL BORING AND TURNING MILLS. ALFRED TROSCH, Rochester, N. Y., and GEORGE W. MORETON, Wilmington, Del., assignors to Consolidated Machine Tool Corporation of America, Rochester, N. Y., a Corporation of Delaware. Filed Mar. 29, 1924. Serial No. 702,936. 2 Claims. (Cl. 77—4.)

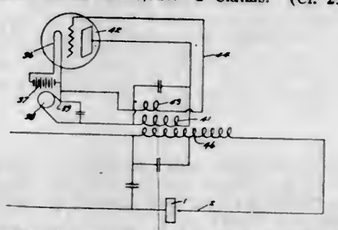


1. In a vertical boring and turning mill, the combination with a table and a series of work gripping jaws radially movable thereon, of a rotary driving member operatively connected with the jaws to effect such radial movement and movable independently of the table, a reversing clutch for reversing the driving member, and a friction band cooperating with the table and operable to hold the latter against movement during reverse movement of the driving member to effect releasing of the jaws.

1,570,800. APPARATUS FOR DESEEDING FLAX. FREDERIC LANGTRY VAN ALLEN, Goderich, Ontario, Canada. Filed Aug. 2, 1921. Serial No. 489,886. 18 Claims. (Cl. 130—13.)

1. Apparatus of the character described comprising flax deseeding, hammering and heating means arranged to act on the flax in the order named and conveyor means serving to support the flax in horizontal position while presenting same to the successive action of the aforesaid means.

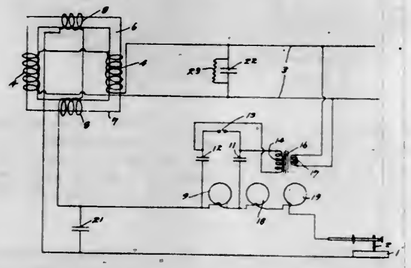
1,570,801. BELT CLAMP. EDWIN VOLLRATH, Easton, Pa., assignor to Victor Balata & Textile Belting Co., New York, N. Y., a Corporation of Pennsylvania. Filed Nov. 6, 1924. Serial No. 748,122. 1 Claim. (Cl. 24—37.)



In a belt clamp the combination of the following elements; rigid clamping members provided with corrugated inner faces and outwardly extending rectangular flanges having curved inner faces; and means adapted to lock belt ends and the clamping members together comprising bolts adapted to be passed through apertures in the said belt ends and in the said clamping members, lock washers on the said bolts, and nuts adapted to hold the said lock washers in close engagement with the said clamping members.

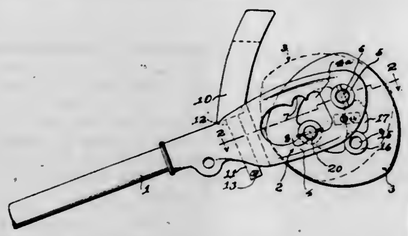
1,570,802. MEANS FOR PREVENTING ADHERENCE OF CAST METAL TO THE MOLD. FOORD VON BICHOWSKY, Glendale, Calif. Filed Apr. 22, 1924. Serial No. 708,312. 4 Claims. (Cl. 22—189.)

1. A coating compound for molds of the character described comprising a substance containing an appreciable quantity of combined nitrogen in the form of a nitride of a member of the carbon group of elements.



1,570,803. METHOD FOR STARTING AN ARC IN A WELDING APPARATUS AND THE LIKE. FLETCHER L. WALKER, Jr., Westwood, Calif. Filed Feb. 9, 1925. Serial No. 8,013. 2 Claims. (Cl. 219—8.)

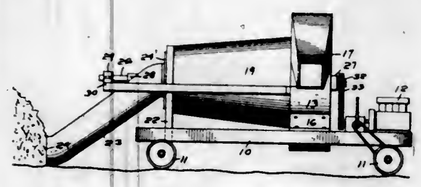
1. An electric circuit made for heavy current flow and having a low voltage source of energy and spaced electrodes therein and means for superimposing a high



voltage of high frequency on the circuit made for causing a small current to bridge the space between the electrodes for starting heavy current from the low voltage coil.

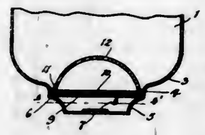
1,570,804. ARC-WELDING SYSTEM. FLETCHER L. WALKER, Jr., Westwood, Calif. Filed Feb. 9, 1925. Serial No. 8,014. 3 Claims. (Cl. 219—8.)

2. An electric circuit made for heavy current flow and having a low voltage source of energy and spaced electrodes therein and means for superimposing a high voltage of high frequency on the circuit made for causing a small current to bridge the space between the electrodes for starting heavy current from the low voltage source, the said means comprising a coil in the circuit, a spark gap in shunt with the coil, condensers interposed between the spark gap and the coil and means for alternately charging the condensers and allowing the same to discharge across the spark gap the coil having turns of wire in series therewith for stepping up the voltage in the first mentioned circuit.



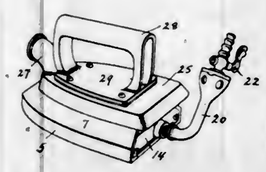
1,570,805. TROLLEY WHEEL. GEORGE WALLET, Milwaukee, Wis. Filed July 9, 1925. Serial No. 42,483. 4 Claims. (Cl. 191—59.1.)

1. In a device of the class described in combination, a trolley fork, a trolley wheel pivoted off center in said trolley fork, stops in said fork for limiting the arc of swing of said wheel, perforations in said wheel, a web having a hole therein between two of the said perforations and a tension spring passing through the said hole having the ends fastened to the said fork for returning the said wheel to its first position.



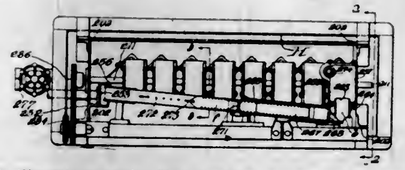
1,570,806. MACHINE FOR HANDLING SNOW OR THE LIKE. CLAUDE LESTER WALLING, Sherburne, N. Y. Filed Sept. 3, 1925. Serial No. 54,295. 5 Claims. (Cl. 37—41.)

1. A machine for handling snow or the like, comprising a fan casing, a tapered drum having its large end leading into one end of the fan casing, substantially horizontal conveying blades disposed in a circular group within the tapered drum to act upon the snow therein and throw the same outwardly by centrifugal force,



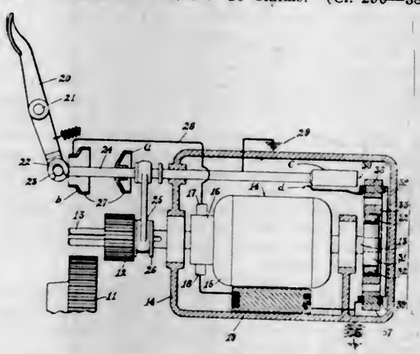
a rotary fan within the fan casing, means to rotate the conveyor blades and fan, and an outlet for the fan casing.

1,570,807. LEACHER. JAMES A. WATSON, Winnipeg, Manitoba, Canada, assignor to James A. Watson and George A. Powell, both of Winnipeg, Canada. Filed Apr. 28, 1925. Serial No. 26,471. 5 Claims. (Cl. 53—3.)



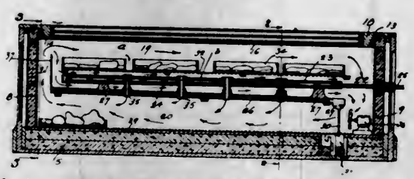
1. A leacher comprising a liquid receiving receptacle provided with a removable cover and having the bottom thereof contracted to provide an internal seat and a well beneath the seat, the well being provided with a restricted outlet opening, a strainer resting on the seat, a filtering member covering the strainer and a releasable ring frictionally holding the filtering member and strainer in position against the sent.

1,570,808. GAS IRON. HARRY WEINTRAUB, New York, N. Y. Filed May 19, 1925. Serial No. 31,404. 3 Claims. (Cl. 158—23.1.)



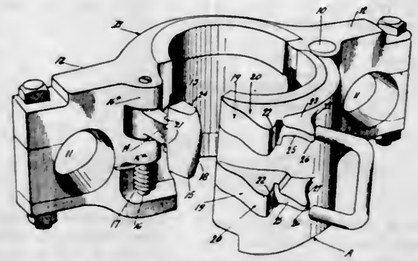
3. A gas iron of the class described comprising a hollow body open at one end, a ribbed heating surface on the bottom and interior of said body, a flat plate having an integral end wall formed therewith extending within said body in proximity to the ribbed surface and closing said open end, a pipe connection including means for regulating a mixture of air and gaseous fuel discharging within said body and beneath the plate, a cover plate having an exhaust nozzle at its front end in communication with the interior of said body whereby the incomplete products of combustion are discharged, an insulating pad between the top of said body and cover plate, a hollow handle attached to the cover plate and an insulating pad between the said handle and cover plate.

1,570,809. TREATMENT OF CINEMATOGRAPHIC FILMS. WILLIAM BURTON WESCOTT, Wellesley, Mass., assignor, by mesne assignments to Technicolor Motion Picture Corporation, Boston, Mass., a Corporation of Maine. Original application filed Dec. 7, 1917, Serial No. 205,999. Divided and this application filed Apr. 25, 1922. Serial No. 556,535. 25 Claims. (Cl. 95—7.)



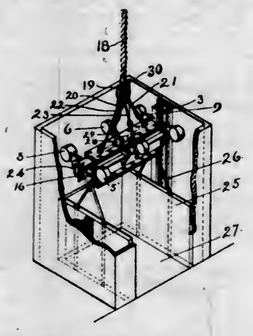
1. Cinematographic film treating apparatus comprising an elongate tubular container having a transverse dimension slightly greater than the width of the film and constructed to contain liquid, and means for continuously feeding a cinematographic film in the container at one point, thence through the container, and thence out of the container at a widely separated point along its length.

1,570,810. ELECTRIC SELF-STARTER FOR INTERNAL-COMBUSTION ENGINES. RALPH H. WHISLER, Halfway, Mich., assignor to Essex Motors, Detroit, Mich., a Corporation of Michigan. Filed June 13, 1921. Serial No. 477,084. 10 Claims. (Cl. 290—38.)



1. In combination with an electric self-starter motor, a gear, a pinion, pedal-operated means for causing the pinion to engage the gear and to close the circuit through the electric motor and electric means operated by said pedal-operated means for turning the pinion relatively to the gear.

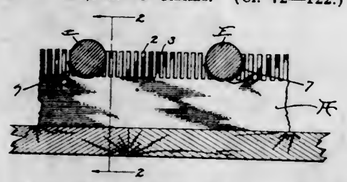
1,570,811. COMBINED REFRIGERATOR AND DISPLAY COUNTER. ELIZA A. WILKINSON, San Francisco, Calif. Filed Aug. 3, 1925. Serial No. 47,915. 3 Claims. (Cl. 62—102.)



1. A combined refrigerator and display counter comprising a cabinet interiorly provided with an upper compartment for receiving the material to be displayed, a lower compartment for receiving the material to be stored and vertically extending passages at the opposite ends of the compartments for placing the compartments in communication with one another, a division wall between said compartments extending longitudinally and transversely of the central portion of the cabinet from one of said passages to the other and including a refrigerating unit, and means for circulating air from one of said compartments into the other and through the said passages.

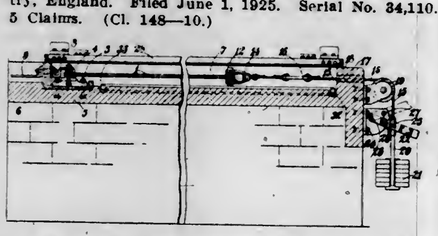
1,570,812. LATCH GUARD FOR CASING-HANDLING TOOLS. ELIHU C. WILSON, Los Angeles, Calif. Filed Nov. 1, 1923. Serial No. 672,103. 5 Claims. (Cl. 294—90.)

1. In casing handling tools, the combination of a plurality of clamping and holding members hinged together and adapted to embrace between them a pipe or casing, an oscillatory latch device pivotally connected with one of said members, said latch device including a shank, a head on the free end of the shank and with its outer longitudinal face forming the nose of the latch, the member with which said latch is engaged being provided with spaced locking lugs with which said head is adapted to engage and between which the shank thereof is received, spaced guard lugs on the latch engaged clamp member, shoulders on said guard lugs and adapted to be engaged by the inner side face of the latch when in locking position, said shoulders extending longitudinally beyond the ends of the head, and the ends of the guard lugs extending partially around the nose of the latch.



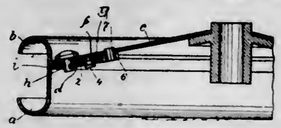
1,570,813. SAFETY DEVICE FOR ELEVATORS. PETER WILSON, Springfield, Ill. Filed Aug. 20, 1923. Serial No. 658,330. 3 Claims. (Cl. 187—83.)

3. In an elevator safety device of the character described, the combination with vertical guide members in the elevator shaft, having integral vertically aligned stop-lugs on opposite side faces thereof, of a cage having opposite sets of counter-balanced emergency catch dogs mounted on bracket supported horizontally parallel opposite counter shafts, adapted to provide simultaneous rotatable support of said catch dogs; said rotatably sup-



ported emergency catch dogs adapted to be normally suspended in a predetermined position of disengagement with the integral vertically aligned stop-lugs during the cable support of said elevator; but adapted to quickly and automatically rotate simultaneously into engagement with said stop-lugs through the agency of gravitation on said rotatable counter weighted grabbing dogs in the event of accidental breaking of the elevator supporting cable; and an auxiliary centrally disposed pair of counter weights securely mounted on said counter shafts and adapted to aid in expediting the emergency rotation of said emergency catch dogs as described and for the purpose set forth.

1,570,814. REENFORCING-BAR SUPPORT. HORACE M. WOOLLEY, Jr., Alameda, Calif. Filed Sept. 10, 1924. Serial No. 736,873. 3 Claims. (Cl. 72—122.)



1. A reenforcing bar support of the character described comprising an elongated strip of metal adapted to stand on edge, and a plurality of closely spaced, easily bendable teeth formed in one edge thereof.

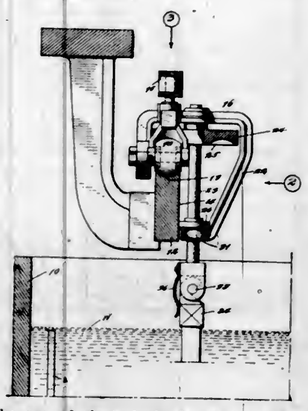
1,570,815. PROCESS AND APPARATUS FOR INSURING THE STRAIGHTNESS OF METAL TUBES AND STRIPS OF ANGLE OR OTHER FORM DURING HEAT TREATMENT. HAMILTON NEIL WYLIE, Coventry, England. Filed June 1, 1925. Serial No. 34,110. 5 Claims. (Cl. 148—10.)

1. A process for heat treating and for insuring the straightness of metal tubes and strips of angle or other form during heat treatment, consisting in first subjecting the tube, strip or the like to a predetermined tensile load, and, while so loaded, heating it by the passage through it of an electric current which is cut off when the required temperature of the material is attained and the desired straightening has been effected, after which, when the strip has cooled sufficiently, the load is removed, substantially as and for the purpose described.

1,570,816. DIVIDED RIM FOR AUTOMOBILE WHEELS. WALTER ZIPPER, Vienna, Austria. Filed Dec. 12, 1924. Serial No. 755,525. 1 Claim. (Cl. 152—21.)

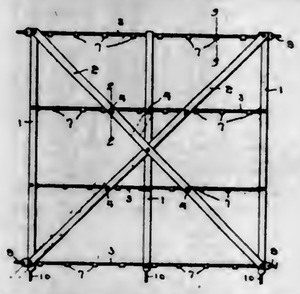
A wheel rim with a detachable flange, comprising connecting hooks arranged in a circle on said flange, the non-detachable rim part being formed with apertures through which said connecting hooks project, a single ring rotatable secured to the non-detachable rim part to act as a locking organ for all the hooks, the said ring being formed with marginal recesses corresponding to the connecting hooks and with gear teeth, and a toothed pinion meshing with said gear teeth, said pinion being adapted to be rotated by means of a wrench.

1,570,817. ARTIFICIAL STONE AND METHOD OF MAKING SAME. SALVATORE S. ZOTTOLI, Quincy, Mass. Filed Feb. 26, 1924. Serial No. 695,348. 3 Claims. (Cl. 18—48.8.)



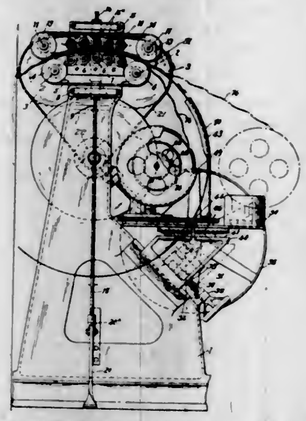
1. The method of making imitation travertin consisting of placing in a mold a bed of cement mixed to a thick plastic consistency and pressing on the top surface while the cement is still in a plastic condition in such manner that portions of the under surface of the cement are pressed against the underlying surface of the mold with greater degree of pressure than other portions, whereby there are formed irregular cavities in the under surface of the molded cement and then allowing it to dry.

1,570,818. TEAPOT, COFFEEPOT, AND THE LIKE. EDMUND WILLIAM ABRAM, London, England. Filed Feb. 24, 1925. Serial No. 11,129. 2 Claims. (Cl. 53—3.)



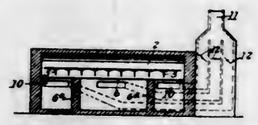
1. A tea pot, coffee pot and the like having a filling opening in its top and a spout at its upper front portion, and a removable cover having a strainer portion in the form of a shutter which closes the lower end of the spout, such shutter having slots therein through which the infusion flows in passing to the spout, said slots being curved thereby decreasing the danger of the shutter being broken.

1,570,819. METHOD OF ELECTROPLATING AND APPARATUS THEREFOR. BLASIUS BART, East Orange, N. J. Filed Oct. 11, 1923. Serial No. 667,797. 34 Claims. (Cl. 204—11.)



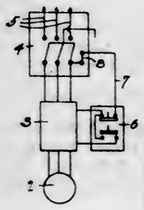
1. In the art of electrolytic deposition where a series of anodes are used and where the depositing operation is of different activity in different parts of the bath, the method which consists in causing the article to be coated to traverse continuously a path through the several parts of the bath where the depositing activity is variable, subjecting the article to the electrolytic depositing action of the bath for a prescribed period of time and causing the article during its passage to present all sides thereof repeatedly to the different anodes.

1,570,820. GROUND-CLEANING RAKE. VICENTE BETÉS, Venado Tuerto, Argentina. Filed Nov. 19, 1924. Serial No. 750,935. 1 Claim. (Cl. 55—3.)



In a rake for cleaning the ground including in combination a frame having vertically disposed cross-bars, of a plurality of headed teeth, means for adjustably clamping the teeth in various positions of vertical adjustment on the cross-bars, including a staple-shaped member embodying spaced apertured arms arranged in straddled engagement with the cross-bar and receiving one of the teeth through the apertured ends, and a screw passing through the medial portion of the staple member and bearing against the cross-bar for clamping the parts in position.

1,570,821. MACHINE FOR THE MANUFACTURE OF BEAD CABLES OR GROMMETS. FRANK H. BEYEA, Akron, Ohio, assignor to John R. Gammeter, Akron, Ohio. Filed Sept. 23, 1921. Serial No. 502,819. 29 Claims. (Cl. 117—5.)

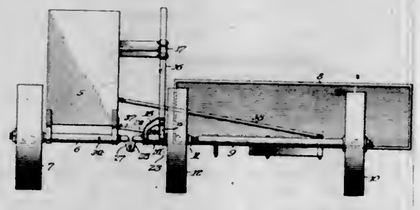


1. In a machine for the purpose set forth, the combination of means for supporting a grommet and a holder for preformed spiral wire, means for casting the holder about the grommet, means for rotating the holder and the grommet circumferentially relative to one another and means for maintaining the axis of the holder at a constant angle with respect to the plane of the grommet.

1,570,822. METHOD AND APPARATUS FOR ANNEALING AND COOLING SHEET GLASS. FREDERIC L. BISHOP, Pittsburgh, Pa., assignor to Window Glass Machine Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Sept. 4, 1924. Serial No. 735,790. 4 Claims. (Cl. 49—47.)

1. In the method of annealing and cooling sheet glass, the steps consisting in passing glass through a leer, passing streams of heated gaseous fluid through the leer above and below the glass and in contact therewith, and varying the cooling effect of at least one of said streams from side to side of the leer.

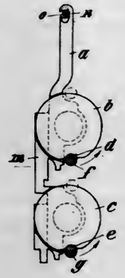
1,570,823. ELECTRIC SYSTEM. GEORGE T. BAUUN, Pittsburgh, Pa. Original application filed Jan. 17, 1922, Serial No. 529,916. Divided and this application filed Feb. 9, 1923. Serial No. 618,012. 2 Claims. (Cl. 175—294.)



1. An electric system comprising a main circuit and a translating device, a manually- and an electrically-operable switch between the circuit and the device, a holding coil requiring energization to hold the electrically-operable switch closed, and an auxiliary switch associated with the manually-operable switch for closing the holding coil circuit after the manually-operable switch is closed and for opening the holding coil circuit before the manually-operable switch is opened.

1,570,824. SURFACE WASHER. LESTER GEORGE CLARK, Montreal, Quebec, Canada, assignor, by mesne assignments, to The E. Z. Anto Washer Company, New Haven, Conn., a Corporation of Connecticut. Filed Nov. 13, 1922. Serial No. 600,507. 1 Claim. (Cl. 15—130.)

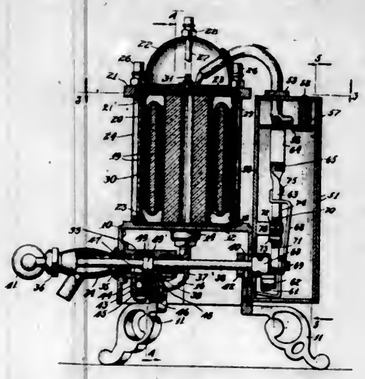
A surface washer comprising a sheet of rubber forming in the central portion a longitudinal and comparatively flat pocket of reinforced construction and opening out at one end of the sheet into the upper half of a circular rubber hose extension and a rubber sponge secured to the aforesaid sheet and communicating with said pocket through the inner wall thereof and extending partly across the circular hose extension to narrow the mouth of the pocket.



1,570,825. COMBINATION HARVESTER THRASHER. ERNEST COBURN, Racine, Wis., assignor to J. I. Case Threshing Machine Company, Racine, Wis., a Corporation. Filed Feb. 18, 1924. Serial No. 693,441. 9 Claims. (Cl. 56—209.)

1. In a machine comprising a harvester and a thrasher, an axle on said thrasher, a connecting member mounted in said axle, a leveling wheel for said harvester having an axle, a connecting member in said harvester axle, and means for securing said members together.

9. In a machine comprising a harvester and thrasher, a swiveling connecting member supported by said harvester, an arm on said member positioned at right angles thereto, means for preventing endwise movement of said member, a swiveling connecting member supported by said thrasher, an arm on said member positioned at right angles thereto, means for preventing endwise movement of said member, and means connecting said arms to permit their simultaneous uniform movement or independent variable movement in relation to each other.

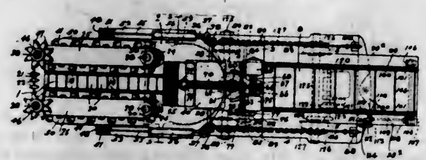


1,570,826 MATRIX-SETTING AND TYPE-BAR-CASTING MACHINE. JULIUS DORNETH, Konradshohe, near Tegel, Germany. Filed Apr. 8, 1924. Serial No. 705,112. 3 Claims. (Cl. 199—51.)

1. A justifying device for matrix setting and type-bar casting machines with a spacing device, comprising in combination a plurality of circular spacing wedges and means in engagement with said circular spacing wedges at the peripheries thereof for turning the spacing wedges.

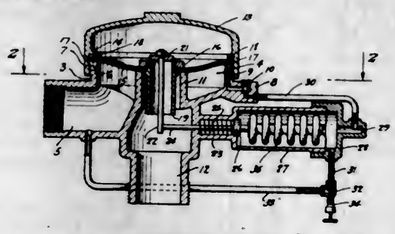
1,570,827. ELECTRIC WATER HEATER. JOSEPH C. FELDMAN, New York, N. Y., assignor to Tillie K. Feldman, New York, N. Y. Filed Dec. 6, 1923. Serial No. 678,800. 4 Claims. (Cl. 200—169.)

1. The herein described switch mechanism for automatic water heaters comprising a pair of spaced contact studs, a bridge, a switch arm carrying at its free end said bridge, a manually operated rock shaft on which the end of the arm remote from the bridge is journaled freely, a spring acting upon the arm tending to throw it in one direction to open the switch, an actuating knuckle fixed to the rock shaft and having lost motion engagement with the arm for positive movement thereof



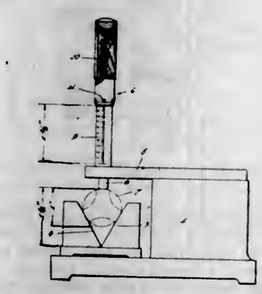
in the opposite direction against the force of said spring, and locking means for the switch arm releasable by said knuckle to permit the switch to open under actuation of the spring.

1,570,828. APPARATUS FOR DRILLING OIL WELLS. JAMES P. FISHER, Bartlesville, Okla., assignor to Doherty Research Company, New York, N. Y., a Corporation of Delaware. Filed June 30, 1922. Serial No. 572,056. 5 Claims. (Cl. 255—64.)



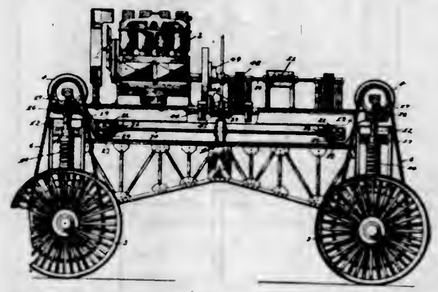
1. A drilling apparatus comprising a bit having a cutting edge extending substantially transverse to the axis of the bit, said bit having longitudinal channels in the plane at right angles to the longitudinal plane including the cutting edge of said bit, and means for providing a downward draft of water at the corners of said cutting edge.

1,570,829. LOADING MACHINE. JOHN A. FORSYTH, Nemacolin, Pa., assignor of one-fourth to Clyde J. Smith, Uniontown, Pa. Filed Jan. 13, 1922. Serial No. 528,976. 13 Claims. (Cl. 262—5.)



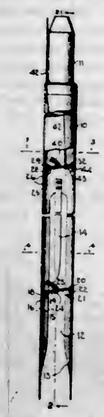
1. A loading machine comprising an inclined movable endless conveyer, endless chains extending along the sides of said conveyer, and scraper lugs with bits carried by the said chains for pushing material upon said conveyer.

1,570,830. AUTOMATIC WATER CONTROL. MARVIN A. HAGEY and LOREN T. MCKEE, Los Angeles, Calif. Filed Sept. 21, 1925. Serial No. 57,724. 3 Claims. (Cl. 139—93.)



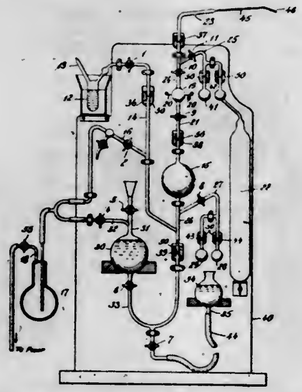
1. A device of the character described adapted to be connected to a hydraulically actuated flush valve having a relief chamber and mechanically operated means to release fluid therefrom so as to operate said valve including a slidable actuating stem, said device comprising an expansible chamber motor, a fluid inlet for said motor connected to the inlet of said valve and arranged to permit the passage of fluid slowly to said motor, said motor having a fluid outlet connected to said relief chamber, said stem being disposed to be engaged and operated at an end of the travel of the motor.

1,570,831. MEASURING DEVICE. BENGT M. W. HANSON, Hartford, Conn.; Einar A. Hanson and Clarence E. Whitney executors of said Bengt M. W. Hanson, deceased. Filed May 21, 1923. Serial No. 640,352. 2 Claims. (Cl. 33—166.)



1. A measuring device of the character described comprising a pair of angularly disposed jaws, and a micrometer having a jaw or spindle provided with threads by which it may be moved toward and from the point of intersection of the first jaws, said micrometer being provided with a scale having divisions indicating standard units of measurement, but spaced apart in proportion to such standard units to designate by direct reading in that standard distances proportionally less than those to which the threads move the spindle upon rotation thereof.

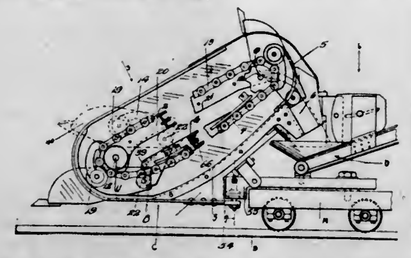
1,570,832. POWER STEERING MECHANISM FOR LOGGING TRUCKS. JENS HASSELBERG, Klamath Falls, Oreg. Filed Oct. 20, 1924. Serial No. 744,680. 6 Claims. (Cl. 180—80.)



1. In a logging truck provided with an engine operatively mounted upon the truck for delivering power to the wheels, steering mechanism comprising steering knuckles connected to each wheel for imparting pivotal movement thereto relative to the body of the truck; reach rods connected between the knuckles of the front pair and of the rear pair of wheels respectively, said rods having oppositely pitched threaded portions along the middle portions thereof; gears engaging said threaded portions of the rods; means for holding the gears against longitudinal movement along the rods whereby rotation of the rods will cause the rods to be moved to actuate the steering knuckles; and means actuated by power from the engine for rotating the gears to steer the truck.

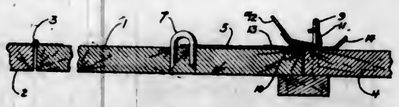
1,570,833. FISHING TOOL FOR WELLS. JOHN T. HELBERT, Broadway, Va. Filed Aug. 17, 1923. Serial No. 657,892. 2 Claims. (Cl. 294—104.)

1. In a device of the character described, an elongated hollow body, a stationary curved plate therein, a wingable clutch member on the inside of the body and adapted to clamp a cable between the edge of said member and said plate, said member having its free edge curved and provided with prongs which converge and extend downwardly to obviate untwisting or unraveling while it is being pulled out.



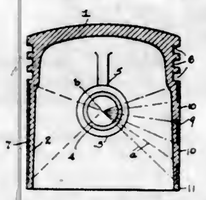
1,570,834. METHOD OF AND APPARATUS FOR PURIFICATION OF RADIUM EMANATION. VICTOR F. HESS, Orange, and EDWIN D. LEMAN, East Orange, N. J., assignors to United States Radium Corporation, a Corporation of New York. Filed June 14, 1923. Serial No. 645,258. 12 Claims. (Cl. 167—7.)

2. The method of separating gaseous impurities from radium emanation which comprises, removing a portion of the gases from the emanation, passing the partially purified emanation to a tube containing an absorbent to obtain the emanation in a state of substantial purity, and sealing off the portion of the tube containing the absorbent, whereby the remaining portion of the tube contains only substantially pure emanation.



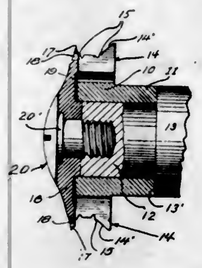
12. In a gas collecting apparatus of the character described, the combination of an expansion chamber, an auxiliary trap chamber and means for connecting and disconnecting the expansion chamber with the trap chamber, a vacuum pump and means for connecting and disconnecting said pump with the explosion chamber and with the auxiliary trap chamber, means for forcing mercury into the expansion chamber against a very low gaseous pressure to displace rarefied gas therefrom and force it into the auxiliary trap chamber, and an explosion chamber provided with electrodes adapted to produce an electric discharge therein and means for connecting and disconnecting the explosion chamber with the expansion chamber, a capillary tube and means for connecting and disconnecting the capillary tube with the explosion chamber, and an absorption bulb and means for connecting and disconnecting said absorption bulb with the expansion chamber.

1,570,835. SHOVELING MACHINE. FRANK M. HEWITT, Oakland, Calif. Filed Feb. 9, 1925. Serial No. 7,836. 20 Claims. (Cl. 198—12.)



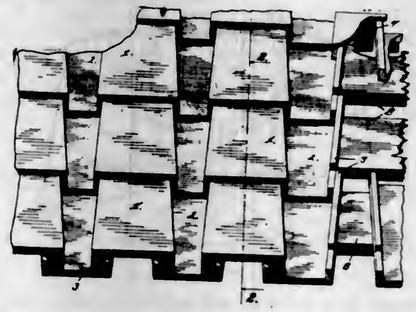
1. A shoveling machine comprising in combination an excavator frame, chains operatively mounted in the frame, excavating buckets and a link connecting the chain and buckets in the plane of the chain.

1,570,836. HASP. CHARLES BRUCE HOLMAN, Eureka, Calif., assignor to Ora F. Simpson, Eureka, Calif. Filed Jan. 12, 1925. Serial No. 1,865. 4 Claims. (Cl. 292—285.)



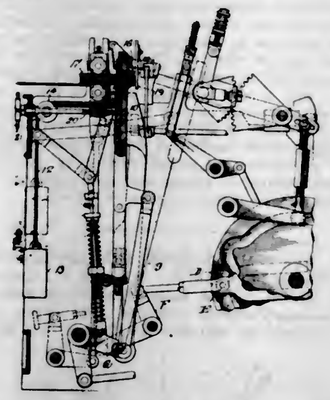
1. A hasp comprising a plate having means at one end thereof for securing the same to a door, and an aperture through the plate adjacent the other end, and an element mounted on a pivot extending transversely across the plate adjacent the aperture and having an arm at the aperture side of the pivot adapted to engage in a closed staple extending through the aperture, and a relatively angular arm at the other side of the aperture adapted by pressure thereon to move the first arm out of the staple.

1,570,837. PISTON. JOHN E. HOY and NORMAN A. BEST, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed Mar. 18, 1924. Serial No. 699,978. Renewed Jan. 22, 1925. 8 Claims. (Cl. 74—108.)



1. In a piston, or like article, the combination of a body and a part surrounding the same, said body and part being composed of metals having different co-efficients of expansion and laterally contacting edges of said body and part inclining with respect to the cylindrical face of said body, substantially as described.

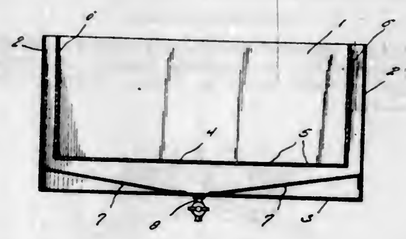
1,570,838. SHOE-SOLE TRIMMER. CHARLES JACKMAN, Portsmouth, Ohio, assignor of one-half to Pearl E. Selby, Portsmouth, Ohio. Filed May 4, 1923. Serial No. 636,635. 5 Claims. (Cl. 12—91.)



5. In a shoe sole trimming mechanism, a rotary trimming member having a peripheral series of cutting teeth thereon, cutting lips formed on said member at the outer side edge thereof, a circular guard disposed in abutting relation at the outer side of said trimming member with its peripheral edge extending beyond the teeth of said member, said guard having an annular series of circular bores therethrough in alignment with the cutting lips of said trimming member for trimming the edge face of a shoe sole being worked.

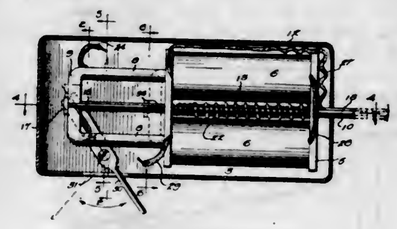
1,570,839. ROOF TILE. JOSE JOAQUIN, San Jose, Calif. Filed Aug. 18, 1924. Serial No. 732,743. 2 Claims. (Cl. 108—10.)

1. In a tile roof, upper and lower tiles having oppositely disposed flanges edges, the flanged edges of said upper and lower tiles converging in opposite directions and having notches formed in the flanges at the narrow end of each tile whereby portions of the flanges at the narrow end of each tile may be received between overlap portions of the flanges at the wide end of an adjacent overlapping tile and the overlapping flange portions interlap with the overlapping flange portions of opposite tiles; and lugs formed upon the under sides of the upper tiles to engage and retain said tiles upon a supporting surface, said lug forming a spacing element adapted to space the ends of the underlying tile.



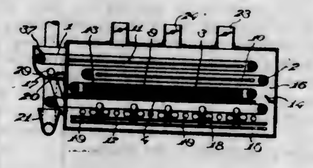
1,570,840. MEANS FOR PREVENTING BACKLASH IN ROUNDING AND BACKING MACHINES. AXEL VIKTOR JOHNSON, Brooklyn, N. Y., assignor to Fred Gont Company, Brooklyn, N. Y., a Corporation of New York. Filed Dec. 10, 1920. Serial No. 429,665. 5 Claims. (Cl. 11—5.)

1. In a machine for rounding and backing books, the combination of means for holding the books to be rounded and backed, and a weight flexibly connected to said holding means for preventing back lash of said holding means.



1,570,841. FLOWER BOX. WILLIAM KARNATZ, Bismarck, N. Dak. Filed Mar. 23, 1925. Serial No. 17,762. 1 Claim. (Cl. 47—34.)

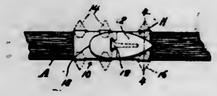
A flower box comprising opposed side and end walls and bottom walls, said bottom wall being provided with a centrally located valve, a false bottom connected to the side walls and spaced from the end walls and equipped with a multiplicity of apertures, partitions connected with said false bottom and side walls of the box and spaced from the end walls, said false bottom



being spaced above the bottom of the main box, and inclined chutes connected to the end walls of the box and inclining toward the bottom of the main box so as to guide drain water toward said valve.

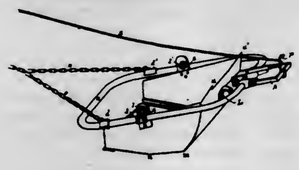
1,570,842. WINDSHIELD CLEANER. MATTI I. KEVARI, Bessemer, Mich. Filed Feb. 26, 1923. Serial No. 621,296. 2 Claims. (Cl. 172—126.)

1. An electro-magnetic motor comprising a pair of coils, a substantially U-shaped armature adapted to be moved inwardly when the coils are energized, an auxiliary armature adapted to complete a circuit through said coils, when the U-shaped armature is in its outer position, means for breaking the circuit when the armature is in its inner position, and a spring to return said armature to its outer position when the circuit is broken.



1,570,843. APPARATUS FOR DRYING LIVE COCOONS AND THE LIKE. KIHACHIRO KOBORI, Kobe, Japan, assignor to Kanegafuchi Boseki Kabushiki Kwaisha, Tokyo, Japan. Filed Apr. 18, 1923. Serial No. 632,999. 4 Claims. (Cl. 34—12.)

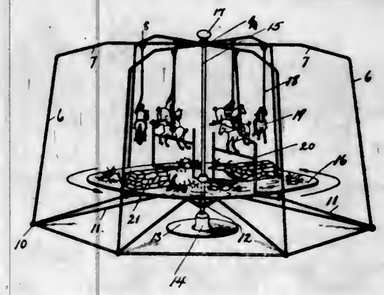
1. In an apparatus for drying live cocoons and the like, a drying chamber divided internally into upper and lower compartments, conveyors arranged in the upper compartment, heating means for said conveyors, a conveyor arranged in the lower compartment, air heating means arranged exteriorly of the drying chamber,



means for introducing the heated air into the lower compartment, means for heating cocoons preliminarily to their introduction in the heating chamber, and means for conducting the air exhausted from the lower compartment to the preliminarily heating means.

1,570,844. ELASTIC THREADING AND FASTENING DEVICE. FAY L. KUELLMER, Denver, Colo. Filed Jan. 13, 1925. Serial No. 2,220. 1 Claim. (Cl. 24—222.)

In a device of the character described, a pair of flat elongated body members each adapted for engagement upon the ends of a strip of flexible material and each having a plurality of prongs at its side edges adapted to be bent over and crimped upon the flexible material, one member having a substantially arrow shaped head connected with the body by a constricted neck portion and the other member having an elongated slot at its central portion opening out into a transverse slot, the corners at the junctures of the slots being rounded, said arrow shaped head being adapted for insertion within the first named slot whereby the constricted neck may be turned and brought into the second named slot.

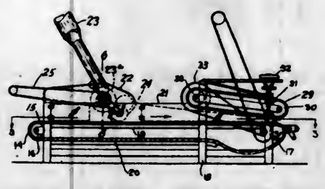


1,570,845. ROAD SCRAPER. ROBERTO KURTZ, Buenos Aires, Argentina. Filed Sept. 2, 1921. Serial No. 497,884. 4 Claims. (Cl. 37—138.)

1. An automatic road scraper of the character described including a substantially rectangular frame, a draft device connected with the forward portion of the frame, a single cavity scraper body rotatably suspended from the frame and automatically rotatable under the combined action of gravity and the draft exerted on the frame, a cooperating latching and locking device mounted in the rear of the frame and on the rear of the scraper body and normally holding the scraper in operative position, and a flexible element permanently connected with the locking and latching element on the frame and temporarily engaged at times with the frame so as to maintain the latching and locking device in engaged position and facilitate the lifting of the frame to cause the scraper body to excavate, the flexible element being disengageable from the frame to release the scraper body so as to permit a complete rotation of the scraper body in the frame and insure an automatic dumping and subsequent latching of the scraper body in an operative position in the frame.

1,570,846. STEEPLECHASE GAME. ISRAEL KUSSNER, New York, N. Y. Filed June 2, 1925. Serial No. 34,375. 3 Claims. (Cl. 273—138.)

1. A toy or game of the class described comprising an open frame, a plurality of detachable units suspended from the top of the frame, a rotatable shaft and support therefor mounted centrally of the frame, a turntable

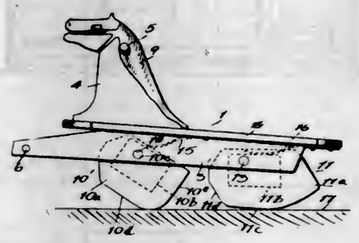


rotatable with the shaft and obstructions on the turntable for engaging said detachable units.

1,570,847. ADJUSTABLE CLEVIS. SAMUEL C. LAVENDER, Pickens, Okla., assignor of one-fourth to Robert W. Case, Wright City, Okla. Filed Nov. 15, 1922. Serial No. 601,185. 1 Claim. (Cl. 278—96.2.)

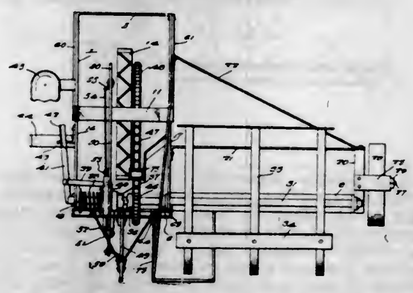
A draft appliance for plows comprising a pair of forwardly extending plates adapted to be secured to the opposite sides of a plow beam at its forward end, a clevis pivotally mounted between said plates adjacent their free ends having a reduced portion provided with a segmental rack, a rack wheel having extensions conforming in shape to the beam and adapted to embrace the beam at the rear end thereof, means for securing said extensions to said beam, said rack wheel being provided with a hub, a shaft having a crank mounted in said hub, a bearing on said beam in which the forward end of said shaft is mounted, a pinion carried by said shaft engaging the segmental rack of said clevis and a pivoted spring-actuated detent carried by the crank of said shaft adapted to engage said rack wheel for locking said clevis in adjusted position.

1,570,848. METHOD OF AND APPARATUS FOR MAKING MATTRESSES. WILLIAM C. LLOYD, Montreal, Quebec, Canada, assignor, by mesne assignments, to Simmons Company, Kenosha, Wis. Filed Apr. 23, 1921. Serial No. 463,900. 18 Claims. (Cl. 226—45.)



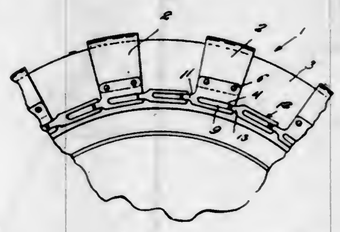
1. In a mattress making machine, a framework, an endless conveyor therein, side boards forming with the upper surface of the conveyor a trough, and a floating roll disposed transversely of said trough above the conveyor and adjacent the inlet end of the trough.

8. In a mattress making machine, a framework, an endless conveyor therein, a perforated roll above the conveyor, and means driving said roll in a direction contrary to the conveyor.



13. A continuous process of making mattresses which comprises, opening, cleaning and teasing fibrous material, depositing the cleaned and opened fibre in a continuous manner on a moving conveyor, forming the fibre in a single layer of thickness sufficient for a complete mattress filling by retarding movement of fibre on the conveyor.

1,570,849. TOY VEHICLE. RAYMOND H. MANLEY, Cottonwood, Ariz. Filed July 5, 1923. Serial No. 649,606. 3 Claims. (Cl. 272—53.)



3. A toy vehicle comprising a pair of rocker units, an elongated body swingingly supported upon the rocker units, one of said rocker units being disposed beneath one end portion of said body and the other rocker unit being disposed beneath the opposite end portion of said body, each of said rocker units comprising an eccentric adapted to rock about an axis intersecting the respective eccentric in advance of and above the level of its transverse central line and extending at right angles to the direction of length of said body, said rocker units being adapted to be actuated successively by the shifting of weight on the body of the vehicle from one end portion of the body to the opposite end portion thereof while both of said rocker units rest upon a substantially flat surface and when so actuated repeatedly to propel the body forward.

1,570,850. STALK CUTTER. JEROME B. MARTIN, Granite, Okla. Filed June 5, 1925. Serial No. 35,173. 3 Claims. (Cl. 55—118.)

1. A machine of the class described including a longitudinally extending U-shaped frame having its ends disposed forwardly, a beam extending across the ends and beyond one side of the frame, a cutter bar on the beam, a frame at the end of the beam, wheels journaled in the frames, a shaft journaled between the frames, means operatively connecting the shaft with one of the wheels, a clutch mechanism associated with said means, a plurality of bars disposed in spaced circumferential relationship about the axis of the shaft, means operatively connecting the bars with the shaft, means for tilting the frames so as to vary the distance of the beam from the ground.

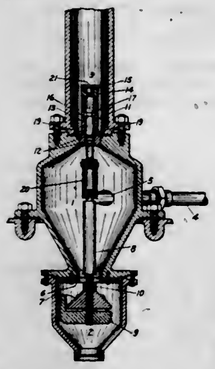
1,570,851. TIRE ARMOR. THOMAS CARMAN METCALFE, Bowsman River, Manitoba, Canada. Filed Apr. 1, 1925. Serial No. 20,006. 1 Claim. (Cl. 152—14.)

A tie armor comprising a series of segmental sections cut from an old tire casing, said sections adapted to straddle a tire and arranged in annular spaced relation, a pair of complementary plate sections secured at their upper portions on the inner and outer sides respectively at each end of each section, the lower portion of said plate sections extending below the lower edges of the ends of each section, the lower portions of the plates being provided with registering longitudinally extending slots, a looped portion connecting the lower portions of the plate at one side of each section, and links connecting the looped portions of the plate with the slotted adjacent portions of the plate carried by the adjacent segmental sections, said links being of substantially U-shaped formation, the arms thereof being slotted and adapted to engage the looped portions of the plate, the crown portion of each of the substantially U-shaped links engaging the slotted lower portions of the plates.

1,570,852. BAFFLE SECTION FOR HOT-WATER HEATERS. WALTER H. MILLER, Richmond, Va. Filed Apr. 22, 1924. Serial No. 708,308. 1 Claim. (Cl. 110—98.)

In a structure of the class described, a baffle section for a hot water heater of the class described, said section comprising a relatively wide plate provided on its under side with a longitudinally extending rib of a predetermined width with respect to the width of the plate, said rib terminating in spaced relation from one end of the plate, a relatively narrow extension contiguous with said plate and rib, said extension being of a thickness equal to the combined thickness of said plate and rib, the free end of said extension being bevelled and notched upon its under side.

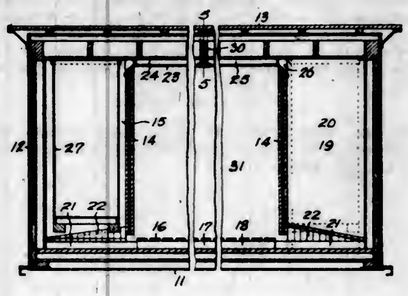
1,570,853. MANUFACTURE OF GLASS CYLINDERS. WILLIAM L. MONRO, Pittsburgh, HENRY F. CLARK, Oakmont, and LONNIE J. PIERCE, Pittsburgh, Pa., assignors to Window Glass Machine Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Apr. 29, 1918. Serial No. 231,332. 12 Claims. (Cl. 49—17.)



4. In apparatus for drawing glass cylinders, a bait, a chamber above the bait through which air is supplied to

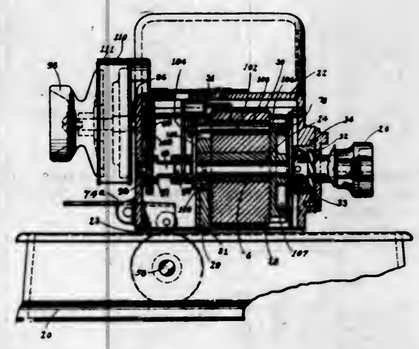
the cylinder being drawn, having an air inlet opening which is of smaller cross-sectional area than and is adapted to discharge air in jet form into the chamber,

said chamber being at least partially enclosed laterally of the air stream and having a venting opening, substantially as described.



1,570,854. MEANS FOR SEPARATING, WASHING, AND DISCHARGING COMMINUTED SOLID MATERIAL IMMERSED IN LIQUIDS. CARL H. NORDELL, Fort Wayne, Ind. Filed Sept. 12, 1922. Serial No. 587,836. 3 Claims. (Cl. 23—267.)

3. In combination with a device for separating, washing and discharging comminuted solid material immersed in liquid, a check valve, a piston and a connection between said check valve and piston, causing said piston and valve to move in unison.

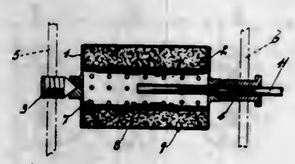


1,570,855. REFRIGERATOR CAR. KARL F. NYSTROM, Montreal, Quebec, Canada. Filed June 11, 1921. Serial No. 476,776. 7 Claims. (Cl. 257—7.)

4. In a refrigerntor car, a temperature changing compartment at each end thereof disposed at opposite sides of the car, a vertical flue at each end of the car disposed on opposite sides of the car, and longitudinal air passages at floor and ceiling on each side of the longi-

tudinal centre of the car connecting the temperature changing compartments severally with the flues at the opposite ends of the car.

1,570,856. PRINTING APPARATUS. WALTER B. PAYNE, CHARLES G. TIEFEL, and RAYMOND E. BOHRER, Rochester, N. Y., assignors to The Todd Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Aug. 29, 1923. Serial No. 660,032. 15 Claims. (Cl. 197—6.4.)

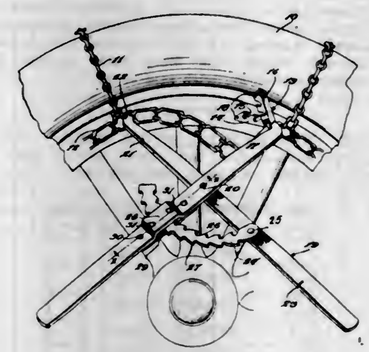


1. A printing apparatus comprising a plurality of rotary type carriers each provided with a plurality of type forms, adjustable means for moving said carriers transversely of the axis of rotation thereof to bring them selectively to printing position, manipulative means for rotating a selected carrier to bring the type forms thereof selectively to the printing point, and operating means for effecting an impression of the selected type form.

1,570,857. INKING ROLLER. JAMES F. PERKINS, Hayward, Calif. Filed Aug. 6, 1924. Serial No. 730,419. 2 Claims. (Cl. 91—67.8.)

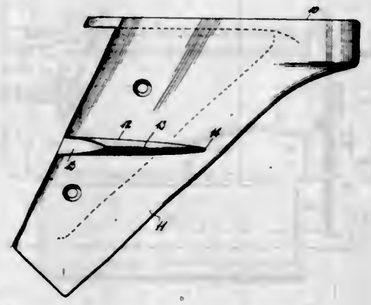
1. An inking roller comprising in combination a pair of heads each having a coned bearing surface, a perforated cylinder between said heads, a fibrous pad surrounding

the cylinder, stationary screw threaded bearing pins having conical ends engaging the coned bearing heads, a



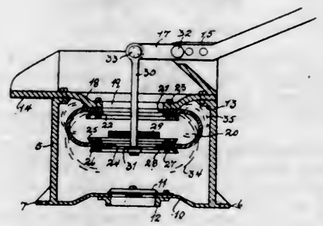
tube passing through one of the bearing pins and through one of the heads, and means to feed ink through the said tube.

1,570,858. LEACHING PROCESS FOR THE EXTRACTION OF METALS. WALTER GEORGE PERKINS, London, England, assignor to Metals Production Company of North America, Incorporated, New York, N. Y., a Corporation. Filed July 25, 1925. Serial No. 46,167. 14 Claims. (Cl. 75—18.)



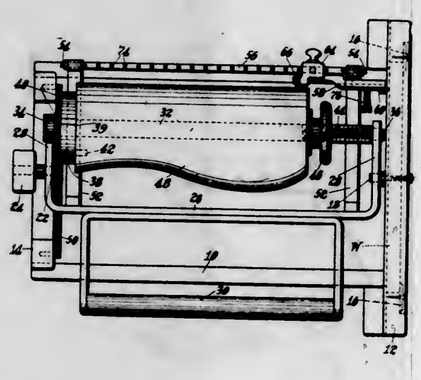
1. In a process for the leaching of ores and like materials by ammoniacal solutions, the application to the ore, following upon the solutions, of a previously effected admixture of vapours comprising steam and ammonia.

1,570,859. TIRE-CHAIN TOOL. WILLIAM N. PORTER, Leigh, Nebr. Filed July 21, 1924. Serial No. 727,253. 1 Claim. (Cl. 254—78.)



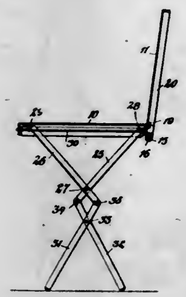
In a tire chain tool, the combination of a pair of crossed flat pivotally connected levers provided at their forward ends with fingers to engage a tire chain, the rear end portion of one of said levers being bent to form a yoke, a plate secured to said lever to extend across said yoke bracing the yoke and reinforcing the lever, spaced pins extending transversely through said yoke and plate and rigidly supported at their ends thereby, and an arcuate rack bar pivoted upon the rear end portion of the other of said levers at the same side of said second mentioned lever with said first mentioned lever to lie in a plane with said first mentioned lever and extending through said yoke beneath said plate freely between said pins, each edge of the bar being provided with teeth to engage said pins respective for adjustably locking the rear ends of the levers against spreading movement and the teeth at each edge of the bar being staggered with respect to the teeth at the other edge of the bar to provide close spacing between the adjusted postions at which the levers may be locked.

1,570,860. PLOWPOINT. ALDIN H. POWELL, Harmony, Pa. Filed Aug. 17, 1921. Serial No. 493,047. 1 Claim. (Cl. 97—117.)



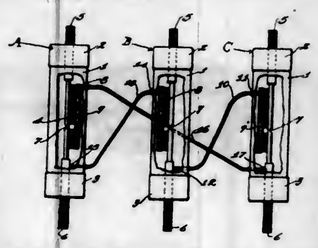
As an article of manufacture, a plow share including a laterally projecting wing and an auxiliary cutter formed integral with an intermediate portion of the said wing so as to be centered between the opposite side edges of the latter and extending vertically above the upper face of the wing, said cutter presenting a sloping front edge extending upwardly and inwardly in a straight line from a point on the upper face of the wing and spaced inwardly from the leading edge of the latter to provide a straight cutting edge, said cutter also presenting a thickened rear edge sloping upwardly and inwardly in a straight line from a point on the upper surface of the said wing and flush with the trailing edge of the latter, the said sloping front and rear edges of the said cutter meeting and terminating at a point appreciably spaced above the said upper face of the said wing and located inwardly of the leading and trailing edges of the wing.

1,570,861. PUMP. FRANCISCO A. QUIROZ, New York, N. Y. Filed Apr. 15, 1924. Serial No. 706,632. 2 Claims. (Cl. 103—148.)



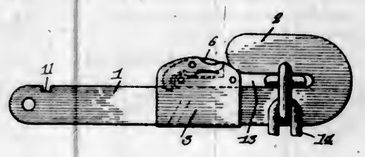
1. A pump having a flexible retractable and extendable member, a plurality of saucer shaped rings engaging the edges thereof, a hub formed in the innermost ring, an operating rod secured to said hub and passing through said flexible member and a valve surrounding said operating rod, all combined for joint operation as herein set forth.

1,570,862. METHOD AND MEANS FOR DETERMINING THE SHAPE OF MOLDS. THOMAS H. SEELY, Malden, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 8, 1918. Serial No. 243,986. 29 Claims. (Cl. 33—27.)



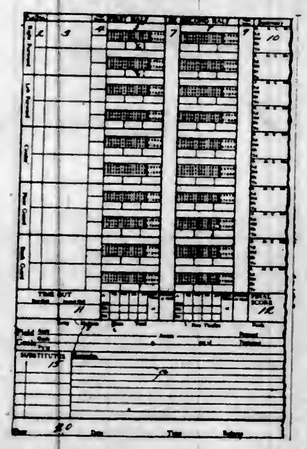
15. In an apparatus for determining the shape of molds, a form support movable to cause elements of a mold to be generated by a form carried on the support, and means variable in position with respect to the form for separately recording said elements.

1,570,863. FOLDING FURNITURE. FINN SIMMONS, Brooklyn, N. Y., assignor of one-half to George Rieger, Brooklyn, N. Y. Filed Mar. 11, 1924. Serial No. 698,542. 4 Claims. (Cl. 155—139.)



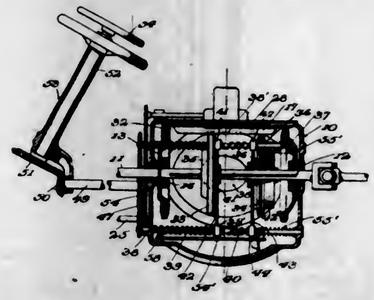
1. A folding chair including a longitudinally foldable seat and a folding supporting means therefor comprising inner and outer pairs of side legs each consisting of a pair of upper and lower pivotally connected sections, the upper and lower sections of each pair of legs having pivotal connection with each other and a connection between the front and rear ends of the seat and the upper ends of the leg sections for limiting the separation of the same when the chair is opened.

1,570,864. ELECTRIC FUSE. GEORGE H. SINN, Spencer, Iowa. Filed Mar. 7, 1923. Serial No. 623,483. 4 Claims. (Cl. 200—113.)



1. An electric fuse comprising a series of casings, a fuse mounted in each casing, means for connecting said fuses to close a circuit to overload the other fuses and cause a blow-out of all fuses in the series in case one of said fues blows out.

1,570,865. SAFETY GRAB-HOOK LOCK. VICTOR SOUCY, Caron Brook, New Brunswick, Canada. Filed June 24, 1925. Serial No. 39,394. 5 Claims. (Cl. 24—241.)



1. A safety grab hook lock comprising in combination with a grab hook consisting of a shank and a short arm spaced therefrom, a block slidably mounted on said shank and adapted to engage the short arm, and a locking member disposed within said block, said member being adapted for co-operation with said shank.

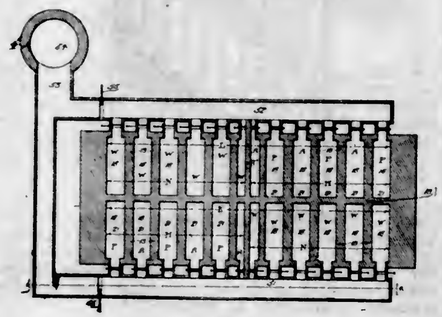
1,570,866. BASKET-BALL SCORE CARD. JOHN E. STEMPEL, Bloomington, Ind. Filed Sept. 1, 1922. Serial No. 585,580. 1 Claim. (Cl. 283—49.)

A basket ball score card comprising right and left hand sections similarly marked, each of said sections being provided with indicia correspondingly positioned for the different positions of players and in horizontal alinement, and indicia of the corresponding players score adjacent the name indicia, whereby scores of the first and second half of a game may be indicated.

1,570,867. SPEED-CHANGING TRANSMISSION. FREDERICK HUSSEY TANNER, Bristol, England. Filed Apr. 17, 1923. Serial No. 632,696. 8 Claims. (Cl. 74—26.)

1. In a transmission apparatus, a driven shaft, friction disks arranged about the driven shaft, means whereby said friction disks may be driven, a plurality of friction wheels separably movable longitudinally of the driven shaft, and means whereby said friction disks in conjunction with the friction wheels may be utilized for imparting different ratios of rotative movement to said driven shaft with individual movement thereon.

1,570,868. EXTRUDING MAGNESIUM. RICHARD L. TEMPLIN, Parnassus, Pa., assignor to American Magnesium Corporation, Niagara Falls, N. Y., a Corporation of New York. Filed Aug. 4, 1920. Serial No. 401,214. 2 Claims. (Cl. 207—10.)

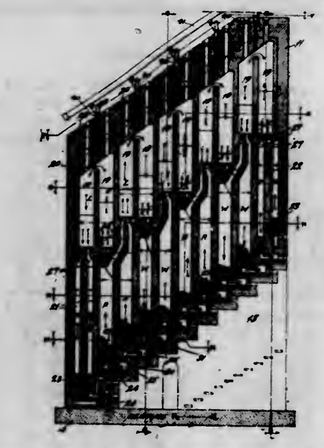


2. The method of plastically working magnesium comprising die-expressing the metal within a temperature range from 650° to 800° F.

1,570,869. APPARATUS FOR FILTERING DUST-LADEN GASES. THOMAS THOMSON and NICHOLAS NISBET, Scunthorpe, England. Filed Sept. 12, 1925. Serial No. 55,994. 4 Claims. (Cl. 183—46.)

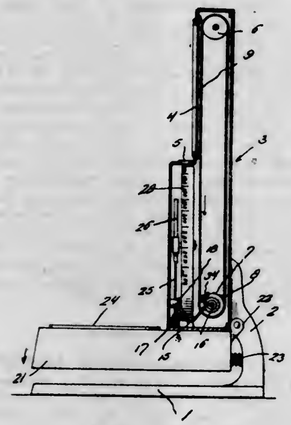
1. In apparatus for filtering gases comprising a diaphragm moving across a filtering chamber, the method of filtering gases in stages of increasing fineness by passing them through successive portions of the same diaphragm in the same direction, each passage of the gases through the diaphragm being through a portion nearer to its point of entry to the filtering chamber than the succeeding one and each stage being kept separate, substantially as specified.

1,570,870. COKING RETORT OVEN. JOSEPH VAN ACKEREN, Pittsburgh, Pa., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 5, 1921. Serial No. 490,087. 9 Claims. (Cl. 202—9.)



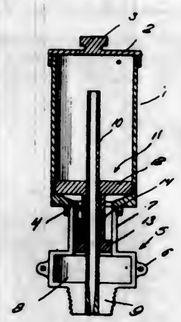
1. In a coke oven battery, in combination: a plurality of coking chambers; heating walls contiguous to such coking chambers and respectively constituted of vertical combustion flues operatively disposed into two groups; reversible regenerators on both sides of the battery located below the coking chambers and the heating walls and parallel therewith, said regenerators being communicably connected with the flues and operatively disposed into inflow and outflow groups, there being inflow and outflow groups of regenerators on each side of the battery disposed at the opposite ends thereof; a producer gas supply; reversing valve connections between said producer gas supply and some of the regenerators of each group on both sides of the battery; reversing air valve connections for the other regenerators of each group on both sides of the battery; waste gas tunnels located respectively on opposite sides of the battery; and valve connections for establishing communication concurrently between the outflow regenerators on both sides of the bottery reseeptively with the waste gas tunnels on the same sides of the battery as the outflow regenerators: substantially as specified.

1,570,871. INCLINED COKING RETORT OVEN. JOSEPH VAN ACKEREN, Pittsburgh, Pa., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Sept. 29, 1921. Serial No. 504,142. 16 Claims. (Cl. 202—9.)



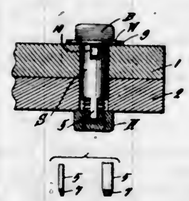
1. In an inclined retort battery, in combination: a plurality of inclined retort chambers; heating walls contiguous to said retort chambers and respectively constituted of vertical combustion flues, the flues of each heating wall being grouped into pairs with one member of each pair communicably connected with the other member of the same pair; regenerators disposed in tiers at a lower level than said combustion flues and grouped into crosswise series corresponding to the respective heating walls, each combustion flue being communicably connected with a pair of such regenerators, and each pair of the thus connected regenerators, when operating for inflow, being constituted of an air regenerator and a regenerator for feeding fuel gas; flow channels extending longitudinally of the battery and individually correspond-

ing with the respective tiers of regenerators, each flow channel being communicably connected by separate duct means with the individual regenerators of its respective



tier; and regulable damper means individual to the duct means connecting individual regenerators with such flow channels; substantially as specified.

1,570,872. ADVERTISING SCALE. PHILIP VIVIANO, St. Louis, Mo. Filed May 9, 1925. Serial No. 29,115. 1 Claim. (Cl. 40—28.)



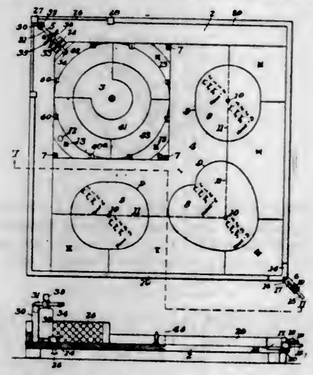
In a structure of the class described, a vertically elongated housing provided in its front with a window, drums mounted for rotation in said housing, an endless advertising band trained over said drums, a pawl carried by one of said drums, a ratchet mounted for idling, the teeth of said ratchet being engageable with said pawl for imparting rotation to said one drum, a flexible element anchored at one end upon said ratchet for imparting rotation thereto, the opposite end of said element being anchored upon a relatively stationary part, a lever pivotally mounted between its ends upon said housing, a pulley carried by the free end of the lever and cooperable with said flexible element, a tiltable platform, and a connection between the platform and the opposite end of said lever.

1,570,873. EMERGENCY GREASE CUP. PERRY O. BROWN, St. Vincent, Minn., assignor of one-half to Gustaf V. Backstrom, St. Vincent, Minn. Filed May 14, 1925. Serial No. 30,318. 4 Claims. (Cl. 184—68.)

1. In a lubricating device of the class described, a cup, a lubricant conducting tube extending into the cup and adapted to conduct the lubricant therefrom to the part to be lubricated, a plunger slidable in said cup for forcing the lubricant into said tube, and a mercury receptacle carried by the bottom of the cup slidably receiving a portion of said plunger, whereby to permit the expansion of the mercury to act upon said portion and to cause the plunger to eject the lubricant.

1,570,874. COMBINED NUT AND BOLT LOCK. THOMAS R. BRUMFIELD, Danville, Va., assignor of one-half to Posie L. Hines, Danville, Va. Filed Oct. 16, 1924. Serial No. 744,085. 5 Claims. (Cl. 151—2.)

1. A combination with a bolt and nut, a bushing received on the bolt, means between one end of the bushing and nut for holding the latter against rotation, a bendable washer associated with the bolt adjacent the head thereof and adapted to be bent against the latter to hold the bolt against rotation, and elements carried by the washer having interlocking engagement with the bushing to lock the latter and the washer together.



1,570,875. GAME APPARATUS. WILLIAM R. CARTEE, Lakewood, Ohio. Filed Aug. 26, 1924. Serial No. 734,233. 14 Claims. (Cl. 273—89.)

9. A game apparatus, comprising a playing field, a ball, a ball throwing device adapted to be operated by one player, a batting means adapted to be operated by another player and directable at his will, and safety stations on the playing field for the batter requiring a desired number of moves to go from one safety station to another, the field being divided into areas into which the ball may be batted and requiring varying numbers of moves to advance the ball from such area to the safety station, substantially as described.

11. A baseball game, comprising a playing field having a home plate, a batting device adjacent thereto and

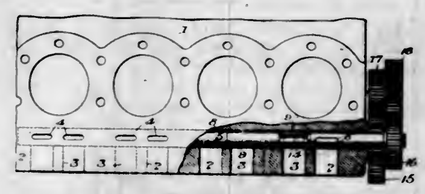
movable in various paths at the will of a player, and means for indicating a strike when the batting device is moved over the home plate, substantially as described.

13. A baseball game, comprising a playing field having

a home plate, an eccentrically loaded ball, a ball throwing device adapted to be operated by one player, and means for indicating a strike when the ball is pitched over the home plate, substantially as described.

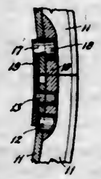
1,570,876. GLASS AND ARTICLE MADE THEREFROM. ARTHUR H. COMPTON, St. Louis, Mo., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Oct. 16, 1920. Serial No. 417,378. 7 Claims. (Cl. 106—36.1.)

1. A glass resistant to the chemical action of vapors of metals of the sodium group, comprising boron oxide, and basic oxides including at least one alkali metal oxide, at least one of the following oxides, namely, calcium, barium, strontium or magnesium oxide, and aluminum oxide.



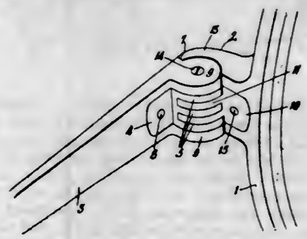
1,570,877. TELEGRAPHY. LAWRENCE CONNELL, JR., Portland, Oreg. Filed Dec. 2, 1921. Serial No. 519,433. 19 Claims. (Cl. 178—33.)

1. A telegraph alphabet consisting of signals, each signal consisting of a plurality of elements, each element being used but once in a signal each of said elements being varied in length relatively to each other and the relative lengths of the elements composing the signals being the point of distinction between signals composed of the same elements in the same sequence.



1,570,878. VALVE STRUCTURE. BURT W. DANFORD, Lansing, and ERROL E. EMSHWILLER, East Lansing, Mich. Filed Nov. 28, 1923. Serial No. 677,476. 8 Claims. (Cl. 123—190.)

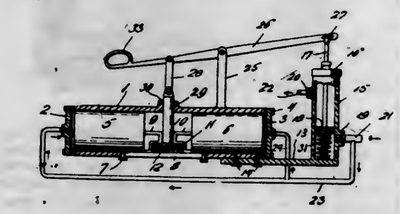
1. A valve-structure comprising an inner-member including sections connected together and provided with intake and exhaust openings arranged adjacent and longitudinally of the valve and adapted to be brought into register with intake and exhaust openings of an engine cylinder; an outer valve-member including sections connected together and also provided with intake and exhaust openings arranged adjacent and longi-



tudinally of the valve and adapted to be brought into register with corresponding openings in the inner-member; and means, including a train of gears connected with a driven part of the engine, for positively rotating the members in the same direction to bring the openings therein into register.

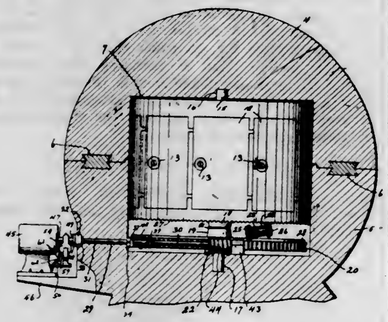
1,570,879. SECTIONAL PNEUMATIC-TIRE RIM. FREDERICK J. DOUR, Brooklyn, N. Y., assignor to Prindor Sectional Rim Co., New York, N. Y. Filed July 19, 1924. Serial No. 726,933. 1 Claim. (Cl. 301—31.)

A sectional pneumatic tire rim comprising an aligning plate rigidly connected with one of said sections which overhangs an end thereof; a stud rigidly mounted in said aligning plate for extension through a recess in the adjacent section; and a swinging lock pivotally mounted on the first mentioned section to swing into engagement in the path of said stud and across the junction between the sections to prevent the contraction of the rim formed by said sections.



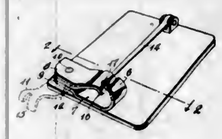
1,570,880. OPHTHALMIC MOUNTING. LOUIS DUNKELSBERG, New York, N. Y. Filed Feb. 20, 1925. Serial No. 10,457. 6 Claims. (Cl. 88—53.)

1. An ophthalmic mounting including a non-metallic front for the mounting having an integral end-piece portion and a hinge member comprising a flat plate and barrel, said end-piece portion having said plate inlaid



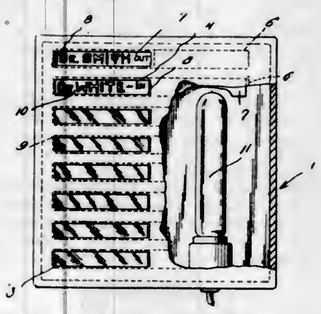
therein and a recess receiving at least a part of said barrel whereby the end of said portion extends circumferentially about said barrel to conceal at least a part of the barrel from view laterally and exteriorly of the mounting and a single rivet securing said member to said portion.

1,570,881. GAS REGULATOR. HUBERT A. ELKINS, Midkiff, W. Va. Filed Mar. 14, 1925. Serial No. 15,547. 1 Claim. (Cl. 67—115.)



In a gas regulator, a valve structure in the gas line, a cylinder, a pair of pistons in the cylinder, frames on the inner ends of the pistons, a slide bar extending through the cylinder between the pistons, spring means between the frames tending to normally hold the pistons on the ends of the cylinders, pipes connecting the gas line with the ends of the cylinder so that the pressure will tend to maintain the pistons toward each other with the frames in abutment so that the slide bar may rest thereon, a lever for operating the valve, and a link connecting the slide bar to the lever so that the valve will be opened when the slide bar rests on the frames and so that the valve will be closed when the slide bar is disposed between the frame.

1,570,882. BURGLARPROOF SAFE. LUTHER ADDISON ELLISON, Topeka, Kans. Filed June 17, 1924. Serial No. 720,587. 12 Claims. (Cl. 109—1.)

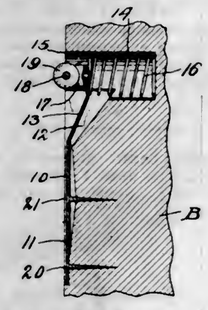


1. A safe comprising a body having a chamber provided therein, a drum rotatably mounted in said chamber having compartments successively moving into registry with the entrance to the chamber as the drum is rotated in the chamber, means for imparting rotary movement to said drum including a main drive shaft, an electrically operated motor for imparting rotary movement to said shaft, and a control switch for said motor, and means for moving said switch to an off position after said shaft has been rotated a predetermined number of times and the drum rotated a sufficient amount to move a compartment thereof out of registry with the entrance to the chamber and another compartment into registry with the entrance.

1,570,883. SAFETY CATCH FOR BADGES. MORRIS FOLKMAN, Cleveland, Ohio, assignor to The Morris Folkman-Shiffer Company, Cleveland, Ohio. Filed June 18, 1925. Serial No. 38,017. 7 Claims. (Cl. 24—157.)

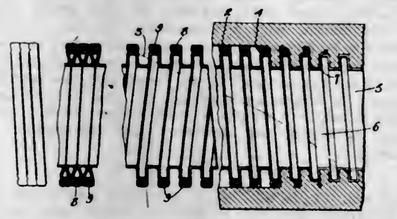
1. A safety catch for a badge having a pivoted attaching pin including, a base plate, a pair of inwardly curved resilient jaws carried by the plate, and a pivoted keeper movable to a position beneath and between said jaws.

1,570,884. ILLUMINATED REGISTER. EMERY J. FORD, Everett, Wash. Filed Jan. 19, 1925. Serial No. 3,465. 2 Claims. (Cl. 40—62.)



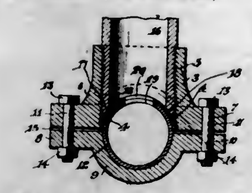
2. A register of the class described comprising a casing, said casing being open at its front, a closure for said open front, said closure embodying an outer plate provided with sight openings, an inner transparent plate, and an intermediate grooved plate, the portions of said transparent plate opposite said sight openings being provided with names adapted to be displayed through said sight openings, translucent slides mounted in the grooves in the intermediate plate and cooperable with said sight openings, a mirror arranged in said casing in back of said sight openings, said mirror being adapted to reflect light rays through all of said openings and being disposed at an angle with respect to said openings, and a single source of illumination in said casing adapted to project light rays onto said reflector.

1,570,885. SASH HOLDER. WILLIAM D. FOSS, Bell, Calif. Filed Oct. 9, 1924. Serial No. 742,693. 3 Claims. (Cl. 292—77.)



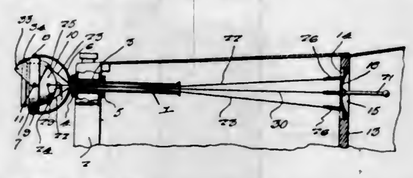
1. The combination with a window casing and a sash mounted therein, the side face of the sash being longitudinally recessed and the sash at one end of said recess being formed with a socket, of a resilient strip disposed in the recess and extending longitudinally therealong, one end of the strip being inwardly off-set with respect to the sash and carrying a roller adapted to engage the window casing, a spring disposed in said socket and engaging the inwardly off-set end of the strip and urging this end of the strip and the roller outward, the end of the strip opposite said off-set portion resting flat against the bottom of said recess and being attached to the sash frame, the recess between said point of attachment

of the strip and the off-set portion thereof having its bottom re-entrantly inclined, and a screw passing through the strip opposite the deepest portion of this last named



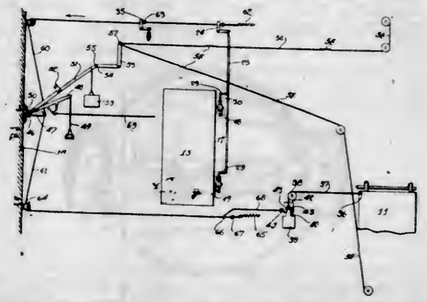
part of the recess and engaging the window sash whereby the strip may be shifted inward against the action of said spring or may be permitted to shift outward under the action of the spring.

1,570,886. FLEXIBLE TUBE. WILLIAM H. FULTON, Irvington, and HERMAN SHELLMER, Newark, N. J., assignors, by mesne assignments, to Titeflex Metal Hose Co., a Corporation of New Jersey. Filed Sept. 5, 1919. Serial No. 321,747. 3 Claims. (Cl. 137—75.)



1. A flexible tube comprising a helical strip having edges of adjacent convolutions interfolded, said strip having a longitudinal fold or groove, and the parts interfolded together having positive engagement with each other holding them permanently from relative movement longitudinally of the tube and a packing interposed between portions of said interfolded parts which portions are displaced from each other radially of the tube.

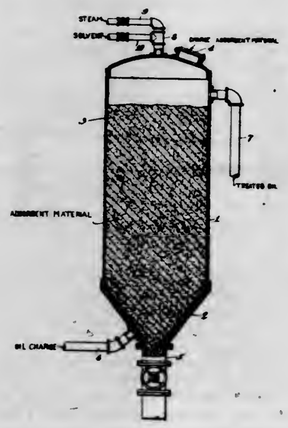
1,570,887. PIPE CONNECTION. WILLIAM B. GRAVES, Kingman, Ariz. Filed Dec. 29, 1924. Serial No. 758,718. 3 Claims. (Cl. 285—195.)



1. A take-off pipe connection comprising a pair of oppositely disposed saddles each having the medial part thereof shaped to surround a pipe line, means for detachably connecting the saddles to the pipe line, one of said saddles having its medial part provided with an opening of the same diameter throughout and through which extends a part of the pipe line, the said saddle further formed with an outwardly projecting sleeve registering with and having its inner diameter the same as the diameter of said opening, a take-off pipe extending into and connected to said sleeve and having its inner end edge bevelled inwardly in a curvelinear manner whereby the said edge at said end will be of greater width than the thickness of its body, and a flexible packing disk arranged within said opening and sleeve, permanently spaced from the walls thereof, mounted on the periphery of the pipe line and positioned against the bevelled inner end edge of said take-off pipe, said disk formed with an opening for establishing communication between the pipe line and take-off pipe and further having its outer edge spaced from the inner end of said opening in said saddle.

1,570,888. DIRIGIBLE HEADLIGHT. ARTHUR W. GRAY, Pueblo, Colo. Filed Feb. 4, 1925. Serial No. 6,745. 1 Claim. (Cl. 240—61.)

A dirigible headlight comprising in combination with the radiator and dash board of a motor vehicle, a tube extending transversely through the radiator, a yoke on the outer end of said tube, a ring pivotally supported in said yoke and adapted to rotate on a vertical axis, a headlight pivotally supported in said ring at right angles to the aforementioned pivot adapted to rotate on a horizontal axis, cables secured at predetermined points to the headlights and extending through said tube, means on said dash board connected to the opposite ends of said cables for moving said headlights on said vertical and horizontal pivots independently, said means comprising a disc, and a ring, said disc and said ring being disposed within an opening provided therefor in said dash board, said ring being adapted to rotate on a vertical axis in said openings, the disc being adapted to rotate on a horizontal axis in said ring, a handle associated with said disc, and resilient means associated with the rear ends of the cables and said disc for returning the headlight to its normal position.

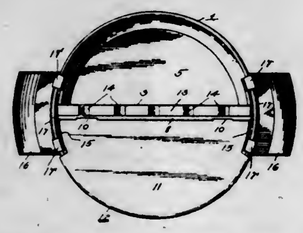


1,570,889. RELEASING DEVICE FOR LIVESTOCK. HERMAN T. GREATHOUSE, Lexington, Ky. Filed Apr. 30, 1925. Serial No. 27,009. 9 Claims. (Cl. 119—115.)

1. In a releasing device for live stock, an inclosure including a plurality of restraining devices for preventing exit of the animals, separate means for retaining each restraining device in its restraining position, a connection between all of said means for simultaneously re-

leasing the same, a weight operated lever associated with said connecting means for operatively moving the same, fusible link restraining means for the weight operated lever and a hand operated lever for operating said connecting means independently of movement of the weight operated lever.

1,570,890. TREATING HYDROCARBON OILS. FRANK W. HALL, Port Arthur, Tex., assignor to The Texas Company, New York, N. Y., a Corporation of Texas. Filed Sept. 20, 1921. Serial No. 501,986. 5 Claims. (Cl. 196—147.)



1. The process of treating hydrocarbon lubricating oils that comprises passing the oil, substantially free from water, upwardly through a mass of adsorbent clay.

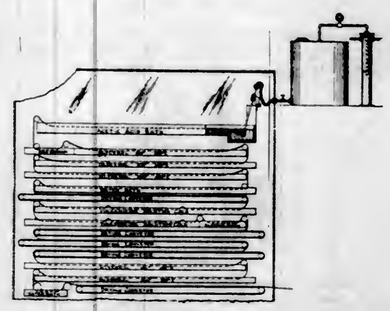
1,570,891. UTILIZING CORNCOBS. HERMAN HEUSER, Chicago, Ill. Filed Mar. 22, 1923. Serial No. 626,903. 12 Claims. (Cl. 99—11.)

8. A food stuff consisting of a mixture of corncobs and germinated cereal containing products of proteolytic and amyolytic enzyme conversion of the former.

1,570,892. WASHTUB ATTACHMENT. WALTER A. HILL, Columbus, Ohio, assignor to Robert R. Watson, Columbus, Ohio. Filed May 14, 1924. Serial No. 713,356. 3 Claims. (Cl. 15—264.)

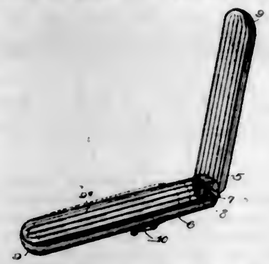
1. In combination with a tub, a perforated partition member, a flange on said member, a partial closure hinged to said flange, arcuate plates secured to said member, and buckets secured to said plates as and for the purpose described.

1,570,893. METHOD OF MAKING ALUMINUM-SILICON-ALLOY CASTINGS. DOUGLAS B. HOBBS, Cleveland, Ohio, assignor to Aluminum Company of America, a Corporation of Pennsylvania. Filed Apr. 29, 1925. Serial No. 26,809. 6 Claims. (Cl. 148—11.)



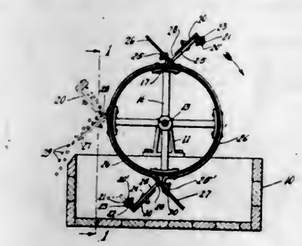
1. The method of making aluminum-silicon alloy castings, comprising filling a non-chilling mold with molten aluminum-silicon alloy, promptly removing the casting from the mold after initial solidification, and rapidly chilling the casting.

1,570,894. FUSIBLE LINK. MORTON K. HOPKINS, Chicago, Ill., assignor to John L. Kennedy, Chicago, Ill. Filed July 21, 1919. Serial No. 312,225. 2 Claims. (Cl. 169—42.)



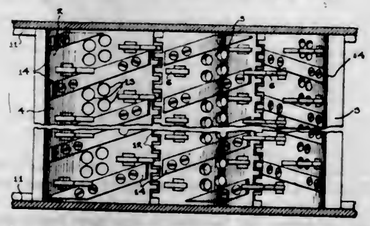
1. A fusible link comprising opposed members, the said members each having a recessed part, which when brought into registration provides a keyway, one of said depressions being of larger area than the other, the smaller depression being provided on an end wall with an inclined part connecting with the face of the plate, in combination with a cooperating key on one side formed to loosely seat in the smaller depression and having an inclined edge part, the space between said inclined part of the key and wall of the recess being unobstructed whereby in separating movement the said inclined parts contact, said key having a part thereof lying on the inner surface of the member having the smaller depression.

1,570,895. PROCESS FOR MAKING ARTICLES OF VARIOUS SHAPES DIRECTLY FROM SOLUTIONS OR SUSPENSIONS OF RUBBER, AND TO THE ARTICLES SO OBTAINED. ERNEST HOPKINSON, New York, and WILLIS A. GIBBONS, Little Neck, N. Y., assignors to Revere Rubber Company, Chelsea, Mass., a Corporation of Rhode Island. Original application filed Apr. 17, 1923, Serial No. 632,609. Divided and this application filed June 10, 1925. Serial No. 36,082. 8 Claims. (Cl. 18—54.)



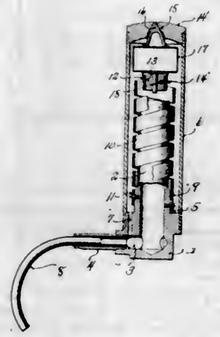
1. A process for making tubing which comprises passing a stream of rubber latex through an opening adapted to form a tube, forming a tube from the rubber latex, and supporting the walls of the tube by a liquid core.

1,570,896. CIGAR BOX. WALTER JAEGER and HERMAN POTSTOCK, Chicago, Ill.; said Jaeger assignor to Christ Bullinger, Chicago, Ill. Filed Dec. 24, 1920. Serial No. 432,948. 1 Claim. (Cl. 206—41.)



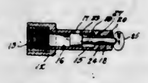
A cigar box shaped to substantially conform to a single cigar and comprising a pair of sections pivoted together at one end, each section being provided with a corrugated sheet metal liner secured therein and extending over substantially its entire inner area, said sections having their contiguous side edges and other end overlapped so as to form a substantial tight joint therebetween when a lighted cigar is held in the box between the two corrugated liners.

1,570,897. SCREENING DEVICE. CURT G. KNOBLAUCH, Park Ridge, Ill., assignor to Leslie P. Green, Chicago, Ill. Filed Nov. 26, 1923. Serial No. 677,132. 8 Claims. (Cl. 209—270.)



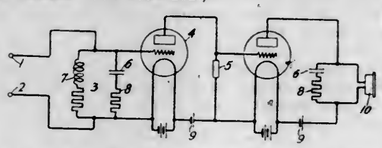
1. A screening device comprising a rotary cylindrical screen having means mounted longitudinally on the outside of said screen to elevate material, means adjustably mounted on the outer edge of said elevating means to vary the capacity thereof, and deflecting means mounted rearward of said elevating means to discharge the elevated material.

1,570,898. CONCAVE FOR THRASHING MACHINES. ULRICH F. LANDIS, Kiowa, Kans. Filed Oct. 21, 1924. Serial No. 744,913. 1 Claim. (Cl. 130—27.)



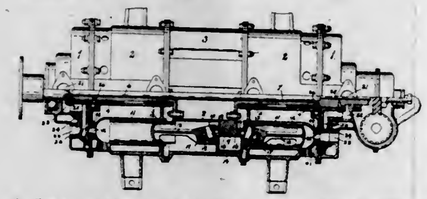
In a concave for thrashing machines, the combination with a cylinder, of a concave for operating with the cylinder and being composed of upper rear, lower forward and intermediate sections provided with rows of teeth, and a plurality of plates interposed between the teeth, the plates of the upper rear section being flat and disposed on angles to the faces of the teeth and the direction of travel of the grain, thereby imparting an angular twist to the grain, and the plates on the lower forward and intermediate sections also being flat and disposed on angles to the faces of the teeth and the direction of grain travel, but opposite to the first angle, thereby imparting an angular twist to the grain in the opposite direction to more thoroughly thrash the grain in its passage between the concave and the cylinder.

1,570,899. THERMOSTATIC VALVE. ANTON LIJESKI, Milwaukee, Wis., assignor of one-half to Frank B. Kantorski, Milwaukee, Wis. Filed June 15, 1925. Serial No. 37,359. 1 Claim. (Cl. 236—62.)



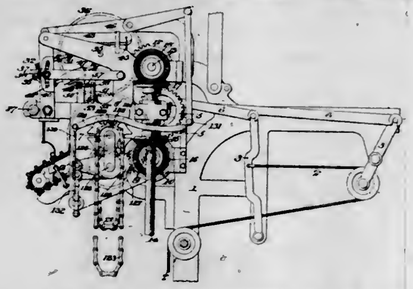
A thermostatic valve comprising a base portion having an upwardly extending apertured central pipe, said base portion having an aperture extending thereinto and adapted to communicate with a radiator, said base portion having a duct extending upwardly and communicating with said aperture, a casing extending upwardly from said base portion, a top carried by said casing and provided with a valve seat, a helical member composed of two dissimilar metals secured to said base portion, and surrounding said upwardly extending pipe, a hub carried by the upper end of said helical member, a float loosely connected with said hub, and a valve carried by said float and adapted to cooperate with said valve seat.

1,570,900. COLLAPSIBLE TUBE. ROBERT H. LIEBERTHAL, Bridgeport, Conn., assignor to The All-In-One Manufacturing Company, Incorporated, Bridgeport, Conn., a Corporation of Connecticut. Filed Oct. 10, 1922. Serial No. 593,612. 7 Claims. (Cl. 221—60.)



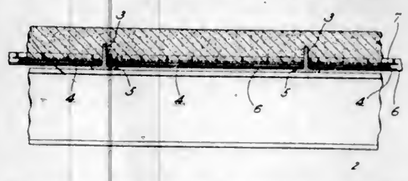
1. A discharge nozzle for a collapsible tube provided with a discharge opening, a closure for said opening, and means for securing the closure over said opening said means being movable to nonsecuring position by a rotary movement of said closure, and said closure being so arranged that it is movable from closing position by pressure from the contents of the tube when said securing means is released.

1,570,901. AMPLIFYING SYSTEM. SIEGMUND LOEWE, Berlin, Germany, assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 19, 1921. Serial No. 453,844. 14 Claims. (Cl. 179—171.)



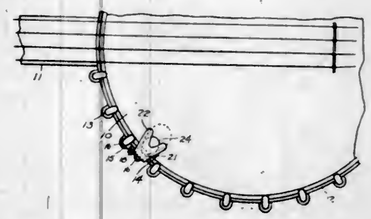
1. A repeater of the space current type, having an electrostatic control element and an input circuit, and a network including shunt elements only and containing reactance and resistance in series, connected to said input circuit and having a substantially constant impedance for oscillations of all frequencies impressed upon said input circuit.

1,570,902. ENGINE. WILLIAM E. LOONEY, Detroit, Mich. Filed Feb. 15, 1922. Serial No. 536,631. 3 Claims. (Cl. 123—190.)



1. In an engine comprising a cylinder and a head for one end thereof, a combined intake and exhaust valve mounted to slide between the end of the cylinder and the cylinder head, a packing-member comprising a plate adapted to bear against the valve, and a thimble extending into the adjacent end of the cylinder, said packing member having holes through said plate adjacent the outer surface of the thimble to permit the passage of gases.

1,570,903. PATTERN MECHANISM FOR LOOMS. WILLIAM J. LUTTON, Paterson, N. J., assignor of one-half to Maurice Franck, Paterson, N. J. Filed Apr. 14, 1924. Serial No. 706,457. 16 Claims. (Cl. 139—326.)

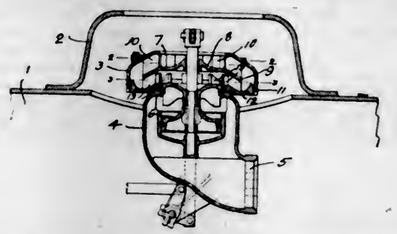


1. In a pattern mechanism for looms, the combination with a shuttle box pattern chain, a multiplier pattern chain, mechanism coacting with said chains to control the movement of the chains, and vibrating levers, of a supplemental shuttle box pattern chain, means connected to the vibrating levers and actuated by the supplemental shuttle box pattern chain for controlling the movement of the vibrating levers, and mechanism for moving said last named chain laterally to present different surfaces of the chain to said means for actuating the vibrating levers.

1,570,904. ROOF OR FLOOR CONSTRUCTION. HERBERT E. MARKS, Sewickley, Pa. Filed Apr. 16, 1923. Serial No. 632,243. 2 Claims. (Cl. 108—6.5.)

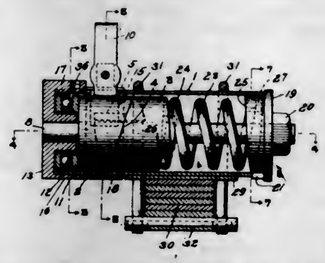
1. A roof of the character described, comprising purlins, metal angle members supported on the purlins and presenting oppositely projecting flanges, small angle members having substantially straight longitudinal axes extending between the first named angle members and resting on the flanges of the latter and also presenting oppositely projecting flanges and an upstanding flange provided with spaced notches, the bottoms of which lie in a plane closely adjacent to that of the base portions of the said small angle members, thin composition boards bridging the space between said angle members, metallic mesh having its longitudinal members entering the notches in the second named angle members and supported by the latter in closely spaced relation to the composition boards, and cementitious material embedded in all of said metallic members and bonded to said composition boards.

1,570,905. PICK HOLDER FOR FRETTED MUSICAL INSTRUMENTS. JOHN MARTELL, New York, N. Y. Filed Jan. 18, 1924. Serial No. 686,947. 5 Claims. (Cl. 84—329.)



1. A pick holder attachment for fretted musical instruments, comprising a rigid supporting bracket, and separate yieldable means carried by the bracket and normally contacting therewith for yieldably holding a pick against the bracket and over the head of the instrument.

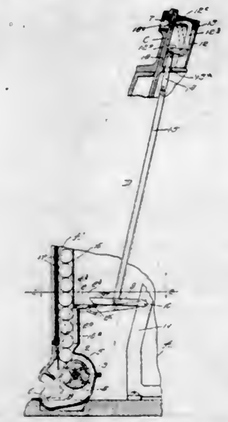
1,570,906. DEVICE FOR ADVERTISING AND PROMOTING THE SALE OF AN ARTICLE OR MATERIAL. RHEY MCCORD, St. Louis, Mo. Filed Mar. 2, 1925. Serial No. 12,669. 1 Claim. (Cl. 35—12.)



An advertising device, consisting of a book, each two opposed pages of which bear a picture of an object, suggesting the advertised article, and printed matter relating to the same, the picture on one page being complete and that on the other being in outline, in combination with a plurality of picture sections, adapted to complete said outline picture to reproduce said complete picture, as and for the purpose set forth.

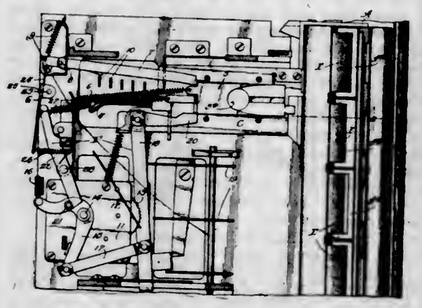
1,570,907. STEAM SEPARATOR. NEAL TRIMBLE MCKEE, Mount Vernon, N. Y., assignor to The Superheater Company, New York, N. Y. Filed June 20, 1923. Serial No. 646,531. 5 Claims. (Cl. 183—80.)

1. In a device of the class described the combination of a casing having an opening at one end for the admission of steam in a direction parallel to the axis of the casing; means to deflect the steam outward from the axis and at the same time give it a rotary motion; a chamber wherein the steam moves in a rotary path and where any water is thereby separated out; means to permit the water so separated to leave the casing; a delivery conduit extending from the opposite end of the casing; and means between said chamber and said delivery conduit to remove the rotary component from the motion of the steam while passing toward the delivery conduit.



1,570,908. SHOCK ABSORBER. GOTTLIEB MERZ, McKeesport, Pa. Filed July 7, 1925. Serial No. 42,002. 5 Claims. (Cl. 267—9.)

1. A shock absorber comprising a casing, a cam member rotatably but axially immovably mounted in said casing, a second cam member mounted for axial movement in the casing, said cam members being provided with complementary contacting cam faces, whereby rotation of the first members moves the second axially, a fixed abutment in the outer end of the casing, a compression spring between said abutment and the axially movable cam member and arranged to prevent rotation of the latter, and means to rotate the first-named cam member to thereby axially move the second and compress said spring.

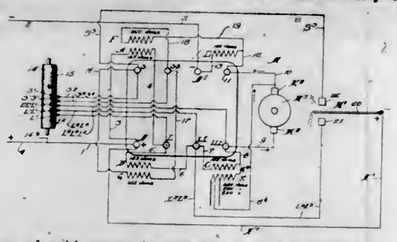


1,570,909. SLOT-GUARD DEVICE. FRED L. MILLS, Oak Park, Ill., assignor to Mills Novelty Company, Chicago, Ill., a Corporation of Illinois. Filed May 3, 1924. Serial No. 710,782. 1 Claim. (Cl. 194—1.)

In a machine of the character set forth, the combination of a vertically disposed elongated article chamber for holding a column of articles, the rear wall of said chamber being equipped near its lower end with a housing, a bell-crank lever pivotally mounted in the upper portion of said housing and having a depending arm normally sheathed within said housing which is adapted to be projected into said chamber, said bell-crank lever having at its upper portion a rearwardly projecting arm, a lever having its free end supported on said rearwardly projecting arm, a coin-slot, a slot-obstructing bell-crank lever pivotally supported back of said coin-slot and having

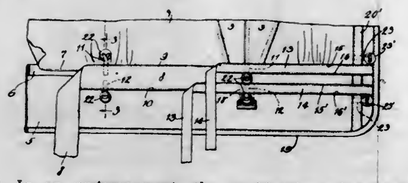
an arm adapted to be projected into the coin-slot and having a forwardly extending actuating arm, and links connecting said second-mentioned lever with said actuating arm and normally supporting said slot obstructing bell-crank lever in the non-obstructing position.

1,570,910. LATCH-CONTROLLING DEVICE FOR COIN-CONTROLLED MACHINES. FRED L. MILLS, Oak Park, Ill., assignor to Mills Novelty Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 29, 1925. Serial No. 5,509. 4 Claims. (Cl. 211—8.)



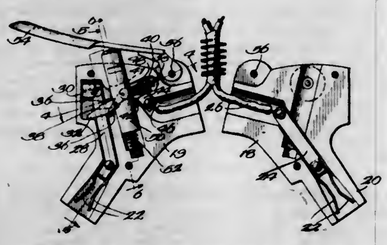
1. In a coin-controlled machine of the character set forth, the combination with a coupon magazine, a stack of pay-out slides associated therewith, springs tending to move said slides to the discharging position, and latch levers engaging said slides, of a locking-device normally preventing accidental releasing movement of said latch levers, and means actuated by the coin-controlled mechanism of the machine serving to retract said locking-device.

1,570,911. MOTOR-CONTROLLING MEANS. BERTIE E. MILLS, Oak Park, Ill., assignor to Mills Novelty Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 9, 1925. Serial No. 7,908. 5 Claims. (Cl. 171—230.)



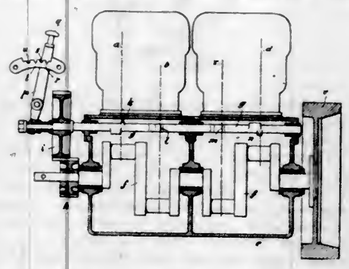
1. In motor mechanism for violin players and the like, the combination of a motor provided with field coils normally in the main circuit of the motor, expres-

sion-circuits adapted to be closed to cut out one or more of said coils, a governor-controlled circuit adapted to cut out one or more of said coils and thus modify the



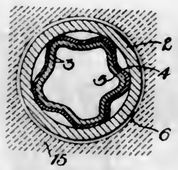
action of said expression-circuits, and a centrifugal governor actuated by the motor and controlling said last-named circuit.

1,570,912. UNDERWAIST. BENJAMIN MOSKOWITZ, New York, N. Y. Filed July 17, 1923. Serial No. 652,034. 2 Claims. (Cl. 2—112.)



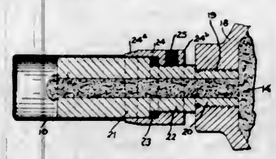
1. In an undergarment, the combination of a single ply of material forming a body portion and a belt portion of double ply extending from said body portion and joined thereto, a waist band superimposed on said body portion at the junction between said body portion and said belt portion, a series of spaced tabs located between said body portion and said waist band adjacent the upper edge of the latter, a line of stitching passing through said waist band and through said tabs, another series of spaced tabs held between the body portion and said waist band, said tabs and the body portion adjacent the lower edge thereof, reinforcing strip superimposed on said waist band adjacent the upper edge thereof and secured thereto by stitchea passing through said strip, waist band, upper tabs and the body, another reinforcing strip superimposed on said waist band adjacent the lower edge thereof and secured by a line of stitches passing through said waist band and said lower tabs and the body, said first series of tabs being folded back under the first mentioned reinforcing strip and fastened down therewith.

1,570,913. SNAP SWITCH. CHARLES L. MOYER, Chicago, Ill. Filed Oct. 23, 1924. Serial No. 745,377. 4 Claims. (Cl. 200—157.)



3. In a snap switch a switch blade, a lever for operating it, a rod connected to the lever at a point remote from the lever pivot, said rod being movably supported at a point remote from its point of connection to the lever whereby the lever and rod form two elements of a toggle-like couple, a spring associated with said couple for urging the same past center in either direction as soon as center position is passed, and a plunger slidable transversely to said couple and adapted to engage said couple at the connected portion thereof for moving it past center.

1,570,914. STARTING MECHANISM FOR INTERNAL-COMBUSTION ENGINES. FRIEDRICH MÜLLER, Vienna, Austria. Filed Mar. 25, 1921. Serial No. 455,575. 5 Claims. (Cl. 123—182.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

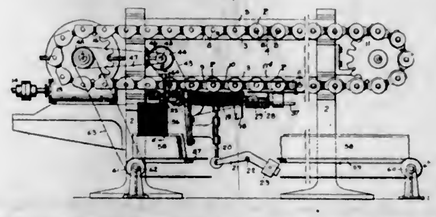


1. In an internal combustion engine having relief valves and a camshaft therefor, a plurality of cams on said shaft for each valve and means adapted to shift said camshaft step by step to produce successive engagement between said cams and said valves.

1,570,915. DEVICE FOR CONSTRUCTING CULVERTS OF CONCRETE. TOICHI NOSE, Kamakura Gun, Kanagawa Ken, Japan. Filed Mar. 2, 1925. Serial No. 12,629. 2 Claims. (Cl. 25—128.)

1. A core for molding culverts of concrete consisting in the outer tube made of elastic substance smaller in diameter than the diameter of the bore to be formed, and thrusted therein an inner tube of flexible but substantially unextensible material larger in diameter than that of the outer tube.

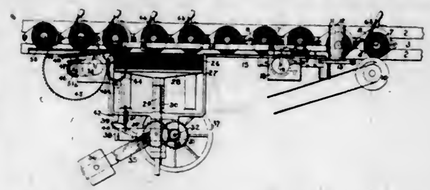
1,570,916. APPARATUS FOR INTRODUCING PASTE INTO DRY-CELL CUPS. HAROLD DE OLANETA, New Haven, Conn., assignor to Winchester Repeating Arms Company, New Haven, Conn., a Corporation of Connecticut. Filed June 9, 1920. Serial No. 387,674. 2 Claims. (Cl. 226—125.)



1. An apparatus for dispensing paste into dry cell cups comprising a container having a nozzle through which the paste is discharged, said nozzle being of sufficient length to extend to the bottom portion of the cup and having a relatively small bore and an end surface of substantial area, the exterior diameter of which surface is substantially that of the interior diameter of the cup, whereby the paste discharged into the cup will be confined between the end face of the nozzle and the cup bottom, and means for limiting the insertion of the nozzle within the cup whereby a predetermined quantity of paste may be introduced therein.

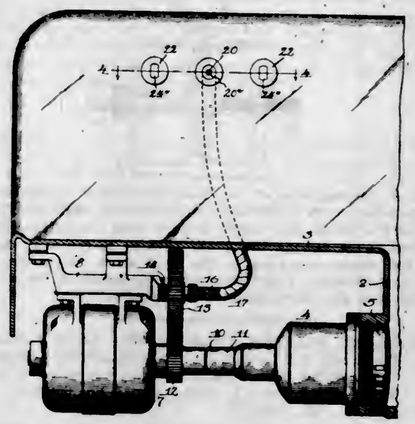
1,570,917. GARMENT. JACOB L. ORENT, New York, N. Y. Filed Jan. 7, 1925. Serial No. 989. 3 Claims. (Cl. 2—70.)

1. A convertible garment of the character described comprising a jacket having a lining, a skirt, reinforcing means incorporated within the garment structure, a placket formed by the edge portions of the exterior material of the jacket, and the lining for receiving the upper edge of the skirt, said means extending into said placket, and fasteners on the portions of said means in said placket for detachably securing the skirt to the jacket, said fasteners constructed to interlock for holding the placket closed when the skirt is detached from the jacket.



1,570,918. CONVEYER AND PACKAGE-LABELING MACHINE. PHILIP D. PARSONS, Philadelphia, Pa., assignor to Scott Paper Company, a Corporation of Pennsylvania. Filed Sept. 18, 1924. Serial No. 738,364. 17 Claims. (Cl. 216—57.)

1. A machine of the character stated, comprising an endless conveyer having lateral pins at intervals along its length adapted for carrying in suspension rolls of paper to be labeled with encircling bands, combined with means for applying said bands consisting of devices for causing the paper rolls to rotate upon the pins of the conveyer, magazine means for feeding the bands or labels into position for the rolls to roll over them, and means for supplying adhesive material whereby the rolls when rolling over the bands or labels are caused to pick up and wrap the same about themselves in succession.

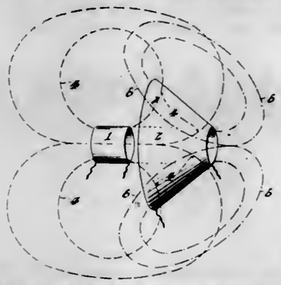


1,570,919. LABEL-APPLYING MACHINE. PHILIP D. PARSONS, Swarthmore, Pa., assignor to Scott Paper Company, a Corporation of Pennsylvania. Filed Sept. 24, 1925. Serial No. 58,279. 8 Claims. (Cl. 216—57.)

1. A machine of the character stated, comprising a traveling conveyor having lateral pins at intervals along its length adapted for carrying in suspension rolls of paper to be wrapped with encircling bands, combined with means for applying said bands consisting of devices for causing the rolls to rotate about the pins while being conveyed by the conveyor, a container or magazine for the bands, a hold-down bar, means for normally moving the bands upward against the hold-down bar, means for applying paste to the edges of the uppermost label adjacent to the hold-down bar, and

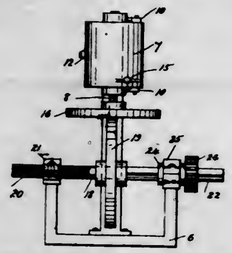
means for automatically removing the pressure from the bands, said means operative intermittently and synchronously with the passage of each pin for the rolls whereby the bands are released from the container and hold-down bar after having been applied to the rolls.

1,570,920. POWER ATTACHMENT FOR KITCHEN UTENSILS AND THE LIKE. ERICH J. PATELSKI, Chicago, Ill. Filed Dec. 17, 1923. Serial No. 681,182. 7 Claims. (Cl. 74—7.)



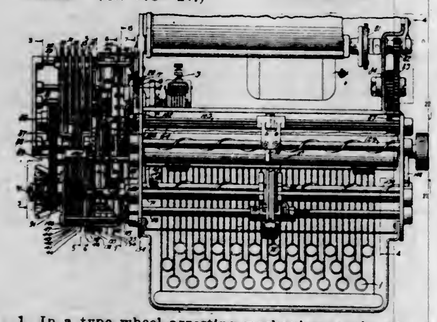
1. The combination with a utensil of a supporting panel therefor, a motor driven element journaled in said supporting panel, a socket adjacent said motor driven element, said utensil being provided with a member adapted to engage said motor driven element, and a locking member adapted to be inserted in said socket, and a spring pressed plunger normally closing the opening to said socket.

1,570,921. ELECTRICAL TRANSFORMER. EDWARD B. PATTERSON, Merchantville, N. J. Filed Apr. 14, 1925. Serial No. 22,934. 4 Claims. (Cl. 170—359.)



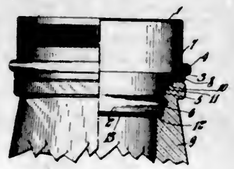
1. In an electrical transformer; the combination with a cylindrical helically coiled primary electrical conductor; of a conically helically coiled secondary electrical conductor, in coaxial telescopic relation therewith; said primary coil being adjacent the larger end of the secondary coil and the relative position of said coils being such that the major portion of the lines of force in the magnetic field produced by electrically energizing said primary coil interlink with the convolutions of said secondary coil, but only a negligible minor portion of the

lines of force in the magnetic field thus induced in said secondary coil interlink with said primary coil; whereby the maximum inductive effect of said primary coil upon



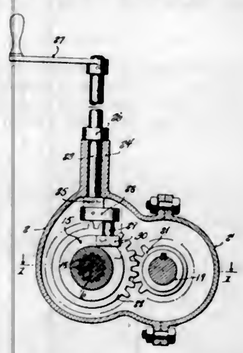
said secondary coil is attained but the counter-inductive effect of said secondary coil upon said primary coil is minimized.

1,570,922. SERVOMOTOR. OTTO PHILIPP, Washington, D. C. Filed July 6, 1925. Serial No. 41,698. 4 Claims. (Cl. 74—26.)



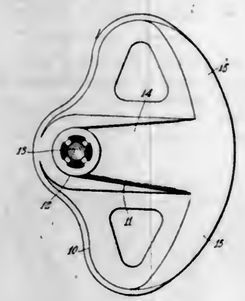
1. In apparatus of the class described, a rotary motor provided with a friction driving disk, a shaft provided with a driven disk which engages with the driving disk, means for moving the motor parallel to the said shaft, and means operated by the said shaft for moving it longitudinally in the same general direction as the motor to stop the driven shaft automatically.

1,570,923. PRINTING TELEGRAPHY. LOUIS M. POTTS, Highwood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 29, 1922. Serial No. 609,579. 28 Claims. (Cl. 178—27.)



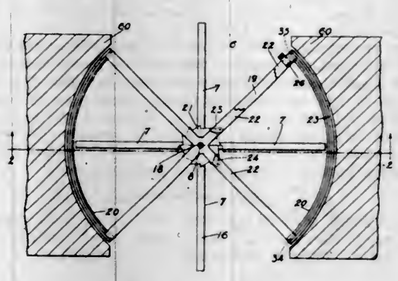
1. In a type wheel arresting mechanism, a plurality of movable members, means for setting said members in predetermined combinations, and means loosely supported by said members and effective upon the movement thereof to form a rigid stop at various positions for said type wheel.

1,570,924. RECEPTACLE CLOSURE. ROBERT A. RUSSELL, Ridgewood, N. J., assignor to Paragon Can & Cap Company, Inc., Patterson, N. J., a Corporation of New York. Filed Mar. 26, 1923. Serial No. 627,710. 6 Claims. (Cl. 215—49.)



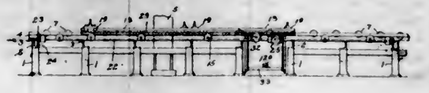
1. In combination, a receptacle having interior closure engaging means, a shoulder located below said means, a shoulder located above said means, and a surface surrounding and above said last named shoulder, together with a sheet metal closure comprising an upper member, a lower member provided with a laterally extending flange, a seam at the perimeter of said flange uniting said members, said lower member being adapted to cooperate with the shoulder located below the closure engaging means, and said flange being adapted to cooperate with the shoulder located above the closure engaging means and with the surface surrounding said last named shoulder.

1,570,925. TWO-SPEED POWER UNIT. WILLIAM H. SCHMIDT, Milwaukee, Wis. Filed Oct. 4, 1924. Serial No. 741,615. 2 Claims. Cl. 74—39.)



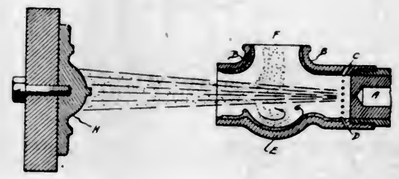
1. A two speed power unit for tractors comprising a two part casing, a driving shaft carried by one portion of said casing and supported adjacent the inner and outer ends of said portion, a driven shaft carried by the other portion of said casing and projecting through the outer wall of such portion and aligning with said driving shaft, said shafts having mutually cooperating means for mutually supporting the adjacent ends thereof, said shafts having a plurality of keys formed thereon at their juxtaposed portions, a sleeve splined to the keyed portions of said shafts and slidably mounted thereon, said sleeve adapted to be carried wholly by said driven shaft when in neutral position and adapted to directly connect said shafts when moved into a position overlapping both shafts, a jack shaft mounted parallel to said shafts, reduction gearing connecting said jack shafts and said driving shaft, a driving pinion rigidly carried by said jack shaft, a driven gear rigidly carried by said sleeve and adapted to mesh with said driving pinion when said sleeve is moved to its outermost position upon said driven shaft, a rock shaft projecting through said casing and having a crank portion operatively connected with said sleeve and adapted to shift said sleeve to any one of several positions, and means for holding said rock shaft in any one of its adjusted positions.

1,570,926. GOLF TEE. JOHN W. SIBBALD, New York, N. Y. Filed Oct. 10, 1925. Serial No. 61,629. 4 Claims. (Cl. 273—33.)



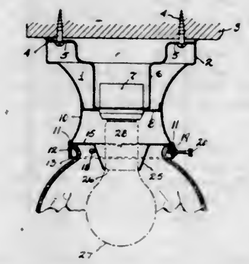
1. A golf ball tee, comprising a supporting base having a protruding boss or hub, an arm with inclined approach and guide surface extending from said base substantially to the top of the said hub, and a recessed member adjustably mounted in said boss adapted to receive a golf ball.

1,570,927. SAFETY DOOR STRUCTURE. EDWIN EGMONT SPOTTSWOOD, Cincinnati, Ohio. Filed May 27, 1925. Serial No. 33,308. 7 Claims. (Cl. 20—1.1.)



1. In a safety door structure the combination with revolving doors mounted for one-way rotation in an entry way, of oppositely spaced arcuate doors mounted for movement in a circle about the revolving doors, and means for locking the revolving doors and arcuate doors whereby said doors may be moved in one direction only with the arcuate doors forming closures for the spaces between the revolving doors.

1,570,928. METAL-PERFORATING MACHINE. GEORGE P. THOMAS, Glenshaw, Pa. Filed June 26, 1924. Serial No. 722,447. 33 Claims. (Cl. 164—117.)

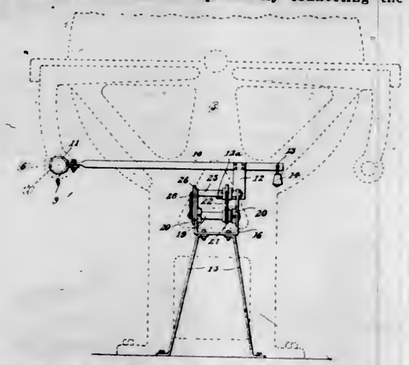


1. The combination with a metal perforating machine, of a universally movable templet and work support comprising a table, a frame mounted on said table for movements to and from said machine and provided with a plurality of blank-supporting rollers, and a carriage mounted upon one side of said frame for movements at right angles to those of the frame, said carriage being provided at a side thereof with clamps for engaging one side of a blank otherwise resting freely upon said frame rollers.

1,570,929. METHOD OF PROTECTING THE SURFACE OF METAL MOLDS. STANLEY M. UDALE and DANIEL H. MELOCHE, Detroit, Mich. Original application filed May 6, 1922, Serial No. 559,076. Divided and this application filed May 23, 1925. Serial No. 32,279. 1 Claim. (Cl. 22—189.)

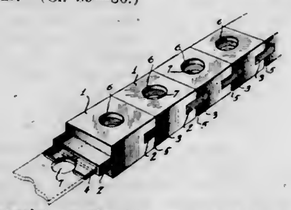
The method of protecting the metal surface of permanent iron molds, which consists in heating the surface of the iron molds by means of the flame of a blow torch directed against the surface of the said molds and injecting into the flame powered magnesium oxide, whereby the particles of magnesium oxide are carried against the surface of the iron molds which are thereby coated with the magnesium oxide.

1,570,930. LIGHTING-FIXTURE CONSTRUCTION. ALBERT F. WAKEFIELD, Vermilion, Ohio, assignor to The F. W. Wakefield Brass Company, Vermilion, Ohio, a Corporation of Ohio. Filed Mar. 18, 1925. Serial No. 16,359. 10 Claims. (Cl. 240—78.)



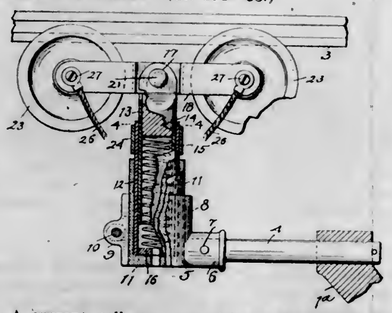
1. In a lighting fixture, the combination of an outer shell having an internally extending shoulder and terminating in a globe holding flange below said shoulder, an apertured baffle plate removably mounted in said flange and against said shoulder, and a locking ring adapted to be removably mounted on the inside of said flange and against the edge of said plate to conceal the latter.

1,570,931. TENSION-CONTROL INDICATOR. CHARLES W. YOUNG, Killingly, Conn. Filed Feb. 13, 1925. Serial No. 9,027. 4 Claims. (Cl. 265—1.)



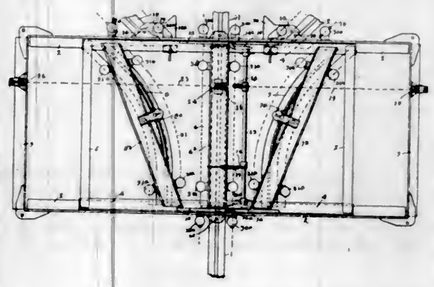
1. In a twister or the like, the combination with a tension bar, of a tension lever clamped thereupon, said

tension lever having a depending extension, an indicator element, and means for operatively connecting the ele-



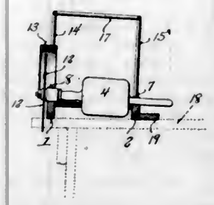
ment with said depending extension for causing movement of the extension to produce movement of the indicator element.

1,570,932. FLEXIBLE BRACELET OR THE LIKE. EMIL I. ANDERSON, New York, and NILS E. ANDERSON, Bronx, N. Y. Filed May 22, 1924. Serial No. 715,240. 4 Claims. (Cl. 59—80.)



1. A bracelet or the like embodying a plurality of hollow boxes positioned end to end and each of which is provided across both of its ends with transverse slots extending entirely across the box, a tubular bushing positioned within the adjoining slots of each two adjacent boxes with the opposite exposed edges of the bushings substantially flush with the corresponding edges of the boxes, and a metallic band extending through the boxes and bushings and of a width substantially equal to the interior widths of the boxes and bushings.

1,570,933. CURRENT COLLECTOR. EARL T. BENNINGTON, Willoughby, Ohio, assignor to The Cleveland Crane & Engineering Company, Wickliffe, Ohio, a Corporation of Ohio. Filed Sept. 5, 1924. Serial No. 736,040. 9 Claims. (Cl. 191—58.)

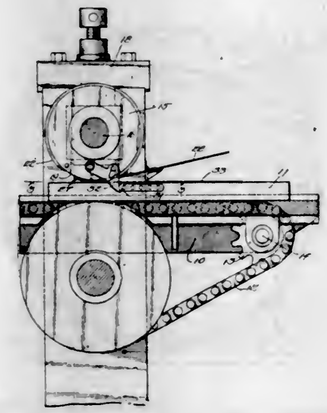


1. A current collector comprising a supporting member mounted to swing laterally and having a socket substantially at right angles to the pivotal axis thereof, a post slidably fitted in said socket, a spring acting upon said post to yieldingly press the same outwardly with respect to the socket, a rigid member pivoted intermediate its ends to said post and trolley wheels carried by said member on opposite sides of the post.

1,570,934. TRAMRAIL SWITCH. EARL T. BENNINGTON, Cleveland Heights, Ohio, assignor to The Cleveland Crane & Engineering Company, Wickliffe, Ohio, a Corporation of Ohio. Filed Nov. 28, 1924. Serial No. 752,686. 8 Claims. (Cl. 104—102.)

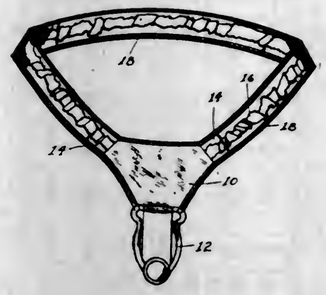
2. A tramrail switch comprising fixed frame, a main track terminating at one side of the frame, a plurality of tracks terminating at spaced points on the opposite side of the frame, a frame movably mounted on the fixed frame, a plurality of track sections carried by the movable frame, each adapted to connect the main track and one of said tracks at the opposite side of the fixed frame, a latch carried by the movable frame, means on the fixed frame with which the latch is adapted to engage to lock the movable frame in positions in which anyone of the rail sections is aligned with the main track, and pull cables extending in opposite directions and each connected to the latch to move the same to releasing position when a pull is exerted thereon.

1,570,935. POWER-DRIVEN SAW. PRENTICE BOOTH, North Fond du Lac, Wis. Filed May 17, 1924. Serial No. 714,029. 2 Claims. (Cl. 143—43.)



1. A device for trimming the edges of slanting roofs comprising a frame having an outer runner and an inner runner, said runners being of different heights whereby their upper edges are maintained in a horizontal plane, a motor secured to the upper edges of said runners, and a circular saw directly connected to said motor and positioned outside of said outer runner.

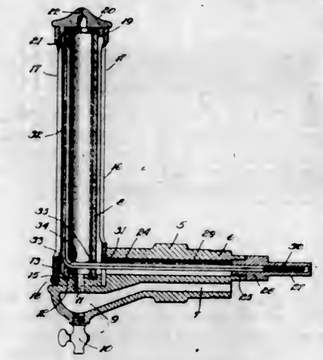
1,570,936. PAPER-GRIPPING DEVICE FOR PLATE PRINTERS. ALBERT P. BOWERS, Chicago, Ill., assignor to Columbian Bank Note Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 20, 1925. Serial No. 51,341. 6 Claims. (Cl. 101—158.)



1. In a plate printing machine, an oscillating roll, a reciprocating table adapted to pass under said roll, a

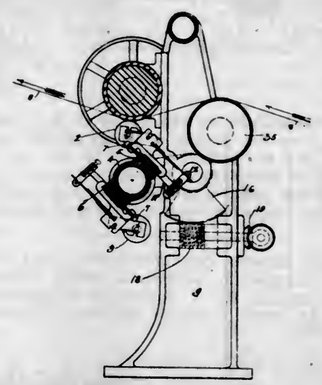
plate carried thereby, means on said roll operable by said table for gripping a sheet of paper fed thereto, said

means releasing said sheet of paper after the latter is gripped between said roll and plate.



1,570,937. GARTER AND ARM BAND. ANNA PICHOWETZ BRAND, Chicago, Ill., assignor to Benjamin A. Brand, Chicago, Ill. Filed Apr. 7, 1924. Serial No. 704,871. 2 Claims. (Cl. 241—6.)

1. In a supporter, a limb encircling tube formed of opposed separate sections of flat and longitudinally elastic material, a non-elastic flat tape extending longitudinally within said tube and of a greater length than the normal length of the tube, and means joining the opposed tube sections along the longitudinal edges thereof and serving to retain said sections in flat opposed relation throughout.

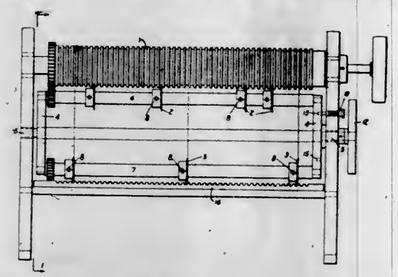


1,570,938. COMBINED SIGHT GAUGE AND THERMOMETER. MATTHEW J. BUTLER and ELMER A. JOHNSON, Joliet, Ill. Filed Aug. 1, 1923. Serial No. 654,984. 8 Claims. (Cl. 73—52.)

3. In a liquid level gauge for a vessel, a supporting member with a passageway therein for the liquid and having also a second passageway alongside the first to extend into the interior of the vessel, a tubular cap adapted to be positioned inside the vessel to close the

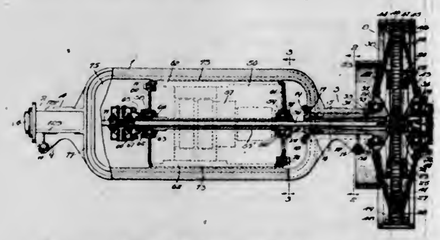
second passageway from communication to the interior of the vessel, said second passageway being adapted to house a temperature-sensitive device.

1,570,939. SLITTING MACHINE. JAMES A. CAMERON, Brooklyn, N. Y., and ROBERT McC. JOHNSTONE, Roselle Park, N. J., assignors to Cameron Machine Company, Brooklyn, N. Y., a Corporation of New York. Filed Dec. 3, 1923. Serial No. 678,333. 22 Claims. (Cl. 164—65.)



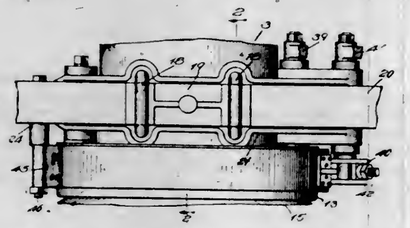
1. A slitting machine comprising: a carrying member mounted to turn, two groups of slitting elements on said carrying member, said groups being spaced circumferentially on said carrying member, slitting means to co-act with said slitting elements to slit a web, and means for turning said carrying member to bring either of said groups into proper position with relation to the slitting means.

1,570,940. SLITTING MACHINE. JAMES A. CAMERON, Brooklyn, N. Y., and ROBERT McC. JOHNSTONE, Roselle Park, N. J., assignors to Cameron Machine Company, Brooklyn, N. Y., a Corporation of New York. Filed Dec. 3, 1923. Serial No. 678,384. 6 Claims. (Cl. 164—65.)



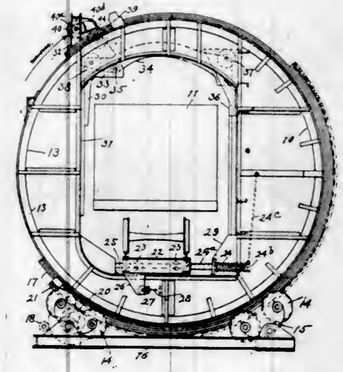
1. A slitting machine comprising: two groups of adjustable shear-cut slitting elements, grooved slitting means, means for bringing either of said groups of slit-

ting elements into proper position with respect to the grooved slitting means, a spacer bar grooved to correspond to the grooved slitting means, and means for ad-



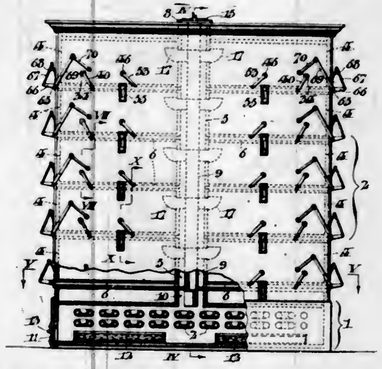
justing one group of slitting elements with respect to the grooves of the spacer bar while the other group is coacting with said grooved slitting means to slit the web.

1,570,941. AXLE FOR VEHICLES. JOHN G. CARROLL, Chicago, Ill., assignor to Walker Vehicle Company, Chicago, Ill., a Corporation of Illinois. Filed June 12, 1923. Serial No. 644,904. 12 Claims. (Cl. 180—62.)



1. In combination, an axle having an open frame portion, and an end portion, a driving spindle extending through said end portion, a wheel on said end portion actuated by said driving spindle, and a motor having a field frame mounted in said frame and serving as a mechanical connection between the sides of the frame.

1,570,942. BRAKE CONSTRUCTION. JOHN G. CARROLL, Chicago, Ill., assignor to Walker Vehicle Company, Chicago, Ill., a Corporation of Illinois. Filed June 12, 1923. Serial No. 644,905. 6 Claims. (Cl. 188—75.)

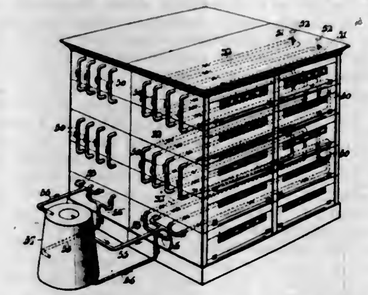


1. A spring pedestal comprising a central substantially horizontal web having vertical longitudinal flanges at its margins forming side supports or guides for a spring, depending portions at each end of said pedestal for straddling a support and preventing fore and aft movement of the pedestal relative the support, comprising a central transverse web joined to said flanges, and depending flanges having aligned apertures therethrough for supporting brake operating shafts.

1,570,943. CAR DUMPER. ARTHUR F. CASE, Cleveland, Ohio, assignor to The Wellman-Seaver-Morgan Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 22, 1923. Serial No. 682,144. 18 Claims. (Cl. 214—55.)

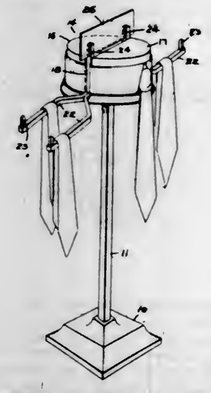
1. In a car dumper, a cradle adapted to receive a car and to be turned to dump the same, a car clamp carried by the cradle having a part adapted to extend across the top of the car and movable toward and from the top of the car, and means for slidably supporting the clamp at the side of the car receiving portion of the cradle opposite that toward which the cradle is turned to dump the car.

1,570,944. INCUBATOR. GEORGE W. CISCO, Hawthorne, N. J. Filed June 8, 1920. Serial No. 387,382. 17 Claims. (Cl. 119—35.)



1. An incubator comprising a casing having therein a vertical series of compartments including a heating compartment and a plurality of incubation chambers, means in said heating compartment for heating the air therein, and means for delivering the heated air to the incubation chambers and automatically equalizing the distribution of heat thereby to the chambers at different heights.

1,570,945. INCUBATOR. GEORGE W. CISCO, Hawthorne, N. J., and JOHN F. MACKAY, Lancaster, Pa. Filed Aug. 18, 1920, Serial No. 404,289. Renewed June 25, 1925. 11 Claims. (Cl. 119—42.)

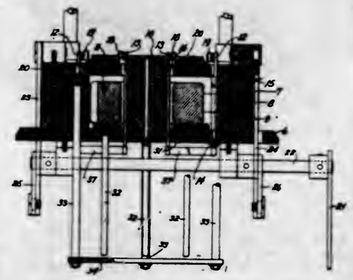


1. A sectional incubator comprising a multiplicity of superposed, interchangeable, chambered unit sections each having at both top and bottom spacing and engagement

means correlatively adapted to interlock with those at bottom or top of an adjacent section and to space the sections apart so that their top and bottom walls shall form a double wall partition with narrow air spaces

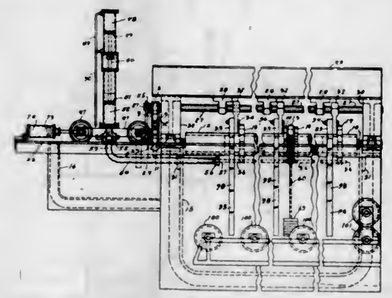
therein, and each also having therein a horizontal bank of radiating pipes with inlet and outlet connections to the exterior of the section for circulation of a heating medium through said pipes.

1,570,946. NECKTIE-DISPLAY STAND. SAMUEL COHN, New York, N. Y. Filed Feb. 29, 1924. Serial No. 695,883. 6 Claims. (Cl. 211—24.)



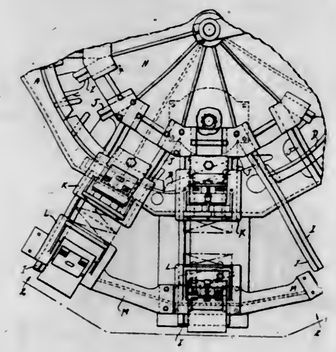
1. A display stand, comprising a cylindrical head portion split vertically into a plurality of segments and arms projecting from between the segments.

1,570,947. AUTOMATIC STRINGED INSTRUMENTS OF THE VIOL CLASS. NATHANIEL BANKS CREGIER, Chicago, Ill., assignor to Mills Novelty Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 24, 1923. Serial No. 664,587. 15 Claims. (Cl. 84—11.)



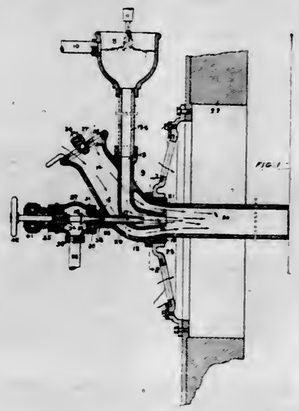
1. In apparatus for the operation of stringed instruments, means for sounding the individual notes playable upon each of the strings of said instruments, manually operable keys corresponding to each of said notes, and electric circuits controlled by the operation of said keys for operating the corresponding sounding means, the circuits controlled by certain adjacent keys corresponding to notes playable upon a single string of an instrument operating note sounding means of different instruments, whereby different notes from such selected string may be simultaneously sounded by simultaneous operation of the keys corresponding thereto.

1,570,948. TEST FIXTURE. JAMES L. CROUCH, Summit, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 27, 1923. Serial No. 659,549. 6 Claims. (Cl. 175—183.)



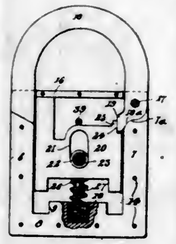
1. A test fixture comprising a platform and means for producing a continuous winding of a plurality of turns around an object placed on said platform, said means comprising a plurality of rows of metallic posts, a plurality of rows of contact members, permanent connections between each contact member of one row and a contact member of a second row, a permanent electrical connection between one end of each post of one row and a post in a second row, and means for bringing said posts and said contact members into contact to form a continuous winding of a plurality of turns around the object resting on said platform.

1,570,949. METAL-COATING MACHINE. FRANK H. CUNNINGHAM, Youngstown, and HARRY W. MOSELEY, Struthers, Ohio. Filed Feb. 20, 1924. Serial No. 694,178. 1 Claim. (91—12.1.)



In a device of the class described, means for automatically carrying an article to be metal coated through a flux, automatic means for causing a head of flux to be forced through said article, means for continuing said article through a bath of zinc, means for causing a head of zinc to be forced through said article, means for allowing said article to roll by gravity in an inclined plane to a conveyor, substantially as described for the purpose set forth.

1,570,950. EXTENSION BAR. JOSEPH L. DOSTAL and ALEXANDER ANDERSON, Detroit, Mich., assignors to Earl Holley, Detroit, Mich. Filed Apr. 25, 1925. Serial No. 25,743. 5 Claims. (Cl. 22—26.)

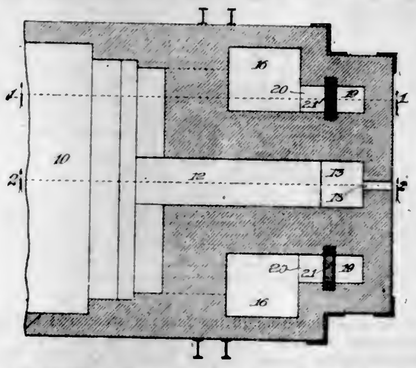


1. In a rotating molding machine having a plurality of pairs of parallel guides of unequal length radially mounted thereon and having with each parallel pair of guides a pair of mold supports, an inner mold support supported by said pair of rails, an outer mold support supported by only the longer of said rail supports, a circumferential ring supporting each outer mold support and its neighbor, means for closing and separating said mold supports, whereby when the mold supports are in the open position the castings produced therein which exceed in dimension the distance between the parallel mold guide supports can drop freely past the guide suports.

1,570,951. TAR BURNER. WILLIAM J. DOWNING, Salisbury, Md. Filed July 17, 1923. Serial No. 652,190. 5 Claims. (Cl. 158—74.)

5. In a burner apparatus, a combined nozzle device comprising a hydrocarbon passage having a nozzle end, a steam passage entering the hydrocarbon passage and provided with a nozzle end directed toward but arranged at a distance from the nozzle end of the hydrocarbon passage so that the steam impinges directly upon the hydrocarbon material to subdivide it and form a thorough mixture before leaving said hydrocarbon nozzle, an air passage surrounding the hydrocarbon passage and terminating in an annular nozzle immediately about the hydrocarbon nozzle, means for supplying and controlling steam to the steam passage whereby the extent of its discharge within the hydrocarbon nozzle may be regulated, a cup for receiving hydrocarbon material arranged at a considerable elevation above the hydrocarbon nozzle and in communication with it by a vertical pipe to provide a definite static head for feeding the hydrocarbon material downwardly against the pressure in the nozzle, and means for delivering the fluid hydrocarbon material to the cup, and wherein further, there is combined with the burner a receiving tank for the hydrocarbon material, a nozzle for delivering hydrocarbon fluid to the cup, a pump for forcing the material from the receiving tank to the nozzle which discharges into the cup of the burner, and overflow pipe from the cup extending to the receiving tank for delivering the overflow thereto.

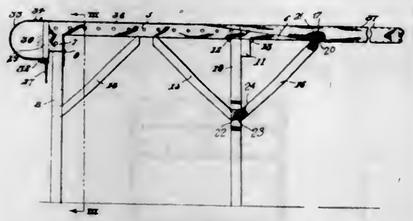
1,570,952. PADLOCK. ANDRAS DRENOVICS, Tamasi, Hungary, assignor of one-fourth to J. Fabian and one-fourth to C. Szombathy, both of New York, N. Y. Filed May 14, 1925. Serial No. 30,345. 3 Claims. (Cl. 70—106.)



1. In a padlock of the type described, a casing, a hasp pivoted to the casing and having a heel projecting inwardly thereof from its pivot end, a spring pressed slidable keeper engageably associated with the heel of the hasp for holding the hasp in its closed position, a rotatable member for sliding said keeper into its hasp heel releasing position, said rotatable member having a pair of spaced key receiving openings, said casing having a relatively large key-hole registering with both key openings, and a key for actuating said rotatable member.

1,570,953. PACKING MATERIAL. MADS POULSEN EBBESEN, Frederiksberg, near Copenhagen, Denmark. Filed Mar. 10, 1925. Serial No. 14,564. 2 Claims. (Cl. 106—8.)

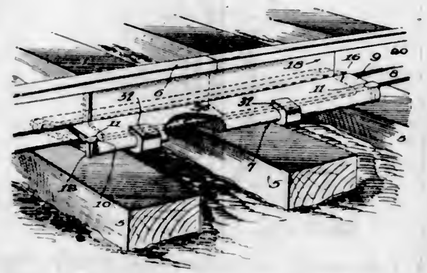
2. A process of making a plastic, non-resilient packing material, comprising the steps of saponifying a fatty substance with an alkali; adding to the soap thereby formed a mixture of water-glass, starch, an alkali carbonate and sugar; and mixing graphite and chalk with the resultant product.



1,570,954. REGENERATIVE FURNACE. NICHOLAS F. EGLER, Chicago, Ill. Filed June 30, 1923. Serial No. 648,808. 4 Claims. (Cl. 263—15.)

3. In a reversing regenerative open hearth furnace, a central mixing port, an air port on each side of the mixing port, a regenerative chamber communicating with said mixing port, a regenerative chamber communicating with said air ports, a passage leading from each port to its regenerative chamber, a separate passage adjacent

each passage leading to the air port, a cross passage connecting the last named passages, and a valve in each cross passage.

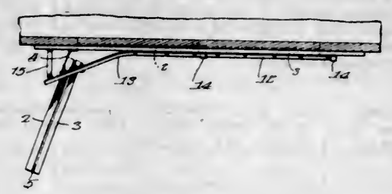


1,570,955. IRONING BOARD. THOMAS F. EVANS, Williams, Calif. Filed July 16, 1925. Serial No. 43,969. 2 Claims. (Cl. 68—10.)

1. In a device of the type described, a two-part board, legs hingedly connected to said board parts, removable and interchangeable brace members for preventing said legs from swinging on their hinge connections, said brace members each having a hook projecting form one end and a pin projecting from the other end, said board parts having recesses formed therein to receive the hooks on said brace members and pins arranged transversely of said recesses to be engaged by said hooks, said legs having recesses suitable for receiving the pins projecting from the brace members.

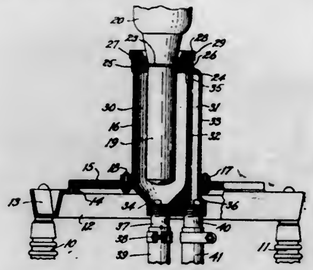
1,570,956. RAIL JOINT. SAM FALCONE, Cleveland, Ohio. Filed Mar. 20, 1925. Serial No. 17,134. 1 Claim. (Cl. 238—205.)

A rail joint comprising a major seat having a base and inwardly extending flanges overhanging the base flanges of a rail, the end portions of the seat being provided with notches, fastening devices arranged beyond the ends of the major seat and having heads received in said notches to hold the seat against endwise movement, said fastening devices constituting the sole means to hold the seat and the adjacent portions of the rails in place, and a one-piece metal supplemental seat having a base lying flat in contact with said first named base and having flanges positioned between the base flanges of the rail and the inwardly extending flanges of said major seat, the inwardly extending flanges of said supplemental seat being provided with upwardly extending side walls lying flat in contact with the web of the rail and engaging the head of the rail adjacent the joint thereof to brace the same, the inner edges of the flanges of said major seat being flatly engaged with the lower portions of said side walls of the supplemental seat for the full length thereof whereby to firmly hold said side



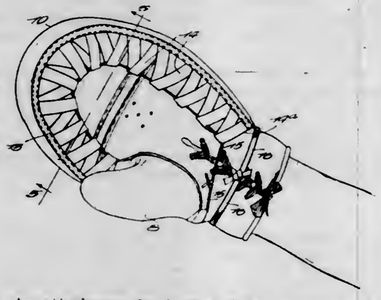
walls in place, said major seat consisting of two separate sections arranged in spaced relation, and a clamp extending beneath said separate sections and having upwardly and inwardly directed lugs engaging the outer edges of said sections whereby to firmly clamp said separate sections in binding engagement with the adjacent portions of the supplemental seat.

1,570,957. COMPOSITION OF MATTER FOR A PAINT REMOVER. OTTO L. FLUEGEL, Birmingham, Mich. Filed Jan. 24, 1925. Serial No. 4,446. 2 Claims. (Cl. 87—5.)



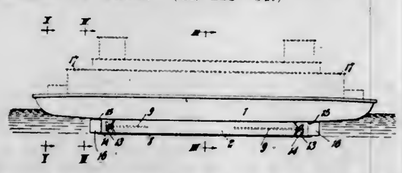
1. A paint removing compound adapted for dissolving and removing coats of dried paint from wood or iron painted surfaces, comprising the following ingredients mixed in the proportions as follows; caustic potash one pound; tri-sodium of phosphate one half pound; oxalic acid one half pound; hydrate of lime one pound; starch three ounces; and about one gallon of water.

1,570,958. DOOR HANGER AND TRACK CONSTRUCTION. PETER FRANTZ, Sterling, Ill., assignor to Frantz Manufacturing Co., Sterling, Ill., a Corporation of Illinois. Filed Sept. 10, 1924. Serial No. 736,936. 10 Claims. (Cl. 20—20.)



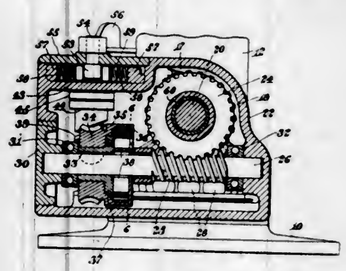
1. In swinging and folding door construction, the combination of a plurality of door sections hinged together, means for hinging one section at the side of the doorway, a hanger for another section, a track for said hanger adapted for use with either a right or left door, said track having a section thereof formed out of alinement with the main portion of the track, permitting lateral movement of said hanger relatively to the plane of the doorway, when the hanger travels from said main portion of the track onto said other section thereof, whereby to permit said door sections to swing open and fold back, more or less, parallel with the plane of the doorway.

1,570,959. TUBE MOUNTING. JOHN O. GARGAN, Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 16, 1924. Serial No. 686,509. 3 Claims. (Cl. 250—27.)



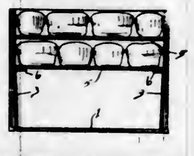
1. A mounting for high power electric discharge tubes comprising a supporting member, a water jacket mounted on and extending entirely above said member, inlet and outlet ports in the bottom of said jacket, and a water circulating system disposed below said supporting member for conducting water to and from said ports.

1,570,960. BOXING-GLOVE ATTACHMENT. MICHAEL F. GATELY and FLOYD N. WELLS, Westpoint, Nebr. Filed Nov. 20, 1924. Serial No. 751,162. 6 Claims. (Cl. 2—18.)



1. An attachment for boxing gloves, comprising a casing, a pneumatic cushion detachably housed in the casing, and means carried by the casing for detachably binding the same upon the glove in a position over the striking surface thereof and leaving the inner side of the glove free and unobstructed.

1,570,961. HULL FOR VESSELS. SAMUEL GOLDEN, New York, N. Y. Filed May 3, 1923. Serial No. 636,424. 1 Claim. (Cl. 115—34.)

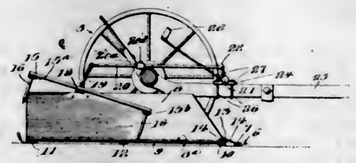


A double-ended vessel comprising, a main hull, a fin on the hull adapted to contain propelling mechanism, said hull having its ends well rounded in cross section and its bottom substantially flat, a propeller at each end of the fin, and a rudder adjacent each propeller, both the propellers and rudders being located under the substantially flat bottom of the hull.

1,570,962. HIGH-SPEED LIFTING JACK. FRANK L. GORMLEY, Brookline, Mass., assignor to The Buda Company, Harvey, Ill., a Corporation of Illinois. Filed May 15, 1925. Serial No. 30,420. 26 Claims. (Cl. 254—103.)

1. In a self-lowering lifting jack; a standard; a ram reciprocable in said standard; a nut in said ram; a rotatable screw in said nut; a gear on the lower end of said screw; a driving gear meshing therewith; a worm gear secured to the driving gear shaft; a worm driven thereby; means for rotating said driving gear and worm gear; an annular member secured to said worm shaft; pawls carried thereby; a worm pinion surrounding said annular member and carrying a ratchet coacting with said pawls; a vertical shaft having a worm thread meshing with said pinion; and means at the upper end of said vertical shaft for controlling its rotation.

1,570,963. CANDY OR MERCHANDISE DISPLAY BOX. YOUNG C. HAMILTON, Fort Worth, Tex. Filed Aug. 14, 1925. Serial No. 50,325. 3 Claims. (Cl. 206—44.)



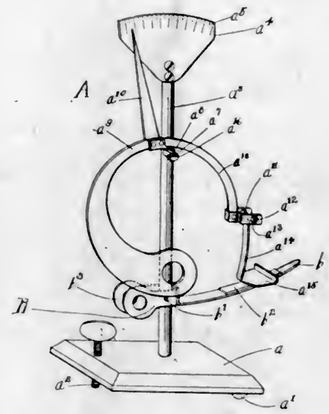
1. A display box having a bottom and a plurality of pairs of tongues or supports struck therefrom, and a plurality of trays for goods to be supported on said bottom and on said supports.

1,570,964. AIR-FEED CONTROL FOR STOPERS. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed May 28, 1925. Serial No. 33,406. 2 Claims. (Cl. 121—9.)

2. In a feed controlling device for rock drills, the combination of a percussive cylinder and a feeding cylinder, a back head for the percussive cylinder, a valve chest having a chamber and a series of spaced supply ports, a hollow fluid actuated reciprocatory valve in said chest for controlling the feeding cylinder and having an exhaust port, a throttle valve for controlling admission of pressure fluid to the cylinders and to the chamber, a supply passage leading from the throttle valve to the chamber for supplying pressure fluid to the feeding cylinder through the spaced supply ports, a second supply passage leading from the throttle valve to the end of the chamber for admitting pressure fluid to move the control valve in one direction, an exhaust port in the chest adapted to register with the port in the control valve for opening the feeding cylinder to atmosphere, a spring in the control valve for bringing said ports into registration and for closing the spaced supply ports, a hollow rotation handle communicating with the end of the chamber, and a sleeve slidable on said handle for releasing pressure fluid from said chamber.

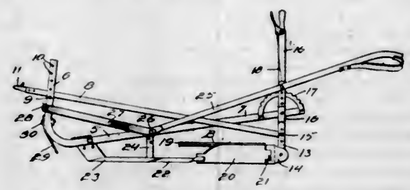
1,570,965. BUNCHING ATTACHMENT FOR MOWING MACHINES. CRIST HERMINGHUYSEN, Van Wert, Ohio. Filed Dec. 5, 1923. Serial No. 678,739. 4 Claims. (Cl. 56—203.)

1. A hay bunching attachment for mowing machines comprising an open-ended hay receptacle having side walls and a bottom, a frame mounted for longitudinal swinging movement within said receptacle above the bottom thereof, a hay engaging abutment carried by said frame adjacent each end thereof and extending in the direction of the bottom of said receptacle, and means for actuating said frame for selectively bringing said abutments to contact with the bottom of said receptacle for stopping the passage of hay therethrough.



1,570,966. OIL BURNER. WILLIAM KENT KISE, Kansas City, Mo., assignor to The Everbrite Stove Company, Kansas City, Mo., a Corporation of Missouri. Filed Mar. 16, 1925. Serial No. 15,778. 2 Claims. (Cl. 158—61).

2. In an oil burner, a casting comprising a chambered body having top burner openings and a shelf having an inclined rear wall provided with recesses having communication with the body chamber, the shelf comprising a trough and having air slots between the trough and said recesses, a generator tube above the shelf and in line of discharge from said recesses, a mixing chamber in communication with the generator tube and with the body chamber, and means for controlling flow to the mixing chamber.



1,570,967. SCALE. FRED G. KRUEGER, Norwood, Ohio, assignor to The Cincinnati Stamping Company, Cincinnati, Ohio, a Corporation of Ohio. Filed May 19, 1921. Serial No. 470,983. 5 Claims. (Cl. 265—61.)

1. The combination of a base, two fixed contacts upon the base, a vertically adjustable contact spaced equidistant from the fixed contacts, a standard mounted vertically upon the base, a lug mounted on the standard, there being a seat formed on the lug extending in parallelism with a line extending between corresponding

points of the fixed contacts, a dial on the standard, a pendulum, a knife edge on the pendulum adapted to bear on the seat on the lug, and an indicator on the pendulum adapted to register with the dial.

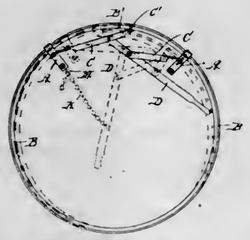
1,570,968. CULTIVATOR. OLLIE M. MARTIN, Bloomington, Ind. Filed Feb. 25, 1925. Serial No. 11,460. 3 Claims. (Cl. 97—162.)

1. A cultivator of the class described including a frame, a pair of blades pivoted to the frame, a pulverizer box including a pair of hingedly associated sections, the free ends of the sections being pivotally engaged with the free ends of the blades, and means for swinging the pulverizer box longitudinally of the frame so as to swing the sections thereof relatively to the blades for changing the width of the cultivator.

1,570,969. METHOD OF MANUFACTURING COATING FOR PERMANENT METAL MOLDS. FREDRICH MAYER, Solingen, Germany. Filed Oct. 20, 1924. Serial No. 744,832. 1 Claim. (Cl. 22—189.)

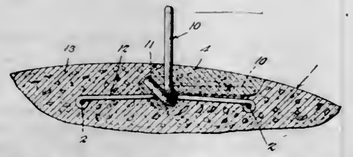
The method of manufacturing coatings for permanent molds for the production of aluminum castings which consists in dissolving the mineral matter such as graphite employed by the aid of a colloidizing process, diluting the same and rendering it capable of being readily poured into the mold.

1,570,970. EXPANSION JOINT. JAMES J. MILAR, Chicago, Ill., assignor to The Philip Carey Manufacturing Company, a Corporation of Ohio. Filed June 1, 1922. Serial No. 565,104. 9 Claims. (Cl. 94—18.)



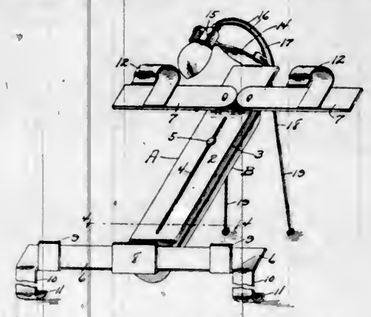
8. In a concrete roadway, a channel shaped strip adapted to be embedded therein for the purpose of form-

ing a contraction joint, said strip being formed with vertically aligned holes in the walls of said channel for



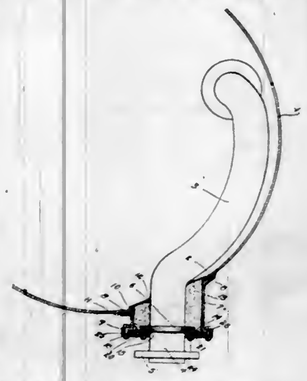
receiving supporting stakes to hold said strip in position until embedded.

1,570,971. RIM CONTRACTING AND EXPANDING TOOL. THEODORE OSCAR MOREL, Tutaki, New Zealand. Filed Jan. 26, 1924. Serial No. 688,737. 1 Claim. (Cl. 157—1.)



A rim contracting and expanding tool, comprising, in combination, an operating lever, a pair of links pivoted to said lever to extend in opposite directions therefrom, and a grip pivoted to each link; each grip embodying a pair of substantially parallel jaws, a double-ended bolt passing through said jaws near the inner end thereof and provided at each end with a pair of nuts engaging the opposite faces of the corresponding jaw to enable the distance between the jaws to be adjusted, a second bolt passing loosely through both jaws near the outer end thereof and to which the outer end of the adjacent link is pivoted, said second bolt having a head at one end to engage the adjacent jaw, a pair of expansible springs encircling the second bolt and interposed between the said link end and the jaws to force said jaws apart, and a thumb nut threaded on the other end of said second bolt to move the corresponding jaw inward against the action of the adjacent spring.

1,570,972. CEMENT-VAULT HANDLE. THOMAS H. SEIFERT, Springtown, Pa. Filed June 27, 1924. Serial No. 722,790. 1 Claim. (Cl. 72—7.)

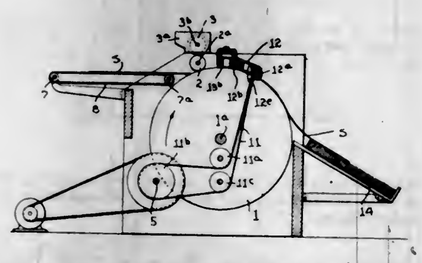


A portable cement structure having a metal reinforce embedded therein, substantially V-shaped hangers connected with said reinforce and provided in their apices with loops, handles having hooks at their ends engaged with said loops, the bills of said hooks being deflected at an angle to the body of the handle for engagement with the loops when the handles are arranged at right angles thereto to hold the handles in upright position, said handles and reinforce being embedded in the cement forming the article.

1,570,973. BOOK HOLDER. MICHAEL SIMONELLI, Everett, Mass. Filed June 11, 1924. Serial No. 719,432. 2 Claims. (Cl. 45—80.)

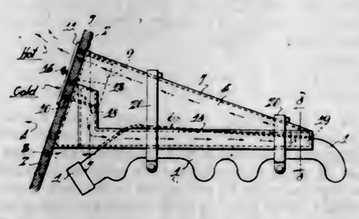
1. A device of the class described including a body formed of two telescopically associated sections, a pair of arms pivoted to each section, one of said pair of arms provided with depending legs terminating in feet, the other pair of arms provided with clips, and a propping device associated with one section and cooperating with said legs so that the body is supported on a horizontal surface in an inclined position, said propping device and said arms being foldable in relation to the body.

1,570,974. STEAM-PIPE-CONNECTION PACKING. HENRY V. STEVENS, Topeka, Kans. Filed Oct. 23, 1924. Serial No. 745,358. 7 Claims. (Cl. 285—30.)



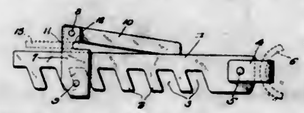
7. A packing collar for locomotive smoke boxes comprising a collar having flanges at its respective ends, a ring, a diaphragm, means for clamping the diaphragm between the ring and one of the flanges, a split collar to fit around the steam pipe of the locomotive passing through the smoke box and fastening devices for clamping the diaphragm between the split collar and a portion of the steam pipe.

1,570,975. PROCESS OF CARBONATING MILK OR CREAM. DAVID SWEENEY, Winnipeg, Manitoba, Canada, assignor of one-eighth to Margaret McLeod, one-fourth to Alexander C. MacKenzie, and one-fourth to Robert Prosser Adams, all of Winnipeg, Canada. Filed Nov. 11, 1922. Serial No. 600,464. 5 Claims. (Cl. 99—8.)



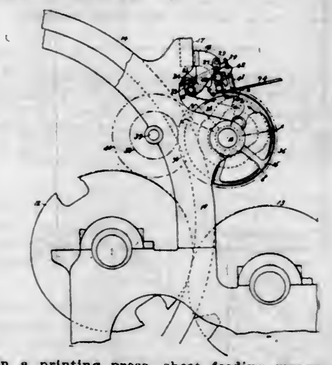
5. A process of carbonating milk which consists in introducing the milk into an air tight container, placing the interior of the container in communication with the atmosphere and introducing a charge of carbonic acid gas to purge the container and milk of atmospheric air, disrupting communication between the container and the atmosphere subsequent to elimination of the air while permitting the carbonic acid charging operation to continue until a predetermined pressure is developed in the container, shutting off the flow of carbonic acid gas upon the development of said predetermined pressure and subjecting the milk to slow and gentle agitation to absorb the gas and repeating the charging and agitating operations in the same sequence without any substantial release of absorbed carbonic acid between the charging and agitating stages until a predetermined pressure is developed in the container.

1,570,976. BRONZING MACHINE. BURT FROST UPHAM, Brookline, Mass., assignor to United Printing Machinery Company, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 11, 1924. Serial No. 705,879. 15 Claims. (Cl. 91—59.)



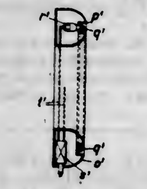
1. In a machine of the character specified, a cylinder and belts arranged at obtuse angles to the line of movement of the sheets with their inner runs conforming to the curvature of the portions of the cylinder with which they cooperate, said belts being adapted to operate upon the sheets carried forward on the cylinder.

1,570,977. AUTOMOBILE HEATER. CLARENCE W. WALIZER, Salina, Kans. Filed Feb. 17, 1925. Serial No. 9,889. 4 Claims. (Cl. 237—123.)



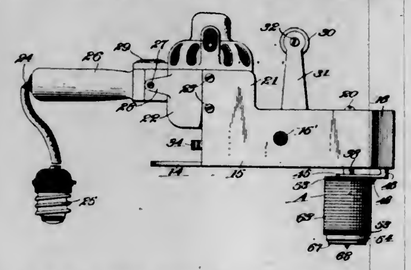
1. An automobile heater of the class described comprising a hollow heater body shaped along its bottom to surround a portion of the exhaust manifold of the engine of the automobile upon which it is used and having its rear end adapted to lie adjacent the dash of the automobile and having a throatway adapted to register with a like sized opening in the dash, means for dividing said heater body to provide a low positioned cold air duct, and an upwardly extending warm air duct, a connector pipe insertable through the dash opening into the rear end throatway, said connector pipe being divided horizontally to provide upper and lower portions and adapted to have its lower portion form an air inlet communicating with the cold air duct and its upper portion form an air outlet communicating with the warm air duct.

1,570,978. TIRE-CHAIN FASTENER. DAVID ALLEN WARD, Primrose, Nebr., assignor of one-half to E. B. Broughton, Primrose, Nebr. Filed Oct. 26, 1925. Serial No. 64,883. 5 Claims. (Cl. 24—68.)



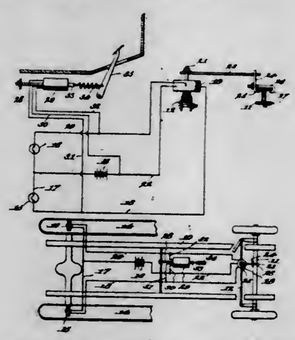
1. A fastener for anti-skid chains comprising a notched bar, a member slidable thereon, a pin carried by said member adapted to seat in one of said notches, a chain engaging notch formed in the opposite end of said slidable member, and means for locking the free end of an auto-skid chain therein.

1,570,979. SHEET-CONTROL DEVICE FOR PRINTING PRESSES. BRUCE C. WHITE, New York, N. Y.; Maria Louisa White executrix of said Bruce C. White, deceased. Filed Apr. 18, 1922. Serial No. 554,885. 50 Claims. (Cl. 271—53.)



1. In a printing press, sheet feeding means, a front gage provided with a stop guide member disposed while at rest to position the leading edge of a sheet, a sheet engaging element carried by said member, finger movable with respect thereto and adapted to yieldingly cooperate therewith to advance the sheet against said stop guide, means for adjusting said front gage during the running movement of the press to variably position the leading edge of the sheet, and a feed drum adapted while at rest to engage the sheet from said stop guide.

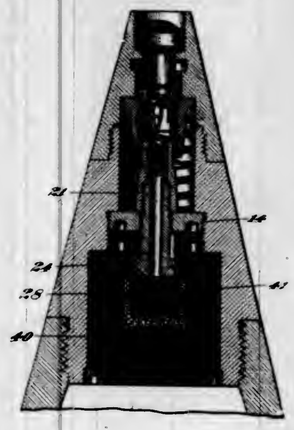
1,570,980. ILLUMINATED SIGN. KURT WIEGAND, Berlin, Germany. Filed June 2, 1925. Serial No. 34,354. 2 Claims. (Cl. 40—130.)



1. An illuminated sign element, comprising a box-like member having the shape of a sign character, a gas discharge tube conforming to said shape and disposed on the front of said member, said discharge tube having portions containing electrodes, said portions passing through the member into the interior thereof and a transformer contained within the member.

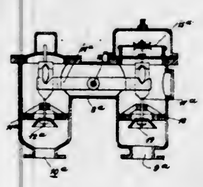
1,570,981. VALVE GRINDER. RUDOLF WILDEN, New York, N. Y., and FRANK J. WINARSKI, Jr., and AUGUST J. WINARSKI, West Hoboken, N. J. Filed May 17, 1921. Serial No. 470,447. 3 Claims. (Cl. 51—29.)

1. A valve grinder having a casing, a valve actuating means provided with a guide member, said casing having an elongated slot, said member being movable in the slot, said actuating means including an electromagnet, means to oscillate the magnet, and conductor means for the magnet passing through said guide means.



1,570,982. TRAFFIC SAFETY SIGNAL SWITCH. ROBERT M. WILLIAMS, New York, N. Y., assignor to Traffic Signal Corporation, New York, N. Y., a Corporation of Delaware. Filed Apr. 7, 1922. Serial No. 550,325. 1 Claim. (Cl. 200—59.)

In a switch mechanism for automobiles comprising a casing fixed to the steering rod thereof, a center post rising from the casing and adapted to actuate the movable contacts of the switch, a horizontally disposed rod secured to the upper end of the center post, an upright member provided with an eye in one end to receive the rod and being bent angularly at its opposite end to engage the front axle of the automobile, a rod having a toe formed on one end thereof to engage the axle upon its side opposite the angled end of the upright member in a manner for cooperative association therewith and said rod having its opposite end threaded and secured in an aperture formed in the upright for the purpose specified.

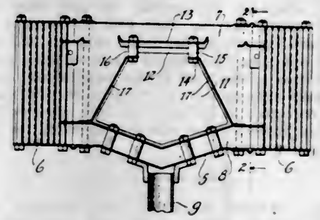


1,570,983. SAFETY DEVICE FOR HIGH-EXPLOSIVE FUSES AND PROJECTILES. PIETER DANIEL VAN ESSEN, Haag, Netherlands, assignor to Bethlehem Steel Company, a Corporation of Pennsylvania. Filed May 15, 1924. Serial No. 713,512. Renewed Mar. 6, 1925. 9 Claims. (Cl. 102—39.)

9. In a projectile fuse, the combination of a detonating charge movable to armed and unarmed positions, a booster charge provided with a cavity within which the detonating charge is movable, and a cup consisting of inert material, disposed within the cavity of the booster charge, and surrounding the detonating charge when the

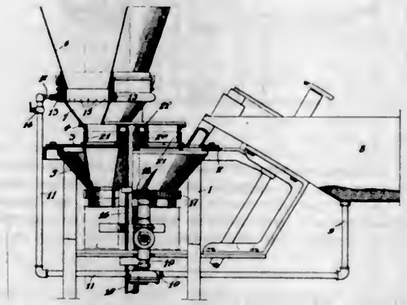
latter occupies its unarmed position for preventing the effective transmission of waves of detonation to the booster charge.

1,570,984. GAS MIXER. FRIEDRICH WOLFF, Berlin, Germany, assignor to Selas Aktiengesellschaft, Berlin, Germany. Filed Dec. 21, 1923. Serial No. 682,078. 2 Claims. (Cl. 48—184.)



1. In a gas mixing arrangement, a gas conduit and an air conduit introducing gas and air under pressure, a mixing device to which said conduits lead, a stop valve in each of the said conduits, each stop valve including a casing forming part of one of the said conduits and also including a diaphragm in said casing and acted upon by the pressure in the conduit on one side, and by atmospheric pressure on the other side, a regulating valve, a two-arm lever between the regulating valve and the associated diaphragm, and links to connect one end of the said two-arm lever to the regulating valve and the other to the diaphragm so as to close the regulating valve on the pressure in one of the conduits falling below a certain amount.

1,570,985. STEAM PURIFIER. ROGER W. ANDREWS, Pittsburgh, Pa., assignor to Andrews-Bradshaw Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 30, 1922. Serial No. 597,708. 13 Claims. (Cl. 183—75.)

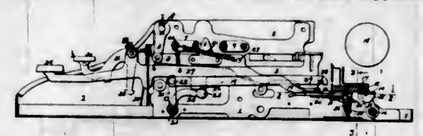


1. A steam separator comprising a hollow casing having openings in its walls, steam separating baffles mounted

in said openings, a steam outlet connected to one end of said casing, an inner conduit in said casing, with its wall spaced from the walls of said casing, said conduit

opening into said outlet, and said conduit having a narrow longitudinal opening through its wall extending substantially the entire length of the wall.

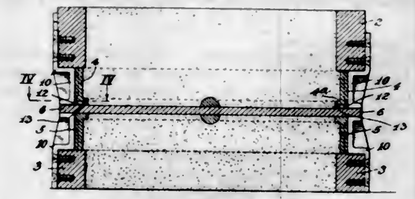
1,570,986. CANNING MACHINE. CHARLES H. AYARS, Salem, N. J., assignor to Ayars Machine Company, Salem, N. J. Filed Jan. 23, 1924. Serial No. 687,924. 1 Claim. (Cl. 226—96.)



In a canning machine, a feed hopper provided with a perforated liquid channel encircling it at the top; a liquid-tank; a pump; a pipe leading from the liquid-tank to the pump; a pipe leading from the pump to the channel; a shaft adapted to actuate the pump; a rotatable distributing wheel arranged to receive material from the hopper and deliver it to the cans; a gear fixed to the distributing wheel, and a gear on the pump-actuating shaft meshing with the gear on the distributing wheel.

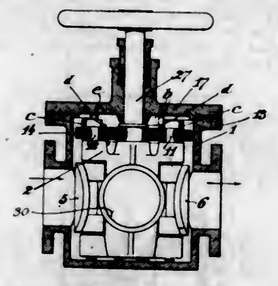
1,570,987. PROCESS FOR RESOLVING EMULSIONS. EUGENE E. AYRES, Jr., Chester, Pa., assignor to The Sharples Specialty Company, Philadelphia, Pa., a Corporation of Delaware. Filed Apr. 2, 1921. Serial No. 458,124. 7 Claims. (Cl. 87—9.)

1. The process of resolving emulsions which consists in the addition thereto of a reagent capable of forming, by reaction in the continuous phase, a substance in a state of colloidal dispersion therein and that will act as an emulsifying colloid tending to reverse the form of the emulsion.



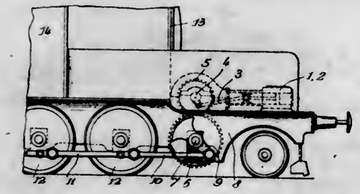
1,570,988. TYPEWRITING MACHINE. EDWIN E. BARNEY, New Rochelle, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed July 29, 1924. Serial No. 728,809. 3 Claims. (Cl. 197—71.)

1. In a typewriting or like machine, the combination of a case shift frame mounted for substantially horizontal case shift movements fore-and-aft of the machine, a carriage carried by said case shift frame near one end thereof, and contractile suspension springs on opposite sides of said shift frame near the carriage supporting



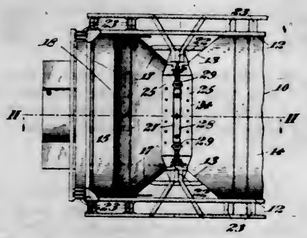
end thereof, each spring being connected at its upper end to a fixed portion of the machine and extending downwardly and inwardly therefrom to its point of connection with the case shift frame.

1,570,989. MOLD FLASK. EDWARD BOSSERT, Toledo, Ohio, assignor to National Malleable and Steel Castings Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 1, 1925. Serial No. 27,291. 6 Claims. (Cl. 22—157.)



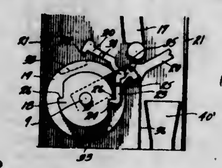
1. A molding flask comprising a cope; a drag; a cope band and a drag band having a slot and projection engagement; a pattern plate; and means for maintaining the pattern plate in centered relation to the cope and drag bands.

1,570,990. STEAM-CUT-OFF VALVE. ARNO BÖTTNER, Sudenburg, near Magdeburg, Germany, assignor to the Firm: Polte, Madgeburg, Germany. Filed July 10, 1925. Serial No. 42,785. 3 Claims. (Cl. 251—102.)



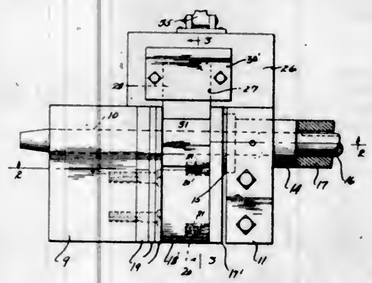
1. A stop valve of the character set forth, comprising a casing, a cover on the said casing, a rotary valve body fitted in said casing and having a transverse bore, two cut-off plates attached to the said valve body diametrically opposite each other and parallel to the bore thereof, a spindle adapted to be turned but not moved lengthwise, for moving the said valve body and controlling the said cut-off plates, two shafts mounted in the said valve body, cam-like formations on the said shafts, a toothed gearing for transmitting motion from the spindle to the said shafts and including a driving wheel on the spindle and a driven wheel on each of the two shafts, two curved ribs on the inside of the said cover, and recesses cut in the two driven wheels of the toothed gearing and adapted to cooperate with the said curved ribs, substantially as and for the purpose set forth.

1,570,991. STEAM LOCOMOTIVE. JACOB BUCHLI, Winterthur, Switzerland. Filed June 29, 1925. Serial No. 40,298. 4 Claims. (Cl. 105—37.)



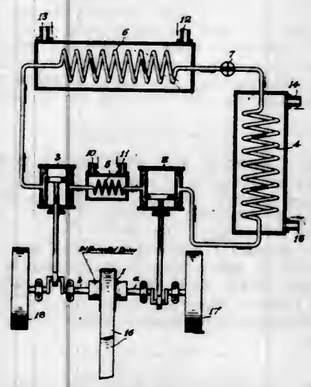
1. In a steam driven locomotive in combination, a wheeled frame provided with driving axles, a boiler having a smoke box and mounted on said frame, a steam engine having at least four cylinders arranged in front of said smoke box, a crank shaft in said steam engine, a lay-shaft, a toothed gearing interposed between said crank shaft and said lay-shaft, and a parallel crank gear operatively connecting said lay-shaft to the driving axles.

1,570,992. REGENERATIVE FURNACE. TIMOTHY BURNS, Buffalo, N. Y., assignor to Bethlehem Steel Company, Bethlehem, Pa., a Corporation of Pennsylvania. Filed Dec. 21, 1923. Serial No. 681,929. 6 Claims. (Cl. 263—10.)



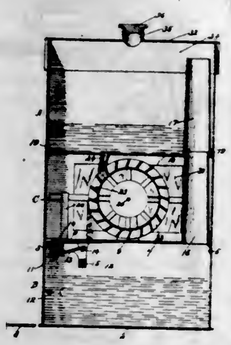
1. In a regenerative furnace, in combination, end portions having reentrant side walls, a roof, buckstays for supporting the reentrant side walls, and a beam structure connected to opposite buckstays and constituting a portion of the roof.

1,570,993. VENDING MACHINE. PEARL M. COOK, Seattle, Wash., assignor of one-half to Gus E. Rasmussen, Seattle, Wash. Filed Oct. 31, 1921. Serial No. 511,752. 1 Claim. (Cl. 194—48.)



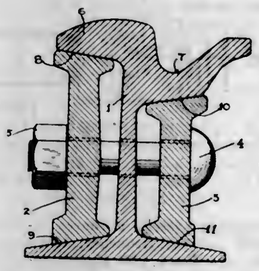
In a vending machine of the class described, the combination with a supply containing housing and a vending drum therefor, of an actuating shaft for rotating the drum an advancing cam and a locking cam fixed to the shaft and provided respectively with peripheral notches and circumferentially directed slots, an actuating lever pivotally mounted on the shaft, a spring pressed latch on the lever having a hook engageable with the notches of the advancing cam whereby the drum may be rotated forwardly, a coin chute, a pivotally supported latch lever having a hook at one end normally engageable within a slot of the locking cam to prevent rotation of the drum, and having a cup at its opposite end disposed to receive coins therein from the chute to thereby raise the hooked end to released position; said latch being so disposed relative to the locking cam that when a coin is received within the cup, that end of the latch will be rocked into engagement with the cam but will still retain the coin, and the slots of said cam being so located that rotation of the cam by the handle will advance a slot thereof into position to receive the coin supporting end of the latch to permit a further movement of the latter and thereby effect the discharge of the coin, for the purpose set forth.

1,570,994. SPRING-FORMING DIE. WILLIAM A. COOK, Mount Clemens, Mich. Filed Nov. 20, 1923. Serial No. 675,866. 6 Claims. (Cl. 153—49.)



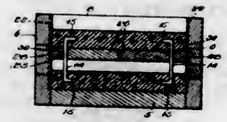
1. A spring forming die comprising a movable die; a stationary die; an aligning member adapted for aligning the work-piece; a core forming member; and means mounted on said core forming member for moving said aligning member into engagement with the work piece.

1,570,995. REFRIGERATION. KNUD DE LONY, New Haven, Conn., assignor to Johannes Schiott, Greens Farms, Conn. Filed Mar. 24, 1925. Serial No. 17,876. 4 Claims. (Cl. 62—115.)



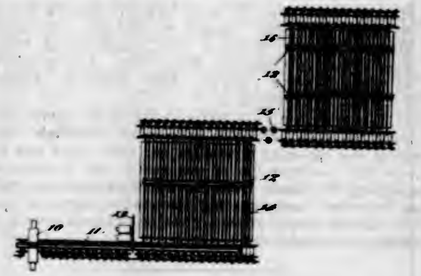
1. In a compound refrigerator having a condenser, an evaporator and two compressors with shafts driven from a common source of power, the combination of the compressor shafts with a differential drive, distributing said power whereby the ratio between the two torques imparted to each compressor is maintained constant.

1,570,996. MECHANICAL TOY. ROY K. DENNISON, East Machias, Me. Filed Feb. 2, 1925. Serial No. 6,260. 6 Claims. (Cl. 46—37.)



1. In a fluid actuated mechanical toy an enclosing case comprising an independently constructed upper section (A) having a top, bottom, sides and ends, said sides and ends at their junction with the bottom crimped to closely engage an intermediate section, an independently constructed lower section (B) having a bottom, top, sides and ends, said sides and ends at their junction with said top crimped to engage said intermediate section, an independently constructed intermediate section (C) having sides and ends only to engage with and be rigidly secured by a water tight connection at its top and bottom edges respectively to the crimped portions of the upper and lower sections (A and B) to form a single water-tight case or casing to receive and support movable devices of various types, said movable devices, and means to actuate said devices, substantially as described.

1,570,997. JOINT PLATE FOR RAILWAY RAILS. GILBERT E. DOAN, Cleveland, Ohio. Filed June 15, 1922. Serial No. 568,516. 2 Claims. (Cl. 238—243.)



1. A joint plate for railway rails having fishing contact surfaces of different areas, an aperture through the said plate outside of the longitudinal medial line of the plate, the width of the surfaces being only slightly wider than the thickness of the plate and the areas of the fishing contact surfaces varying inversely with the distance thereof from the said aperture.

1,570,998. MOLD FOR BUILDING BLOCKS AND THE LIKE. EVERETT V. EGGER, Elgin, Ill. Filed Oct. 12, 1925. Serial No. 61,881. 8 Claims. (Cl. 25—121.)

1. In combination, a mold, a sectional core dividing said mold, said core comprising an endwise removable part having a continuous edge, and an edgewise removable part extending along the side of said first part and having a notched rod receiving edge adjacent the continuous edge of said first part.

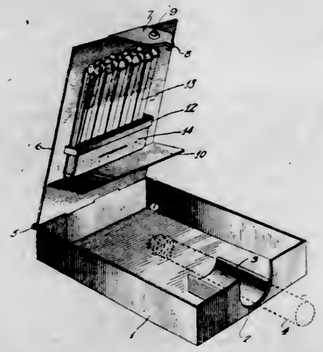
1,570,999. METHOD OF MAKING RAILS. EDWARD F. ENTWISLE, Steelton, Pa., assignor to Bethlehem Steel Company. Filed June 27, 1924. Serial No. 722,846. 5 Claims. (Cl. 80—60.)

1. In a process of making rolled shapes which tend to curve upon cooling due to irregular transverse distribution of metal, the steps of cooling the shapes to a predetermined temperature and in immediately cambering the sections as they attain the pretedermined temperature to such an extent and in such a direction that, in cooling, they will become straight.

1,571,000. ARTICLE HOLDER. JOHN P. EUSTIS, Newton, Mass.; JAMES W. EUSTIS, Cambridge, Mass.; WARNER EUSTIS, Newton, Mass.; GRANT B. EUSTIS, Watertown, Mass.; and FRANK OWEN WHITE, Brookline, Mass., executors of said John P. Eustis, deceased. Filed Mar. 7, 1923. Serial No. 623,520. 2 Claims. (Cl. 211—17.)

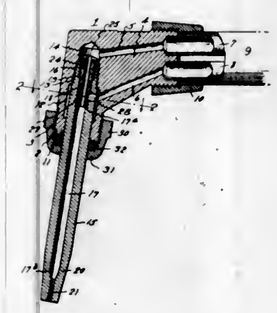
1. An article holder, comprising a strip of material which is slitted longitudinally by successive pairs of slits equidistantly spaced apart at intervals less than the length of each pair, the slitted portions hence being joined by relatively short webs, and the strip having undulations which extend continuously longitudinally thereof and are bowed away from said webs, in one direction, at opposite sides of the pairs of slits, and also having undulations which are formed from the material intermediate of the slits of the successive pairs of slits and are bowed away from said short webs in opposite direction to aforesaid undulations, the strip presenting edgewise a series of relatively large, regularly spaced and closely successive loops, and attaching means at each end of the strip.

1,571,001. SEPARABLE FASTENER. PAUL E. FENTON, Thomaston, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Oct. 29, 1924. Serial No. 746,656. 8 Claims. (Cl. 24—218.)



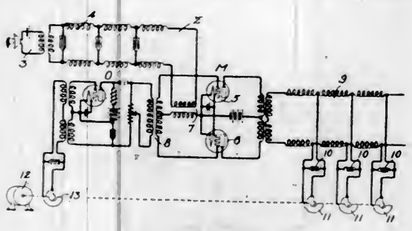
1. A separable fastener socket member, having a spring chamber and a circumferential rim therefor, and a spring provided with a loop, said spring arranged in said chamber and having a limited lengthwise bodily movement therein and provided with limbs which have a limited surface contact near their terminals with said rim, said spring also having stud-engaging jaws located between said loop and a subjacent portion of the limbs.

1,571,002. PROCESS OF RECOVERING BORAX FROM SALINE LIQUORS. ALFRED W. GAUGER and HENRY HERMAN STORCH, Westend, Calif., assignors to Burnham Chemical Company, Reno, Nev., a Corporation of Nevada. Filed Feb. 21, 1925. Serial No. 10,957. 5 Claims. (Cl. 23—41.)



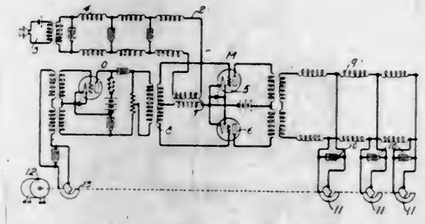
1. The process of recovering borax from liquors containing the same and other salts which comprises evaporating the liquor to crystallize out other salts and increase the concentration of metaborate and tetraborate, separating the liquor from the deposited crystals, chilling the liquor and agitating the chilled liquor in contact with a finely divided material whereby borax is rapidly crystallized out.

1,571,003. SMOKER'S ACCESSORY. ALEXANDRE GENAILLE, Ridgefield Park, N. J. Filed June 9, 1925. Serial No. 35,852. 6 Claims. (Cl. 206—41.)



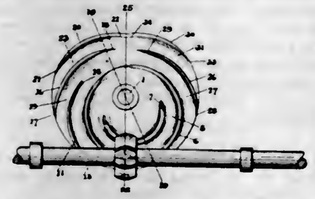
1. A smoker's accessory adapted to be normally carried on the person and embodying a receptacle having an open top, a hinged cover for closing said top, a partition carried by and extending transversely of the cover adjacent to but spaced from the hinged end thereof, and match retaining means also carried by the cover and positioned between the partition and the free end of the cover, said partition being proportioned to partition off a portion of the interior of the receptacle when the cover is closed for the purpose of segregating ashes in a position to preclude them from soiling the matches.

1,571,004. BLOWPIPE. JOHN HARRIS, Lakewood, Ohio. Filed Jan. 19, 1921. Serial No. 438,287. 5 Claims. (Cl. 158—27.4.)



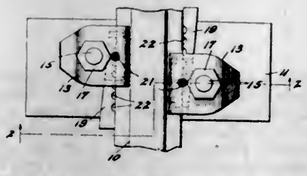
1. In a blowpipe, the combination of a head, a tip member secured to said head and provided with an expansion chamber having one or more burner outlets below and communicating therewith, a mixing device additional to said tip member and arranged to discharge its contents into said chamber, means for supplying oxygen to the bore of said mixing device, there being restricted ports extending through the wall of the mixing device from said bore, and means for supplying a combustible gas through said head and through said ports into the bore of said mixing device, the cross-sectional area of the outlet or outlets being at least as great as the cross-sectional area of the mixing device bore and at least as great as the aggregate cross-sectional areas of the ports for combustible gas communicating with said bore.

1,571,005. SECRET SIGNALING. RALPH V. L. HARTLEY, South Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 8, 1920, Serial No. 408,890. Renewed Nov. 14, 1925. 11 Claims. (Cl. 178—44.)



1. In a signaling system, a source of carrier waves of continuously varying frequency, means to modulate said waves in accordance with signals to produce upper and lower side bands of frequency components, selective circuits for selectively transmitting a portion of said frequency components to the practical exclusion of all of the components in one of said side bands, and means coordinated with the said source of carrier waves for varying the selective range of transmission of said selective circuits in step with the variations in the carrier frequency to cause said selective circuits to suppress substantially the whole of the same side band at all frequencies of the carrier wave.

1,571,006. SIGNALING SYSTEM. RALPH V. L. HARTLEY, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Original application filed Sept. 8, 1920, Serial No. 408,890. Divided and this application filed July 6, 1921. Serial No. 482,710. 14 Claims. (Cl. 178—44.)

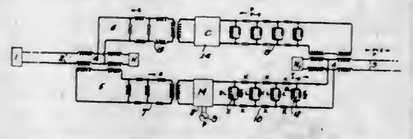


1. In combination, an electric wave filter of a plurality of sections, each of said sections comprising a shunt impedance element and a series impedance element, said impedance elements having such values as to freely transmit frequencies of a certain range while completely suppressing other frequencies, and unitary means for simultaneously and continuously varying the value of an impedance in each of said sections to continuously vary a limit of the effective transmission band of said filter.

1,571,007. MECHANICAL MOVEMENT. ALBERT HAYES, New York, N. Y., assignor to George F. McKay, Newark, N. J.; James J. Doyle administrator of George F. McKay, deceased. Filed Apr. 18, 1923, Serial No. 632,901. Renewed Dec. 19, 1925. 4 Claims. (Cl. 74—14.)

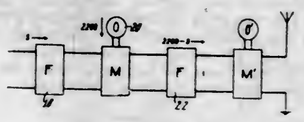
1. In a mechanical movement for converting continuous rotary motion into oscillating motion, a driving shaft, a driven shaft at right angles to the driving shaft and provided with a pinion, and a cam disc carried by the driving shaft having cam ridges on its face adapted to engage the teeth of the pinion, the cam ridges being formed on arcs concentric one with the other but eccentric to the axis of rotation of the disc.

1,571,008. RAIL-FASTENING MEANS. MEIER G. HILPERT, Bethlehem, Pa., assignor, by mesne assignments, to Bethlehem Steel Company, a Corporation of Delaware. Filed May 3, 1922. Serial No. 558,087. 12 Claims. (Cl. 238—282.)



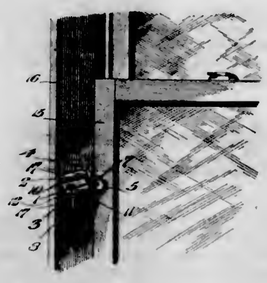
12. A rail fastening device including in combination, an anchoring means, adapted to be embedded in concrete, rail engaging blocks, means removably held by said anchoring means to clamp said blocks against the rail and means cooperating with said blocks securing the rail in a definite position of lateral adjustment.

1,571,009. LONG-WALL CONVEYER. HIRAM A. HOLZER, Kansas City, Mo., assignor to United Iron Works, Inc., Kansas City, Mo., a Corporation of Missouri. Filed Aug. 4, 1924. Serial No. 729,959. 2 Claims. (Cl. 198—129.)



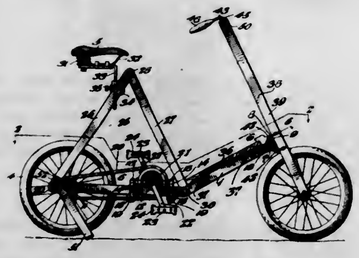
1. A long wall conveyer for mines, comprising a chain housing made up of a number of sections detachably connected together and each comprising two superimposed, shallow troughs provided with solid bottoms, a plurality of endless conveyer chains of relatively small pitch arranged to support and convey the material through the top trough of the housing and to return through the bottom trough of the housing, driving sprockets and idler sprockets at the ends of said housing around which said chains travel, the diameter of said sprockets being greater than the depth of said chain housing, and guide sprockets arranged adjacent said driving sprockets and idler sprockets and disposed so as to hold the top and bottom portions of the chains in substantially parallel relationship at the opposite ends of the chain housing.

1,571,010. SECRET SIGNALING. BURTON W. KENDALL, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 23, 1920. Serial No. 432,680. 26 Claims. (Cl. 179—1.)



1. The method of transmitting a band of audio frequency waves of given frequency range which comprises inverting the frequencies of the components thereof to produce resultant audio frequency waves restricted to a frequency range substantially equal to that of the band of waves to be transmitted.

1,571,011. SECRET SIGNALING. BURTON W. KENDALL, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Original application filed Dec. 23, 1920, Serial No. 432,680. Divided and this application filed June 19, 1925. Serial No. 38,129. 11 Claims. (Cl. 250—6.)

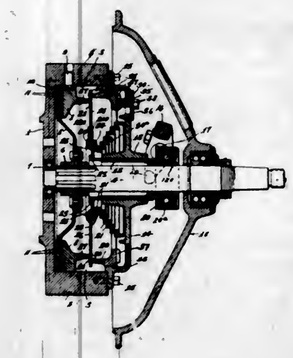


1. The method of secret radio telephony which comprises producing an inverted speech frequency band occupying approximately the same absolute frequency range as normal speech, modulating a radio wave in accordance with said inverted frequency band, and radiating said modulated waves.

1,571,012. ANTIRATTLER FOR WINDOWS. EMANUEL KEUSER, Sr., Palmyra, N. J. Filed Mar. 11, 1925. Serial No. 14,609. 4 Claims. (Cl. 292—140.)

1. As a new article of manufacture, an antirattler comprising a supporting plate, an endwise shiftable member having a lateral projection at each end thereof, a bolt having a handle arranged between said projections for partial rotation with respect to said members and a keeper for said member and said bolt fixed to said plate, said keeper being slotted to form a cam-face, through which slot said handle projects.

1,571,013. COMBINED BICYCLE AND SCOOTER. RICHARD G. LEDIG, Philadelphia, Pa., assignor to A. Mecky Company, Philadelphia, Pa., a Corporation of Pennsylvania. Original application filed Sept. 30, 1924, Serial No. 740,719. Divided and this application filed Apr. 9, 1925. Serial No. 21,761. 6 Claims. (Cl. 208—93.)

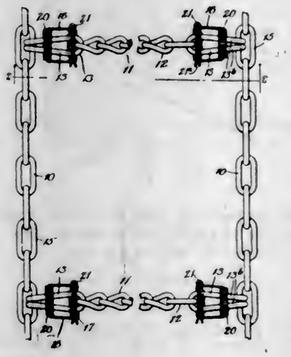


1. In a device of the character described, an upper angular frame carrying a seat, a lower frame, composed of spaced apart, rear parallel substantially horizontal members and upwardly inclined converging front members, rear wheel driving mechanism, carried on said rear members, and a centrally located scooter platform mounted on said front converging members and in advance of said rear wheel driving mechanism.

1,571,014. MOLD COMPOUND. CHARLES E. LEHR, Bethlehem, Pa., assignor to Bethlehem Steel Company. Filed May 27, 1925. Serial No. 33,287. 6 Claims. (Cl. 22—188.)

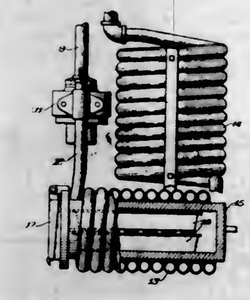
1. A compound suitable for forming foundry molds comprising a comminuted slag, foundry sand and fire clay.

1,571,015. FICTION CLUTCH FOR MOTOR VEHICLES. HERBERT J. LEIGHTON, Syracuse, N. Y., assignor to Brown-Lipe Gear Company, Syracuse, N. Y., a Corporation of New York. Filed May 7, 1921. Serial No. 467,553. 7 Claims. (Cl. 192—68.)



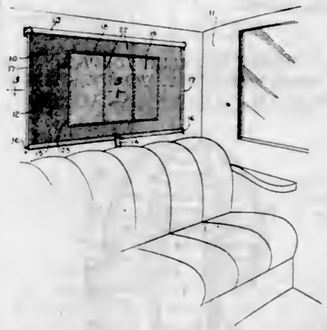
1. In a clutch, the combination with driving and driven elements, a pressure ring rotatable with and shiftable axially of one of said elements, the other of said elements including a shaft, and a friction plate rotatable with the shaft and extending between the pressure ring and the opposite surface of the element with which the ring is associated, and an operating member shiftable axially of the shaft; of an annular fulcrum carried by and rotatable with the element with which the pressure ring is associated, the annular fulcrum being adjustable axially of said element, and motion transmitting means between said operating member and the ring, said means comprising levers for moving the pressure ring, the levers engaging said annular fulcrum substantially throughout the entire circle thereof, substantially as and for the purpose described.

1,571,016. SPORTS TROUSERS. ALFRED D. LESSER, New York, N. Y. Filed Oct. 28, 1925. Serial No. 65,276. 1 Claim. (Cl. 2—228.)



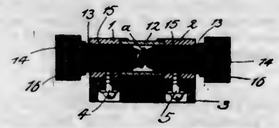
As an article of manufacture, a pair of trousers having side pockets and the usual outside and inside seams in each leg, a loosely fabricated tape insert in each of said seams, said tape being more pervious than the material of which trousers are made and also presenting spaced openings through which the trousers may be ventilated, said inserts in the outside seams extending from the lower points of the pockets substantially to the bottoms of the legs.

1,571,017. SNAP FASTENER. THOMAS H. LESTER, Highland Park, Ill. Filed Dec. 8, 1921. Serial No. 520,796. 4 Claims. (Cl. 24—232.)



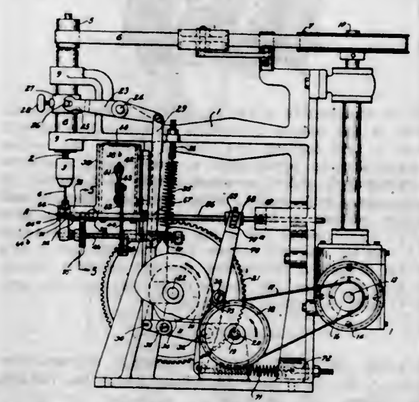
1. A snap fastener comprising an elongated chain link adapted for use as the end link of a chain, said elongated link having a hooked extremity, and a holding device having parts surrounding said elongated link and being adapted to be passed into position on said elongated link over the hooked end thereof and to engage the end link of a chain to which said elongated link is connected, said holding device being retained in place by the next adjacent link of the chain and having a part adapted to be engaged by said hooked extremity.

1,571,018. SHARP FREEZER. CARL E. L. LIPMAN, Beloit, Wis., assignor to Lipman Refrigerator Car & Manufacturing Company, Beloit, Wis., a Corporation of Delaware. Filed Aug. 20, 1923. Serial No. 658,216. 4 Claims. (Cl. 62—95.)



4. A refrigerating apparatus, including a cooling compartment and a sharp freezer therein, said sharp freezer comprising a refrigerating coil and a chamber surrounded by the convolutions of said coil, the walls of said chamber being formed of thick cast metal possessing the characteristics of low heat conductivity and high thermal capacity, and a movable door for said chamber, said chamber walls being adapted to prevent rapid fluctuations of temperature within said chamber when there is a rise in temperature in the cooling compartment.

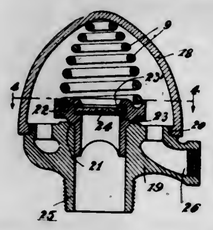
1,571,019. NONGLARE TRANSPARENT SHADE FOR AUTOMOBILES AND OTHER VEHICLES. ROSE J. H. LUCAS, East Orange, N. J. Filed July 26, 1924. Serial No. 728,486. 5 Claims. (Cl. 296—97.)



1. A rollable non-glare device for the window or opening of an automobile or the like comprising a sheet of flexible light filtering medium of rollable material and superimposed mesh material and means for securing said mesh material to said sheet of light filtering material.

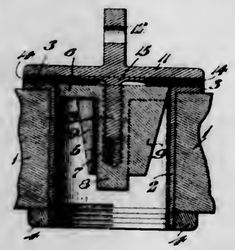
1,571,020. CRYSTAL DETECTOR FOR WIRELESS TELEPHONY AND TELEGRAPHY. WILLIAM D. McGOWAN, Jersey City, N. J. Filed Sept. 16, 1922. Serial No. 588,609. 4 Claims. (Cl. 250—31.)

1. In a device of the character described, two spaced cylindrical electro-conductive bearings, a cylindrical insulating member connecting the bearings, an electro-conductive brush support slidable within each bearing and a plurality of resilient electro-conductive brush bristles carried by each brush support inwardly of the device abuttable upon a freely movable crystal detector.



1,571,021. DRILLING MACHINE. PETER MEYER, Newark, N. J. Filed July 10, 1924. Serial No. 725,137. 7 Claims. (Cl. 77—5.1.)

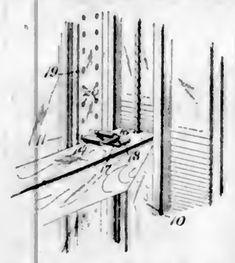
2. A drilling machine of the character specified comprising means to rotate and reciprocate a drill, supply means for pins having flat surfaces, means to feed the



pins to drilling position, and means to cause the pins to present their flat surfaces in drilling position comprising one or more movable blocks having an inclined surface to encounter the flat surfaces of the pins to rotate them into drilling position.

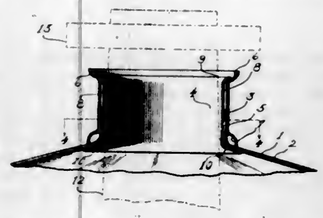
1,571,022. PRESSURE-RELIEF DEVICE. CASIN W. OBERT, Mount Vernon, N. Y. Filed Mar. 21, 1923. Serial No. 626,715. 3 Claims. (Cl. 137—53.)

1. A pressure relief valve comprising a casing having an inlet aperture, a discharge aperture and a valve seat between said apertures, a valve member cooperating with said seat for closing the communication between said apertures, means for maintaining said valve on its seat under normal fluid pressures exerted through the inlet aperture and yieldable to permit said valve to open when a predetermined pressure is reached, cushioned means normally movable with said valve member but adapted to duplture by the pressures when it exceeds the normal increases of pressure in the event that the valve fails to open and move from its seat and is prevented from operating normally.



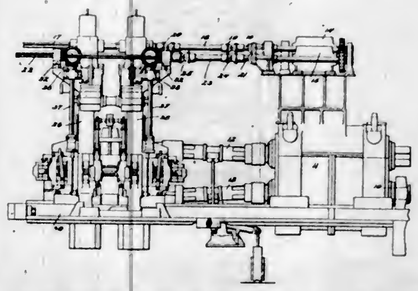
1,571,023. OUTLET PLUG FOR DYE VATS. MICHAEL PEKORA, Philadelphia, Pa. Filed Feb. 27, 1923. Serial No. 621,543. 2 Claims. (Cl. 217—110.)

1. In combination a dye vat having a flat bottom an outlet in the bottom thereof, a flanged hollow thimble fitted to said opening and secured therein the bottom of said thimble being open, a plug having a central screw-threaded socket arranged within said thimble to close same, said socket being operable through said thimble bottom, a cap having a screw-threaded stem engaging said socket and a flat gasket arranged between said plug top and cap bottom and upon the top of said trimble flange for preventing the vat contents attacking said cap screw, the weight of the vat contents serving to hold said plug in position.



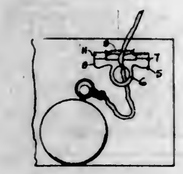
1,571,024. WINDOW LOCK. WALTER J. SCHEID, Newark, N. J. Filed July 16, 1924. Serial No. 726,255. 2 Claims. (Cl. 292—156.)

1. A window lock comprising a plate having parallel sleeves formed on its side edges and with its back edge provided with a stop, and a U-shaped bolt in the sleeves and adapted to be withdrawn therein when the rear end



of the bolt engages the stop and to be projected therefrom when in locking position, and a plate having recesses to receive the ends of the bolt.

1,571,025. LAMP-SHADE VENT RING. ADOLPH SCHERER, Philadelphia, Pa. Filed Feb. 1, 1923. Serial No. 616,428. 3 Claims. (Cl. 240—108.)



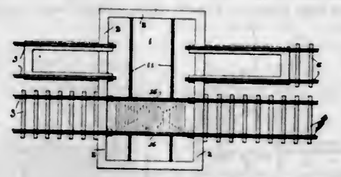
1. In combination with a lamp shade having a vent opening in its top, an outer ring mounted around the opening on the outer side of the shade, and an inner ring mounted within the opening and having curved flared ends adapted to be forced against the upper end of the outer ring and the inner side of the shade to clamp the shade between the rings.

1,571,026. ROLL-CHANGING RACK. PAUL AUGUST SCHULZ, Bethlehem, Pa., assignor to Bethlehem Steel Company, Bethlehem, Pa., a Corporation of Pennsylvania. Filed Nov. 17, 1921. Serial No. 515,863. 12 Claims. (Cl. 80—1.)

12. In apparatus for changing rolls in rolling mills having roll adjusting means and roll-supporting housings separable lengthwise of the horizontal rolls, the combination of sole plates for supporting mill housings, a cross-head movable lengthwise with respect to a housing, a plurality of screws arranged parallel to the sole plates and engaging the cross-head, a drive shaft, gearing between the drive shaft and each of said screws, supporting structure arranged above one end of the sole plates, a pair of drive shafts carried by the supporting structure and adapted for connection to the adjusting means for the horizontal and vertical rolls of the mill, a train of gearing, clutches between elements of said train and each of the said shafts of said pair of shafts, a source of power, power transmitting means between the source of power and said gear train, and clutch means between the power transmitting means and the drive shaft for said screws.

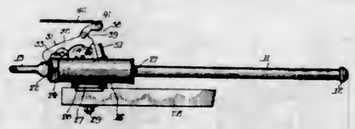
1,571,027. WATCH GUARD. WILLIAM P. TALBOT, Millbrook, N. Y. Filed July 23, 1925. Serial No. 45,483. 1 Claim. (Cl. 2—249.)

A watch guard made up of a single piece of flat stock, comprising a body portion, having an opening therein through which a watch chain is adapted to pass, a spring coil fastening element at one end of said body portion, a bent over portion on said body portion to cover the spring coil fastening element, a pointed portion on the other end of said fastening element, a bent over portion on said body portion to cover the point on said fastening element, and an offset portion intermediate of said fastening element.



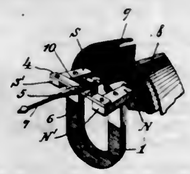
1,571,028. GREASE GUN. JOSEPH W. THOMAS, New York, N. Y. Filed May 21, 1925. Serial No. 31,783. 5 Claims. (Cl. 221—47.3.)

2. A grease gun including a cylinder, a pair of end walls each having a flange encircling said cylinder with the edge portion spaced therefrom, one of said end walls being removable whereby a jacket may be slipped onto said cylinder, and held between and beneath said flanges, a piston having a rod projecting through one of said end walls, the other of said end walls having a dispensing outlet.



1,571,029. HYDRAULIC JACK. WILLIAM J. WATERS, Elizabeth, N. J., assignor to The Watson-Stillman Co., New York, N. Y., a Corporation of New York. Filed Sept. 18, 1924. Serial No. 738,350. 42 Claims. (Cl. 104—32.)

1. In a drop pit jack, in combination a wheeled carriage, a motor supported by the wheeled carriage, means for driving the wheeled carriage by the motor, an hydraulic jack supported by the carriage, a transfer table

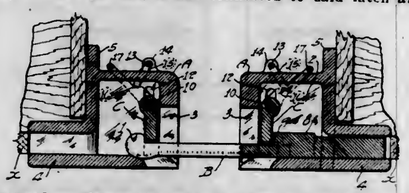


above the jack carrying load-receiving rails and adapted to be engaged and lifted by the jack or disengaged at will and means for operating the jack by the motor.

1,571,030. TRACTOR HITCH. IRA A. WEAVER, Springfield, Ill., assignor to Weaver Manufacturing Company, Springfield, Ill., a Corporation of Illinois. Filed Apr. 10, 1924. Serial No. 705,441. 9 Claims. (Cl. 280—33.16.)

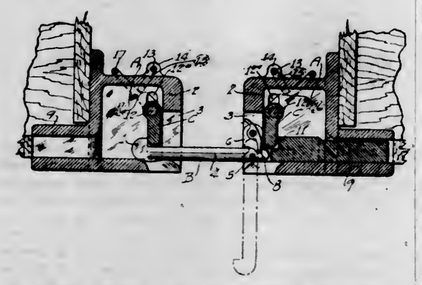
1. In a hitch of the character described, the combination of a relatively-movable first and second means, one adapted to be secured to a tractor and the other designed to be fastened to an agricultural implement, means to lock said first and second means together whereby the pull of the tractor is exerted on the agricultural implement, means to automatically release said locking means upon the occurrence of abnormal conditions, and means to automatically again render said locking means operative upon movement of said first and second means toward one another.

1,571,031. SPRING-MOTOR INDICATOR. MAXIMILIAN WEIL, New York, N. Y. Filed Jan. 6, 1921, Serial No. 435,541. Renewed Apr. 8, 1925. 30 Claims. (Cl. 185—44.)



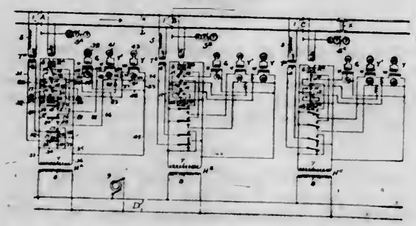
8. The combination of a coiled motor spring and a device provided with a magnetic field extending within a portion of said spring and responsive to the variations in reluctance effected by the extent of coiling and uncoiling of said motor spring.

1,571,032. CAR COUPLER. JOSEPH WESOLIK, Belleville, Ill., assignor of one-half to Henry H. Gerling, Belleville, Ill. Filed Mar. 23, 1925. Serial No. 17,708. 4 Claims. (Cl. 213—176.)



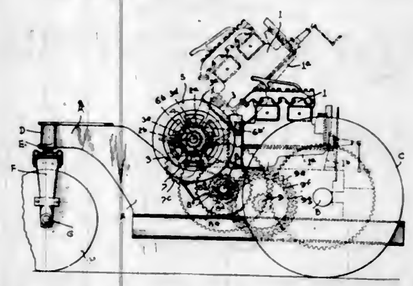
1. In a car coupling, a coupler member adapted to be mounted on a car and provided with a box-like portion, a draw bar removably mounted in said member and provided with a shoulder, a latch inside of the box-like portion of said member arranged to co-operate with said

shoulder to prevent the draw bar from pulling out of said member, laterally-projecting trunnions on said latch arranged in elongated slots in the side walls of said box-like portion, a bail connected to said latch and



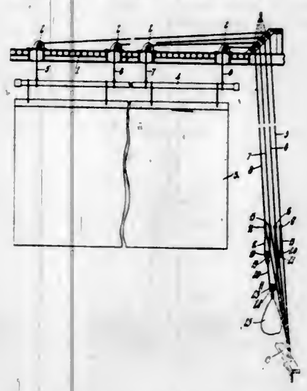
arranged on the outside of said member for bodily shifting said latch, and a rock shaft on said member provided with arms that cooperate with said bail to retain said latch in operative position.

1,571,033. CAR COUPLER. JOSEPH WESOLIK, Belleville, Ill., assignor of one-half to Henry H. Gerling, Belleville, Ill. Filed Mar. 23, 1925. Serial No. 17,709. 4 Claims. (Cl. 213—176.)



1. A car coupling, consisting of two coupler members adapted to be arranged in opposed relation, a draw bar removably mounted in one of said members and provided with an adjustable front portion that can be arranged in an inoperative position, means for holding said front in its operative position, a latch in one of said coupler members that retains the draw bar in same, and a similar latch in the other coupler member arranged so that the front end of the draw bar will automatically interlock with same during the operation of coupling two cars together.

1,571,034. RAILWAY SIGNALING. HENRY S. YOUNG, Wilkinsburg, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed May 5, 1923. Serial No. 636,827. 8 Claims. (Cl. 246—34.)

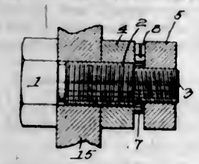


1. A railway signaling system comprising a step-down lighting transformer, a signal lamp connected to the secondary of said transformer, a circuit for the primary of said transformer including a source of energy, train governed means for interrupting said circuit and a resistance whereby the voltage of the source is reduced to a safe value for said primary, a second signal lamp having a circuit including the said source, and a second train controlled means for interrupting the last-mentioned circuit.

1,571,035. MOTOR VEHICLE. ANDREW W. AITKEN, Springfield, Ohio, assignor to The Buffalo-Springfield Roller Co., Springfield, Ohio, a Corporation of Ohio. Filed Dec. 12, 1924. Serial No. 755,522. 27 Claims. (Cl. 180—27.)

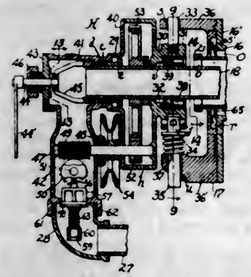
1. In a motor vehicle of the character specified, a frame, a shaft mounted on the frame, a motor mounted on the frame, the motor being swingable concentric to said shaft; means for driving the shaft by the motor, and change speed gearing between the shaft and the driving axle of the vehicle.

1,571,036. HOISTING AND EQUALIZING APPARATUS. ALLEN A. ANGUISH, Everett, Mass. Filed Mar. 24, 1925. Serial No. 17,886. 4 Claims. (Cl. 254—14.)



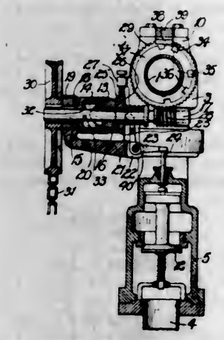
1. A hoisting and equalizing apparatus comprising, in combination, a movable member, a plurality of hoisting ropes attached to said movable member, pulleys over which said ropes extend, flexible members forming loops and attached at opposite ends thereof to separate ones of said hoisting ropes, a pulley mounted upon each of said loops, a flexible member also forming a loop and attached at opposite ends thereof to said last-named pulleys, and a weight suspended upon said flexible member.

1,571,037. NUT LOCK. ARTHUR F. BARTLETT and WILLIAM F. STRAUB, Fitchburg, Mass. Filed Sept. 30, 1925. Serial No. 59,606. 3 Claims. (Cl. 151—17.)



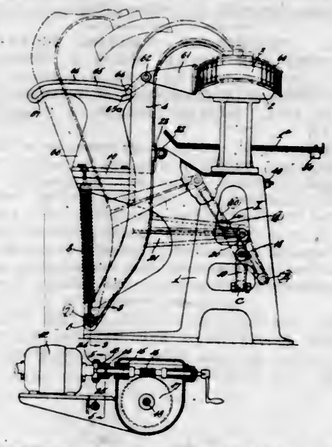
1. In a nut lock mechanism, the combination with a bolt or shaft having contiguous oppositely threaded portions, an inner nut and an outer nut, of a reduced por-

tion on one nut having peripheral ratchet teeth, a spring pressed pawl on the face of the other nut to co-



operate with said ratchet teeth, and a pivot for said pawl adapted to receive the pressure between said nuts, leaving said pawl free to be turned.

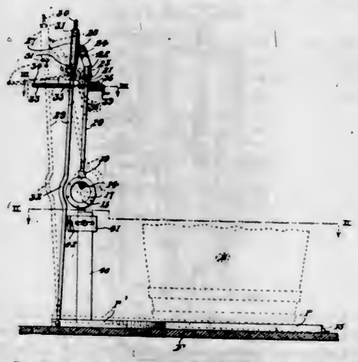
1,571,038. SOOT BLOWER. LEO JOHN BAYER, St. Louis, Mo. Filed May 8, 1922. Serial No. 559,290. 2 Claims. (Cl. 122—392.)



2. In combination with a boiler and setting therefor, a soot blower unit comprising a blower pipe, a steam supply pipe therefor, an operating head communicating with the blower pipe and supply pipe, and means for securing the soot blower unit to the boiler wall comprising a wall plate having an opening for receiving the blower pipe, a pair of spaced, vertically alined lugs projecting from said wall plate, and means for flexibly connecting the operating head to the wall plate comprising a universal joint arranged between the head and the bottom lug and a pin and slot connection between the head and the upper lug.

1,571,039. SOOT BLOWER. LEO JOHN BAYER, St. Louis, Mo. Filed Jan. 4, 1924. Serial No. 684,361. 4 Claims. (Cl. 122—392.)

1. In a soot blower for boilers, a rotatable blower unit, a steam supply pipe therefor, a valve for controlling the supply of steam to the blower unit, means for rotating the blower unit, means associated therewith for opening said valve, and means for automatically acting on said valve opening means, when said blower rotating means are released, to permit said valve to close.

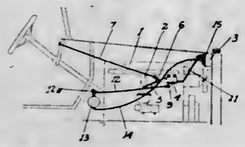


1,571,040. POWER PRESSING MACHINE. DANA H. BENJAMIN and HOWARD W. BENJAMIN, Cleveland Heights, Ohio, assignors to The American Laundry Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Jan. 16, 1925. Serial No. 2,859. 12 Claims. (Cl. 68—9.)

8. A garment press, comprising a frame, a stationary work supporting bed, a pressing head mounted in said frame for swinging motion about a horizontal axis into and out of registration with said bed and vertical pressing motion relative thereto, movable guarding means for the space between said members and means actuated by relative head and bed motion for operating said guarding means.

12. A garment press, comprising a frame, a stationary work supporting bed, a pressing head, a support therefor extending downwardly past the bed and at its lower end provided with a horizontal shaft having limited vertical movement in the frame yielding supporting means for said support, and means for swinging said support about the axis of said shaft to move the head into and out of registration with the bed and for moving said shaft vertically to produce vertical pressing motion of the head toward the bed.

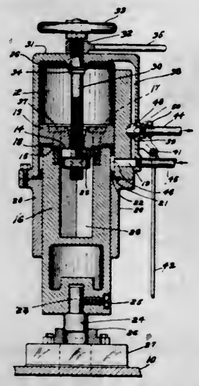
1,571,041. ART OF PACKAGING FRUIT AND THE LIKE. HUGH R. BLACK, Hall, N. Y. Filed Dec. 27, 1923. Serial No. 683,015. 32 Claims. (Cl. 259—75.)



10. In the packaging of fruit and the like, wherein the contents of the container are caused to settle into transportable condition by a succession of jolts applied to the container during filling of the latter, and wherein

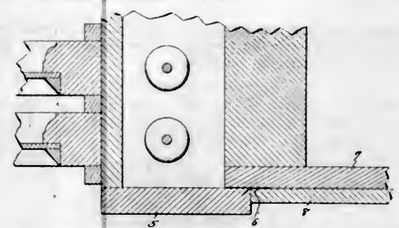
the jolting action is provided by moving the container support upwardly out of a normal position and permitting it to drop to its normal position, the method of producing a graduated settling action of the contents, said method consisting in increasing the intensity of the applied jolt as the filling proceeds by progressively increasing the distance through which the support drops.

1,571,042. PROCESS OF TREATING FILTRATION RESIDUES FOR REUSE. PERCY A. BOECK, Los Angeles, Calif., assignor, by mesne assignments, to The Celite Company, a Corporation of Delaware. Filed Jan. 19, 1921. Serial No. 438,520. 8 Claims. (Cl. 252—2.)



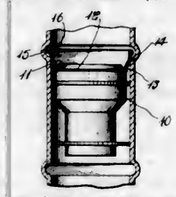
1. The process of recovering diatomaceous earth filter aids after use in filtration of liquids containing impurities, which comprises drying such diatomaceous earth filter aids together with impurities removed from the liquid, and then heating the dried residue for a sufficient time to increase the filtration efficiency without removing any substantial amount of chemically combined water from the diatomaceous earth, said residue being reduced to fragmentary condition before the heating operation.

1,571,043. WATER-CONSERVING SYSTEM FOR GAS-ENGINE RADIATORS. FRED CLASING, Sacramento, Calif. Filed Apr. 28, 1924. Serial No. 709,709. 7 Claims. (Cl. 123—174.)



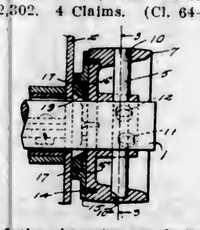
1. A system for conserving the water in the radiators of gas-engines comprising a tank, passage means leading from the radiator above the normal water level therein to said tank, a return pipe from the tank to the radiator at a point in the latter below the normal water level therein, means for inducing a suction in said passage means away from the radiator whereby a negative pressure will be maintained in the latter, and valve means for said return pipe normally closed and arranged to open only when the water in the radiator drops below a certain level.

1,571,044. POWER PRESS. ARTHUR V. DA COSTA, Providence, R. I., assignor, by mesne assignments, to Providence Press Machinery Co., Inc., a Corporation of Rhode Island. Filed Aug. 31, 1922. Serial No. 585,409. 3 Claims. (Cl. 121—12.)



1. In a power press, a cylinder, a piston in said cylinder carrying a plunger member provided with an elongated chamber, a stop nut slidably but non-rotatably mounted in said chamber, a threaded spindle extending through said cylinder head and said piston into said nut, means whereby said spindle may be rotated to adjust said nut thereon to limit the outward stroke of the piston, and a valve for controlling the reciprocating action of said piston.

1,571,045. WINDOW FRAME. SAMUEL L. DENNIS, Norfolk, Va. Filed Apr. 9, 1925. Serial No. 21,941. 1 Claim. (Cl. 20—11.)

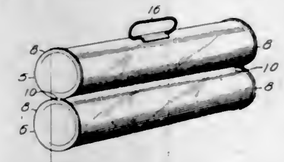


A window-casing weather-strip consisting of a bendable strip of sheet metal having one of its longitudinal edges anchored in a kerf formed in the outside casing-strip of the window-frame, said kerf being located at the inner corner of the outer edge of the casing-strip so that the free portion of the strip will project obliquely beyond the edge of the casing-strip so as to flatten out against the storm-sheathing when the frame is positioned in the building and be covered by the finishing lumber.

1,571,046. CUP-PACKING GASKET FOR OIL-WELL-CEMENTING PLUGS. ZEB ALLEN DYER and HORACE H. DUBENDORF, Long Beach, Calif., assignors to Frederick W. Huber, Riverside, Calif. Filed May 17, 1924. Serial No. 714,128. 1 Claim. (Cl. 166—13.)

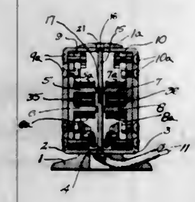
A cup packing consisting of a flat circular body portion having an upstanding peripheral flange, the lower portion of said flange being arranged approximately perpendicularly to the body, the portion of the flange above the body portion flaring outwardly in a reverse curve and gradually decreasing in thickness from the lower portion upwardly, said flange terminating in a beading at its upper edge, the beading being of greater thickness than the material just below the beading.

1,571,047. ADJUSTABLE FAN-BELT PULLEY. HAMMAN L. FRENCH, Piedmont, Tenn. Filed May 10, 1924. Serial No. 712,302. 4 Claims. (Cl. 64—17.)



1. A pulley of the character set forth provided with axially spaced series of radially alined openings and with a boss provided with a conical recess, and a washer provided with a conical front side entering said recess.

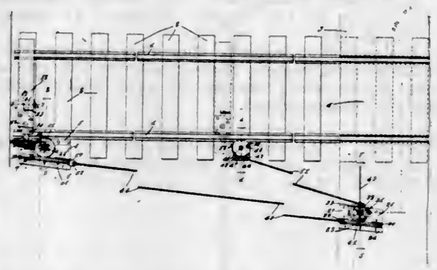
1,571,048. TREATMENT OF FIBROUS MATERIALS. JAMES RANKIN GARROW, London, England, assignor, by mesne assignments, to Novocrete & Cement Products Company Limited, London, England, a Corporation of Great Britain. Filed Aug. 28, 1924. Serial No. 734,816. 7 Claims. (Cl. 91—68.)



6. Process of treating fibrous materials which consists in rendering a solution of a normal metallic salt sensitive in regard to its tendency to precipitate a mineral compound therefrom by the addition of an alkaline substance to an extent such that a slight excess will provide a permanent precipitate, impregnating the fibrous material with the sensitive solution, and then bringing into contact the impregnated material with an alkaline substance, whereby a solid compound is precipitated in and on the material.

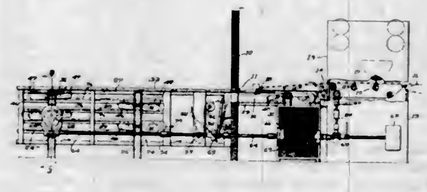
1,571,049. MULTI-UNIT PACKAGE. FREDERICK D. GATCHELL, New York, N. Y. Filed June 12, 1924. Serial No. 719,529. 1 Claim. (Cl. 220—1.)

A multi-unit package comprising independently sealed containers having end margins and arranged with such end margins in point contact, and a rupturable bonding means uniting such end margins at their points of contact, the remaining lengths of the containers being free of each other.



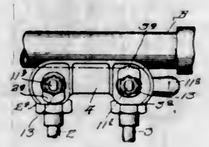
1,571,050. ELECTROMAGNETIC DRIVING APPARATUS. WILLIAM H. GERNS, East Orange, N. J., assignor, by mesne assignments, to Brandes Laboratories, Inc., Newark, N. J., a Corporation of New Jersey. Filed Apr. 29, 1925. Serial No. 26,707. 3 Claims. (Cl. 179—100.1.)

3. An armature member for electromagnetic apparatus comprising in combination a substantially ring shaped portion, a tongue extending inwardly from said ring shaped portion and an enlarged central portion formed on said tongue, said tongue being arranged to fulcrum about the junction of said tongue and said ring shaped portion whereby mechanical movement of said armature may be secured for developing sound vibrations therefrom.



1,571,051. CROSSING SIGNAL. CHARLES GRAGERT, Ada, Minn. Filed Sept. 5, 1925. Serial No. 54,762. 4 Claims. (Cl. 246—293.)

1. A railroad crossing signal of the character described, comprising a connected rack and gear mechanism, a contact stud carried by said gear, a trip element designed to be carried by a train to strike said stud, a signal element, a rack and gear mechanism controlling said signal element, connecting means between the said

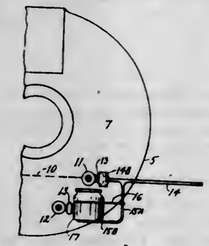


mechanisms, and means operable by said trip element and connected with said last mentioned mechanism to restore the said signal element to non-signaling position after the setting of the same.

1,571,052. COATING AND DRYING MACHINE. JESSE W. GREER, Cambridge, Mass. Filed Sept. 11, 1922. Serial No. 587,324. 4 Claims. (Cl. 198—30.)

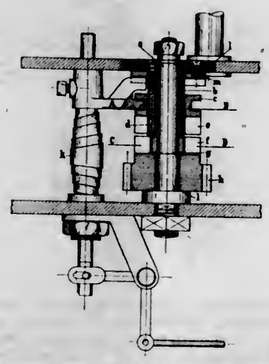
1. A confectionery drying apparatus, comprising in combination an endless conveyor consisting of trays connected to travel as a unit lengthwise of the apparatus along different runs, means for maintaining the trays in a horizontal position while traveling lengthwise of the runs and from one run to the other, and an endless carrier extending over an end portion of the upper run of the conveyor and having an upper run that terminates in close proximity to the surface of the upper run of the conveyor to deposit articles gently upon each tray as it reaches the upper run.

1,571,053. GAS RANGE. AUGUSTUS F. HARTER, Oak Park, Ill., assignor to Cribben & Sexton Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 6, 1924. Serial No. 730,899. 4 Claims. (Cl. 126—42.)



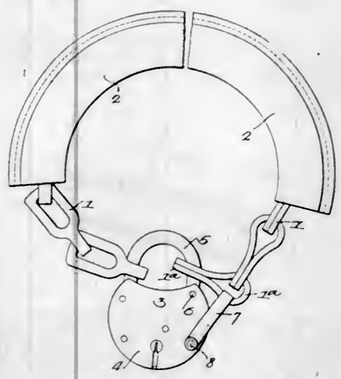
1. The combination of a pair of gas-cock casings, taper gas-cocks working therein having handles at one end and having at the other end extensions equipped with cams rigid therewith, springs interposed between said casings and cams, and a cam-shifted lock-plate connected with said extensions and serving, when either gas-cock is open, to lock the other gas-cock.

1,571,054. METHOD FOR REMOVING SILICA FROM ORE LEACHES. MARTIN HOSENFELD, Berlin-Siemensstadt, Germany, assignor to Siemens & Halske, Aktiengesellschaft, Siemensstadt, near Berlin, Germany. Filed Jan. 26, 1925. Serial No. 4,944. 16 Claims. (Cl. 23—182.)



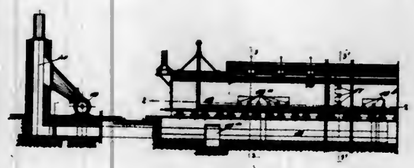
5. A method of producing silica which comprises mixing a powdered insoluble substance with the jelly setting from an ore leach, removing the water, and pulverizing the resulting product.

1,571,055. OIL-GAUGE-TESTING DEVICE. MELVIN M. HUTCHINS, St. Paul, Minn. Filed Apr. 2, 1925. Serial No. 20,204. 1 Claim. (Cl. 137—139.)



In an oil valve device for opening and closing pet-cocks in oil reservoirs of the class described, an elongated main bar with a handle at one end, valve stem engaging and manipulating means at the other end, means secured to said main bar and adjacent its valve engaging end for supporting and holding a receptacle with its opening adjacent said valve engaging means, said main bar adapted to be turned by means of the handle to open the pet-cock and, simultaneously to position the vessel to catch oil escaping from the pet-cock, said vessel comprising a jar of transparent material, said vessel supporting means comprising an L-shaped member secured to the main bar and extending at an angle from the main bar thence lateral to the main bar to support the bottom of the vessel, and said vessel holding means comprising a pair of oppositely disposed spring arms secured to the angular arm of the supporting member and adapted to simultaneously engage opposite sides of the vessel.

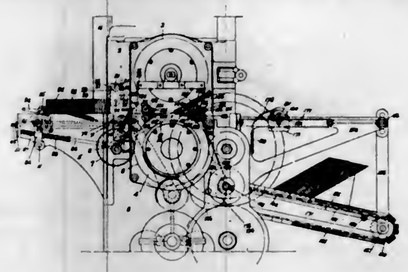
1,571,056. COUPLING FOR SINGLE-THREAD LACE-BRAIDING MACHINES. GUSTAV KRENZLER, Barmen, Germany. Filed Mar. 8, 1922. Serial No. 542,116. 4 Claims. (Cl. 96—11.)



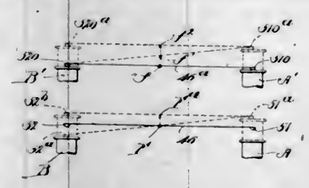
1. In a lace braiding machine, a pillar having a part of normal diameter and a part of reduced diameter, a carrier driver with a bushing on it surrounding the reduced part of the said pillar, a clutch member slidable but not rotatable on the said bushing, a driver wheel adapted to be coupled with the said clutch member and surrounding the said pillar on its part showing the normal diameter, and a ring of a greater diameter than the normal diameter of the said pillar supporting the said bushing and supported by the said normal part of the said pillar.

1,571,057. CHAIN AND LOCK THEREFOR. WALDEMAR KROLL, Philadelphia, Pa., assignor, by mesne assignments, to The Yale & Towne Manufacturing Company, Stamford, Conn., a Corporation of Connecticut. Filed Dec. 6, 1923. Serial No. 678,959. 4 Claims. (Cl. 70—17.)

1. The combination of a chain; a lock having a body portion and a shackle, the shackle being arranged to connect links at the two ends of the chain; and means for retaining the shackle in one of said links when the lock is open.



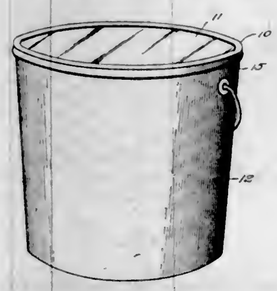
1,571,058. KILN AND LIKE STRUCTURE, AND HEAT TREATMENT. NICOLA LENGERSDORFF, Dresden, Germany. Filed Feb. 9, 1924. Serial No. 691,688. 11 Claims. (Cl. 25—142.)



1. The process of treating goods or material, which consists in heating them by flames, then carrying them away from such flames, into contact with air to be heated by such hot material, and then carrying such heated air, in amounts, to the several flames, to support combustion, the amount of heated air delivered to each flame being independently regulated with respect to the flame which it serves.

1,571,059. ROTARY STAMPING PRESS FOR BOOKBINDERS' USE. JOHN MURRAY, London, England. Filed Jan. 4, 1923. Serial No. 610,671. 12 Claims. (Cl. 101—23.)

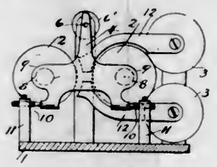
1. In a rotary stamping press for bookbinders' use; in combination, means for receiving book covers of different sizes and thicknesses and for permitting their discharge singly, means for moving the covers towards the stamping cylinders, means for aligning the moving covers, means for feeding the covers into the stamping cylinders, means for registering the covers on the impression cylinder, and means for finally moving the covers from the stamping cylinders and for delivering them in a finished condition.



1,571,060. FULL-CAN-CHANGER STOP MECHANISM. ROBERT E. NAUMBURG, Winchester, Mass. Filed July 1, 1925. Serial No. 40,966. 18 Claims. (Cl. 19—164.)

2. Apparatus of the class described comprising means for delivering textile fibre, a series of receptacles, means for moving each receptacle as filled away from the delivery means and for substituting an empty receptacle for the filled one, and means responsive to filling of the last receptacle only of said series for stopping the delivery means.

1,571,061. FOOD COVER. LEIGH G. NELSON, Chicago, Ill. Filed Apr. 23, 1923. Serial No. 633,958. 1 Claim. (Cl. 220—82).

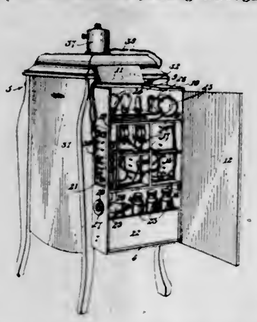


A device of the character described, comprising a ring having a substantially flat portion with a downwardly turned flange at its outer edge, and a downwardly projecting crimped flange at the inner edge supporting a circular disk of transparent material, the bend in said crimped flange being relatively large and springy and its extreme inner edge being bent downward away from said transparent material, whereby said transparent material is clamped in said crimped flange.

1,571,062. SPURRED PICKEROON. DAVID H. PEAVEY, Brewer, Me. Filed Mar. 27, 1925. Serial No. 18,851. 5 Claims. (Cl. 294—19.)

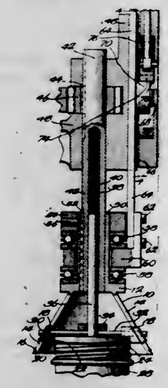
1. An implement for the purpose set forth comprising a hollow wedge-shaped head adapted to be mounted on one end of a handle member, a one-piece laterally extending tapered pick point having its inner end integral with the forward end of and flush with the outer and inner sides of said head, said point inclining slightly towards the inner side of the head, a laterally extending spur base integral with the rear end of said head at the outer portion thereof, and a tapered spur integral with the forward side of said base and offset with respect to and projecting beyond the outer side of the head, said spur disposed at a slight outward inclination with respect to the vertical axis of the head.

1,571,063. TELEGRAPH RELAY. GEORGE L. RAWDON, Lakewood, Ohio. Filed Nov. 10, 1923. Serial No. 673,912. 2 Claims. (Cl. 200—98.)



2. In a relay, the combination with a main electro-magnet and pole pieces and a holding electro-magnet of a support therefor, a vibratable armature lever common to both magnets and pivotal suport therefor at one end therefor, and front and rear contact points therefor, and laterally extending pole pieces for said holding magnet, the free extremities of said pole pieces being opposed to said common armature lever, said main electro-magnet being positioned horizontally on said base and said holding electro-magnet being supported upon one longitudinal edge adjacent to with one side of said main elecero-magnet, the pole pieces of said holding electro-magnet encircling said adjacent side of said main electro-magnet, said armature being provided with lateral extensions opposed to the poles of said main electro-magnet, the central portion thereof being opposed to the poles of said holding electro-magnet.

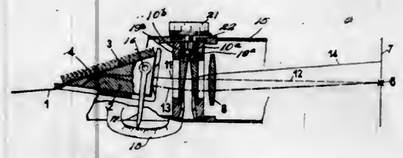
1,571,064. WIRELESS-RECEIVING-APPARATUS CABINET. FREDERICK W. RENWICK, Camden, N. J., assignor of one-half to John S. Latta, Philadelphia, Pa. Filed July 24, 1924. Serial No. 727,932. 1 Claim. (Cl. 45—52.)



In a device of the type described, a cabinet adapted for housing music producing mechanism, a cabinet adapt-

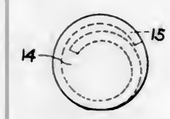
ed to house a wireless receiving set, a portion of one wall of said latter cabinet being constructed for the reception of jacks and other electrical connector elements, and tubular members passing through portions of

both of said cabinets for connecting the receiving set cabinet to the music mechanism housing cabinet and for permitting wires attached to the electric connector elements to pass therethrough into the last mentioned cabinet.



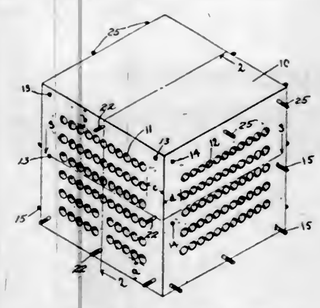
1,571,065. CLUTCH FOR BOTTLE-SCREW-CAPPING MACHINES. ARTHUR I. RISSER, Chicago, Ill., assignor to U. S. Bottlers Machinery Co., Chicago, Ill., a Corporation of Illinois. Filed Feb. 10, 1923. Serial No. 618,277. 5 Claims. (Cl. 226—88.)

1. In mechanism of the class described, a reciprocable shaft, a plurality of arms radiating therefrom, a gripping jaw slidable on each arm, means having wedging engagement with said jaws operating upon movement of said shaft in one direction to move said jaws radially on said arms towards one another and upon movement of said shaft in an opposite direction to move said jaws away from one another, and means normally urging said shaft in a direction with respect to said means to move said jaws away from one another.



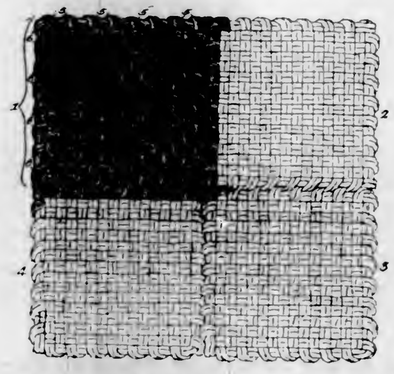
1,571,066. REFRACTOMETER. HANS SCHULZ, Grosslichterfelde-Ost, near Berlin, Germany, assignor to Optische Anstalt C. P. Goerz Aktiengesellschaft, Friedenau, near Berlin, Germany. Filed Mar. 21, 1924. Serial No. 700,784. 2 Claims. (Cl. 88—14.)

1. A fluid-testing refractometer with a temperature compensating device, comprising an adjustable prism having a reflecting surface adapted to be brought into contact with the fluid to be tested, a lens disposed in the path of the rays coming from said reflective surface of the measuring prism, a wedge-shaped adjustable optical device disposed in the path of the rays between the measuring



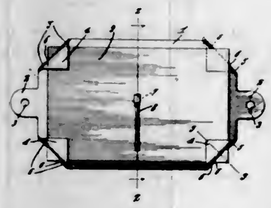
prism and said lens, the said adjustable optical device having coordinated thereto a setting scale and a mark carrying member arranged in the image plane of the instrument.

1,571,067. DEMIAMBER RIM AND PROCESS FOR PRODUCTION OF SAME. ELMER L. SCHUMACHER, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Jan. 24, 1925. Serial No. 4,526. 7 Claims. (Cl. 18—48.)



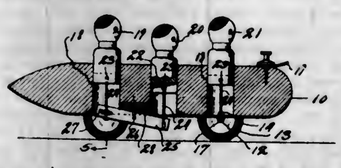
2. The process of producing a composition rim for ophthalmic lenses, which consists in forming a flat spiral strip from the center cut from the front of a composition frame, expanding this strip to encircle a lens, and subsequently bevelling and grooving the same.

1,571,068. HEAT INTERCHANGER. CECIL W. STANCLIFFE, New York, N. Y., assignor to Stancliffe Engineering Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 7, 1922. Serial No. 580,073. 10 Claims. (Cl. 257—242.)



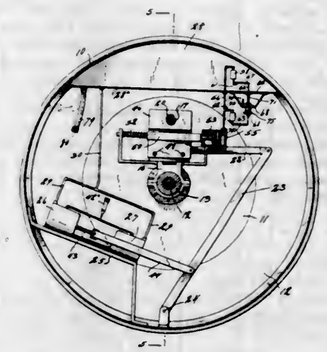
3. A heat interchanger unit comprising tubes arranged in alternate courses in each of which the tubes are substantially parallel to one another, and in certain of which the tubes are transverse to those in other courses, such tubes extending at both ends beyond the outermost transversely arranged tubes in the other course, and a mass of solid material embedding said tubes and extending to the outer ends thereof forming solid masses at the edges of the unit, the unit having in its external solid portions fastening means which project from the faces in which said tubes open.

1,571,069. FLOOR COVERING AND LIKE MATERIAL. WILLIAM M. STEVENSON, Springfield, Mass., assignor to Unit Rug Company, Oshkosh, Wis., a Corporation of Wisconsin. Filed Feb. 12, 1924. Serial No, 692,305. 9 Claims. (Cl. 28—1.)



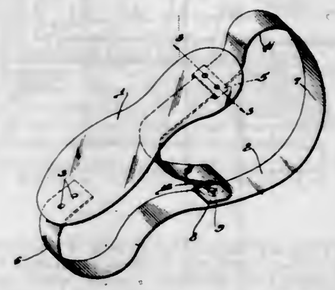
1. A floor covering made of a plurality of woven sections having intermeshing sevage edges; and members running through the intermeshing portions of adjacent sections for pivotally connecting the same.

1,571,070. TAG. JOHN STRAUB, Ashley, N. Dak. Filed Aug. 26, 1925. Serial No. 52,610. 2 Claims. (Cl. 40—10.)



1. A tag holder of the character set forth, comprising a plate body having each corner thereof turned inwardly over the face of the plate and further having a slot cut from the portion connecting the inturned corner with the body for the extension of the corners of a tag therethrough, means for attaching the body to an article, and an engaging tongue carried by the body and adapted to pierce the tag and secure the same to the body.

1,571,071. ANIMATED TOY. CLIFFORD I. SWEET, Highland Park, Ill. Filed Aug. 8, 1925. Serial No. 49,089. 4 Claims. (Cl. 46—45.)

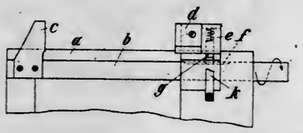


1. A toy of the character described including a solid-body having cranked axles and wheels supporting the axles, the body being formed with vertical bores extending from the top of the body downward to the bottom of the body, a plurality of figures having cylindrical lower portions simulating the bodies of the figures and fitting said bores and reciprocatable therein, and means operatively connecting said cranked axles to said figures and reciprocating the same in said bores as the figure is drawn over the ground.

1,571,072. AUTOMATIC TIRE-INFLATING MECHANISM. JOHN T. TALBERT, Bradley, S. C. Filed May 21, 1925. Serial No. 31,893. 10 Claims. (Cl. 152—11.)

1. The combination with a vehicle wheel having a pneumatic tire, of means for keeping the pneumatic tire inflated comprising an air chamber disposed within the wheel, a gear wheel co-axial with the vehicle wheel and held from rotation, an air pump mounted within the wheel, means for driving the pump including a gear wheel meshing with the first gear wheel and rotating therearound, a clutch device shiftable to operatively connect the pump with the second gear wheel or disconnect it therefrom, a motor operatively connected to the clutch to shift the same when the motor is operated, a pressure responsive member operated by the pressure of air in the air chamber and acting when the pressure is greater than a predetermined amount to cause the operation of the motor and shift the clutch device to its inoperative position and when the pressure is less than the predetermined amount to shift the clutch device to its operative position.

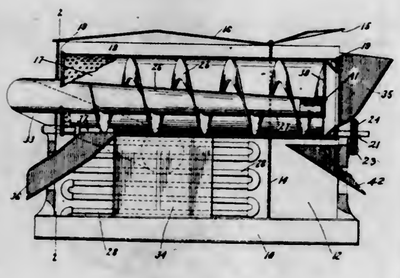
1,571,073. EXERCISING DEVICE. ROBERT D. TAPLING, Chicago, Ill. Filed Feb. 25, 1922. Serial No. 539,194. 4 Claims. (Cl. 208—167.)



1. A spring shoe exercising device comprising a sole plate, a spring runner having one end connected to the toe end of the sole plate, and means slidably connecting said runner to the sole plate at the heel thereof.

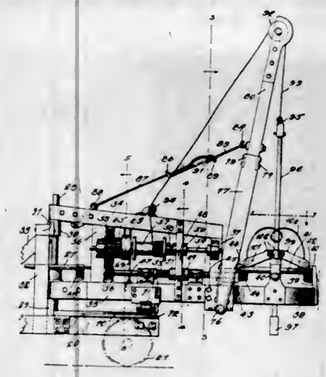
1,571,074. RECOVERED INORGANIC FILTER AID AND PROCESS OF PRODUCING THE SAME. HARRY S. THATCHER, Los Angeles, Calif., assignor, by mesne assignments, to The Celite Company, a Corporation of Delaware. Filed Jan. 24, 1923. Serial No. 614,707. 7 Claims. (Cl. 252—2.)

1. The process of recovering an inorganic filter-aid after use in filtration which consists in drying the filter-cake containing such filter-aid, then finely dividing it, and then calcining the disintegrated material at a temperature sufficiently high to remove part of the inorganic impurities.



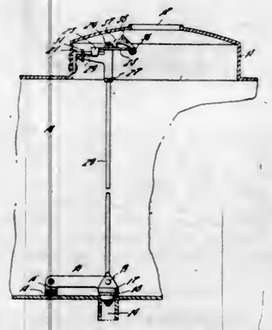
4. A material adapted for use in filtration consisting of an inorganic filter-aid produced by first drying, then finely dividing, and then finally calcining filter cake resulting from filtering operations and containing such filter aid to remove part of the inorganic impurities therefrom.

1,571,075. TYPE-LINE SETTING AND CASTING MACHINE. EDUARD UHTHOFF, Berlin-Charlottenburg, Germany. Filed Feb. 7, 1925. Serial No. 7,686. 3 Claims. (Cl. 199—50.)



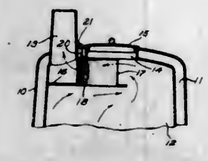
1. In a type line setting and casting machine of the type including matrices guided on wires, an assembler, a front line-closing cheek a rear line-closing cheek, a spindle carrying the latter, means for coupling and disconnecting the front line-closing cheek with the spindle and from the latter and means for automatically returning the front line-closing cheek to th eworking position.

1,571,076. DRYING MACHINE. ALBERT W. WARREN, Providence, R. I., assignor to No-Dust Drying Machine Co., Providence, R. I., a Corporation of Rhode Island. Filed Mar. 4, 1924. Serial No. 696,869. 7 Claims. (Cl. 34—5.)



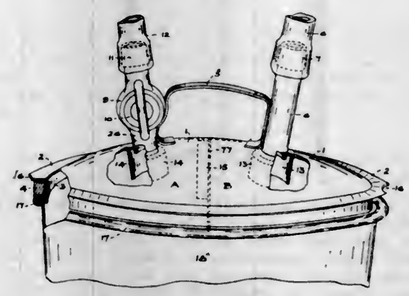
7. A drying machine comprising a rotatable work carrying drum, means in the drum for feeding the work longitudinally therethrough, annular bands having V-shaped bearing surfaces encircling the opposite ends of the drum, a set of driving rollers having correspondingly-shaped bearing surfaces to engage said bands for operatively supporting said drum, and means for rotating said rollers to frictionally drive said drum.

1,571,077. EARTH-BORING MACHINE. FRANK WASHA, Muscoda, Wis. Filed May 23, 1922. Serial No. 563,012. 5 Claims. (Cl. 255—19.)



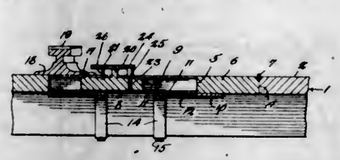
1. An earth boring machine comprising a frame, a shaft journaled vertically upon the frame, a prime mover mounted upon the frame and connected to drive the shaft, an auxiliary frame mounted to oscillate upon said first mentioned frame with the said shaft as a center, earth-boring apparatus carried by the auxiliary frame, mechanism transmitting power from said shaft to said earth-boring mechanism, a hoisting drum, a cable from the drum to the earth-boring apparatus, and means to control the action of the drum from the transmitting mechanism.

1,571,078. TANK-CAR VALVE. FRANK WHITNEY and PETE S. COLL, Glenrock, Wyo. Filed Apr. 11, 1925. Serial No. 22,383. 3 Claims. (Cl. 137—21.)



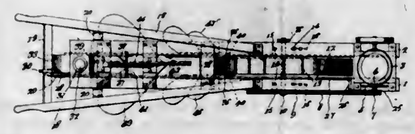
1. A tank car valve of the character described comprising bracket means included upon the bottom of a tank for holding a valve within its seat, a rod for said valve, bracket means included within the tank and receiving the upper end of the valve rod therethrough, a compression spring interposed between the lower side of the bracket supporting means and the valve rod for seating the valve, positive locking means connected to the valve rod and upon the opposite ends of the compression spring and including a lug member upon the upper side thereof and which is adapted to engage the under side of the bracket supporting arm, and slidable adjusting means included upon the bracket supporting means and engaging the upper portion of the valve rod in order that the valve may be readily and easily opened in the manner set forth.

1,571,079. HEATER. EPHRAIM WITMAN, Sinking Spring, Pa. Filed Jan. 28, 1925. Serial No. 5,302. 1 Claim. (Cl. 126—58.)



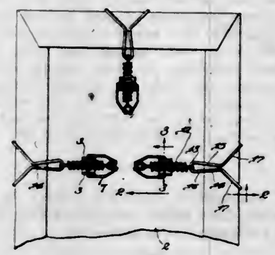
In a heater having a firepot, an opening in the top of the heater for the entrance of fuel, and a flue leading from the heater at the top of the firepot; a baffle device including an arcuate plate below the inlet to said flue, a semi-cylindrical flange rising from said plate and in register with said fuel opening for the passage of fuel through said opening and through said semi-cylindrical flange to the firepot, a horizontal flange on said semi-cylindrical flange at the top of the same, and a bolt securing said horizontal flange to the heater at the top.

1,571,080. TESTING APPARATUS FOR USE IN COW MILKERS. ERNEST HENRY WRIGHT, Morrinsville, Auckland, New Zealand. Filed Nov. 15, 1922. Serial No. 601,201. 2 Claims. (Cl. 31—58.)



1. Apparatus for testing milk comprising a milk bucket lid having two entrances, a milk pipe, a vacuum pipe, means for independently connecting the ends of said pipe together apart from said lid and also for connecting said ends to said entrances, and a baffle surrounding the inner end of each entrance.

1,571,081. BRACE FOR DRILL-ROD WRENCHES. JOHN V. YOUNT, Shidler, Okla. Filed Mar. 9, 1925. Serial No. 14,185. 5 Claims. (Cl. 255—35.)

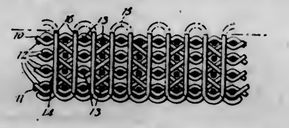


1. A device for bracing the circle of a wrench mechanism of the class described, comprising a fixed guide and a carriage mounted for reciprocation on the guide, the guide and the carriage being provided with interengaging parts which coact to hold the carriage in adjusted positions longitudinally of the guide, the carriage being supplied with circle-engaging means.

1,571,082. AGRICULTURAL MACHINE. JULIUS M. ZIMLICH, Mobile, Ala. Filed June 6, 1923. Serial No. 643,722. 1 Claim. (Cl. 180—19.)

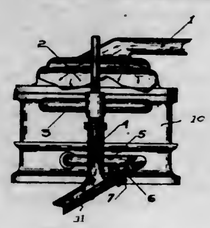
A walking plow comprising a bull wheel, an axle fixed to the bull wheel, a pair of side beams arranged closely against the opposite sides of the bull wheel and supported on the opposite ends of said axle, a motor mounted on the forward end of said beams in front of the bull wheel, a driving connection between the motor and one end of the axle and arranged at the outer side of the adjacent side beam, a pair of handles secured to the side beams closely adjacent to the ends of said axle and diverging rearwardly and upwardly therefrom, a pair of braces secured to the rear ends of said side beams and diverging upwardly therefrom and secured to said handle near the rear ends thereof, a cross brace extending between the rear ends of said handles, and means carried upon the rear ends of said side beams for supporting an agricultural implement.

1,571,083. IRONING-BOARD-COVER FASTENER. ARNE O. ALSAGER, Willow Creek Township, Lee County, Ill. Filed Feb. 24, 1923. Serial No. 621,002. 2 Claims. (Cl. 68—10.)



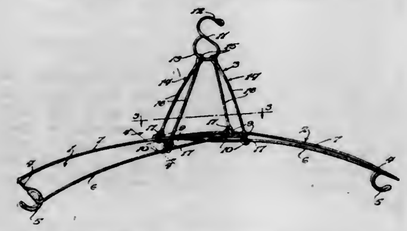
1. A cover fastener for ironing boards including an operating member, having its ends bent transversely, an extension projecting from one of said ends, the bight portion of said member being bent inwardly to form a loop, a coil spring connected to said loop, a gripping member connected to said spring and means for pivotally connecting the operating member to an ironing board.

1,571,084. COMPOSITION FOR CASEHARDENING. WILLIAM CLYDE BASSETT, Long Beach, Calif. Filed May 14, 1925. Serial No. 30,364. 5 Claims. (Cl. 148—30.)



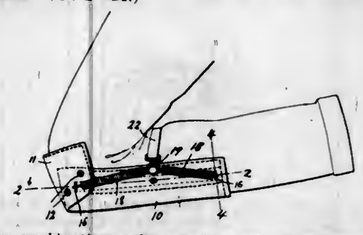
5. A composition for use in case hardening, comprising fine sawdust about 12 parts, charcoal about 8 parts, sodium bicarbonate 1 part, such composition being substantially free from sulfur both free and combined.

1,571,085. LINING FOR TRANSMISSION AND BRAKE BANDS. CHARLES BRAHS, Paterson, N. J. Filed May 11, 1925. Serial No. 29,515. 9 Claims. (Cl. 139—403.)



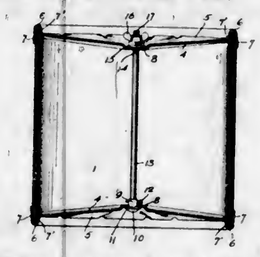
1. As a new article of manufacture, a lining for transmission bands, brake bands and the like comprising a woven fabric body and pile warp threads extending therethrough at an angle to the weave of the fabric.

1,571,086. AIR-COOLED ENGINE. GUSTAVUS O. BRITTAIN, Canton, Ohio. Filed Apr. 1, 1924. Serial No. 703,438. 1 Claim. (Cl. 123—171.)



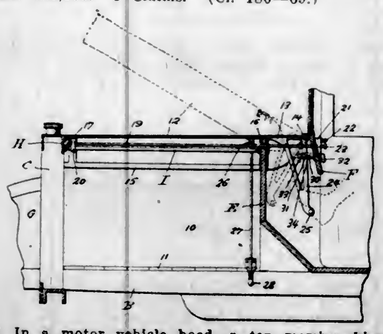
An internal combustion engine having one or more cylinders, an exhaust conduit leading from the explosion chamber of said cylinders, said conduit terminating in a lateral extension communicating therewith, each cylinder being formed of a pair of spaced walls providing a passage for a cooling medium on all sides and the top of each cylinder, a pipe having one end communicating with the atmosphere, the other end of said pipe being enlarged and communicating with the passages in the tops of said cylinders, a pipe having one end in communication with the passages in the sides of said cylinders, the other end of said pipe being positioned in the lateral extension of said exhaust conduit and extending beyond the point of communication between the exhaust conduit and its lateral extension, whereby a suction is created in the passages surrounding said cylinders so as to cause a circulation of air.

1,571,087. GARMENT HANGER. JOHN W. BODKER, Ponchatoula, La. Filed June 24, 1925. Serial No. 39,334. 6 Claims. (Cl. 211—13.)



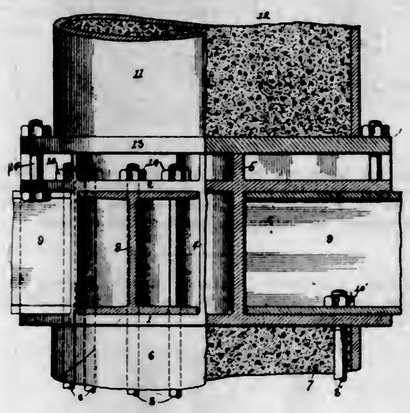
1. A garment hanger comprising a body portion formed of separate sections each having longitudinally extending arms crossed adjacent their inner ends and terminating in eyes slidably securing the arms to the other section to movably connect the sections in overlapping relation and permit longitudinal adjustment thereof, and suspending means disposed between and connected with the inner ends of said sections.

1,571,088. KNEE PAD. DAVID E. BUCHANAN, Dublin, Tex. Filed Apr. 14, 1925. Serial No. 23,037. 2 Claims. (Cl. 2—24.)



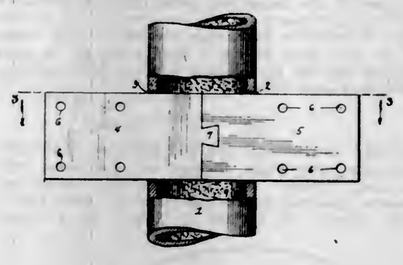
1. In combination, a knee pad, a pair of resilient elements having their corresponding outer ends secured to one side of the pad, and arranged in end to end relation, a ring connecting the corresponding inner ends of said elements, a strip including branches adjustably connected with the other side of the pad, and means carried by the free end of the strip for engagement with said ring as and for the purpose specified.

1,571,089. CONTAINER. HERBERT L. CARPENTER, Brooklyn, N. Y. Filed Apr. 8, 1921. Serial No. 459,615. 2 Claims. (Cl. 229—5.5.)



1. A container, comprising a hollow body formed of a plurality of layers, removable heads on the ends of the body, said heads having at their margins tapered and spaced flanges forming inverted V-shaped grooves, said grooves being of a size less than the thickness of the body, and means for drawing the heads together whereby the ends of the body will be forced into the grooves of the heads with a wedging action and a tight joint thereby obtained.

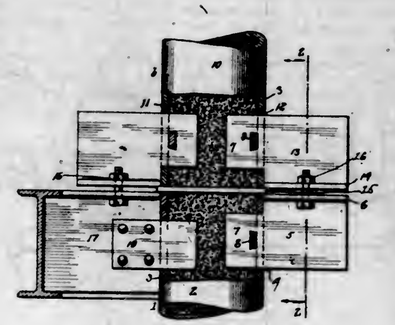
1,571,090. MOTOR-VEHICLE HOOD. CLAUDE I. DAWSON, Anderson, S. C. Filed Nov. 12, 1924. Serial No. 749,503. 8 Claims. (Cl. 180—69.)



7. In a motor vehicle hood, a top member hingedly mounted at its rear end, a pedal member depending from the top member and positioned to receive pressure from the opertaor's foot for effecting upward tilting movement.

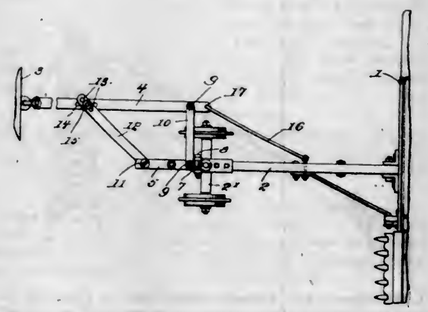
1,571,091. FIREPROOF BUILDING CONSTRUCTION. JOHN LALLY, Boston, Mass. Filed Oct. 30, 1923. Serial No. 671,732. 9 Claims. (Cl. 72—75.)

1. Fireproof building construction comprising upper and lower plates, radially extending I-beams secured between said plates, a column, tie rods on said column and extending beyond the end thereof, said tie rods passing through the plates and beam flanges for tying the parts together.



1,571,092. CONNECTION FOR BUILDING COLUMNS. JOHN LALLY, Great Neck, N. Y. Filed July 20, 1925. Serial No. 44,892. 7 Claims. (Cl. 72—75.)

1. A two-way connection for building columns comprising two plates each adapted to enter an opposed slot in a column casing, one of which is provided with a mortise and the other of which is provided with a tenon, the mortise and tenon being adapted to interlock within a column casing whereby the two plates are locked together.

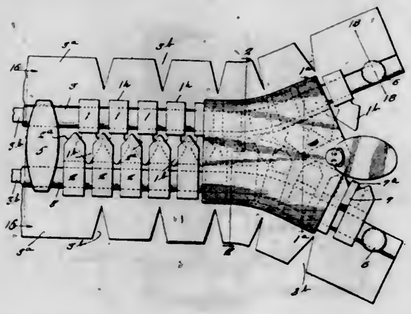


1,571,093. CONNECTION FOR BUILDING COLUMNS. JOHN LALLY, Great Neck, N. Y. Filed Sept. 1, 1925. Serial No. 53,874. 5 Claims. (Cl. 72—75.)

1. In a building column, a tubular metal shell slotted near one end and a connection comprising a web and a flange, the web of which extends through the shell slot into the interior thereof with the flange substantially

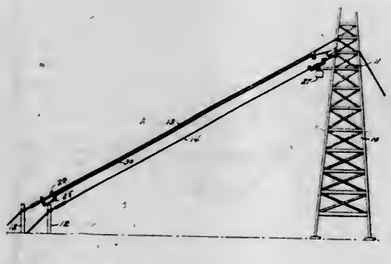
alined with the end of the column and means for securing the connection to the shell.

1,571,094. HITCH. JAMES M. PERKINS, West Bend, Iowa. Filed Mar. 12, 1923, Serial No. 624,546. Renewed July 17, 1925. 3 Claims. (Cl. 280—33.5.)



1. The combination with a binder having a truck supporting the tongue thereof and a tractor for propelling the binder, of a hitch comprising a bar loosely connected to the pole and tractor, a block disposed to one side of the bar, a plate secured thereon having an eye end, flexible means passing through the eye for connecting the block to the axle of the truck, transverse plates pivotally connecting the inner tnds of the bar and block, a plate pivotally secured to the outer end of the block and disposed angularly over the bar, said plate having spaced apertures and said bar having a single aperture with which one of the first mentioned apertures is designed to align, and securing means passing through the aligning apertures.

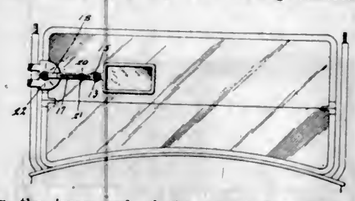
1,571,095. MULTIPLE FASTENER. JOSEPH E. PERRAULT, Watertown, Mass., assignor to Hood Rubber Company, Watertown, Mass., a Corporation of Massachusetts. Filed July 2, 1925. Serial No. 41,188. 10 Claims. (Cl. 24—105.)



1. A fastener comprising clasp members arranged in cooperating series, the members of one series being pro-

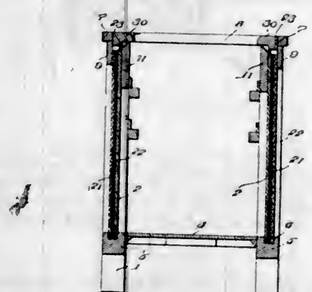
vided with recesses and inclined guides leading thereto, and the members of the other series having converging

sides for slidingly engaging said guides and having angularly disposed shoulders engageable in the recesses of adjacent members of the first named series.



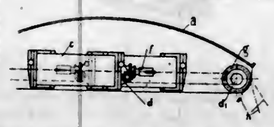
1,571,096. ESCAPE FOR DERRICKS. LOUIS GARLAND RAMBIN and WILLIAM ALFRED RAMBIN, Smackover, Ark.; said William A. Rambin, assignor of one-half of his right to said Louis Garland Rambin. Filed Sept. 30, 1925. Serial No. 59,739. 3 Claims. (Cl. 227—12.)

1. An escape for derricks comprising a plurality of cables arranged in superimposed relation and at spaced intervals along the height of the derrick, a bucket carriage comprising an elongated plate having spaced parallel apertured companion plates arranged upon the opposite ends thereof, grooved pulleys arranged between the apertured ends of the companion plates and mounted for movement upon one of the cables, a brake mounted upon the bucket carriage, a bucket suspended from the bucket carriage, a weight carriage correspondingly mounted upon another of the cables, and an auxiliary cable communicating the bucket carriage with the weight carriage in normally positioning the bucket carriage.



1,571,097. WINDSHIELD ATTACHMENT. HENRY C. REDMAN, Moore, Mont. Filed Dec. 31, 1923. Serial No. 683,762. 1 Claim. (Cl. 296—97.)

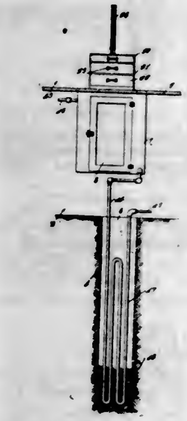
An anti-glare device comprising a relatively large segmental plate adapted to be positioned at one of the vertical edges of the windshield, a pair of laterally extending parallel U-shaped brackets extending from the inner edge of the plate and adapted to embrace one of the vertical frame members of an automobile, fastening elements associated with the bracket for holding the same to the windshield, the segmental plate being provided with a plurality of radially disposed grooves, two of which being located in vertical alinement, an arm pivoted to the segmental plate, a longitudinal rib formed on the inner face of the arm and engageable in any one of the grooves, a pivotal and binding connection be-



tween the inner end of the arm and segmental plate whereby to hold the arm in a position with the tongue and the rib engaged in one of the grooves, and an anti-glare element carried by the inner end of the arm.

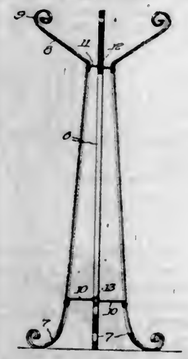
1,571,098. CABINET. WILLIAM RIMKE, Berwyn, Ill. Filed Dec. 27, 1922. Serial No. 609,264. 4 Claims. (Cl. 40—64.)

1. A cabinet having means to receive and frame and display a panel, in combination with a panel disposed in said means and readily removable therefrom; the said means having an opening in its top for the insertion and removal of a panel, and being equipped with a removable cap arranged in said top opening and also arranged horizontally flush with the top of said means, and the said panel having a hand grasp at its upper end, and the said top opening and cap being provided with lateral offset portions.



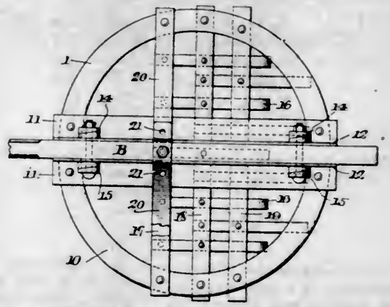
1,571,099. RAILROAD-TRACK-WEEDING MACHINE. AUGUSTE SCHEUCHZER, Renens, near Lausanne, Switzerland, assignor to Ferrodesherbeuse Scheuchzer Societe Anonyme, Renens, Switzerland. Filed May 5, 1924. Serial No. 711,299. 1 Claim. (Cl. 37—105.)

In a railroad track weeding machine having a winch worked by a pneumatic cylinder the combination of a pneumatic friction disk brake comprising a partitioned stationary cylinder having two compartments and arranged coaxially to the axle of said winch, a journal-bearing of said axle provided at the end of the first of said compartments, a series of friction disks arranged in the compartment and slidably but not rotary on the extended end of said axle, said disks being alternately either engaged with their periphery to ridges on the cylinder walls or engaged with their hubs to ridges on



said axle, a compression plate facing said disks, a piston arranged in the second compartment, a shank rigidly connecting said plate and piston, an inlet for compressed air provided in the second compartment, a compression spring interposed between said plate and the partition wall and means for regulating the admission and exhaust of compressed air into said cylinders all substantially as shown and described.

1,571,100. COOLER. EMERSON ENOCH SKINNER, Elgin, Nebr. Filed May 7, 1924. Serial No. 711,707. 3 Claims. (Cl. 187—3.)

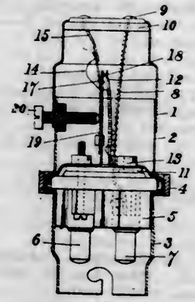


3. The combination with the floor of a building, of a cabinet located therebelow, means for cooling the cabinet, guides in the cabinet, hollow weight boxes having guide ways receiving the guides, reinforcing blocks located between the guide ways and the walls of the boxes, a carrier slidable on the aforesaid guides, through the floor, into and out of the cabinet, flexible elements connected to the blocks and to the carrier, and means for guiding the intermediate portions of the flexible elements.

1,571,101. BOWL STAND. EMIL R. STERNBERG, Chicago, Ill. Filed Dec. 4, 1922. Serial No. 604,666. 1 Claim. (Cl. 248—41.)

A stand for bowls or the like comprising a plurality of similar metal frame sections each formed of a single resilient flat metal strap, said sections being each provided with a plurality of spaced brace members, the corresponding brace members of the several frame sections meeting in a common axis, rivets joining the brace members at such meeting points, the rivets serving to maintain the sections frictionally clamped in adjusted relation, the clamping action being adapted to yield upon the application of moderate force permitting relative rotation of the sections, the upper portion of the sections above the uppermost brace members being bent outwardly to form a bowl seat and having inwardly and reversely curved resilient ends adapted to engage a bowl with a convex gripping engagement.

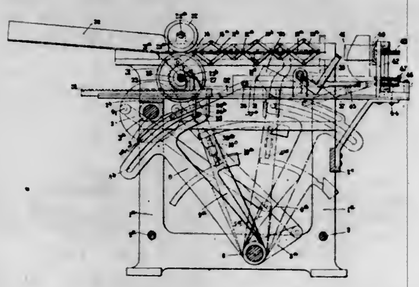
1,571,102. SPRING-TOOTH CULTIVATOR. GEORGE ARTHUR STILL, Cullman, Ala. Filed July 8, 1925. Serial No. 42,242. 3 Claims. (Cl. 97—173.)



1. The combination with a cultivator beam, of angle members bolted to opposite faces of said beam, semi-circular tooth carrying frames secured at their ends to the laterally extending parts of the angle members, and means for adjusting the position of the angle members relatively to the beam for varying the angular adjustment of the teeth carried by the frame.

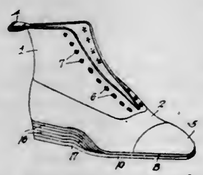
1,571,103. PHOTOGRAPHIC PIGMENTARY PRINTING PAPER. JOSEPH SURY, Wyneghem, near Antwerp, Belgium. Filed May 26, 1924. Serial No. 716,049. 2 Claims. (Cl. 95—7.)

1. A pigmentary photographic printing paper characterized by a colloidal coating, containing a temporary colouring matter permeable to light and capable of being dissolved by a diluted acid with gaseous discharge whereby the colloidal coating is rendered spongy.



1,571,104. THERMALLY-ACTUATED DEVICE FOR CONTROLLING ELECTRIC CIRCUITS. PERCY WILLIAM BAKER, Kingston-on-Thames, England. Filed Sept. 25, 1923. Serial No. 664,764. 2 Claims. (Cl. 200—115.5.)

1. A thermally-actuated electric switch adapted to fit an electric lamp holder and of the kind in which a bimetallic bar is warmed and cooled for the purpose of



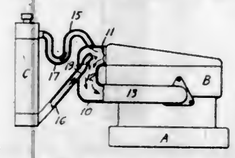
making and breaking the electric circuit in combination with an insulated screw device adapted to be actuated from outside the lamp holder and by which the periods of make and break can be varied, said screw device being wholly beyond the circuit controlled by the switch.

1,571,105. PAPER-FOLDING MACHINE. CHARLES LAURENCE BURDICK, London, England. Filed Jan. 12, 1922. Serial No. 528,752. 8 Claims. (Cl. 270—61.)

1. In a machine for folding paper and like sheets, the combination of a pair of plates, each plate of said pair being foldable, said plates lying in different planes with a space between them, means to feed the sheet into the space between the plates, and means to fold the plates with the sheet between them.

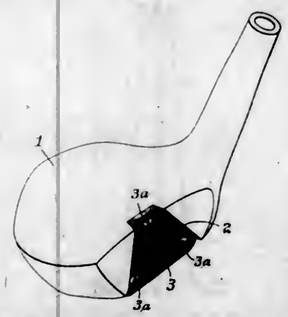
1,571,106. SHOE. LUIS BURGER, New York, N. Y. Filed June 20, 1924. Serial No. 721,323. 1 Claim. (Cl. 36—76.)

In a shoe of the character described, the combination of the customary elements required in the construction of a shoe for the human foot and an exterior arch supporter, said exterior arch supporter consisting of leather wedges arranged between the outer-sole and the welt beneath the arch on the inner side of the shoe, whereby the innerside of the sole of the shoe from the toe to the end of the heel is in a plane, and the corresponding outerside of the sole has a partial arch, said partial arch being formed by means of a slit adjacent the heel portion and midway across the sole, the portion of the sole being bent upwardly and secured to the welt of the shoe and forming the partial arch, and the heel portion being bent downwardly to become the bottom lift of the heel, and wedges secured between said bottom lift of the heel and the heel seat of the shoe.



1,571,107. HAT. AGNES CAPELLE and HERBERT HARRIS, New York, N. Y. Filed June 5, 1925. Serial No. 35,128. 1 Claim. (Cl. 2—197.)

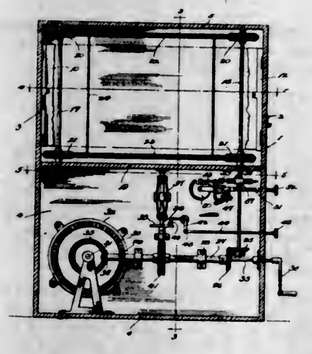
A lady's hat including a crown formed of a plurality of approximately triangular or semi-lunar cloth sections, having their side edges connected together and having their apices disposed at the central top portion of the crown, a relatively stiff non-collapsing band connected to the lower edges of all of said sections save one, whereby the latter section may be collapsed by advancing the ends



of the bands toward each other, flexible strips connected to the ends of the band, said strips interengaging and adapted for folding around the exterior of the band to conceal the space between the band ends.

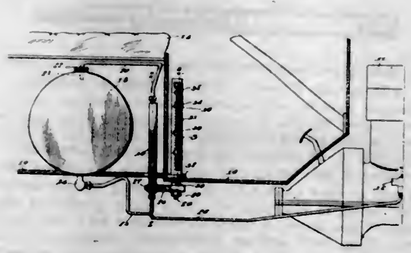
1,571,108. METHOD AND SYSTEM FOR COOLING INTERNAL-COMBUSTION ENGINES. NICHOLAS S. DIAMANT, Jamestown, N. Y. Filed Sept. 17, 1924. Serial No. 738,299. 13 Claims. (Cl. 123—170.)

1. The hereindescribed process of cooling an internal combustion engine having jackets for a cooling liquid, which consists of passing a current of cooling liquid rapidly past said jackets said current flowing in a circuit of low heat radiating capacity, simultaneously conducting portions of said liquid from said circuit through a cooling circuit and returning comparatively small quantities of the cooled liquid from said cooling circuit to said first mentioned circuit.



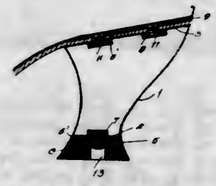
1,571,109. GOLF CLUB. JAMES VICTOR THOMAS EAST, Longmeadow, Mass., assignor to A. G. Spalding & Bros., New York, N. Y., a Corporation of New Jersey. Filed June 22, 1925. Serial No. 38,834. 2 Claims. (Cl. 273—77.)

1. A golf club having in its head a recess with upwardly converging walls, and an impact receiving member consisting of a foundation portion, fastening means extending therethrough into said head, and a facing portion



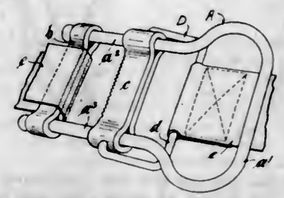
having a homogeneous union with the foundation portion, and covering the same and its fastening means, the edges of both the foundation portion and the covering portion finding bearings along the said converging walls, substantially as described.

1,571,110. MUSIC INDICATOR. WILLIAM H. EBERT and ALBERT G. EBERT, Buffalo, N. Y. Filed Feb. 17, 1923. Serial No. 619,708. 2 Claims. (Cl. 84—484.)



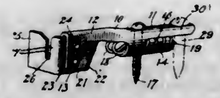
1. In indicating mechanism, in combination, a music sheet having a staff thereon divided by lines defining measures and other lines defining divisions of the measures, the notes of the music being arranged within the measures and with relation to the division lines in accordance with the respective values of the notes, an indicator element, means for moving the said element across the sheet at a constant predetermined rate of speed, and audible means for indicating the beats of a measure.

1,571,111. ATTACHMENT FOR SUPPLY TANKS OF AUTOMOBILES. JAMES WILLIAM FARRIOR, Warsaw, N. C. Filed July 24, 1925. Serial No. 45,892. 4 Claims. (Cl. 158—46.5.)



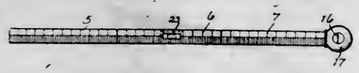
1. In an automobile, the combination of a fuel supply tank, a carburetor, a fuel line connecting the supply tank with the carburetor, and comprising a unitary conduit device for cutting off the fuel supply, said device constituting a portion of the feed line and being movable bodily with flexible connections included in the fuel line whereby the movable conduit device may be elevated or lowered relative to the bottom of the fuel tank and a separate tube communicating with the conduit device and movable therewith causing in cooperation with said movable device cessation of the flow of liquid from the tank at a predetermined level of the liquid in said tank.

1,571,112. HEEL FOR BOOTS AND SHOES. CLARENCE CURTIS FOSTER, Covington, Ky. Filed May 20, 1922. Serial No. 562,353. 1 Claim. (Cl. 36—40.)



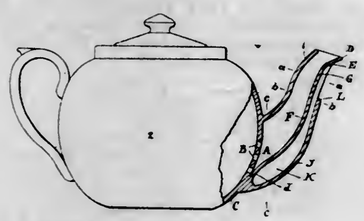
A heel comprising a shell of relatively soft material, and a cover plate for said shell, said cover plate being provided with relatively hard wear nuts disposed on the inner face thereof, said wear nuts being adapted to be engaged by a threaded member passing through said cover plate, for the purpose described.

1,571,113. BELT OR LIKE TENSIONING AND FASTENING APPLIANCE. GEORGE FREDERICK FRENCH, Manchester, England. Filed July 21, 1924. Serial No. 727,300. 3 Claims. (Cl. 24—68.)



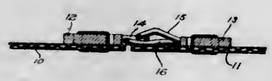
1. A belt tensioning appliance comprising a rectangular elongated metal frame, one end of which forms one half of a clamp, a metal cross-member slidable along the two longer sides of the frame, and forming the other half of the clamp, a further cross-member, substantially U-shaped, pivotally and eccentrically mounted at its ends on the extremities of the sliding cross-member, the belt to be tensioned being secured at one end to the U-shaped cross-member, and at its other end passing between the two half parts of the clamp, the position of the parts prior to tightening the belt being with the frame part of the clamp lying away from and on that side of the sliding cross-member furthest from the U-shaped cross-member, and after tightening the belt, the position of the parts being with said frame part of the clamp lying against and on the side of the sliding cross-member nearest to the U-shaped member, as set forth.

1,571,114. SHUTTLE ATTACHMENT. THEODORE J. GARISIO, Allentown, Pa. Filed Mar. 17, 1925. Serial No. 16,249. 2 Claims. (Cl. 139—203.)



1. For use in conjunction with a thread-laden bobbin carried by a shuttle to cut the thread because of a fault or deformation of the thread, a device comprising a casing adapted to be attached to the shuttle, thread tensioning means including spring-actuated guides, a knife juxtaposed with respect to said guides and carried by said casing, and a bifurcated member for controlling the movement of the thread in advance of its passage through said guides and capable of holding the thread against movement to cause the severance of the thread by said knife when a deformity of the thread engages the furcations of said bifurcated member.

1,571,115. MAHLSTICK. LOUIS GOOTHEARTS, San Francisco, Calif. Filed Oct. 10, 1924. Serial No. 742,897. 2 Claims. (Cl. 7—1.)



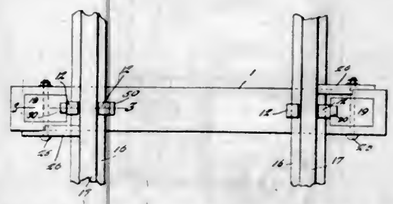
1. In a mahlstick, a plurality of sections removably secured one to the other, a level positioned in one of said sections, a head secured to another of said sections, said head having a level secured therein, the level in said head and the level in said first section being at right angles to each other.

1,571,116. TEA, COFFEE, AND LIKE POT. CHARLES EDWARD GREEN, London, and KATHLEEN SINCLAIR STEVENSON, Kensington, London, England. Filed Aug. 3, 1925. Serial No. 47,838. 1 Claim. (Cl. 53—3.)

In tea, coffee and like pots, the combination with a body, of a pouring spout projecting from said body and provided at its under side with an angular lip, a bellied wall extending along a part of the length of the underside of the spout and having its upper end terminating below the said lip, the bellied wall forming a chamber having its upper end terminating at a distance below said lip to form an opening, and groove means extending along the exterior surface of the spout from the lip to the upper end of the bellied wall and converging from said lip towards the said opening to positively direct the drip from the lip into said chamber.

1,571,117. SNAP FASTENER. HERMAN H. GUTTMAN and SIGMUND GUTTMAN, Brooklyn, N. Y. Filed May 20, 1925. Serial No. 31,544. 2 Claims. (Cl. 24—230.)

1. A snap fastener device, comprising a plate, a loop extending therefrom, a second plate, two loops extending therefrom having their ends lying adjacent each other and between which the end of the other loop is forced, one of said last two-mentioned loops having its end lying close to but within the end of the other loop.

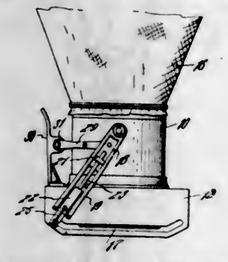


1,571,118. NUT FOR GUITARS. JAMES A. HATTIE, Ewa, Territory of Hawaii. Filed Feb. 3, 1923. Serial No. 616,789. 2 Claims. (Cl. 84—314.)

2. A nut for stringed instruments including a hollow base and a channeled string rest designed to be received in the base to contact with the side and end walls thereof, the sides of said channeled member having their sides stepped and the lower walls provided by the steps arranged at the same angle, a headed screw finding bearings in the ends of the base and received centrally between the side walls of the rest member, follower blocks in the base having upper inclined surfaces to engage with

the inclined stepped portions of the rest and having threaded openings engaged by the screw for the purpose set forth.

1,571,119. TIE. ARTHUR S. HOFFMEIER, Jeannette, Pa. Filed July 8, 1925. Serial No. 42,277. 5 Claims. (Cl. 238—275.)

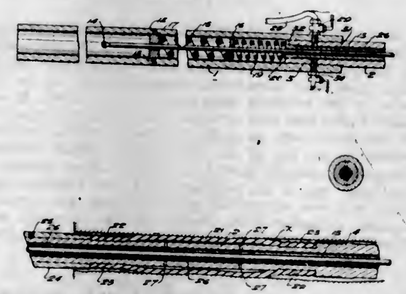


1. A hollow metal tie having clamping means for holding railway rails thereon, including a member having drain openings at the lower ends thereof and having its top provided with T-shaped slots, similarly shaped rail clamps disposed in pairs and having their sides grooved to contact with the upper and lower faces of the top of the tie when arranged in the restricted passages of the T-shaped slots, means adjustably securing the cooperating clamp sections, a headed key member in contact with the inner clamps and designed to be forced thereby against the inner walls of the said restricted passages of the slots and also designed to be held by the adjustable connecting means between the clamps, a cover plate for the widened passages of the T-shaped slots, and removable means holding the cover plate positioned.

1,571,120. PENCIL. WILLIAM K. HOLMES, Brooklyn, N. Y. Filed Jan. 11, 1924. Serial No. 685,637. 1 Claim. (Cl. 120—18.)

A lead pencil comprising a barrel having a tapered end with a hole through which the lead is projected, a guide-tube fixed in said tapered end and extending axially with respect to the hole and longitudinal axis of the barrel, a lead-holder-tube adapted for movement in said guide-tube, a lead-pusher having a portion adapted for movement in said lead-holder-tube, a wire having one end attached to said guide-tube and extending longitudinally of the barrel in the form of a helix for a portion of the length of the barrel, a sleeve surrounding said wire, said sleeve being held against longitudinal movement with respect to the barrel and being rotatable with respect thereto, said sleeve having a longitudinally disposed slot and being cut-away to provide an extension, a radial portion at one end of the lead-holder-tube, a radial portion at one end of the lead-pusher, said radial portions extending through the slot in said sleeve and in contact with said wire to cause the movement of the lead-holder-tube and lead-pusher simultaneously in response to the rotation of the sleeve, the lead-holder-tube remaining stationary when its radial portion is moved into said cut-away, said sleeve being held against rotation in one direction when the radial portion of the lead-holder-tube moves into engagement with said extension, the lead-pusher being movable by virtue of its radial portion extending through the slot of the sleeve and in engagement with the wire after the radial portion of the lead-holder-tube is in the cut-away to push the remnant of lead out of the lead-holder-tube and guide-tube.

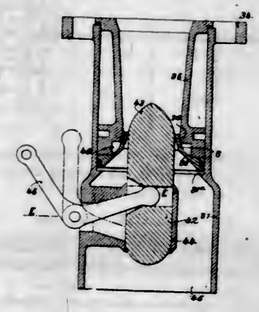
1,571,121. CAKE-DROPPING MACHINE. ROBERT HUMPHREYS, San Francisco, Calif. Filed Feb. 14, 1925. Serial No. 9,201. 6 Claims. (Cl. 107—29.



1. A machine of the character described comprising a base including opposed depending flanges, and a hollow body portion open at both ends, a hopper like bag attached to one end thereof, said flanges having aligned slots, arms pivoted on the opposite sides of said body portion, a cutting element associated with said arms and movable through said slots across the lower end of said body portion, and a yoke connected with said arms and including a thumb actuated plate normally held spaced from the body portion, and adapted to be actuated to move said arms and connecting element in one direction.

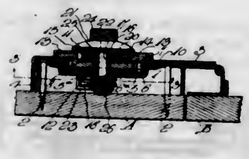
1,571,122. BLASTING CARTRIDGE. ERNEST HUTTON, Fairmont, W. Va. Filed July 24, 1924. Serial No. 727,973. 8 Claims. (Cl. 102—6.)

6. A blasting cartridge comprising a body to contain an explosive charge, and a base connected thereto and formed with an attaching socket for removable attachment to a blasting gun and a primer-receiving seat at the inner end of the socket.



1,571,123. BLASTING GUN. ERNEST HUTTON, Fairmont, W. Va. Filed July 24, 1924. Serial No. 727,974. 11 Claims. (Cl. 102—5.)

1. A blasting gun comprising a barrel adapted for insertion into a blast hole, and a fluid-inflatable packing on the exterior of the barrel and adapted to be inflated and thus expanded against the wall of the blast hole.

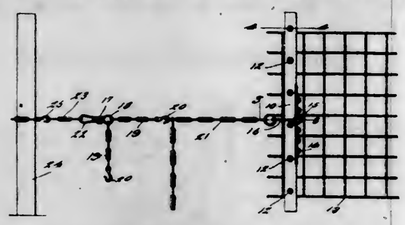


9. A blasting gun comprising a barrel having dust-collecting ribs projecting from its circumference.

1,571,124. MIXING VALVE FOR AIR AND COMBUSTION GASES. ARON KOLKO, Colombes, France. Filed Mar. 31, 1921. Serial No. 457,475. 1 Claim. (Cl. 48—180.)

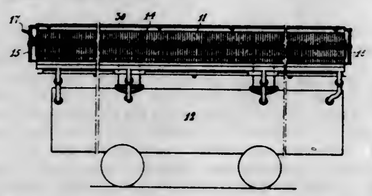
A mixing valve for air and a combustible gas comprising a cylindrical casing adapted to be connected to the intake of an internal combustion engine, a Venturi tube mounted in this casing, a conical tube having its smaller end inserted within the throat of said venturi and movable under the suction of the engine, spring means tending to separate the conical tube from the Venturi tube, means for supplying a combustible gas to the annular space between said Venturi tube and said conical tube, a plug movable along the axis of said casing and having an end of converging form adapted to close the opening of the conical tube, and means for adjusting the position of said plug.

1,571,125. PERMUTATION LOCK. NIKITAS LAPPAS, Peabody, Mass. Filed Aug. 27, 1925. Serial No. 52,917. 5 Claims. (Cl. 70—53.)



1. A permutation lock comprising a shaft, a locking member on and operable by said shaft, a sleeve rotatably mounted on the shaft and having a series of circumferentially spaced recesses, a second locking member, means on said second locking member for engaging the recesses in said sleeve whereby the second locking member may be adjusted on the sleeve for changing the combination of the lock, and a lost-motion driving connection between said shaft and sleeve.

1,571,126. STRETCHER. MARTIN E. LIVINGSTON, Livingston, Tenn. Filed Mar. 10, 1924. Serial No. 698,249. 1 Claim. (Cl. 254—83.)



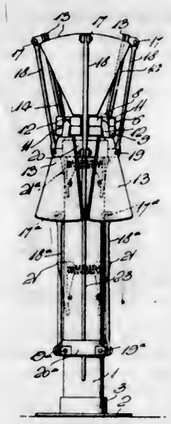
A wire stretcher comprising a clamp including spaced clamping bars, means whereby the bars may be clamped together, longitudinally spaced eyes extending along one

edge of each bar, a clevis adapted to receive the bars, a clevis pin adapted to extend through the eyes for

adjustably securing the clevis to the clamping bars, a chain secured to the clevis, and means associated with the chain to provide stretching means.

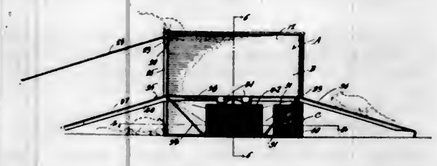
1,571,127. BLOWER FOR CLEANING AIR-COOLED CONDENSERS OR THE LIKE. FREDRIK LJUNGSTRÖM, Brevik, Lidingon, Sweden, assignor to Aktiebolaget Ljungström Angturbin, Stockholm, Sweden, a Corporation. Filed Mar. 7, 1922. Serial No. 541,885. 2 Claims. (Cl. 257—1.)

1. In an air-cooled condenser consisting of cooling elements arranged side by side and separated by air passages, said elements forming together a box-like structure, a blower for cleaning said passages consisting of a pipe extending in the one direction of said condenser structure close to the same and provided with holes directed against the same, means to connect said pipe to a source for a cleaning fluid and means to move said pipe in the other direction of said condenser structure to permit said fluid to act on the cooling elements during the movement of said pipe.



1,571,128. THRASHING MACHINE. EDMUND BERNARD LUCAS, Madioen, Java. Filed Nov. 30, 1925. Serial No. 72,358. 3 Claims. (Cl. 130—27.)

1. A thrashing machine, comprising, a rotatable drum, helically arranged series of teeth on the outer circumference of the rotatable drum for part of the drum length and helically arranged upstanding plates on the outer circumference of the drum for the remaining part of the drum length, a stationary drum rotatably receiving the rotatable drum, an inlet and an outlet in the stationary drum, and a longitudinal row of teeth on the inner side of the stationary drum arranged to permit the teeth of the rotatable drum to pass between them.

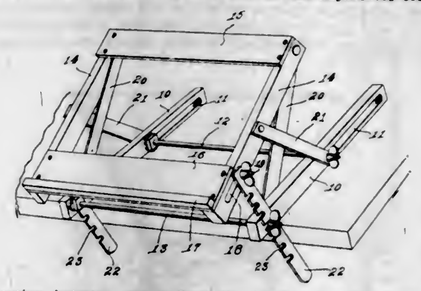


1,571,129. FOLDING SEAT. LOUIS LUCKHOFF, Fenton, Ohio. Filed Mar. 5, 1925. Serial No. 13,197. 4 Claims. (Cl. 155—135.)

1. A folding seat comprising a standard, a plurality of segmental plates pivotally connected with the upper end of said standard and adapted to jointly form a seat, certain of said plates being pivoted for swinging upward and the intervening plates being pivoted for swinging downwardly and releasable means for holding said plates

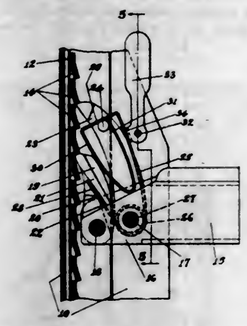
in horizontal position for use and for permitting swinging thereof in the above-named directions when use of the seat is not required.

1,571,130. RODENT TRAP. JOHN M. LYNN, Elkhart, Tex. Filed Mar. 31, 1925. Serial No. 19,680. 4 Claims. (Cl. 43—69.)



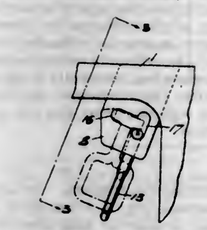
2. A rodent trap comprising a main body, a laterally extending auxiliary body associated with the main body, an inwardly opening normally closed door carried by the main body for permitting communication to be had between the auxiliary body and the main body, a normally closed trap door pivotally carried by the upper end of the main body, an inclined runway leading from the ground to the top of the main body, rockably mounted trap doors normally held in a closed position carried by the upper end of the auxiliary body, the auxiliary body being of a less height than the main body, and inwardly opening swinging doors carried by the auxiliary body disposed below the first mentioned doors carried thereby.

1,571,131. FOLDING DRAWING TABLE. CLAYTON A. MCINTOSH, Greybull, Wyo. Filed Mar. 20, 1925. Serial No. 17,065. 5 Claims. (Cl. 45—57.)



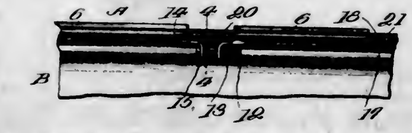
1. In combination, a base, a drawing board support, diagonally disposed braces pivotally connected with the base and said support, links pivotally connected with the

support and said base at points between their ends, and slidably adjustable with respect to the base, whereby said support can be raised or lowered, and an adjustable con-



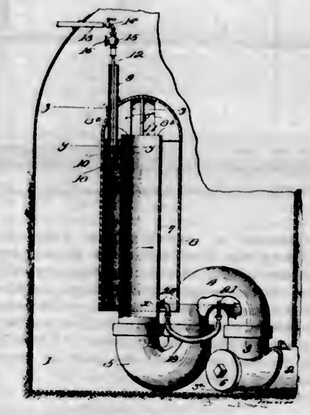
nection between one end of the base and said support whereby the latter can be adjusted angularly with relation to the base.

1,571,132. LIFTING JACK. JOSEPH R. MARCHESSEAULT, Bridgeport, Conn., assignor to The American Tube and Stamping Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Feb. 16, 1923. Serial No. 619,355. 19 Claims. (Cl. 254—111.)



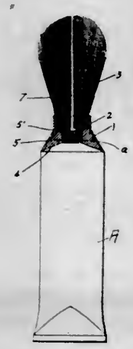
2. A lifting jack comprising a casing, a rack slidably mounted therein, an actuating lever pivoted on said casing, a lifting pawl carried by said lever and engaging said rack, a holding pawl pivoted on the actuating lever pivot and engaging said rack, and a single spring mounted on said pivot only and engaging both of said pawls.

1,571,133. BRAKE-BEAM HANGER. HUGO MENDEL, Baton Rouge, La. Filed Mar. 3, 1925. Serial No. 12,946. 1 Claim. (Cl. 188—209.)



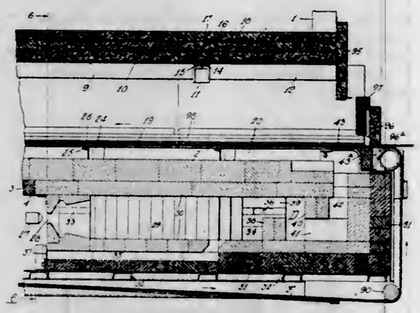
In a device of the class described, a truck, a brake beam, a brake beam hanger for suspending said brake beam and a bracket for supporting said hanger, said bracket being fixed relative to said truck, being provided with an opening extending therethrough laterally with respect to said truck and with a slot formed between the sides thereof and extending to said opening, longitudinally with respect to said truck, said brake beam hanger being formed with a cross bar longer than the width of said slot and insertable thereinto, said cross bar being turnable within said opening, the lower wall of the latter being formed with lateral depressions on each side of said slot affording a seat for said cross bar when the latter is turned to a position angularly with respect to its initial position of insertion, said hanger being normally prevented from returning to its normal position of insertion by parts of the structure associated with said truck.

1,571,134. PAINT PAIL AND CLAMPING RING THEREFOR. GEORGE EUGENE MITTINGER, Cleveland, Ohio. Filed June 12, 1924. Serial No. 719,540. 4 Claims. (Cl. 220—61.)



1. A metallic pail having its top curved inwardly and then outwardly forming a flange, a cover having its periphery forming a horizontal flange, a gasket between said flanges, a V-shaped compressible ring embracing said flanges, the upper and lower walls of the ring adjacent the ring end crimped together and bent downwardly, said downwardly bent portions of the ring provided with means for reducing the size of the ring to compress the pail and cover flanges together upon the gasket, and said flanges and ring positioned in a vertical plane wholly within the diameter of the pail.

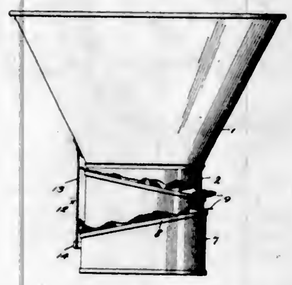
1,571,135. AUTOMATIC FLUSHING APPARATUS. HARMON DE LEON MOISE, Sumter, S. C., assignor, by direct and mesne assignments, to Sumter Super-Siphon Company, Sumter, S. C. Filed Oct. 24, 1921. Serial No. 510,023. 3 Claims. (Cl.137—106



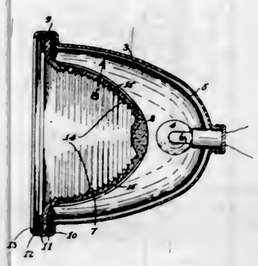
1. The combination of a flush tank, a liquid conductor thereinto, a sewer pipe extending into said tank, and an automatic siphoning apparatus located wholly within said tank and connected to said sewer pipe for periodically discharging the flushing water in said tank into said sewer, said siphoning apparatus including pipes located laterally at an angle to the longitudinal center of the sewer pipe and arranged so as to permit free access to said sewer pipe.

1,571,136. SHAVING BRUSH. SAMUEL MOORE, Jr., Wilmington, Del. Filed July 8, 1924, Serial No. 724,825. Renewed Dec. 15, 1925. 1 Claim. (Cl. 15—135.)

A device of the class described comprising a brush head having a hole passing through the same and a slot in one side which communicates with the hole, said slot extending into the bristle part, the under portion of the hole being threaded to receive the threaded nipple of a cream tube.



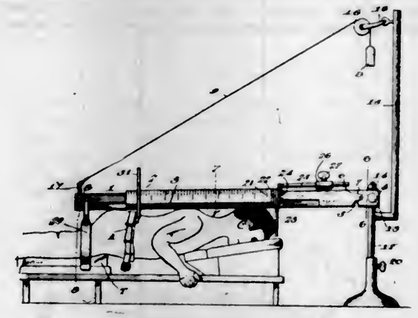
1,571,137. METHOD AND APPARATUS FOR ANNEALING GLASSWARE. VERGIL MULHOLLAND, West Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Mar. 31, 1925. Serial No. 19,615. 51 Claims. (Cl. 49—46.)



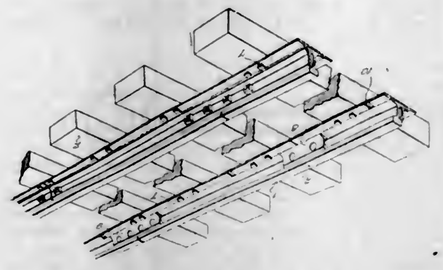
4. The method of annealing glass ware, which comprises passing the ware through a tunnel, heating the lower portion of the tunnel to cause upwardly moving convection currents, cooling the upper portion of the tunnel to cause downwardly moving convection currents, and independently regulating both the heating and the cooling of said portions of the tunnel at intervals longitudinally thereof to control the rate of movement of said convection currents.

1,571,138. STRAINER. FREDERICK H. MYERS, Barberton, Ohio. Filed June 27, 1924. Serial No. 722,802. 1 Claim. (Cl. 210—159.)

A strainer including a funnel-shaped member having a straight neck providing an outlet therefor, the outer edge of the neck being cut at an inclination and being reinforced inwardly, a sleeve telescopically received over the neck and designed to compress a filtering cloth between the said sleeve and neck to hold the body of the filtering cloth in a straight condition against the mouth of the neck, said sleeve having its outer edge cut at an opposite inclination to that of the funnel member and the said edge being reinforced inwardly, a second sleeve, designed to telescopically receive therein the first mentioned sleeve and to compress therebetween and to arrange on the outlet mouth of the first mentioned sleeve a filtering cloth, means for holding the sleeves associated with the funnel, said means comprising a bail hingedly connected to the funnel and a headed lug on the last mentioned sleeve over which the bail is swung.



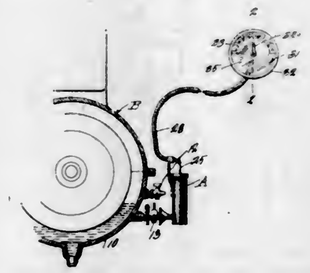
1,571,139. REFRACTOR. JAMES G. NOLEN, New York, N. Y. Filed Dec. 1, 1923. Serial No. 677,971. 3 Claims. (Cl. 240—48.4.)



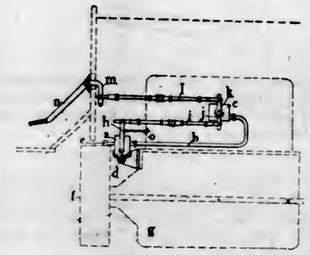
1. The combination with a substantially parabolic reflector having a source of light on the line of its axis at the rear of the reflector, of a substantially parabolic concavo-convex refractor supported in the reflector and having its line of axis coincident with the line of axis of the reflector and its apex near the source of light, a lens at the apex of the refractor for cooperating with the source of light, means for diffusing light arranged on the interior of the refractor circumferentially around the interior and extending forwardly from the lens, and means for diffusing light arranged on the exterior of the refractor and radiating from the lens and extending forwardly therefrom.

1,571,140. NEUROVERTAMETER. MICHAEL FLORANCE O'CONNOR, Sheridan, Wyo. Filed June 1, 1925. Serial No. 34,253. 7 Claims. (Cl. 33—174.)

1. A device for assisting the recording and the relocation of subluxations in chiropractic and comprising a graduated measuring element, means by which said element is held suspended in the direction of the spine of a human body to be treated, means associated with said element to touch a portion of said body thereby to establish a gauge for the positioning of said element, and a movable template to straddle said element and contact the body, said template having graduations coacting with said element and with the surface of the body to fix the desired locations.



1,571,141. RAIL CHAIR AND CLAMP. ANDREW J. PARK, Pueblo, Colo. Filed May 2, 1924. Serial No. 710,654. 1 Claim. (Cl. 238—26.)

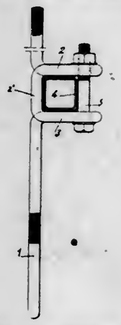


In combination with the rails of a railway track, of a means for bracing and providing a substantially continuous rail, comprising members of a length approximately equalling the length of the rails, each of said members having a channeled base to receive the base of the rails therein, an outer angle flange to contact with the flange of the rail, a plate projecting from the flange and terminating in a head to underlie the head of the rail, said members designed to have their ends disposed opposite the confronting ends of the rails, fish plates in the inner fishing spaces of the rails bolted to the members at the confronting ends thereof and likewise bolted to the members at the confronting ends of the rails, spikes securing the members on the ties, and said members having their base portions on their inner sides notched, for the purpose set forth.

1,571,142. OIL INDICATOR. CHARLES G. PERKINS, Kinrose, Mich. Filed Nov. 14, 1923. Serial No. 674,763. 1 Claim. (Cl. 116—118.)

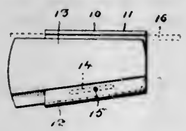
A lubricant indicator for association with one of the crank case lubricant drain cocks comprising a cylinder, a flared tubular element leading laterally from the cylinder adapted to be received on the pet cock, means for securing the flared tubular element to the petcock, an arm extending vertically from the cylinder, a flexible tube having one end supported by the arm, a flexible shaft in the tube, a crank arm extending from one end of the shaft and disposed above the cylinder, a float in the cylinder, a rigid connection between the float and the crank arm, and a registering mechanism including a movable hand operatively connected with the flexible shaft.

1,571,143. AUTOMATIC CONTROLLING DEVICE FOR COMPRESSORS SUPPLYING EXPLOSION ENGINES. EUGÈNE ROYER, Paris, France, assignor to Societe pour l'Exploitation du Suralimentateur Royer, Paris, France. Filed Oct. 23, 1925. Serial No. 64,447. 7 Claims. (Cl. 123—119.)



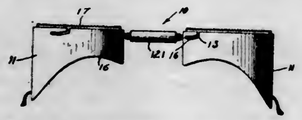
1. In combination, an internal combustion engine having a driven element, a carbureter for furnishing air and fuel to the engine and provided with a throttle valve actuating member, manumotive means operatively connected to said member to permit the throttle to be controlled by the operator, a normally inoperative air compressor having a driven element, a conduit connecting the compressor to the carbureter to permit the compressor to furnish compressed air to the carbureter, and means operatively connecting said member to the compressor for causing the driven elements to engage one another only after the manumotive means has moved said member sufficiently to substantially fully open the carbureter throttle, whereby the driven element of the engine actuates the driven element of the compressor only after the throttle of the carbureter has been opened substantially completely.

1,571,144. IRON FITTING OR BRACKET FOR INSULATORS. ERNEST SAIGNOL, Grangeneuve St. Etienne, France. Filed Oct. 28, 1924. Serial No. 746,448. 2 Claims. (Cl. 173—321.)



1. A bracket cooperating with a support formed to provide upper and lower parallel strands and a connect-

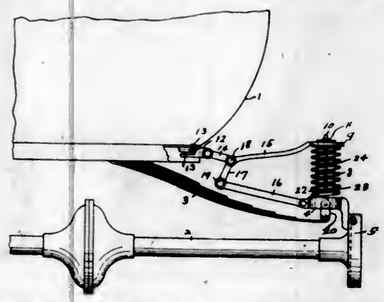
ing side length to embrace the support, and means for tightening the upper and lower parallel strands relative to each other and to the support.



2. A support fitting for insulators comprising a bent over length of material forming two parallel hooks, a support of any suitable shape surrounded by the hooks, a bolt placed between the two hooks for tightening the fitting upon the support.

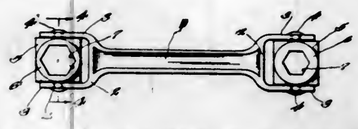
1,571,145. HOLDER. ADOLPH F. SCHLÄPPI, Curwensville, Pa. Filed Apr. 23, 1924. Serial No. 708,527. 4 Claims. (Cl. 250—34.)

1. A dental X-ray film holder comprising a wedge shaped frame including a flange, and a wedge slidably associated with said frame and adapted to clamp said film therebetween and said flange.



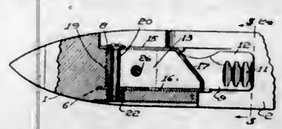
1,571,146. GOGGLES. ELMER L. SCHUMACHER, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Feb. 9, 1924. Serial No. 691,615. 3 Claims. (Cl. 2—14.)

1. A device of the character described comprising a pair of eye cups, each having a portion to fit the face and a lens rest, a flexible bridge member connecting the eye cups which may be bent so that one eye cup may be placed on the other, and a pair of lens retaining members, one for each eye cup having interengaging means with each other and adapted to clamp the lenses on the lens rests through rotation of the retaining members, said interengaging means being for use to tighten or loosen the retaining members when the cups are placed one on the other through the flexing of the bridge member.



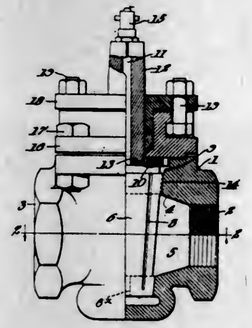
1,571,147. SHOCK ABSORBER. ALBERT E. SCOTT, Houston, Tex. Filed Nov. 5, 1923. Serial No. 672,749. 2 Claims. (Cl. 267—29.)

1. The combination with a vehicle body and a leaf spring supporting said body; of a fixed perch having a central opening; a yieldable means mounted on said perch; said yieldable means including a coil spring supported by said perch; an anchor on said coil spring; a cushion member depending from said anchor within said coil spring; a bearing plate, hanger rods whose upper ends are fixed to said anchor, the lower ends of said rods being slidable through said bearing plate and aligned with said opening, means supporting said plate on said



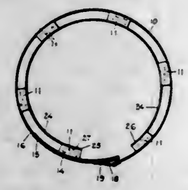
rods, in contact with the lower end of said cushion member, said plate being held normally out of contact with, but adapted to rest upon, said perch; connecting means connected to said anchor, and supported by said yieldable means and also connected to and supporting the outer end of said leaf spring, and means for anchoring said yieldable means on said perch.

1,571,148. WRENCH. JOHN SISOLAK, Chicago, Ill. Filed Nov. 17, 1924. Serial No. 750,310. 1 Claim. (Cl. 81—121.)



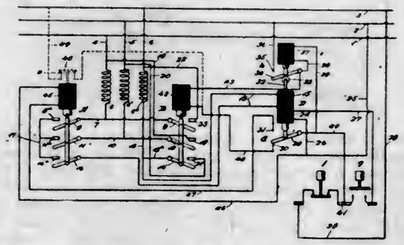
A wrench, including a handle, having its ends extending laterally into enlargements, spaced ears projecting from said enlargements and having aligned openings therethrough, substantially rectangular socket heads between said ears, bearing pins extended through the openings in the ears and projecting transversely through the side walls of said socket heads and having their inner ends upset and embedded in the walls of the socket heads, said pins being mounted for rotation in the openings in the ears, and said socket heads having each face thereof at right angles to the ears provided with an opening, the openings in the faces of said socket heads being of different sizes and all disposed in the same position relative to the faces.

1,571,149. SHUTTLE. WALLACE I. STIMPSON and HARRY A. DAVIS, Hopedale, Mass., assignors to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Aug. 24, 1925. Serial No. 51,952. 8 Claims. (Cl. 139—207.)



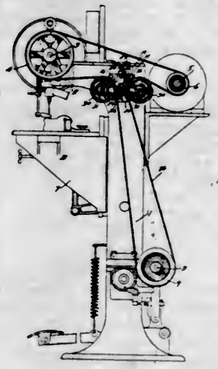
1. A shuttle having, in combination, a body portion, a bobbin holder comprising a shank portion and spring jaws, a bobbin guide having a top plate and a bottom plate resting against the top and bottom of the said shank portion, a through bolt which passes through the top and bottom plates of the bobbin guide and through the shank portion of the bobbin holding jaws, the head of said bolt bearing upon one of said plates and securing means on the opposite end of the bolt bearing directly upon the other of said means for directly clamping said metal parts together as a unit without dependence upon the wood of the shuttle.

1,571,150. LUBRICATION SYSTEM FOR VALVES. WILLIBALD TRINKS, Pittsburgh, Pa., assignor to Homestead Valve Manufacturing Company, Incorporated, Homestead, Pa., a Corporation of Pennsylvania. Filed Sept. 22, 1923. Serial No. 664,305. 5 Claims. (Cl. 251—93.)



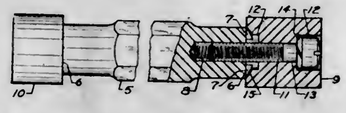
1. In a lubrication system for valves, a valve body having a tapered seat, a rotary plug mounted in said seat, the top of the plug and adjacent parts of the body forming a chamber, and a lubricant inlet to said chamber provided with a check valve, the said chamber opening into channels extending therefrom to a point short of the smaller end of the plug and in contact with said seat, and a pressure relief-port conected with said chamber and opening within the valve body.

1,571,151. GARTER. ARTHUR J. WEHR, Oceanport, N. J., assignor of one-half to Milton J. Goldstein, Long Branch, N. J. Filed Dec. 11, 1924. Serial No. 755,132. 6 Claims. (Cl. 241—6.)



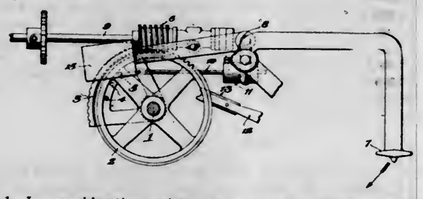
1. A garter or the like comprising a strip of outwardly disposed elastic fabric, means for connecting the ends of said outwardly disposed strip to one another, a strip of inwardly disposed fabric arranged to be positioned adjacent the body of the wearer and a plurality of cushioning members spaced from one another and secured respectively to and between said outwardly disposed strip of elastic fabric and said inwardly disposed strip, said inwardly disposed strip serving to distribute the pressure of said cushioning members against the flesh of the body of the wearer and said cushioning members jointly serving to wholly dispose said strip of elastic fabric in spaced relation from the body of the wearer.

1,571,152. MOTOR-STARTING SWITCH. GEORGE H. WHITTINGHAM, Baltimore, Md., assignor to Monitor Controller Company, Baltimore, Md., a Corporation of Maryland. Filed Dec. 22, 1923. Serial No. 682,205. 2 Claims. (Cl. 172—289.)



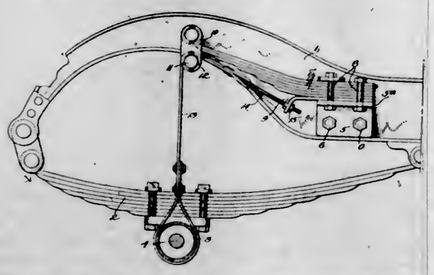
1. The combination with the windings of an induction motor, normally open starting and running switches for the motor and magnets for closing said switches, of a relay having a primary energizing coil and a retarding coil, the latter in a circuit including the motor windings and the starting switch, a normally open manually controlled switch for connecting said primary coil to the supply circuit, a switch movable by the relay and adapted, when said primary coil is energized, to close the circuit of the magnet of the starting switch, an electromagnetic holding switch adapted to connect one terminal of the magnet of the running switch to the supply circuit when said primary coil is energized and until the motor is stopped, and means for connecting the other terminal of the last mentioned magnet to the supply circuit when the current in the retarding coil reaches a predetermined value.

1,571,153. PULLEY DRIVE AND BELT TIGHTENER. JOSEPH T. WRIGHT, Cincinnati, Ohio, assignor to The J. T. Wright Company, Cincinnati, Ohio, a Corporation of Ohio. Filed July 21, 1922. Serial No. 576,591. 2 Claims. (Cl. 64—5.)



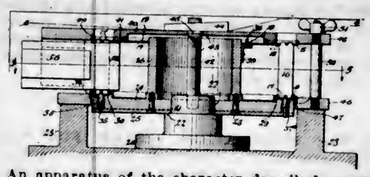
1. In a machine of the character disclosed, a machine frame, a driven pulley journaled upon said frame at a low elevation for transmitting motion to a movable element slidable upon said frame, a second driven pulley journaled upon said frame at a high elevation for transmitting motion to a rotatable element as journalled upon said frame, a driving pulley, a single belt engaged about said driving and driven pulleys for uni-directional rotation of all pulleys, and a pair of idler pulleys unitarily supported intermediate of said driving and driven pulleys for engaging said belt at positions obtaining a maximum arc of belt contact with said driving and driven pulleys and adjustable for belt tightening control.

1,571,154. PLUG GAUGE. WILLIAM H. BAGLEY, Detroit, Mich., assignor to The Studebaker Corporation, South Bend, Ind., and Detroit, Mich., a Corporation of New Jersey. Filed Nov. 30, 1923. Serial No. 677,817. 6 Claims. (Cl. 33—178.)



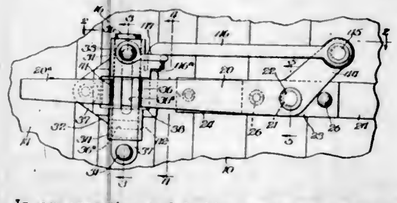
1. A device of the character described, comprising a handle provided with an end face and an axial threaded opening; a key having a curved outer face integral with said handle projecting out from said face and forming the outer extremity of said handle; a gauge head provided with an axial opening and a key-way in each end face adapted to receive said key; and means extending through said axial opening in said gauge head and into said threaded opening in said handle for holding said head against said face.

1,571,155. BUNCH BUILDER FOR SPINNING MACHINES. JAMES V. BROWN, Erlanger, N. C., assignor to H. & B. American Machine Company, Pawtucket, R. I. Filed May 16, 1925. Serial No. 30,720. 11 Claims. (Cl. 247—43.)



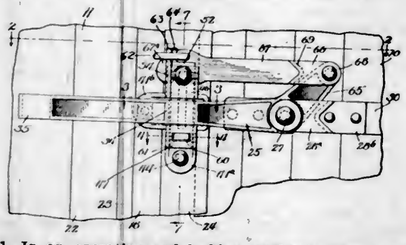
1. In combination with the vertically movable worm and the gear of the bunch builder of a spinning machine, a toothed segment mounted on the gear shaft and having its teeth overlying the gear teeth and formed to mesh with the worm, a weight connected to the segment, a stop connected to the frame of the machine, and a stud adjustably carried by the segment and engageable with the stop.

1,571,156. SNUBBER FOR VEHICLES. ANGUS H. GIBSON, Salt Lake City, Utah, assignor to Gibson Products Co., Salt Lake City, Utah, a Corporation of Utah. Filed July 13, 1923. Serial No. 651,266. 4 Claims. (Cl. 267—10.)



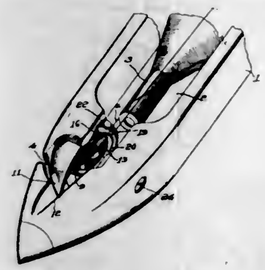
1. A snubber device for motor cars embracing in its construction a leaf spring secured to the car frame, a shackle pivotally supported by the free end of said spring, a flexible snubber element positively anchored at its opposite ends to the axle housing and to the body frame respectively and intermediately supported by said shackle to travel relative thereto, substantially as described.

1,571,157. ASSEMBLING APPARATUS. EUGENE G. MCCALL, Buffalo, N. Y. Filed Mar. 6, 1924. Serial No. 697,300. 17 Claims. (Cl. 29—89.)



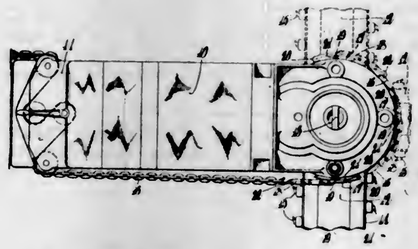
1. An apparatus of the character described comprising a lower support upon which one side member of a fan impeller is adapted to be mounted, spring pressed pins adapted to engage with the lower ends of the tenons on the blades which interlock with said side member, and a pressure plate adapted to engage with the other side member of the fan impeller and press the same into interlocking engagement with the tenons on the other ends of said blades.

1,571,158. SEALING LOCK AND DOOR STARTER. EDWARD POSSON, Chicago, Ill. Filed Feb. 17, 1921, Serial No. 445,502. Renewed Aug. 11, 1924. 18 Claims. (Cl. 292—202.)



1. In an operating and locking mechanism for a sliding door member having a frame member associated therewith, the combination with an operating lever pivotally mounted on one of said members; of means swingable in a plane substantially parallel to the plane of the door, and directly actuated by said lever, for detachably connecting the lever to the other member; and means for locking said lever in fixed position to lock the sliding door member.

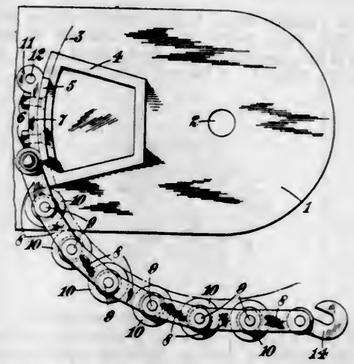
1,571,159. SEALING LOCK AND DOOR STARTER. EDWARD POSSON, Chicago, Ill. Filed Jan. 28, 1922. Serial No. 532,514. 10 Claims. (Cl. 292—202.)



1. In an operating and locking mechanism for a door member having a frame member associated therewith, the combination with an operating element movably mounted on one of said members; of means swingable in a plane substantially parallel to the plane of the door for detachably connecting said operating element to the other member; and independent means for locking said operating element to said last named member in a plurality of positions to hold the door either in partly open or tightly closed position.

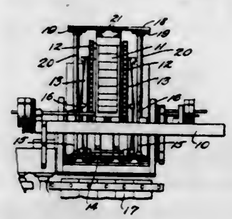
1,571,160. AUTOMATICALLY-THREADING SHUTTLE. ALONZO E. RHOADES, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Aug. 21, 1925. Serial No. 51,618. 10 Claims. (Cl. 139—228.)

1. An automatically threading loom shuttle having a longitudinally extending thread passage, a thread casting and guiding device in the thread passage constructed and arranged to cast the thread upwardly through the open top of the passage on the occurrence of a loop or overthrow as the shuttle is arrested in the shuttle box and an additional thread controller nearer the bobbin chamber than said thread casting and guiding device and extended laterally beyond the thread casting and guiding device to take control of and lead the thread in case it fails to be engaged by the thread casting and guiding device on a pick of the shuttle following an overflow and consequent partial or complete unthreading.



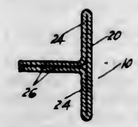
1,571,161. COAL-CUTTING MACHINE. GILBERT RIMMER, London, England, assignor to Sullivan Machinery Company, Chicago, Ill. Filed June 21, 1922. Serial No. 569,860. 20 Claims. (Cl. 262—30.)

1. A mining machine including in combination, a pivoted cutter bar having cutters thereon, flexible means connectible to swing said bar, and flexible means connectible thereto and to the bar and extending over the latter for inhibiting conflict of said means with said cutters.



1,571,162. COAL-CUTTING MACHINE. GILBERT RIMMER, Radford, England, assignor to Sullivan Machinery Company, Chicago, Ill. Filed Jan. 10, 1925. Serial No. 1,687. 3 Claims. (Cl. 262—30.)

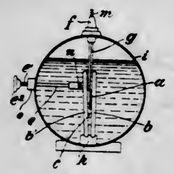
1. For use in conjunction with a mining machine having a frame having an arcuate guiding surface and a cutter bar pivoted on an axis in substantially the same line with the axis of said arcuate surface, a flexible tension element having means for connecting it in fixed relation to the bar to apply a swinging force to the latter, said element being adapted to flex only in planes parallel



to the plane of bar swing and having rolling means associated therewith and adapted to engage said guiding surface as said element is flexed around the latter.

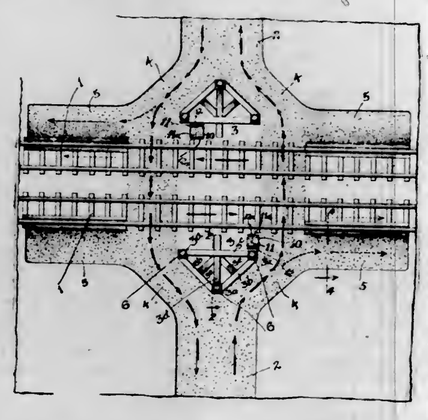
1,571,163. COTTON-PACKER ATTACHMENT. CLAUS H. ROHLF, San Antonio, Tex., assignor of one-half to Anna Rohlf, San Antonio, Tex. Filed July 11, 1922. Serial No. 574,164. 1 Claim. (Cl. 100—25.)

The combination with a cotton packer including a horizontal stationary support, a horizontal stationary beam arranged a substantial distance above and spaced from said support, a packing block, and a pair of vertically extending rods secured at their lower ends to said packing block, of a pair of tubular guides secured at their upper ends to said beam and depending therefrom, said guides extending downwardly at least to said support and being secured thereto and slidably receiving said rods.



1,571,164. MANUFACTURE OF BRAKE SHOES. FRANK H. SMITH and THOMAS A. SINDELAR, Cleveland, Ohio, assignors, by mesne assignments, to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed July 1, 1925. Serial No. 40,952. 17 Claims. (Cl. 188—250.)

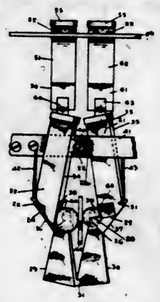
9. A T-section pressed metal brake shoe having a generally cylindrical lining-supporting part and a radial web formed of two radial flanges in engagement with each other and integral with portions of the cylindrical part,



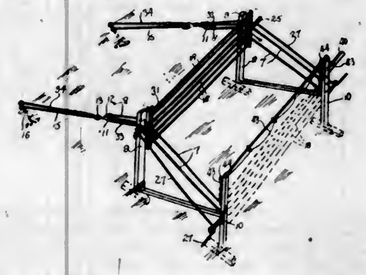
in combination with a separate wear member at the end of the shoe arranged to transmit thrust to both of the radial flanges.

1,571,165. REGULABLE ELECTRICAL STEAM BOILER. MAX FUSS, Berlin, Germany, assignor to Meyer-Keller & Cie., Lucerne, Switzerland. Filed Apr. 1, 1922. Serial No. 548,878. 2 Claims. (Cl. 219—40.)

1. A device for the electric heating of liquids in combination with a boiler, a plurality of stationary electrodes suspended therein, a pair of vertically positioned insulating plates arranged about each electrode and forming a passage way therebetween, and means for rotating said plate whereby the cross sectional area of said passage way may be varied at different points.



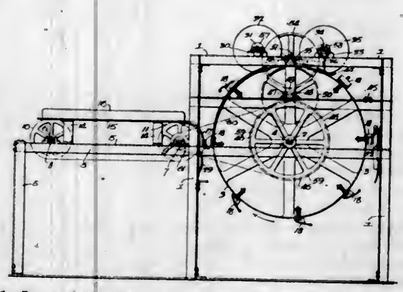
1,571,166. SAFETY APPROACH TO RAILROAD CROSSINGS. JOHN MELLOR, Bay Head, N. J. Filed June 12, 1924. Serial No. 719,489. 5 Claims. (Cl. 238—3.)



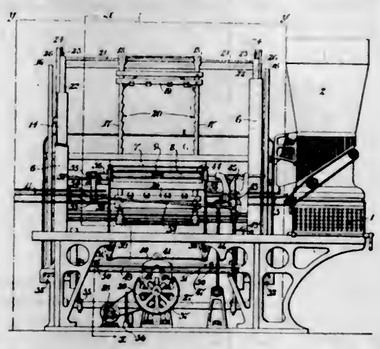
1. A safety approach to a railroad crossing embodying a highway-road divided into two relatively short divergent branch roads, one of which branch roads merges with a dead end spur road extending substantially parallel to the railroad track and in the same general direction of turning as the branch road with which it merges.

1,571,167. VENDING MACHINE. FRANCIS FERDINAND MOLLOY, Montreal, Quebec, Canada. Filed Aug. 25, 1924. Serial No. 733,988. 7 Claims. (Cl. 194—63.)

1. A coin controlled machine comprising a pair of pivoted crossed arms forming a lever stop at the crotch and having vertical tube guides with opposingly coin outlets and rolling surfaces, a casing enclosing said mechanism and suitable ejector mechanism and having a pair of coin slots, chutes extending downwardly from said slots and registering with said tube guides, and a pivoted lever adapted to operate the ejector mechanism and engaging coins on either side and rolling said coins on said surfaces to swing said crossed arms on their pivots and open them at the crotch to avoid said stop.

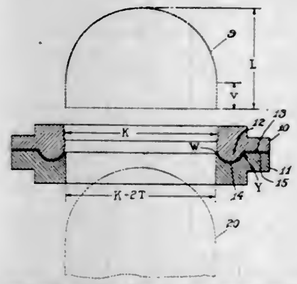


1,571,168. RACE-STARTING MACHINE. REUBEN GABRIEL GRAY, Canterbury, near Sydney, New South Wales, Australia. Filed Aug. 28, 1925. Serial No. 53,133. 2 Claims. (Cl. 39—17.)



1. In race starting machines, a pair of spaced posts, a barrier support consisting of a pair of parallel forwardly inclined flexible side guides constituted of one length doubled with the loop beyond one post and the falls spaced and slidable through said post and their ends secured to the other post, a sheave within the loop and means for drawing said sheave towards an anchorage to uniformly tauten said guides.

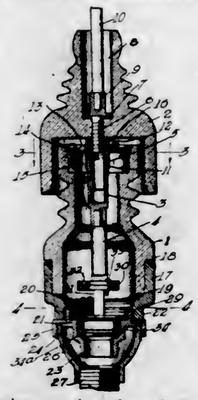
1,571,169. DECAPITATING, CUTTING, AND CLEANING MACHINE. JOHN F. KELLER, Philadelphia, Pa. Filed Mar. 22, 1921. Serial No. 454,395. 11 Claims. (Cl. 17—4.)



1. In a fish cleaning machine, the combination of a continuously rotating drum, fish clamping means carried by said drum, means for severing the head of the fish and a portion of the belly as it is carried around by the drum, means for cleaning the entrails from the fish, and means for releasing the fish from the said clamping means after it has been acted upon by the said severing and cleaning devices.

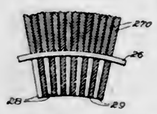
1,571,170. PHOTOGRAPHIC TYPE-SETTING MACHINE. JOHN ROBERTSON, St. Annes-on-the-Sea, England. Filed Jan. 21, 1922. Serial No. 530,851. 9 Claims. (Cl. 95—4.5.)

1. A photographic type setting machine including means for supporting a sensitized plate means for assembling a character line consisting of a plurality of individual character members, a camera device, and means for shifting said line of character members into position to be projected by said camera device on to said sensitized plate.



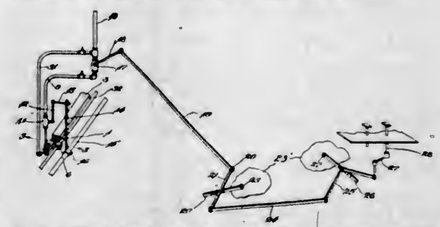
1,571,171. PROCESS OF FORMING KETTLES AND DIE THEREFOR. CECIL H. STRUPE, Indianapolis, Ind., assignor to Leedy Manufacturing Company, Indianapolis, Ind., a Corporation of Indiana. Filed Nov. 10, 1924. Serial No. 749,100. 7 Claims. (Cl. 119—5.)

1. The method of forming thin sheet metal kettles which comprises forming an annular corrugation in a blank, annularly supporting the blank in the corrugation immediately adjacent the desired kettle diameter, exerting a frictional resistance upon the metal of the blank in and beyond the corrugation, and exerting a drawing pressure upon the blank within the annular support substantially at right angles to the plane of the axis of the corrugation.



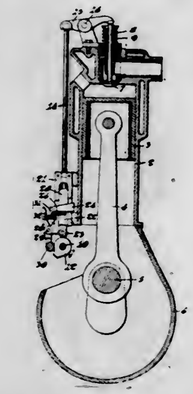
1,571,172. POTHEAD FOR ELECTRICAL CIRCUIT CONNECTERS. PAUL F. WILLIAMS, Chicago, Ill., assignor to G & W Electric Specialty Co., Chicago, Ill., a Corporation of Illinois. Filed Aug. 5, 1918. Serial No. 248,305. 7 Claims. (Cl. 173—363.)

1. In a pothead, a body member having a longitudinal bore and a ring member 15 permanently fitted in the bore of said body member, a plate member 13 fitted on top of and covering the ring member 15, a screw 14 passing downward through the plate member 13 and into the ring member 15 to hold said plate member in position, and



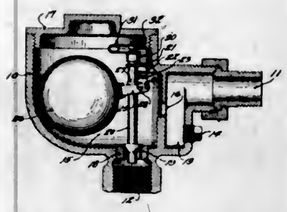
a terminal member passing through the plate 13, said terminal member comprising an externally threaded socket provided with a smooth bore and having a threaded connection with the plate member 13, and adapted to slidably receive a second terminal member in the smooth bore.

1,571,173. LOOSE-LEAF BINDER. GEORGE AYER PARSONS, New York, N. Y., assignor to Charles E. Bedaux Company, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 19, 1925. Serial No. 3,327. 3 Claims. (Cl. 129—41.)



1. In a loose leaf binder, in combination, a plurality of separate leaves, a binding post or strip passing through said leaves adjacent their inner ends, and means associated with said post or strip for clamping said leaves tightly together in parallel relation, the inner ends of different leaves being cut away at different points beyond said post or strip to receive the remaining portions of other leaves when the binder is opened.

1,571,174. HEATER FOR PRINTING PRESSES. ELMER J. WALLACE, Freeport, Ill. Filed July 23, 1923. Serial No. 653,330. 4 Claims. (Cl. 34—18.)



1. A drying heater attachment for printing presses comprising a burner, a substantially U-shaped guard over said burner, a control valve for controlling the flow of heat fuel to said burner, means connecting the control valve with the starting and stopping mechanism of a press for actuating said valve, and press control means for regulating the flow of fuel to the burner independently of said control valve.

1,571,175. INTERNAL-COMBUSTION ENGINE. Lewis J. Bazzoni, Swampscott, Mass. Filed July 7, 1921. Serial No. 483,096. 11 Claims. (Cl. 123—90.)

1. In an internal combustion engine, the combination with a valve, of operating mechanism for said valve including a spring for seating said valve, a cam mechanism for transmitting motion from said cam to said valve to open the valve, and means including power driven parts for automatically effecting a positive adjustment of the connections between said cam and valve to take up lost motion in said connections without interfering with the seating of the valve.

1,571,176. VALVE. Frank Le Clair Hutchinson, Wauwatosa, Wis., assignor, by mesne assignments, to Milwaukee Valve Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed July 25, 1923. Serial No. 653,694. 6 Claims. (Cl. 236—53.)

1. In a valve of the class described a casing forming a chamber provided with inlet and outlet openings, a float, a valve provided with a stem for controlling said outlet opening, means connecting said float to said stem the stem of said valve having passage providing communication between said chamber and outlet opening and thermostatic means for closing said passage.

ALPHABETICAL LIST OF REGISTRANTS OF TRADE-MARKS.

A. B. C. Stores, Incorporated, The, Houston, Galveston and Beaumont, Tex. Eggs and coffee. 207,542; Jan. 5; Serial No. 203,773; published Oct. 20, 1925.

Abraham & Straus, Inc., New York, N. Y. Pictures for artistic and decorative purposes. 207,535; Jan. 5; Serial No. 200,299; published Oct. 6, 1925.

Abraham & Straus, Inc., New York, N. Y. Household furniture. 207,536; Jan. 5; Serial No. 200,303; published Oct. 13, 1925.

Ace Art Company. (See Riley, Anna E.)

Actien-Gesellschaft für Anilin-Fabrikation, Berlin, Germany. Disinfectants, insecticides, parasiticides, and fungicides. 207,677; Jan. 5; Serial No. 213,877; published Oct. 6, 1925.

Alberti, Ditta Guiseppe, Benevento, Italy. Maltless beverage. 207,476; Jan. 5; Serial No. 213,956; published Oct. 20, 1925.

Allright Manufacturing Company, The, Rural Hall, N. C. Toilet seats. 207,594; Jan. 5; Serial No. 217,596; published Oct. 20, 1925.

American Agricultural Chemical Co., The; The American Agricultural Chemical Company, New York, N. Y. Fertilizers. 52,391; renewed May 8, 1926.

American Blower Company, Detroit, Mich. Centrifugal fans, propeller fans, tobacco-curing machinery, etc. 207,687; Jan. 5; Serial No. 212,773; published Oct. 20, 1925.

American Cellulose & Chemical Manufacturing Company, Ltd., The, New York, N. Y. Men's half hose. 207,622; Jan. 5; Serial No. 217,242; published Oct. 20, 1925.

American Federation of Arts, Inc., The. Title of monthly magazine. 207,467; Jan. 5; Serial No. 214,939; published Oct. 6, 1925.

American Flyer Mfg. Co., Chicago, Ill. Miniature railroads. 207,439; Jan. 5; Serial No. 220,100; published Oct. 27, 1925.

American Glue Company, Boston, Mass. Abrasive papers and cloth. 207,657; Jan. 5; Serial No. 219,651; published Oct. 20, 1925.

American Multiple Fabric Co., Providence, R. I. Fabric hose. 47,134; renewed Oct. 31, 1925.

American Multiple Fabric Co., Providence, R. I. Blankets. 47,478; renewed Nov. 7, 1925.

American Products Company, The, Cincinnati, Ohio. Talcum powder and cold cream. 207,566; Jan. 5; Serial No. 216,961; published Oct. 6, 1925.

American Sales Book Company Limited, Toronto, Ontario, Canada, and Niagara Falls and Elmira, N. Y. Paper sheets, strips, rolls, pads, printed forms, etc. 207,629; Jan. 5; Serial No. 210,214; published Oct. 20, 1925.

American Stocking Company, assignor to M. S. Ely, New York, N. Y. Hosiery. 46,821; renewed Oct. 10, 1925.

American Stocking Company, assignor to M. S. Ely, New York, N. Y. Hosiery. 49,268; renewed Jan. 30, 1926.

American Terra Cotta and Ceramic Company, The; American Terra Cotta & Ceramic Company, Chicago, Ill. Ornamental pottery ware. 50,994; renewed Apr. 3, 1926.

American Trona Corporation, New York, N. Y. Mixture of borax and a double salt of trisodium phosphate and sodium metaborate used for cleaning, etc. 207,611; Jan. 5; Serial No. 218,681; published Oct. 20, 1925.

Ansco Photoproducts, Inc., Binghamton, N. Y. Photographic prints. 207,699; Jan. 5; Serial No. 218,682; published Oct. 27, 1925.

Armstrong-Blum Manufacturing Company, Chicago, Ill. Hack sawing machines, metal-punching machines, metal-bending machines, etc. 207,685; Jan. 5; Serial No. 212,990; published Oct. 20, 1925.

Associated Merchandising Corporation, New York, N. Y. Boxed writing paper, correspondence cards, and mailing envelopes. 207,693; Jan. 5; Serial No. 210,520; published Oct. 6, 1925.

Aubeuf, F. J., Co. Inc., Oneida, N. Y. Hand carts. 207,680; Jan. 5; Serial No. 213,545; published Aug. 4, 1925.

Babbitt, B. T. (See Mendleson's, A. Sons, assignor.)

Babcock, H. H., Company, Watertown, N. Y. Carriages. 50,811; renewed Apr. 3, 1926.

Badische Anilin- & Soda-Fabrik, Ludwigshafen-on-the-Rhine, Germany. Chemical products to be added to motor fuels to prevent the motor from knocking. 207,462; Jan. 5; Serial No. 215,960; published Oct. 27, 1925.

Baker, Charles F., & Co.; Charles F. Baker & Co., Inc., Boston, Mass., successor. Wire nails. 49,090; renewed Jan. 23, 1926.

Ballard, James F.; James F. Ballard, Inc., St. Louis, Mo., successor. Antiseptics or germicides. 53,196–7; renewed May 29, 1926.

Ballard, James F.; James F. Ballard, Inc., St. Louis, Mo., successor. Germicide and antiseptic compound. 53,239; renewed May 29, 1926.

Barr, Albert D., doing business as Davis Laboratory, Los Angeles, Calif. Antiseptic and germicidal preparations. 207,463; Jan. 5; Serial No. 215,677; published Oct. 6, 1925.

Bausch & Lomb Optical Company. (See Stevens and Company, assignor.)

Beldam Packing Rubber Company Limited, London, England. Packings of all kinds, hose, india rubber, gutta-percha, etc. 207,543; Jan. 5; Serial No. 206,102; published Oct. 20, 1925.

Bender, Lillian M., San Francisco, Calif. Clothes racks. 207,690; Jan. 5; Serial No. 211,825; published Oct. 20, 1925.

Benevolent & Protective Order of Elks of the United States of America, New York, N. Y. Monthly magazine. 207,649; Jan. 5; Serial No. 209,621; published Oct. 20, 1925.

Bird-Archer Company, The, New York, N. Y. Chemical compounds. 50,995; renewed Apr. 3, 1926.

Birmingham Pen Co., The. (See Hall Brothers, assignor.)

Blake, Moffitt & Towne, San Francisco, Calif. Typewriter paper, manuscript covers, etc. 207,684; Jan. 5; Serial No. 212,993; published Oct. 6, 1925.

Blodgett & Orswell Co. (See Clark, John J., & Co., assignor.)

Blodgett & Orswell Co., Pawtucket, R. I. Spool cotton. 52,033; renewed May 1, 1926.

Blodgett & Orswell Co., Pawtucket, R. I. Spool cotton. 52,088; renewed May 1, 1926.

Blum, Charles, doing business as The Dando-Rub Laboratories, Brooklyn, N. Y. Dandruff ointment. 207,576; Jan. 5; Serial No. 214,777; published Aug. 11, 1925.

Blum Store, The, Philadelphia, Pa. Women's and misses' suits, coats, dresses, wraps, capes, etc. 207,588; Jan. 5; Serial No. 218,041; published Oct. 20, 1925.

Bobb, G. W., Company, The, Columbus, Ohio. Canned fruits and vegetables, dried fruits, and catchup. 207,633; Jan. 5; Serial No. 218,449; published Oct. 20, 1925.

Booser, Allen, Dover, N. J. Liquid polish for automobiles. 207,727; Jan. 5.

Bouquet-Brownson Co., Inc., St. Paul, Minn. Mops. 207,442; Jan. 5; Serial No. 219,711; published Oct. 20, 1925.

Boyd Manufacturing Company, Inc., The, doing business as La-Lo Laboratories, Birmingham, Ala. Hairdressings. 207,598; Jan. 5; Serial No. 219,222; published Oct. 13, 1925.

Bray Shoe Company, Philadelphia, Pa. Shoes. 207,717; Jan. 5.

Breuner, John, Company, The, San Francisco, assignor to John Breuner Co., Sacramento, Calif. Mattresses. 51,110; renewed Apr. 3, 1926.

Brock, Franz W., Burke, Idaho. Antiseptic preparation for the treatment of sores, abrasions, etc. 207,504; Jan. 5; Serial No. 216,583; published Oct. 6, 1925.

Brown, McCleane, Pittsburgh, Pa. Rolled iron and steel. 207,692; Jan. 5; Serial No. 211,403; published June 23, 1925.

Brown & Sharpe Manufacturing Company; Brown & Sharpe Mfg. Co., Providence, R. I. Hair clippers. 48,448; renewed Jan. 2, 1926.

Bulletin Record Publishing Co. Inc., Chicago, Ill. Daily publication. 207,620; Jan. 5; Serial No. 217,756; published Oct. 20, 1925.

Burke Golf Company, The, Newark, Ohio. Shafts for golf clubs. 207,488; Jan. 5; Serial No. 218,161; published Oct. 20, 1925.

California Packing Corporation. (See Griffin & Skelley Co., assignor.)

Carter, Joseph E., doing business as Carter's Laboratories, Fargo, N. Dak. Hair-color restorer. 207,456; Jan. 5; Serial No. 215,847; published Oct. 6, 1925.

Central Laboratories Co., Wheeling, W. Va. Radio-sealing cement and antifreeze compound for radiators. 207,501; Jan. 5; Serial No. 218,607; published Oct. 6, 1925.

Certified Laboratory Products Inc., Glendale, Calif. Chemical gases. 207,524; Jan. 5; Serial No. 205,742; published Oct. 27, 1925.

Champagne, Alphonse B. D., doing business as Massachusetts Sales Service, Lowell, Mass. Metal and glass polish. 207,553; Jan. 5; Serial No. 192,066; published May 19, 1925.

Chemische Fabrik Pott & Co., Dresden, Germany. Soaps and powders for treating textiles and leather. 207,631; Jan. 5; Serial No. 196,432; published Oct. 20, 1925.

Chester, F. E., Mfg. Co., The, Bellefont and Providence, R. I. Fishing tackle. 207,441; Jan. 5; Serial No. 219,877; published Oct. 20, 1925.

Chirometer Sales Company. (See Hayman, George R.)

Chirpoo Chemical Company. (See Cummings, Thomas L.)

Clark, John J., & Co., assignor to Blodgett & Orswell Co., Pawtucket, R. I. Spool cotton. 52,099–102; renewed May 1, 1926.
Clark, Joseph H., San Francisco, Calif. Hosiery. 207,632; Jan. 5; Serial No. 208,569; published Oct. 20, 1925.
Cleaner Products Company, Freedom, Pa. Preparation used as a cleaner for painted or varnished surfaces. 207,511; Jan. 5; Serial No. 216,711; published Oct. 6, 1925.
Cluett, Peabody & Co. Inc., Troy, N. Y. Negligee and dress shirts. 207,739; Jan. 5.
Cohen, Jacob, doing business as Crescent Rubber Company, New York, N. Y. Rubber raincoats, aprons, etc. 207,722; Jan. 5.
Colonial Salt Company; The Colonial Salt Company, Akron, Ohio, successor. Table and dairy salt. 47,770–1; renewed Nov. 21, 1925.
Colonial Salt Company; The Colonial Salt Company, Akron, Ohio, successor. Table and dairy salt. 47,773; renewed Nov. 21, 1925.
Columbia Pictures Corporation, New York, N. Y. Moving pictures. 207,681; Jan. 5; Serial No. 213,487; published Oct. 20, 1925.
Columbia Rope Company, Auburn, N. Y. Rope. 50,586; renewed Mar. 27, 1926.
Co-Mo Manufacturing Company, Mebane, N. C. Floor-sweeping compound. 207,506; Jan. 5; Serial No. 217,007; published Oct. 6, 1925.
Conklin Pen Manufacturing Co., The, Toledo, Ohio. Fountain pens. 207,694; Jan. 5; Serial No. 210,290; published Oct. 6, 1925.
Cook Laboratories, Inc., Chicago, Ill. Hypodermic syringes and needles. 207,728; Jan. 5.
Cook's, Adam, Sons, assignors to Adam Cook's Sons, Inc., New York, N. Y. Lubricating grease. 52,007; renewed May 1, 1926.
Corrado Bros., New York, N. Y. Olive oil. 207,638; Jan. 5; Serial No. 217,818; published Oct. 20, 1925.
Courrier d'Air Products Co. (See Fries & Fries Co., The.)
Crawford, McGregor and Canby Company, The, Dayton, Ohio. Golf clubs. 207,438; Jan. 5; Serial No. 220,112; published Oct. 27, 1925.
Crescent Rubber Company. (See Cohen, Jacob.)
Crown Rubber Manufacturing Co. (See Rindskopf, Herbert A.)
Cummings, Thomas L., doing business as Chirpoo Chemical Company, Honston, Tex. Soaps. 207,628; Jan. 5; Serial No. 213,009; published Oct. 20, 1925.
Cycling Press, The, Inc., New York, N. Y. Monthly magazine. 207,454; Jan. 5; Serial No. 216,262; published Oct. 13, 1925.
Dando-Rub Laboratories, The. (See Blum, Charles.)
Davis, B. T.; Benajah T. Davis, Huntington, W. Va. Liquid preparation for the cure of rheumatism. 51,635; renewed Apr. 17, 1926.
Deisel-Wemmer Co., The, Lima, Ohio. Cigars. 51,417; renewed Apr. 17, 1926.
De Luxe Cake Decorator Company, Minneapolis, Minn. Cake decorators. 207,591; Jan. 5; Serial No. 217,864; published Oct. 20, 1925.
Dennison & Sons, Inc., Long Island City, N. Y. Bank notes, checks, drafts, writing paper, etc. 207,688; Jan. 5; Serial No. 212,271; published Oct. 6, 1925.

A C Spark Plug Company. (See Rabezzana, Hector, assignor.)
Abendroth Brothers. (See Seeley, Frank E., assignor.)
Abernathy, Samuel F., Roanoke, Ala. Pipe cleaner. 1,568,392; Jan. 5.
Abernathy, Samuel F., Roanoke, Ala. Pipe cleaner. 1,568,393; Jan. 5.
Abrasive Company. (See Brockbank, Clarence J., assignor.)
Accocella, Philip F., Brooklyn, N. Y. Automobile barge. 1,568,307; Jan. 5.
Aegerter, Erwin O. and G. W., St. Louis, Mo. Vision shield. 1,568,200; Jan. 5.
Aegerter, Gustave W. (See Aegerter, Erwin O. and G. W.)
Aeromarine Plane & Motor Company. (See Chilton, R., and Hayes, assignors.)
Affel, Herman A., Brooklyn, N. Y., assignor to American Telephone and Telegraph Company. Repeater circuit. 1,568,861; Jan. 5.
Agnew, Harry C. (See Besbeers, Clarence J., assignor.)
Aiken, Charles W., Brooklyn, N. Y. Soap drier. 1,568,791; Jan. 5.
Akins, Randall P., J. W. Bucher and F. D. Gross, Denver, Colo. Screen. 1,568,792; Jan. 5.
Aktiebolaget Vaporackumulator. (See Ruths, J., Ingero and Echrenk, assignors.)
Aktiengesellschaft Brown, Boveri & Cie. (See Schmidlin, Fritz, assignor.)
Albee, William H., assignor to Koehler Manufacturing Company, Marlboro, Mass. Football-cleat-applying tool. 1,568,308; Jan. 5.
Albert, Joseph A., Springfield, Mass. Tire armor. 1,568,581; Jan. 5.
Albright, Dell L., Hollywood, Calif. Traffic signal for motor vehicles. 1,568,862; Jan. 5.
Alexander, Daniel. (See Gardner, Florinda, assignor.)
Allen, Charles V., Buffalo, N. Y. Attachment for ladder legs. 1,568,201; Jan. 5.
Allen, George, Hillman, Minn. Combined toboggan and sled. 1,568,493; Jan. 5.
Allen, Harold K., Springfield, Mass. Portable oil heater. 1,568,582; Jan. 5.
Allen, John M., Toronto, Ontario, Canada. Knitting full-fashioned hosiery on a circular-knitting machine. 1,568,123; Jan. 5.
American Auto Lamp Co. (See Putterman, Benjamin, assignor.)
American Bottle Company, The. (See Curran, Jerome P., assignor.)
American Flatlite Company, The. (See Kuen, Eugene A., assignor.)
American Moistening Company. (See Braemer, William G. R., assignor.)
American Optical Company. (See Hill, Harry W., assignor.)
American Optical Company. (See Schumacher, E. L., and Boutelle, assignors.)
American Oven & Machine Company. (See Notz, F., and Royan, assignors.)
American Stove Company. (See Roy, Joseph, assignor.)
American Telephone and Telegraph Company. (See Affel, Herman A., assignor.)
American Telephone and Telegraph Company. (See Elsasser, Henry W., assignor.)
American Telephone and Telegraph Company. (See Espenschied, Lloyd, assignor.)
Amsden, Eugene C., Allston, Boston, assignor to The Stafford Company, Boston, Mass. Dobby for looms. 1,568,943; Jan. 5.
Anakin Lock & Alarm Co. (See Kinnear, Eugene C., assignor.)
Anastas, George, Pocatello, Idaho. Window screen. 1,568,494; Jan. 5.
Anderson, Carl, assignor of one-half to T. C. Doolittle, Roza, Wash. Brake band. 1,568,043; Jan. 5.
Anderson, David A., Faribault, Minn. Tester for connecting-rod assemblies. 1,568,583; Jan. 5.
Anderson, Elmer E., La Grande, Oreg. Drier. 1,568,436; Jan. 5.
Anderson, Emil F., Chicago, Ill., assignor to International Harvester Company. Tractor hitch for headers. 1,568,124; Jan. 5.
Anderson, Oliver H. (See Morris, Ephraim W., assignor.)
Anderson, Roy H., assignor of one-half to H. G. Hastings, Allentown, and A. H. Elliott, Philadelphia, Pa. Toe protector. 1,568,706; Jan. 5.
Antiscale Corporation. (See Bonine, Charles E., assignor.)
Antiscale Corporation. (See Freeman, George C., assignor.)
Appo-Krisp Limited. (See Humphrey, George F., assignor.)
Argo, Mattie L., Minneapolis, Minn. Garment-hanger support. 1,568,538; Jan. 5.
Arkin, Victor, Chicago, Ill. Hydraulic power transmission. 1,568,394; Jan. 5.
Assmann, Frederick M., East Orange, N. J., assignor to Continental Can Company, Inc., New York, N. Y. Sheet-metal container. 1,568,359; Jan. 5.
Atkins, Clarence E., East Providence, R. I., assignor, by mesne assignments, to The Waterbury Farrel Foundry and Machine Co., Waterbury, Conn. Wire-drawing machine. 1,568,793; Jan. 5.
Atlas Powder Company. (See McFarland, David M., assignor.)
Atwell, Ernest T., Independence, Mo. Signal. 1,568,863; Jan. 5.
Atwood, Eugene, assignor to Atwood Machine Company, Stonington, Conn. Spindle-driving mechanism. 1,568,539; Jan. 5.
Atwood Machine Company. (See Atwood, Eugene, assignor.)
Atwood, William J. (See Schatz, William A., assignor.)
Auld, D. L., Company, The. (See Auld, Frederick H., assignor.)
Auld, Frederick H., assignor to The D. L. Auld Company, Columbus, Ohio. Spare-fishing-line holder and reel therefor. 1,568,309; Jan. 5.
Auld, Frederick H., assignor to The D. L. Auld Company, Columbus, Ohio. Hub-cap-attaching means. 1,568,707; Jan. 5.
Auto Pneumatic Action Company. (See Danquard, Thomas, assignor.)
Automatic Electric Company. (See Lomax, Clarence E., assignor.)
Automatic Electric Company. (See Martin, Talbot G., assignor.)
Automatic Electric Company. (See Powell, Winfred T., assignor.)
Automatic Refrigerating Company, The. (See Lundgaard, Ivar, assignor.)
Ayling, George W., Springfield, Ill. Kite. 1,568,360; Jan. 5.
Babcock & Wilcox Company, The. (See Harter, Isaac, jr., assignor.)
Bach, Niels P., Millburn, N. J., assignor to Thermokept Corporation. Sealed vacuum container. 1,568,437; Jan. 5.
Bach, Niels P., Milburn, N. J., assignor to Thermokept Corporation, New York, N. Y. Can. 1,568,438; Jan. 5.
Baer, Samuel S., Baltimore, Md. Convertible safety razor, hair trimmer, and comb. 1,568,794; Jan. 5.
Bagge, Peter E., Moline, Ill. Holding device for ropes, cables, and the like. 1,568,310; Jan. 5.
Bahr, Herman, Little Falls, N. Y. Method of pictorial reproduction. 1,568,864; Jan. 5.
Bailey, Wonslow E. (See Stone, L. V., and Bailey.)
Baker, Chester A., Omaha, Nebr. Elastic-fluid compressor. 1,568,708; Jan. 5.
Baker, John S., Los Angeles, Calif. Interlocking mechanism for voting machines. 1,568,709; Jan. 5.
Ball, Alfred J., assignor to The General Fireproofing Company, Youngstown, Ohio. Rod-fastening device for card drawers. 1,568,202; Jan. 5.
Ballou, David M., assignor to Rex Mfg. Co., Providence, R. I. Clip for pencils. 1,568,950; Jan. 5.
Ballou, David M., Mansfield, Mass., assignor to Rex Manufacturing Co., Providence, R. I. Mechanically-operated lead pencil. 1,568,951; Jan. 5.
Baltimore Salesbook Company, The. (See Clement, George C., assignor.)
Barault, Georges, Brussels, Belgium. Heating stove. 1,568,866; Jan. 5.
Barber, Howard M., assignor to C. B. Cottrell & Sons Company, Stonington, Conn. Sheet-feed guide mechanism. 1,568,540; Jan. 5.
Bargar, Frederick C., assignor to Nu-Ex-Fire Appliance Company, Columbus, Ohio. Fire-extinguishing apparatus. 1,568,795; Jan. 5.

Barker, Robert W., Providence, R. I., assignor to E. A. Taft, trustee, Brookline, Mass. Knot-tying implement. 1,568,311; Jan. 5.

Barlow, Orrin G., Davenport, Iowa. Ignition-switch lever. 1,568,125; Jan. 5.

Barr, Sidney U., Brooklyn, N. Y. Casement window. 1,568,865; Jan. 5.

Barrett Company, The. (See Howell, Kenneth B., assignor.)

Barron, Bernard M. (See Clement, H., and Barron.)

Barry, Carlos A., Sutherland, Iowa. Tractor hitch. 1,568,867; Jan. 5.

Barton, Theophilus F., Schenectady, N. Y., assignor to General Electric Company. Voltage-regulating system. 1,568,710; Jan. 5.

Bassett, Frederic B., Washington, D. C. Combined telephone seat and desk. Des. 69,170; Jan. 5.

Bassett, Harry P., Cynthiana, Ky., and M. R. Isaacs, Philadelphia, Pa., assignors to United Products Corporation of America. Composition of matter. 1,568,044; Jan. 5.

Bassett, Robert S., Buffalo, N. Y. Liquid strainer. 1,568,126; Jan. 5.

Bates, George E., Syracuse, N. Y. Direction indicator for motor vehicles. 1,568,495; Jan. 5.

Bates, Jesse G., Chicago, Ill. Stapling machine. 1,568,260; Jan. 5.

Baxter, Hector M., Battle Creek, Iowa. Grass-cutting attachment for graders. 1,568,439; Jan. 5.

Beach, H. D., Company. (See Gibson, Francis W., assignor.)

Bean, George L., Quincy, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Apparatus for operating on rubber articles. 1,568,541; Jan. 5.

Bebel, Abraham. (See Generich, Arnold, assignor.)

Becker, August M., New York, N. Y. Can opener. 1,568,312; Jan. 5.

Beebe, Daniel S., Chicago, Ill., assignor to The Vitrolite Company, Parkersburg, W. Va. Anchor between vitreous slabs arranged at an angle to each other. 1,568,944; Jan. 5.

Behr, Allen H., Brooklyn, N. Y. Tennis racket. 1,568,127; Jan. 5.

Behringer, Emil, Brooklyn, N. Y. Combination water heater. 1,568,440; Jan. 5

Bell & Howell Company. (See Howell, Albert S., assignor.)

Bendix Brake Company. (See Thomas, George J., assignor.)

Benjamin, Bert R. (See Johnston, E. A., Benjamin, and Pearson.)

Bennett, Harry T., G. B. Murphy, and L. G. Story, Tulsa, Okla. Product derived from acid sludge and making the same. 1,568,261; Jan. 5.

Berens, Bernice B. B. (See Horn, M. G., and Berens.)

Berg, William, et al. (See Djuberg, Adolph F., assignor.)

Berge, Joseph, assignor to A C Spark Plug Company, Flint, Mich. Magnet mechanism for magnetic speedometers. 1,568,040; Jan. 5.

Berger, Christian, New York, N. Y., assignor to F. L. Sawyer, Evanstown, Ill. Mechanism for depositing coins or other objects. 1,568,711; Jan. 5.

Bergman, Lars H., assignor to Raymond Bros. Engineering Co., Chicago, Ill. Apparatus for pulverizing and feeding fuel to furnaces. 1,568,945; Jan. 5.

Bergstrom, Carl O., assignor to B. F. Sturtevant Company, Boston, Mass. Dynamo-electric machine. 1,568,262; Jan. 5.

Berkey, Dwight L. (See Griffin, M. C., and Berkey.)

Bernard, Lon A., Houston, Tex. Shade-roller-operating mechanism. 1,568,203; Jan. 5.

Bernet, John J., Cleveland, Ohio. Locomotive terminal and method of salvaging fire. 1,568,542; Jan. 5.

Bertrand, Frederic E., Lynn, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J. Machine for use in making shoes. 1,568,045; Jan. 5.

Bertron, Ernest, Brussels, Belgium. Telephonic and radiotelephonic message or audition by means of fluid resistances. 1,568,046; Jan. 5.

Beshears, Clarence J., Memphis, Tenn., assignor of one-half to H. C. Agnew, Washington, D. C. Automatic means for indicating the condition of air-brake mechanism on trains. 1,568,041; Jan. 5.

Best, Frank E., Inc. (See Best, Frank E., assignor.)

Best, Frank E., Inc. (See Moritz, H. K., and Harp, assignors.)

Best, Frank E., assignor to Frank E. Best, Inc., Seattle, Wash. Mortise lock. 1,568,441; Jan. 5.

Bibb, William C., Louisa, Va. Check book. 1,568,128; Jan. 5.

Biedinger, Vera, et al. (See Tull, W. C., and Bristol, assignors.)

Biles, Alfred F., Portland, Oreg. Manufacture of wooden panel doors. 1,568,395; Jan. 5.

Billows, Arthur J., London, England. Machine for filling and sealing bottles. 1,568,129; Jan. 5.

Bisey, Sunker A., New York, N. Y. Typographical casting machine. 1,568,047; Jan. 5.

Bishop, George E., Cleveland, Ohio. Pocket in automobile tops. 1,568,712; Jan. 5.

Bixby, Walter, assignor to Shawmut Engineering Company, Boston, Mass. Supporting means for tube-frame spools. 1,568,396; Jan. 5.

Black, Henry M. (See Smythe, Richard M., assignor.)

Blackmon, Ben C., Dallas, Tex. Support for collapsible container tubes. 1,568,868; Jan. 5.

Blackwell, Howard, Youngstown, Ohio. Multidisk phonograph. 1,568,130; Jan. 5.

Blade, Frank L., Sycamore, Ill. Tractor hitch. 1,568,204; Jan. 5.

Blair, Rolandis A., Fort Wayne, Ind., assignor to The P & M Company, Chicago, Ill. Rail anchor. 1,568,713; Jan. 5.

Blanchfield, Elizabeth L., San Pedro, Calif. Stop and direction indicator. 1,568,361; Jan. 5.

Blankenship, John C., Austin, Tex. Attachment plugs. 1,568,584; Jan. 5.

Bliss, Frank S., Portland, Oreg. Flying machine. 1,568,205; Jan. 5.

Bluhm, Harold J., Muskegon Heights, Mich., assignor to The Brunswick-Balke-Collender Company, Wilmington, Del. Bowling pin. 1,568,313; Jan. 5.

Boberg, Teofron. (See Söderlund O., Boberg and Testrup.)

Bocchino, Ernest, Passaic, assignor to Up To Date Manufacturing Co., Inc., Jersey City, N. J. Sound-producing device. 1,568,543; Jan. 5.

Boes, Heinrich, Bonn, Germany. Clamping chuck. 1,568,869; Jan. 5.

Bohne, Walter T., et al. (See Miller, Fred A., assignor.)

Bonine, Charles E., Melrose Park, assignor to Antiscale Corporation, Philadelphia, Pa. Prevention of scaling and encrustation. 1,568,714; Jan. 5.

Bonnell, William A., Brooklyn, N. Y. Cable-box anchorage. 1,568,131; Jan. 5.

Borden Company, The. (See Mitton, William E., assignor.)

Borgerd, William F. (See Burger, L. F., and Borgerd.)

Borisof, Morris, Chicago, Ill. Folding chair. 1,568,715; Jan. 5.

Büsebeck, Emil, Barmen, Germany, assignor to M. Henkels, New York, N. Y. Manufacture of lace with body bearing leaflike figures. 1,568,048; Jan. 5.

Boulton, George E., Detroit, Mich. Grapple. 1,568,716; Jan. 5.

Bousfield, Alfred, assignor to E. and T. Fairbanks and Company, St. Johnsbury, Vt. Weighing scale. Des. 69,171; Jan. 5.

Boutelle, William H. (See Schumacher, E. L., and Boutelle.)

Bowman, Newton K., Bowdil, Ohio. Mining-machine chain link and tooth. 1,568,870; Jan. 5.

Bradley, George W., assignor of one-half to B. P. Medford, Avery, Tex. Wrench. 1,568,132; Jan. 5.

Bradley, Josiah, Brooklyn, N. Y. Retort slicing device. 1,568,263; Jan. 5.

Braemer, William G. R., Cranston, R. I., assignor to American Moistening Company. Air-conditioning apparatus. 1,568,717; Jan. 5.

Brandes Laboratories, Inc. (See Gerns, William H., assignor.)

Brandt, Matthew A., Minneapolis, Minn. Playing cards. 1,568,206; Jan. 5.

Brattland, Clara G., Ada, Minn. Air motor. 1,568,718; Jan. 5.

Braucht, Benjamin E., Crosby, N. Dak. Demountable rim for vehicles. 1,568,207; Jan. 5.

Brecht, Leonard J. (See Krueger, L. C., and Brecht.)

Breer, Carl, Detroit, assignor to Chrysler Corporation, Highland Park, Mich. Oil filter. 1,568,796; Jan. 5.

Brennan-Taylor Corporation. (See Taylor, Huston, assignor.)

Brennan, Thomas H., Chicago, Ill. Construction for inductances. 1,568,871; Jan. 5.

Bried, Julien A., Oakland, Calif. Shoe-positioning device for skates. 1,568,264; Jan. 5.

Briggs, Milton O., Muscatine, Iowa. Window curtain and shade supporting bracket. 1,568,872; Jan. 5.

Brigham, Albert H., Whitman, Mass. Feeding mechanism for nail, tack, and similar machines. 1,568,719; Jan. 5.

Brigham-Hopkins Company. (See Robson, William H., assignor.)

Briscoe, John W., Ingram, Pa. Chuck. 1,568,049; Jan. 5.

Bristol, Roy J. (See Tull, W. C., and Bristol.)

Broadwell, Harry M., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn. Inclosed switch. 1,568,042; Jan. 5.

Brockbank, Clarence J., assignor to Abrasive Company, Philadelphia, Pa. Manufacturing artificial abrasives. 1,568,873; Jan. 5.

Brooks, Milton, Esperance, N. Y. Gradometer. 1,568,133; Jan. 5.

Brooks, Warren W., and R. E. Rough, Burbank, Calif. Folding ironing board. 1,568,797; Jan. 5.

Brown, Glenne W., Hobart, Ind. Ball bearing for shear tables. 1,568,362; Jan. 5.

Brown, Henry B., assignor to Taylor Instrument Companies, Rochester, N. Y. Thermometer mounting. 1,568,315; Jan. 5.

Brown, Orin B. (See Little, Frederick B., assignor.)

Browns, Thomas H. (See Williams, Elmer R., assignor.)

Brune, Herbert M., et al., trustees. (See Charles C. L., and Drenning, assignors.)

Brune, Louis J., sr., Algiers, La. Electric-wire connecter. 1,568,585; Jan. 5.

Brunswick-Balke-Collender Company. (See Bluhm, Harold J., assignor.)

Bryngelson, Verner. (See Lidbeck, K., and Bryngelson.)

Bryson, Robert, Vancouver, British Columbia, Canada. Color-printing device. 1,568,651; Jan. 5.

Bucher, John W. (See Akins, R. P., Bucher, and Gross.)

Budd, Edward G., assignor to Budd Wheel Company, Philadelphia, Pa. Mill and method for rolling tapered disks. 1,568,050; Jan. 5.

Budd, Edward G., Manufacturing Company. (See Mendowcroft, Joseph W., assignor.)

Budd Wheel Company. (See Budd, Edward G., assignor.)

Budd Wheel Company. (See Butz, William, assignor.)

Buelna, Guadalupe, Santa Barbara, Calif. Automatic fluid control. 1,568,720; Jan. 5.

Buensod, Alfred C., assignor to The Tobacco Treating Co., Inc., New York, N. Y. Artificially curing green tobacco. 1,568,316; Jan. 5.

Buffalo Brake Beam Company. (See Crone, Seth A., assignor.)

Bullington, Frank A., assignor to Bullington Motors, Kansas City, Mo. Divided-charge rotary engine. 1,568,051; Jan. 5.

Bullington, Frank A., assignor to Bullington Motors, Kansas City, Mo. Internal-combustion engine. 1,568,052; Jan. 5.

Bullington, Frank A., assignor to Bullington Motors, Kansas City, Mo. Multicylinder rotary engine. 1,568,053; Jan. 5.

Bullington Motors. (See Bullington, Frank A., assignor.)

Burdette, Otis H., Atlanta, Ga. Penholder. 1,568,496; Jan. 5.

Burger, Leopold F., and W. F. Borgerd, Riverside, assignor to International Harvester Company, Chicago, Ill. Fuel nozzle. 1,568,134; Jan. 5.

Burke, Frank L., assignor of one-half to Indiana Lamp Corporation, Connersville, Ind., and one-half to General Motors Corporation, Detroit, Mich. Headlamp reflector. 1,568,652; Jan. 5.

Burlew, Gilderoy O., Newark, N. J. Tooth wedge. 1,568,054; Jan. 5.

Burns, Edward C., assignor to J. E. Burns, Winona, Minn. Brake system. 1,568,497; Jan. 5.

Burns, John E. (See Burns, Edward C., assignor.)

Burton, Nelson S., Ardmore, Okla. Rotary well drill. 1,568,055; Jan. 5.

Burwood Corporation, The. (See Gruber, Morris M., assignor.)

Butcher, John H., Rugby, and A. P. Young, Kenilworth, England, assignors to General Electric Company. Telephone hand set. 1,568,721; Jan. 5.

Butler, Harry G., and A. F. Teichman, Cincinnati, Ohio, and E. Carr, Ludlow, Ky. Concrete mixer. 1,568,653; Jan. 5.

Butterfield, Gordon B., et al. (See Tull, W. C., and Bristol, assignors.)

Buttress, George A., and C. F. Craig, assignors to R. Goodcell, Los Angeles, Calif. Composition board. 1,568,314; Jan. 5.

Butz, William, assignor to Budd Wheel Company, Philadelphia, Pa. Metal-cutting tool. 1,568,056; Jan. 5.

C. G. Spring & Bumper Company. (See Jandus, Herbert S., assignor.)

Cabaniss, Royston, Atlanta, Ga. Window construction. 1,568,874; Jan. 5.

Caliver, Ambrose, Nashville, Tenn. Work cabinet. 1,568,498; Jan. 5.

Callahan, Harold. (See Tschappat, Sheridan P., assignor.)

Camblin, Robert G., assignor of one-half to A. R. Edmondson, Bartlesville, Okla. Headlight for automobiles. 1,568,875; Jan. 5.

Camel Company. (See Nystrom, Karl F., assignor.)

Campbell, Nelson L., and A. M. Herbsman, Los Angeles, Calif. Cylindrical protractor. 1,568,876; Jan. 5.

Campbell, Robert P., Attica, Kans. Clean-air lead for tractor fuel systems. 1,568,722; Jan. 5.

Campbell, Stephen B., et al. (See Williams, Elmer R., assignor.)

Cannon, Hiram B., Metuchen, N. J. Furnace or oven. 1,568,317; Jan. 5.

Carlson, Frank W., Oilfields, Calif. Heavy-duty bearing. 1,568,318; Jan. 5.

Carr, Edward. (See Butler, H. G., Teichman, and Carr.)

Carr, Richard H., assignor to The Pure Oil Company, Columbus, Ohio. Outlet structure for oil containers. 1,568,057; Jan. 5.

Carrillon, Charles, assignor of one-half to J. M. Klamon, St. Louis, Mo. Making reenforced-concrete walls. 1,568,265; Jan. 5.

Carrillon, Charles, assignor of one-third to J. M. Klamon, St. Louis, Mo. Reenforced-concrete wall section. 1,568,266; Jan. 5.

Carroll, William J., West Haven, assignor to Sargent & Company, New Haven, Conn. Panic-bolt lock. 1,568,135; Jan. 5.

Carter, James E., et al. (See Dargue, Walter, assignor.)

Carter, Clarence W., assignor to Carter-Mayhew Manufacturing Company, Minneapolis, Minn. Scalper. 1,568,267; Jan. 5.

Carter-Mayhew Manufacturing Company. (See Carter, Clarence W., assignor.)

Carter, William, Company, The. (See Redmond, Harriet L., assignor.)

Carver, Ray C., Grand Junction, Colo. Adjustable angle wrench. 1,568,442; Jan. 5.

Case, J. I., Threshing Machine Company. (See MacGregor, Wallace F., assignor.)

Caterpillar Tractor Co. (See Udall, Phillip A., assignor.)

Cathcart, Joseph M., Merriton, Ontario, assignor of one-half to E. S. Crabtree, Montreal, Quebec, Canada. Paper-making machine. 1,568,363; Jan. 5.

Caver, William H., Boonville, Miss. Skillet. 1,568,798; Jan. 5.

Caywood, Lemuel J., Monterey Park, Calif. Bag rack. 1,568,877; Jan. 5.

Cement Gun Construction Co. (See Dewey, Clarence L., assignor.)

Chalmers, Samuel, North Andover, and F. J. Foley, assignors of one-third to H. C. Straker, Methuen, Mass. Shuttle check. 1,568,654; Jan. 5.

Chambers, James G., Montreal, Quebec, Canada. Cover. 1,568,878; Jan. 5.

Champion, Albert, assignor to A C Spark Plug Company, Flint, Mich. Terminal connecter for spark plugs. 1,568,655; Jan. 5.

Charles, Carl L., and P. R. Drenning, assignors, by mesne assignments, to H. M. Brune, C. E. Scarlett, and J. Fisher, trustees, Baltimore, Md. Railway-car truck. 1,568,058; Jan. 5.

Chelotti, Italo. (See Farmer, Thomas E., assignor.)

Chemical Foundation, Incorporated, The. (See Joyce, Asa W., assignor.)

Chicago Crucible Company. (See Crosser, David H., assignor.)

Chilton, Roland, and F. A. Hayes, Keyport, N. J., assignors to Aeromarine Plane & Motor Company. Torsion meter. 1,568,544; Jan. 5.

Christian, Edwin B., Wallace, Idaho. Stovepipe thimble. 1,568,879; Jan. 5.

Christie, John, assignor to Eastman Kodak Company, Rochester, N. Y. Camera bellows construction. 1,568,656; Jan. 5.

Chrysler Corporation. (See Breer, Carl, assignor.)

Church, Edgar D., Saginaw, Mich. Dumping device. 1,568,208; Jan. 5.

Citizens Savings and Trust Company, The, operating trustee. (See Melanowski, Leo, assignor.)

Claessens, Frederick C. (See Leonard, Frank P., assignor.)

Clark, James, and J. E. Walborn, assignors to S. R. Dresser Manufacturing Company, Bradford, Pa. Wrought-metal repair device for pipe lines. 1,568,268; Jan. 5.

Clark, Perry B., Columbus, Ohio. Loom lock. 1,568,799; Jan. 5.

Clark, Perry B. (See Thompson, Ralph D., assignor.)

Clayton, Andrew B., Union, assignor to The Singer Manufacturing Company, Elizabeth, N. J. Looper-actuating mechanism for sewing machines. 1,568,397; Jan. 5.

Clement, Edward E., Washington, D. C. System of radio broadcast distribution. 1,568,938; Jan. 5.

Clement, Edward E., assignor to E. F. Colladay, Washington, D. C. System for radio broadcast distribution. 1,568,939; Jan. 5.

Clement, George C., assignor to The Baltimore Salesbook Company, Baltimore, Md. Combined pad or leaf holding and locking device for manifolding sales books. 1,568,059; Jan. 5.

Clement, Hans, New York, and B. M. Barron, Mount Vernon, N. Y., assignors to General Optical Company, Inc. Optical instrument. 1,568,586; Jan. 5.

Clements, George P., et al. (See Jaeger, Henry G., assignor.)

Clinginsmith, John F., New Castle, Pa. Evaporator. 1,568,364; Jan. 5.

Cluett, Peabody & Company, Inc. (See Hess, John W., assignor.)

Cockburn, William J., Superb, Saskatchewan, Canada. Shocking machine. 1,568,365; Jan. 5.

Coe, Willis A., Trenton, Nebr. Oil can. 1,568,657; Jan. 5.

Cogswell, Wilton W., Colorado Springs, Colo. Toy aeroplane. 1,568,319; Jan. 5.

Coldwell, Harry T., Arlington, N. J., assignor of one-third to W. H. Mable and one-third to H. E. Lex, Newburgh, N. Y. Golf-hole-cup flag holder, base, and flag. 1,568,320; Jan. 5.

Coldwell, Harry T., Arlington, N. J., assignor of one-third to W. H. Mable and one-third to H. E. Lex, Newburgh, N. Y. Golf-hole cup and tool for inserting and extracting said cup. 1,568,321; Jan. 5.

Coleman, Ada, and I. A. Coleman, Baltimore, Md. Adjustable book cover. 1,568,723; Jan. 5.

Coleman, Isadore A. (See Coleman, Ada and I. A.)

Colgan, Leonard J., New York, assignor to Tuttle & Bailey Manufacturing Company, Brooklyn, N. Y. Register constant-lock-operating attachment. 1,568,545; Jan. 5.

Colladay, Edward F. (See Clement, Edward E., assignor.)

Collier, Guy B., Kinderhook, N. Y. Wrist pin for reciprocating engines. 1,568,209; Jan. 5.

Colstad, Charles N., Norfolk Downs, Mass. Windshield wiper. 1,568,210; Jan. 5.

Comey, R. H., Brooklyn Company. (See Geisler, Edgar W., assignor.)
Commercial Solvents Corporation. (See Littmann, Edwin R., assignor.)
Compagnie des Forges & Acieries de la Marine & d'Homecourt. (See Rimailho, Emile, assignor.)
Conant, Arthur P., Fort Thomas, assignor to The Wadsworth Watch Case Company, Dayton, Ky. Watchcase bow. Des. 69,172; Jan. 5.
Conklin, Vernon A., Belmar, N. J., assignor of one-half to H. A. Wilson, New York, N. Y. Envelope. 1,568,880; Jan. 5.
Conrad, Frederick A. (See Martens, Albert L., assignor.)
Conrad, Henry S., trustee. (See Lundquist, F. A., and Kropp, assignors.)
Conrader, Rudolph, Erie, Pa. Pump-controlling mechanism. 1,568,499; Jan. 5.
Conrader, Rudolph, Erie, Pa. Pump-controlling mechanism. 1,568,500; Jan. 5.
Constantinesco, George, Weybridge, England. Carburetor. 1,568,881; Jan. 5.
Continental Can Company. (See Assmann, Frederick M., assignor.)
Continental Can Company. (See Robinson, Daniel P., assignor.)
Conwell, Simon W., assignor of one-tenth to J. Porter, Mineral Wells, Tex., and one-tenth to D. C. Kuder, Hopeville, Iowa. Combined seat and desk. 1,568,211; Jan. 5.
Cook, Howard A., Southfield, Mass. Flexible hide shafting. 1,568,546; Jan. 5.
Cooke, Alfred C., South Manchester, Conn. Truss. 1,568,501; Jan. 5.
Cormier, Alfred J., Long Beach, Calif. Expansible packing mechanism for pistons. 1,568,269; Jan. 5.
Coss, Clare C., Grand Rapids, assignor of one-half to H. R. James, Lake City, Mich. Computing or multiplying machine. 1,568,800; Jan. 5.
Cossey, John C. G. (See Mitchell, J., and Cossey.)
Cottrell, C. B., & Sons Company. (See Barber, Howard M., assignor.)
Cowdrey, Charles F., Fitchburg, Mass. Brake-testing device for automobiles. 1,568,801; Jan. 5.
Cowdrey, Charles F., Fitchburg, Mass. Brake-testing device for automobiles. 1,568,802; Jan. 5.
Cowdrey, Charles F., Fitchburg, Mass. Brake-testing device for automobiles. 1,568,803; Jan. 5.
Cowdrey, Charles F., Fitchburg, Mass. Brake-testing device for automobiles. 1,568,804; Jan. 5.
Cowley, James T., Syracuse, N. Y. Power-control device. 1,568,805; Jan. 5.
Cowley, James T., assignor to The Lamson Company, Syracuse, N. Y. Power controller for pneumatic-dispatch systems. 1,568,398; Jan. 5.
Cowley, James T., assignor to The Lamson Company, Syracuse, N. Y. Power-control apparatus. 1,568,806; Jan. 5.
Cox, Frank P., Lynn, Mass., assignor to General Electric Company. Pressure-responsive instrument for flow meters and the like. 1,568,724; Jan. 5.
Coyne, Anthony E., New York, N. Y. Burglar alarm. 1,568,882; Jan. 5.
Crabtree, Edwin S. (See Cathcart, Joseph M., assignor.)
